# Oroville Apples

## About 1000 Acres in the Fruit

The East Oroville orchard, at Oroville, Wash., contains 90 acres. A car of Jonathans was being loaded when I was there and A. P. Murray, president of the First National bank, was assisting in the loading because he is one of the principal stockholders, and as competent labor was hard to get and he likes to see the apples properly packed, labeled and loaded, as well as for the exercise. This was not the extra fancy grade, though many extra fancy are shipped this season by this orchard. The car was being shipped to New York city at $1.90 a box. They had offers of $1.90 for Winesaps and $2.40 for Delicious. "Redhead" is the attractive brand under which these apples are sold. L. P. Redhead is the superintendent under whose care the orchard has been brought into bearing and the apples ready for shipment. The apples are packed under state grading rules.

About 1000 acres are estimated to be in apple orchard around Oroville. The West Okanogan irrigation district, which takes water out of the Similkameen above Oroville and carries it a good many miles below, has only watered the district three years. But many of the orchards, including this one, used pumping plants, while some used only the floodwaters of the creeks, which lasted until about July. Most of these are young orchards, and are not in full bearing, but I was assured that there are orchards 60 years old and that trees 40 years old are yielding good commercial apples.

Jonathans, Winesaps, Stamens and Delicious are the leading varieties grown, but all commercial varieties flourish.

H. A.

# Plum Diseases

By Granville Lowther.

First in the alphabetical order of plum diseases is "Bladders," sometimes called pockets. It is caused by the same fungus as that which causes leaf curl on peaches. On the fruit of the plum they form enlargements, which are hollow, and this has given rise to the name bladders. It is supposed to be caused by excessive cool and wet weather in the spring. The remedy is to spray with Bordeaux.

Brown rot is a fungus disease, and the remedy is Bordeaux.

Cankers is the same disease treated under that name in the list of apple pests, and the remedy is hard to define. The difficulty seems to be that it is caused by any one of several conditions, such as winter injury from freezing, sun scald, injuries from insects or from other diseases. It seems certain that pear blight is one of the causes, although not very common.

As a remedy, my habit is to cut out the diseased limbs, and if the tree is not profitable, dig it out. However, I do not recommend this to others unless it seems to them better.

Crown gall is the same as in apples and pears, with no specific remedy.

Fire blight is the same as pear blight, and the remedy is to cut it out and burn it.

Gummosis is the same as in cherry gummosis, or so similar that it seems the same. Authorities are not agreed as to the causes, but it seems to originate from a number of causes. The remedy most recommended is to cut out the wound and sterilize it with corrosive sublimate.

Leaf curl and mildew are found on plums, and both diseases may be cured by the Bordeaux spray.

### Plum Pests.

All classes of aphids may be controlled with the tobacco spray.

The beetles and the moths may be controlled by the arsenate of lead spray.

The curculio is an old pest on plums, and has probably done more damage in the eastern states than almost any other pest. The remedy is arsenate of lead.

# Spray Fundamentals

All sucking insects may be controlled by the use of lime-sulphur or tobacco. All chewing insects may be controlled by the use of arsenate of lead.

All bacterial diseases and all fungus diseases may be controlled by Bordeaux, provided the spray can be made to reach them. The reason no spray has ever been found to cure blight is that it is in the sap.

The caterpillar family may be controlled by cutting out their webs or tents and by the arsenate of lead spray.

The scale family, such as San Jose scale, scurvy scale and any others, may be controlled by the use of lime-sulphur.

# Orchard Troubles

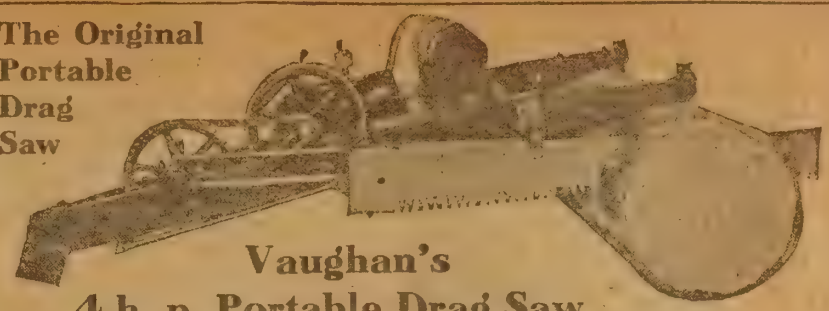
## Apricot Diseases and Pests

By GRANVILLE LOWTHER.

The brown rot is scarcely known in the arid regions, but is prevalent in damp, humid climates. The fruit decays while still on the tree, and sometimes the new shoots die back as a result of the work of this fungus. The remedy is lime sulphur or Bordeaux.

### Bud Blight.

This is a fungus disease, manifest by a dying of the buds. It is the same fungus as causes peach blight, and the remedy is to spray with Bordeaux.



### Fruit Drop.

The dropping of the apricots may be due to weather conditions, lack of vitality in the tree or to lack of proper polination of the flowers. Where there is a heavy crop it is impossible for the branches to mature all the fruit, a certain proportion will naturally drop, and it would be unfortunate for the grower if it did not. The available remedy for excessive dropping is to mix the varieties so that all the trees will be sufficiently pollinated.

### Sour Sap and Seasonable Effects.

The apricot is very sensitive to stimulating effects of heat, cold, moisture and drouth. The excessive flow of sap caused by warm weather and plenty of moisture, and the opposite effects, caused by cold or dry weather, may cause a souring of the sap, the forming of gum and injury to the tissues. The remedy is in so far as possible a regular flow of water.

*Trade Mark Reg. U. S. Pat. Off.*

*Look for this Label in your Raynster*

**A Mark of Value**

There are many kinds of raincoats at varying prices. You cannot estimate their value by their looks.

But you can recognize the Raynster Label and avoid uncertainty. The Raynster Label identifies honest worth—it is the manufacturer's assurance of full value in materials and workmanship.

The Raynster Label is found in a complete line of weatherproof garments—heavy rubber surfaced work coats, smart cravenetted cloth coats, slip-ons, featherweight silks, and warm, heavy ulsters.

Many of these coats look like good overcoats and are generally worn as overcoats as well as raincoats.

Outfit your family with Raynsters. There are Raynster models for women, men, girls and boys. You'll find a Raynster at just the price you want to pay.

# Byproducts Stabilize Prices

"The ratio of cost of animals and other materials to the value of the products is greater in the slaughtering and meat packing industry than in the similar ratio in any other manufacturing lines," is the report of the United States department of agriculture in government bulletin No. 113. In other words, the live stock producer gets more of the money paid by the consumer than does the producer furnishing supplies to any other industry.

J. Ogden Armour.

As a matter of fact, the cost of the live animal is generally greater than the price brought by the dressed meat. So that if Armour & Co. were forced to pay the producer for his live stock on a meat and hide basis alone, the prices to the grower would have to be much lower or the cost of the meat to the consumer much higher. The reason such conditions do not exist is that specialization, research and efficiency have developed ways to make commercial use and profit out of every part in or on the animal, as explained by Armour & Co.

That the producer shares in the returns from the by-products the following figures show: Armour & Co., at the prevailing prices of November, 1917, paid the producer $170 for a 1000-pound steer, the dressed meat of which weighed 600 pounds, which sold to the retailer at $140. The difference of $30 was paid to the farmer for the raw materials from which the by-products are manufactured.

Improved processes and refrigeration have made it possible to prepare delectable foods of the edible parts once thrown away, such as sweetbread, tongues, brains, livers and hearts, now prized and served everywhere. Scientific laboratory work has utilized the inedible portions to the last vestige, and today these once worthless parts are made into hundreds of marketable products, from violin strings to soap, from pharmaceutical supplies to glue.

But aside from the savings effected, resulting in better prices to the live stock grower on the one hand and reduced prices for meat to the consumer on the other, the manufacture of these by-products has brought greater efficiency, greater comfort and improved living conditions to the world, and, as in the case of the marvelous medical preparations, the alleviation and often the cure of many subtle and hitherto fatal maladies.

# Are Just Americans

**By Bruce Barton.**

The war has taught the people many lessons they needed very much to learn. It has made possible many things that were impossible. And there is scarcely a man or woman in America who has not in some degree been lifted by it out of his old prejudices, to a higher, broader plane of thought. We shall see the truth of that statement splendidly demonstrated the week of November 11-18, when seven agencies engaged in war work for our soldiers and sailors are to unite in a great campaign for funds with which to continue their ministry. Of these seven agencies two are Protestant, the Y. M. C. A. and the Y. W. C. A.; one, the National Catholic War Council, embracing the Knights of Columbus, is Catholic; the Jews are represented by the Jewish Welfare League, and the other three, the American Library association, the War Camp Community Service and the Salvation Army have no denominational affiliation. According to the almost general conception these organizations could not be consolidated. But when President Wilson suggested that they get together the impossible was done in a single day. What years of discussion and convention had failed to bring about the larger spirit which the war has engendered was achieved without an effort.

The sum sought by the seven agencies is immense, $170,500,000, the largest single gift ever asked of any people at one time. Yet compared with the figures to which the war has accustomed us, it is small. Measured against the huge total which we shall pay to keep our boys under arms next year, this sum which is to provide for their comfort and cheer, becomes almost insignificant. It is less than ten cents a day for each boy—less than the average man spends for cigars.

It will be raised—not grudgingly, but in a spirit of splendid enthusiasm. The country will go over the top for the Big Seven as it has gone over the top for the Liberty loan and the Red Cross.

TO the Editor of The Washington Farmer: I am enclosing herewith $1, for which please enter my subscription to The Washington Farmer for three years and The Twice-a-Week Spokesman-Review for one year. I am enclosing five cents, for which please send me a Farm Service flag for farm workers.

# Cleveland Tractor

## Machinery Must Replace Muscle

Man-power is at a premium on our farms.

War has taken several million men into the service.

And in spite of these conditions, which are steadily growing worse, there must be *more* crops produced than ever before.

Machinery *must* replace muscle.

Thousands of Cleveland Tractors are successfully meeting the labor shortage and the demand for increased production.

The Cleveland Tractor, pulling two 14-inch bottoms in medium soil, plows 3½ miles an hour—eight to ten acres a day. That is all you can expect from *three* good men with *three* good 3-horse teams.

The Cleveland travels on its own tracks, laying them down and picking them up again like the famous battle "tanks." It turns around in a twelve foot circle. It gives you 12 horsepower at the drawbar for pulling, and 20 horsepower at the pulley for stationary work. It has 600 square inches of traction surface continually on the ground and will go almost anywhere. It weighs less than 3200 pounds.

But in spite of its power, the Cleveland Tractor is so small that it can easily go under and among small trees.

It will go through ditches, gumbo, sand and gravel, over unused roads, plowed fields and stubble. It will not pack the soil, will not mire or flounder.

Rollin H. White, the famous automotive engineer, is the designer of the Cleveland Tractor. It is produced under his supervision.

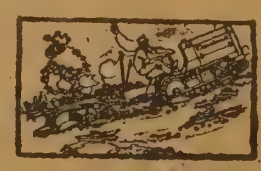
He has used only the best materials. Gears are protected by dust-proof, dirt-proof cases.

The track is designed for long service. The sections are joined with hardened steel pins which have their bearings in hardened steel bushings.

You must replace muscle with machinery on *your* farm.

The Cleveland Tractor offers the means of meeting the emergency.

Write us for detailed information and name of the nearest Cleveland dealer.



The Cleveland Tractor Co.

19087 Euclid Ave., Cleveland, Ohio

## Corn Raising

### In the Lower Palouse Country

By IRVIN DELEVAN, Winona, Wash.

Having been raised on a farm in Minnesota on which continuous wheat raising had impoverished the soil until we were forced to raise corn, when I located at Winona, Whitman county, Wash., it did not take me long to try the corn growing again, as I did not want to wait till wheat for one year after another had worn out my soil. My first experience was in 1917, a rather dry year, but I grew an immense lot of fodder for cattle feed, not attempting to make a corn crop.

On March 15, 1918, I began to plow up a 26-acre field, which had been in wheat in 1917. This I turned over one foot in depth, harrowed it twice, and on May 20 planted it with a two-row planter, using home-grown White Dent seed, then harrowed the field once. Two weeks later I put the harrow over it again, and when the corn was up six inches it was cultivated with a two-horse cultivator, no further cultivation being given. On September 20 I husked out 20 rows of this corn, obtaining 94 measured bushels of as good corn as I ever saw, and better than any I had raised in Minnesota, and a splendid crop for this very dry year. Other work coming on, I have not as yet completed the corn harvesting, but shall do so now. While Whitman county is known as the banner wheat growing county of the state, I believe that it will not be many years until she shall be known as the banner corn growing county.

## Dynamiting Stump Land

"I am often asked whether it pays to clear land with dynamite since it has become so high in price compared to what it was before the war," says C. H. Hockman of Virginia. "Perhaps the best way to answer the question is to give the figures connected with a little blasting job I did in May, 1917, when dynamite had about reached its top cost.

"The tract cleared embraced about an acre in area. It was about the hardest stump blasting job I ever tackled. The timber had been cut about seven years, and there were 25 of the stumps to be taken out, averaging about two feet in diameter. Nine of them measured over three feet. I used a dirt auger to put the bore holes down under them. In case of the larger ones I used as many as five loaded bore holes in order to distribute my charge at the most vulnerable points under the stumps. This, of course, necessitated firing the charges with electric blasting caps and a blasting machine.

"The entire job required 75 pounds of dynamite and two days' labor of two men. The ground was very hard and gravelly. In spite of this difficulty the cost was but $29. We consider that even part of that should be charged to plowing expense, because we have noticed a great improvement in crops on the cleared acre, due, in our opinion, to the deep breakage of the soil when blasting out the stumps."

### RAISES 15 TONS SPUDS ON HALF ACRE.

W. S. Ramsey, on the edge of Oroville, Wash., this season raised 15 tons of Carmen potatoes on slightly less than an acre of ground. Fifteen tons equal 500 bushels; but the amount is well authenticated. Mr. Ramsey has a partner in his farming operations, and so a strict account is kept of all production. Mr. Ramsey is an intensive farmer, raising big crops on small acreage. He prepares his ground thoroughly for any crop he raises, then gives it thorough cultivation, and attributes his success to the wonderful productiveness of the Oroville region. His potatoes were all good, marketable tubers, very uniform and of large size. He cropped the land again after the potatoes were taken off.

Another big yield of potatoes was made by W. E. Weaver, who from half an acre sold six tons. Besides this, in advance of the regular digging time, he sold 16 sacks to a mining company and used what he wanted at home. His variety was the Mortgage Lifter. H. A.

### THE FARMER WAR MAP VALUABLE.

To the Editor: I thank you for your letter and the war map enclosed. You are rendering an excellent service to your readers, and I think your plan for adding little maps weekly is ingenious and valuable. I congratulate you upon the idea.

President.

Whitman College,
Walla Walla, Wash.

*"Keeping the Home Fires Burning"*

# Air-Tight Stoves Have Caused Far Too Many "Home-Fires"

**To the Policyholders of the Northwestern Mutual Fire Association:**

THE AIRTIGHT STOVE MUST GO!

A stove must have some circulation to carry the gas up the flue or an explosion will surely result.

You might better have a powder mill in your home. There are types of so-called airtight stoves with cast iron hinge top and hinged draft which very largely eliminate the danger. When the gas accumulates these hinge lids raise and allow it to escape. Sheet iron tops like the one shown above are very likely to become stuck so that the stove explodes, or the top and pipe may be blown entirely off.

Our 50,000 policyholders are showing such a disposition to cooperate with this office in the prevention of fires that we believe this word of warning against the air-tight stove, which has caused the loss of so many homes, will save many homes.

We also desire to call your attention to the following necessary precautions:

1. Place stoves, furnaces and pipes far enough from walls and woodwork to avoid overheating. Wooden surfaces should be at least 12 inches from stove.

2. Cover the nearest wooden surfaces with sheet asbestos, sheet iron or tin; if iron or tin is used, leave an air space behind it.

3. Where stove pipes or heating pipes pass through walls, enclose the pipes in galvanized iron, double-walled, ventilated thimbles at least 12 inches wider than the diameter of the pipes.

4. Protect the floor beneath the stove with sheet metal, and have it extend forward at least 12 inches directly beneath the door to the ash-pit.

5. Surround the base of the furnace with brick, stone or concrete.

6. Make sure that all pipes are free from rust, and that all joints and conections are sound and tight.

7. Stovepipes should never pass into an attic. If they do, fix the guard about the pipe so that nothing combustible may come in contact with the pipe. This should only be temporary until the pipe can be removed from the attic.

8. Never pour kerosene into a coal or wood stove, even when the fire is out.

9. Never put ashes into wooden boxes or barrels; have a strong metal can.

10. Study the drafts and dampers.

11. Do not let the stove or pipes become red-hot.

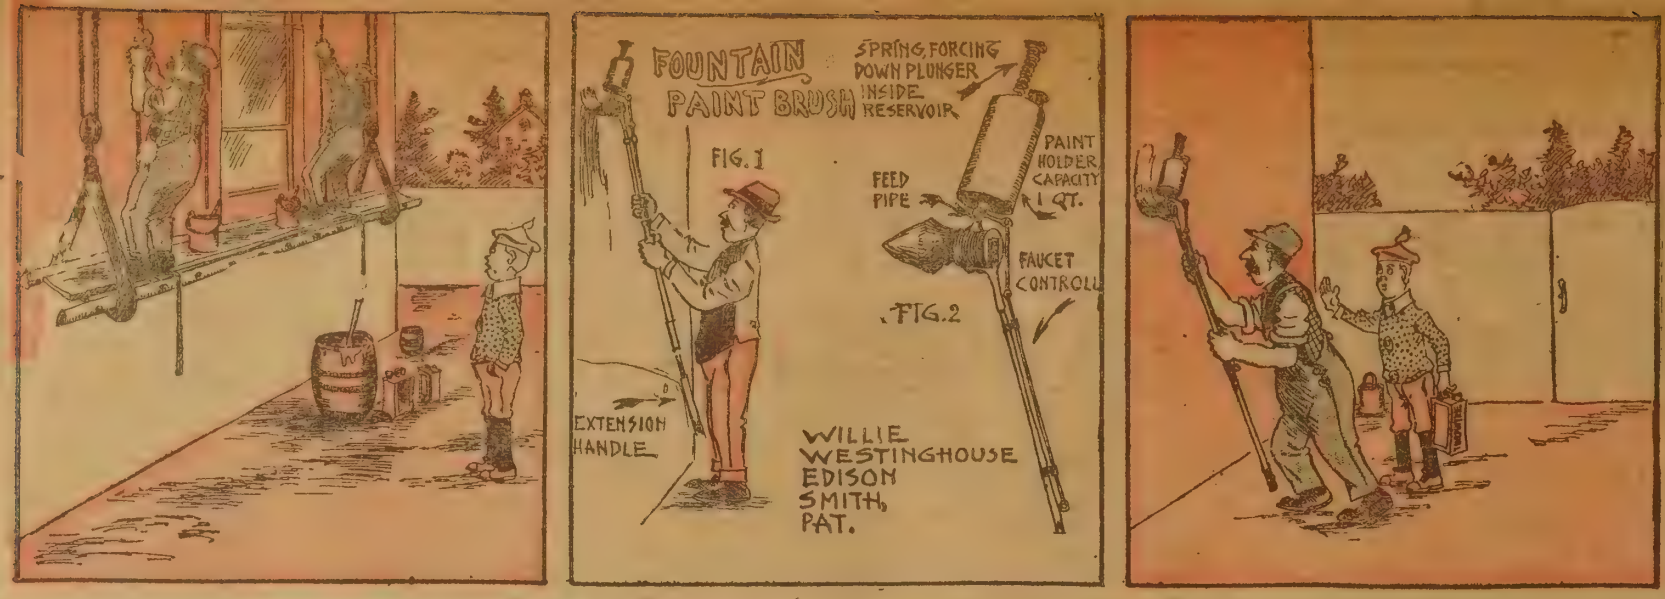
12. Keep stoves, furnaces, flues and chimneys clean.

13. Inspect the chimneys and flues to be sure that they are sound.

14. Do not dry wood in an oven.

15. Do not hang wet clothing too near a stove.

16. Keep curtains and other cloth away from stoves and pipes.



By following precautions of this kind the policyholders of the Northwestern Mutual Fire Association have not only saved hundreds of homes but by so doing have enabled the Northwestern to return them over $2,500,000 in cash dividends and insurance savings.

DEAR TOMMY: I invented this scheme after I noticed that the painters working on Mr. Jones' house wasted so much time shifting the scaffold. Mr. Jones thought it was great. At first we got the paint too thick; then the painter put too much turpentine in, and it squirted right out of the brush and I got my shoes spattered up! Yours, etc., WILLIE.

# KATE AND KARL ARE BRAVE PICNICKERS

# "UNCLE SAM NEEDS A MILLION MORE LABORERS AT ONCE"

The words above are the heading of an article in The Current Opinion magazine dealing with the shortage of man power throughout the United States. This article states:

"Unless employers engaged in business that is not essential to the carrying on of the war are willing to release those working for them, that they may engage in war industries, the country will see the shutting down of many war industries. This announcement is made by the Department of Labor, which asserts that a million unskilled workers are needed immediately in these industries. The announcement states further that the existing shortage will no doubt be greatly augmented by the extension of the draft ages."

Our readers have come to understand that a great many men—good men capable of war industry work—will be required to handle their subscriptions unless our readers send in their orders direct.

For over a year now our friends have been cooperating with us in a plan to conserve man power; and since the need is growing more and more pressing, we are confident that your efforts will not be lessened.

You are asked to send in your subscription renewal well in advance of the expiration date stamped on the address label on each copy of your paper; also to mail with your own order the orders for friend and neighbor.

Incidentally, you and those whose subscriptions you handle for us will receive the benefit of every penny which you save by acting as your own agents. A 3-year subscription at 50 cents means 52 big issues yearly. This is less than 17 cents per year for each of the three years. Think it over. Then let us hear from you in a way that will convince us that you are in sympathy with this cooperative plan.

**Uncle Sam urges the employer to release as many workers as possible for war service. Will *you* help *us* make our answer the right one?**

**Rates:-25c** For 1 Year **50c** For 3 Years **$1** For 5 Years

**The Washington Farmer.** Nov. 7.

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Council of Defense

## Not a New Thing Under the Sun

That committees of public safety, as they are called in some states, and state councils of defense, as they are called in others, is not a new thing under the sun is proved by the fact that there was a council of safety appointed in Vermont July 2, 1777, says Charles D. Greenfield, secretary of Montana state council of defense.

The first order made by the council was August 15, 1777, the day preceding the battle of Bennington. This order was addressed to the chairman of the committee of safety at Williamstown, indicating that in each community there was a subcouncil of safety corresponding to the present county or community councils.

This Williamstown chairman was requested to forward to Bennington all the lead he could collect in his vicinity. The reason given for this order was: "It is expected every minute an action will commence between our troops and the enemies within four or five miles of this place and the lead will be positively wanted."

A similar order was sent to numerous other chairmen of local committees.

That the council of safety had a great deal of work to do in connection with royalists and slackers to the Revolutionary cause is indicated by a lot of orders it made. For instance, under date of August 23, 1777, David Breckenridge "is permitted to remain at his father's house under the care of a guard at that place until further orders."

On August 27, in the same year, the council notified Lieutenant Martin Powel to return to Auger Hawley's wife a cow, as her children were in a suffering condition and the scouts had taken all the live stock on her place.

This man, Breckenridge, must have been a slacker and a royalist, because in another order an officer is required to take four horses belonging to him, which had been left by him in the care of John Bruno.

Hearings and trials for seditious utterances and giving help to the enemy was one of the activities of the council. For instance, on August 27, 1777, Lieutenant Silas Watson received this order:

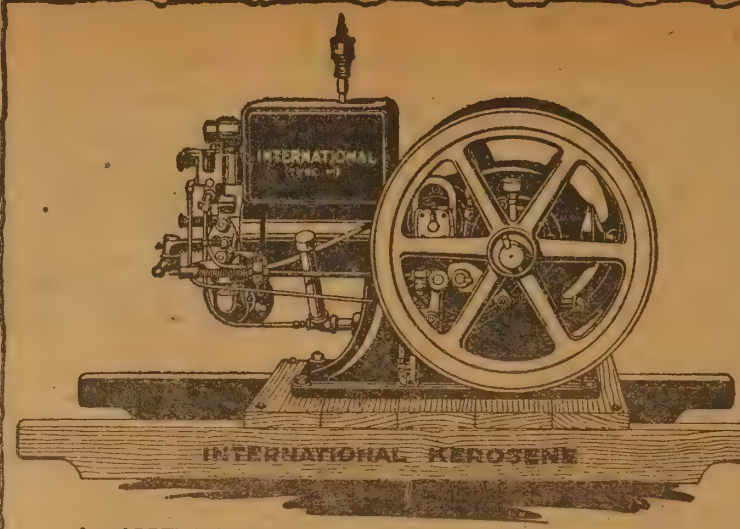
"You will please send all the evidence you have against Jonathan Card and Pelig Card, as we propose to bring them on trial on the 29th instant."

On the same date an order is made permitting Mrs. Munro to keep her cattle, sheep, swine and other effects until further order of the council.

It would appear that Breckenridge was a farmer and that he grew wheat, because on the same date a Mr. Harris is directed to employ men to harvest Breckenridge's wheat, to put the grain into his barn, to pay the expenses of the harvesting out of the wheat, and what is not required for the use of Breckenridge's family, Harris is to hold until further orders of the council.

### WINTER WHEAT AND VETCH.

To the Editor of The Washington Farmer: In connection with your story concerning my experiences with winter wheat and vetch, I note that you place the vetch seed at $2 per bushel, when as a matter of fact it sold at 20 cents a pound, or $12 a bushel. The gross receipts, however, of $755.40 have been increased since that data was given, owing to the fact that 40 pounds more seed were found, which was sold at 20 cents per pound, or $8. This makes a total receipt of $763.40 for the vetch seed alone. When the data which was published in your issue of October 10 was made up the straw was credited with bringing $15 per ton. As a matter of fact, the entire lot of straw has been sold for $18 per ton, making $404.55. The entire gross receipts from this 16-acre field of wheat and vetch, therefore, should be $1986.95. J. M. HODGES.



Deer Park, Wash.

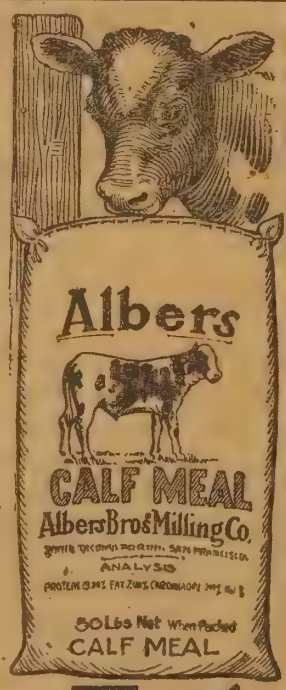
### RECORD POTATO YIELD.

What is said to be the world's record production of marketable potatoes on one acre—49,531 pounds, or 825 bushels—has been made on an acre of land near Kanab, in the southeastern section of Utah, a few miles from the Arizona state line. The record yield was made in response to a competition fostered by the Mormon church.

I wish to discontinue my subscription to The Washington Farmer; not because I don't like your paper, but because I am in other business. It is too good a paper to be wasted and we seldom have it because it is not in line with our work.

W. L. COX.

THE PRESENT line of **International Engines** gives every farmer a chance to buy the very engine he needs at a price he can well afford to pay.



The sizes now run from 1 to 15-H. P., with a special line in the 1½, 3, and 6-H. P. sizes, known as the **International Type M.** All sizes, even the smallest, operate on common coal oil and other cheap fuels testing down to 39 degrees Baume. Every engine develops more than its rated horse power. All conform to International standards of quality, insuring good service, long life, and cheap operation.

It will pay any farmer who is in the market for a good engine, at a fair price, to pay close attention to the International line. If you can use a 1½, 3, or 6-H. P. engine, the Type M will give you a number of pleasant surprises in features, the value of which any engine-using farmer can appreciate.

The local dealer either has an International engine in stock, or can get one for you to see. If he has not told you about our engines yet, write us for complete information.

**Raising Calves**

is a patriotic duty. It does not mean the feeding of expensive milk, nor does it mean unprofitable work. It means an increased revenue in your dairy business as well as adding strong, sturdy stock to your herd. You can raise your calves successfully for approximately one-quarter of the cost of whole milk by feeding ALBERS CALF MEAL as a milk substitute.

This Calf Meal is specially prepared for promoting health, rapid growth and a sturdy constitution; all the ingredients being thoroughly and easily digested. Directions for feeding in every sack.

Your dealer carries ALBERS CALF MEAL in 25 and 50 lb. sacks or he can get it for you.

**Albers**
**CALF MEAL**

**On Exhibition**

At present we have on exhibition in our store window a long red Mangel Wurzel Beet that was grown on Indian Prairie without irrigation, weight 19 pounds. Also an Ox Heart Carrot grown in the city limits of Spokane which weights 3 1-4 pounds. Both are true to type and of perfect shape, and shows the quality of seeds we furnish.

# Comparative Potato Yields and Prices

By ASHER HOBSON, State Director of Farm Markets.

Comparing the estimated supply this year with other years it will be seen that Washington's potato crop will be about 1,500,000 bushels less than it was last year and the year before, but that it is a little larger than it was in 1915, and it is about three-fourths of a million bushels in excess of what it was in 1914. The estimate for the five western states is about 7,000,000 bushels short of last year, about 500,000 bushels greater than it was in 1914 and 1915. It must not be forgotten, however, that in 1916 the yield for the United States was more than a hundred million bushels short of what it will be this year.

It should be noted further that in judging this year's yield care should be taken against making comparisons with the two previous years. Both these years were abnormal. In 1916 northwest growers, because of the 100,000,000 bushels shortage in the east, were able to sell a big crop on a high market for eastern shipments. Such prices are not likely to be obtained this year. On the other hand, last fall the northwest bumper crop had practically no market in the east. Idaho, Montana and even California shipped to Seattle and other Coast cities much stock which would have gone east during normal years. This contributed greatly to the low market of the entire season.

A study of the table would seem to indicate the following: Including the country as a whole the estimates for this year show a comparatively high yield. The fact is that with the exception of three years, 1912, 1914 and 1917, this estimate is higher than any year's yield in the history of the country. As compared with the last four years this year's Washington crop will be somewhat below normal, but considering the five states of Washington, Oregon, Idaho, California and Montana as a unit, estimates indicate a good yield for this year, being slightly above the average for the last five years. It should be kept in mind, however, that the demand this year will be raised by the increase in population in the northwest.

In this particular there may be noted a fairly close similarity between this year's estimate and the yield for 1915. It should be kept in mind, however, that in comparing supply with prices received, one must consider that prices of all commodities have advanced during the last two or three years. If the supply and demand were exactly the same this year as in some previous year, prices would necessarily be higher for this year. Further, the cost of labor, and other expenses have been appreciably advanced, a circumstance which must reflect upon prices generally.

The first table herewith shows the potato supply in the northwest and in the country generally for each year from 1914 to 1918, and also the estimated supply for this year as reported by the bureau of crop estimates of the United States department of agriculture. The second table shows the prices paid growers f. o. b. Seattle upon October 1, January 1, and April 1, each season. By use of both these tables one may compare yields to prices in previous years. Growers by doing this should be in a better position to judge the probable market this year.

In the following table the amounts are given in thousands. To get correct figures add three naughts, "000."

| Season Fall to Spring | Potatoes, in bushels, fall harvest. Wash. | Idaho | Oregon | United States. |
|---|---|---|---|---|
| 1914-15 | 7552 | 5270 | 4753 | 409,221 |
| 1915-16 | 8235 | 3500 | 3520 | 359,103 |
| 1916-17 | 990 | 4050 | 8250 | 286,953 |
| 1917-18 | 9875 | 5084 | 8100 | 442,000 |
| 1918-19 | 8330 | 4583 | 5625 | 391,033 |
| 5 years average | 8778 | 4697 | 6049 | 377,662 |

The table below shows growers' prices of potatoes f. o. b. Seattle, as quoted upon October 1, January 1, and April 1, each season:

| Season, Fall to Spring | Growers' price f. o. b. Seattle. Oct. 1. | Jan. 1. | April 1. |
|---|---|---|---|
| 1914-15 | $21.75 | $15.00 | $24.00 |
| 1915-16 | 14.00 | 18.00 | 27.50 |
| 1916-17 | 23.00 | 37.00 | 60.00 |
| 1917-18 | 30.00 | 26.50 | 26.50 |
| 1918-19 | 40.00 | ? | ? |

# Farm Motor Truck

## Compared With Hauling by Wagon

Is the hauling of farm products cheaper by motor truck than by wagon?

The October crop report of the United States department of agriculture gives some facts which will aid in answering this question. According to answers received from its correspondent the estimated cost for hauling in wagons from farms to shipping points averaged in 1918 about 30 cents per ton per mile for wheat, 33 cents for corn and 48 cents for cotton; for hauling in motor trucks or by tractors the averages are 15 cents for wheat or corn and 18 cents per ton-mile for cotton. These figures are based upon reports made by correspondents of the bureau of crop estimates. While most of the hauling from farms is done by the farmers themselves, these estimated costs are based largely upon the usual charges in the various counties for hiring team and wagon or for motor truck, by the day.

In 1906 a similar inquiry showed an average for wagons of 19 cents per ton per mile for hauling corn or wheat and 27 cents for cotton. In 1918 wagon costs were naturally higher, since prices and wages have increased, but motor-truck costs are much lower in 1918 than even the wagon costs of 1906, due to greater efficiency of the motor truck.

Motor-truck hauls in 1918 from farm to shipping point averaged 11.3 miles, while wagon hauls averaged 9 miles; and a motor truck made 3.4 round trips per day over its longer route of 11.3 miles, while wagons made 1.2 round trips per day over the nine-mile distance.

The motor trucks generally in use by farmers are not the large trucks, but the small ones whose nominal capacity is usually one to two tons. In quite a number of counties throughout the country the trucks used for hauling are made-over passenger cars. In some cases light wagons are attached as trailers to ordinary passenger cars and produce taken to market in that way. In North Dakota and California, as well as other states, tractors, each drawing several wagons, are used for hauling grain. Trailers are also used, especially in the west, with horse-drawn wagons. This practically helps to raise the average wagon load as reported from the Rocky Mountain and Pacific states. For the United States as a whole the average wagon load of wheat was 56 bushels in 1918, while the motor-truck load averaged 84 bushels.

**As a reader of The Farmer have you had any experience with marketing farm crops in motor trucks, and if so what has been the relative cost as compared with marketing by wagon? Are you interested in the answer to some other question? Write it down and send it to the Editor of this paper. Encourage your boys and girls to ask questions, for that is the finest way of gaining valuable information. Make of The Farmer your Family Question Box.**

The Washington Farmer has come regularly and is a dandy little paper. We can notice a large improvement since we took it last.

# Buy Your Moline Tractor Now

## Because:

You may not be able to get a Moline-Universal if you delay ordering.

You will help relieve spring congestion of shipping by buying now.

You will have plenty of time to become familiar with its construction and operation before the spring rush and will be able to work your tractor in on belt work and other light jobs.

It is the only tractor which does all farm work including cultivating.

One man operates both tractor and implement from the seat of the implement where you must sit in order to do the best work.

Tractor and implement form one unit—backs as easily as it goes forward—turns in a 16-ft. circle.

It has plenty of power for your heaviest work, yet light in weight to operate economically on light jobs. All the weight on two big drive wheels—no dead weight—no extra expense.

Substantially constructed for many years of service.

Electric lights for night work and self starter for non-robust labor.

You can practically double your efficiency—you can produce more food with less help. You will need it, order now.

**Write today for full information and name of your nearest Moline Dealer. Address Dept. 50.**

# MOLINE UNIVERSAL TRACTOR

# It Is the Farm of Your Dreams, but Is Not a Dream Farm

By S. B. NELSON, W. S. C.

Traveling on the train a few days ago I met a successful young farmer who is a graduate of the college of agriculture of the State college of Washington. He made this remark:

"If you have ever had a vision of the farm of your ideals and dreams, you can find that vision fulfilled within half a mile of Sprague, Wash."

He was referring to the Hercules Stock ranch of Day & Rothrock.

Quite recently, at the invitation of Frank M. Rothrock, I revisited this stock farm, my former visit having been three or four years before.

A surprise awaited me. At the time of my previous visit there was sagebrush on the hills and sedge in the swales. But the land had been leveled and drained and put under irrigation. This year more than a thousand tons of alfalfa hay has been raised where but a few years ago the sagebrush reigned supreme.

It is true that the owners of this farm of your dreams are wealthy, but you would never discover this by meeting and talking to them. They are what we call "plain, homey folks," who, when all is said, are the highest American type there is, and the type that has written America on the map of the world.

For the reason that Mr. Rothrock and his associates have wealth I was interested a few years ago to see them start the Hercules stock farm in so modest a way. The very first thing they built on the ranch was a silo. Mr. Rothrock believed that real live stock could not be raised without plenty of feed.

Shelter was the next consideration. They built large well planned though not elaborate stables for cattle and horses. During my recent visit I noticed one little thing about their stables which is significant. The main posts in the partition between the stalls did not extend from the ceiling above to the floor below where the moisture at the bottom could rot them, but they had been set in a concrete foundation in an iron pipe, and would last for years. There will be no wiggling or wobbling of the stall partitions in this building.

The Hercules stock ranch at the present time is fairly good sized—15,000 acres! All its irrigation is done by the use of electrical power, which has succeeded gasoline, the latter having proved unsatisfactory. Having the hay land under cultivation, it is the custom of Day & Rothrock to run about one animal on 10 acres of the rocky land. Now, they are running about a thousand head of cattle, 250 of which are purebred Shorthorns. One hundred and 20 of the latter number are breeding cows, and the rest are bulls and young stock.

I saw 300 steers in one pasture. Quite recently I noticed in the public press announcement of the fact that Mr. Rothrock had sold 78 of these steers for the highest price ever paid in Spokane for fat steers.

The Hercules herds are headed by two magnificent bulls. One of these is Gainsford Perfection, the first bull to head the herd. Some of his offspring are now in great demand, and are bringing very satisfactory prices. The other is the imported bull, Dounes Radiance, bred by Lord Mouray of Scotland.

When I went out in the pasture to see this bull, there was recalled to my mind a little story told me recently by a cattleman from Salmon City, Idaho. They had a stock show over there, and secured an eastern man to do their judging. He was a very competent man, and they got along very well until he reached the wild steers. After trying vainly to lay hands on them, he said to the superintendent of the show:

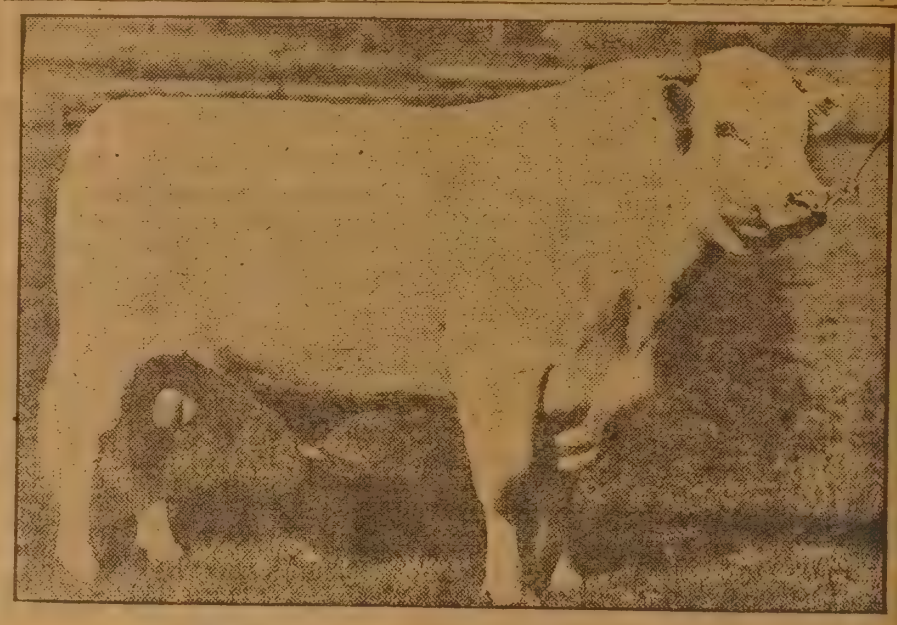
"I can't judge these steers—I can't get close enough to put my hands on them and see whether or not they are in prime condition."

If this judge had seen Dounes Radiance approaching him in the pasture he would not have cared to lay hands on him to judge his condition. The bull walked like he was on springs when I saw him. The grand play of the muscles underneath the rolling folds of his skin was that of high power mechanism oiled and polished to the last degree of perfection. No judge would need to feel his skin to know that Dounes Radiance had what stockmen speak of as "condition." It was a wonderful sight. But really, the animal was only in good breeding shape.

Mr. Rothrock gives a great deal of attention to the farm, rather more than Mr. Day, possibly. He says the ranch must pay, and that they must get their pleasure out of running a ranch that is kept on a practical, paying basis. Mr. Rothrock, Mrs. Rothrock, the children—Zena, a girl of 17, and Wallace, who is 15—the superintendent, the herdsmen and the farm laborers, all have their work to do, and they do it in the right way and on time. No one overworks, but every hour of the day in everybody's time counts for something. Mr. Rothrock believes in system and order. On the Hercules ranch things move by the clock, and the clock is not allowed to run down.

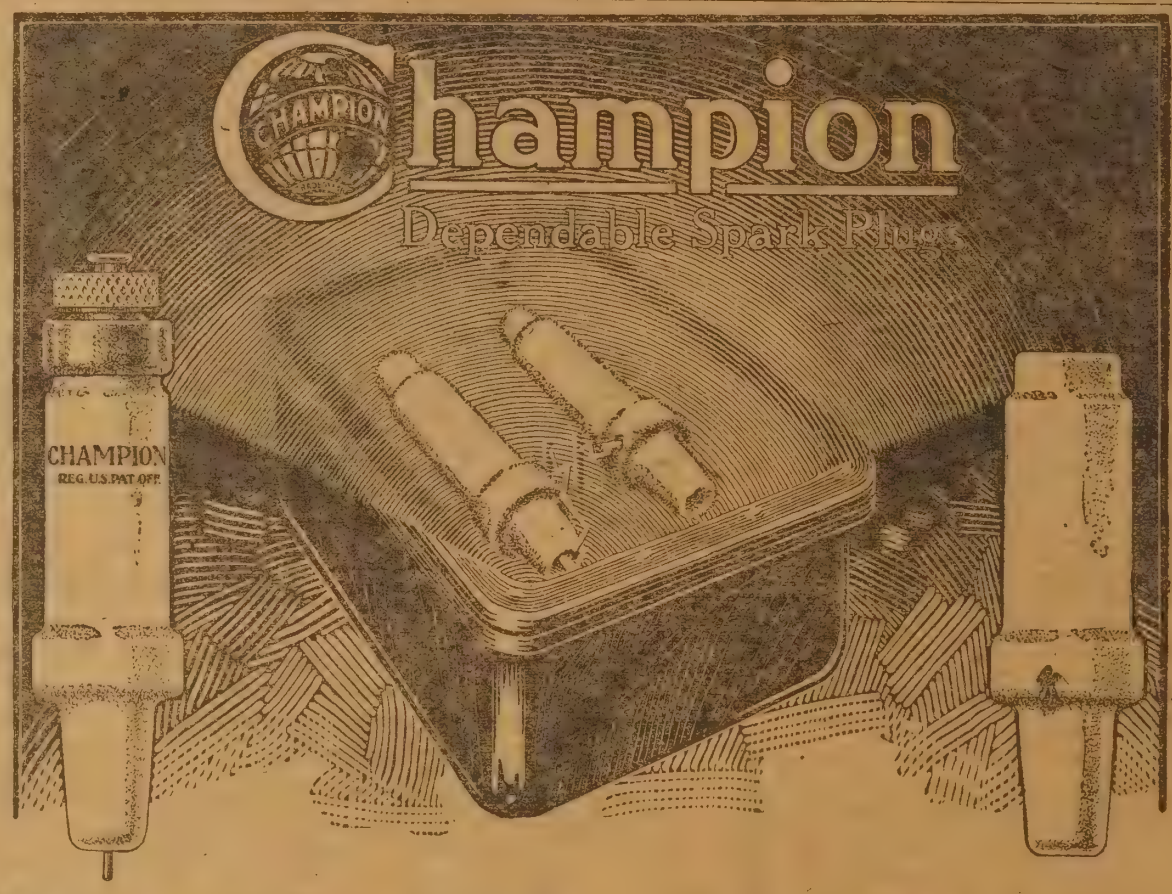
He believes in plenty. Better have feed left over in the spring and well-fed live stock, than to run low in feed and skimp or buy. From end to end of the ranch, in its smallest details and in the greatest undertakings, you see no sign of neglect, oversight, or improvidence. Thrift is everywhere—in every barn, in every field, in the farm home and shows in every animal from hoofs to ear-tips. Waste is abhorred on the Hercules stock ranch, and there is none of it. Upon these simple, homely ideals has been built the great ranch, and it is still building.

When I was there a few days ago they had 30 young bulls on the place. Thirteen were in and 17 were out in the fields. Each group of youngsters had 12 hours in the fields and took its turn alternately with the other. Even the young bulls worked and moved by system.



I chanced to be down at the field when the band of 17 were let out. Immediately there were eight bull fights in progress. The odd seventeenth had no antagonist, so acted as referee until he managed to horn in somewhere. It was a spectacle at once comical and magnificent. Out of their sheer exuberance of spirits they battled in play with one another, and all the while they were thus engaged you could walk in perfect safety among them.

At the time of my visit they were just finishing the new ranch house, which was spacious and splendidly planned for solid comfort and convenience. The bunkhouse for the men is comfortable, equipped with shower bath and with other modern sanitary conveniences.



Going over the ranch I noticed in particular Mr. Rothrock's sub-irrigation plan. There is a meadow three hundred acres in extent which has at its upper end a large living spring. Formerly, the spring flowed away through its surface channel, and was lost.

Studying the situation very carefully, Mr. Rothrock saw a way to make use of both the normal and the overflow of the spring. First, a canal was dug above the

(Continued on page twenty-two.)

Dounes Radiance, one of the Hercules herd leaders.

# Big Increase in Porcelain Efficiency

*Half Again as Much Resistance to Current When Heated*

In the high-speed, high-compression motors of today spark plugs must work in heat undreamed of a short time ago.

Yet under intense heat the porcelain insulator that once worked perfectly, actually becomes a conductor of the electric current—fails to supply the explosive spark.

But science has now more than kept pace.

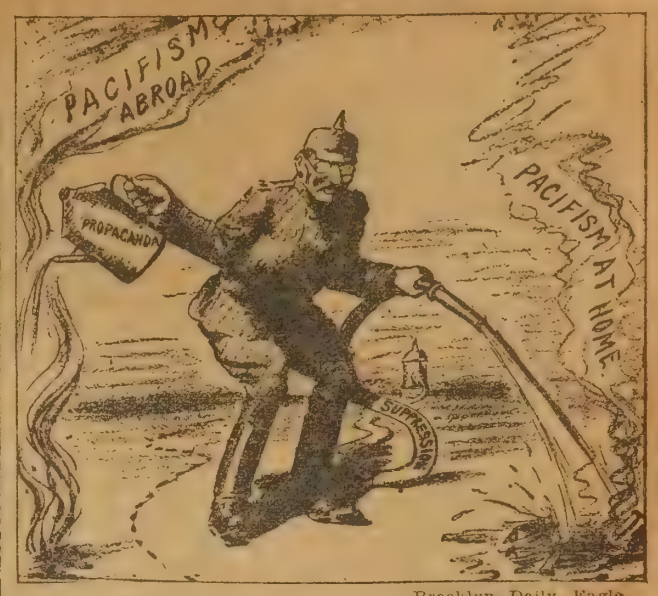
Experiment 3450 in the tenth year of unremitting original research work in our porcelain laboratories has produced a porcelain with half again as much resistance to current when heated.

Champion Dependability takes so long a step forward that it seems well nigh inconceivable that any future motor will ever again develop heat enough to threaten short-circuiting through the porcelain insulator.

This greater dependability is yours if you merely take the pains to see that "Champion" *is on the porcelain* of your spark plugs as well as on the box.

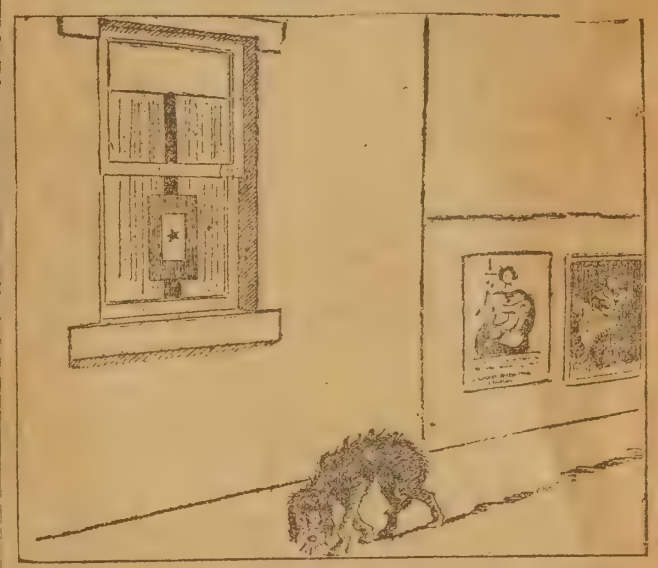
There is a Champion Spark Plug for every type of motor car, motor truck, tractor, motorcycle and stationary engine.

**Champion Spark Plug Company, Toledo, Ohio**



*Champion Spark Plug Company of Canada, Limited, Windsor, Ontario*

## Parents of Fighters in War Work



Fathers and mothers of soldiers and sailors have entered into the work of the united drive of seven great agencies to raise money for the comfort of those who are fighting for their country. Mrs. Edward T. Statesbury represents the Y. W. C. A. workers who have sons in service. In the National Catholic War council John G. Agar, treasurer of the organization, has three sons who are aviators. The majority of fathers in the Y. M. C. A. work have sons in uniform. Among these is George W. Perkins. Colonel William R. Peart, chief secretary of the Salvation Army, has a son, Lieutenant Herbert L. Peart, in the 18th infantry. Of the war camp community service, a noteworthy example is that of William E. Hopkins, who has three sons in service. Three of the directors of the Jewish welfare board have fighting sons. Charles Hartman is one of these. Dr. Frank P. Hill is one of the American Library association workers who have sons in uniform.

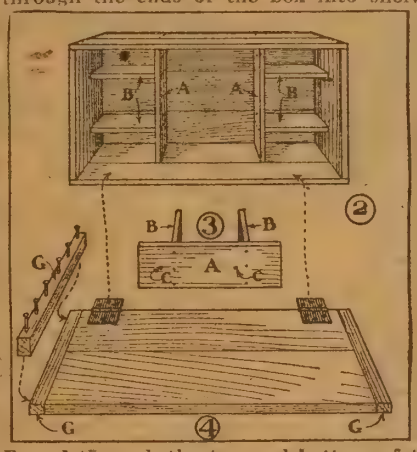
# Handicraft for Boys

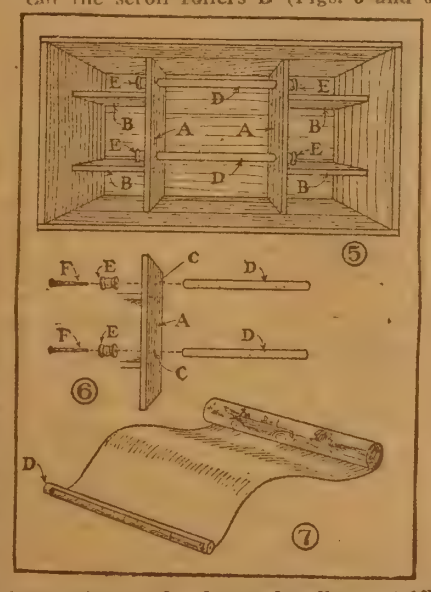
By A. NEELY HALL.
(Copyright by A. Neely Hall.)



### A HOME-MADE DESK.

Every boy can own a desk, because it is one of the simplest pieces of furniture to build. I have designed a great many desks for boys to make, but I believe that the one shown in Fig. 1 will be the most popular yet. You see, in addition to its being a first-class desk, with lots of pigeonholes for papers, envelopes and other things which boys always want to keep near at hand, a scroll is provided on which to paste pictures of animals, locomotives, aeroplanes, automobiles, battleships, and all sorts of interesting inventions. Unless you are different from most other boys, you like to draw pictures of all of these things, and with the scroll turned to the picture that you want to draw you will have all of the data you require directly before you.

This desk is made out of a small packing-case, or a grocery box. Select the best-looking box you can find. Get the cover boards, too, because you will need them for the hinged dropleaf. The first thing to do is to



reenforce the nailing of any boards which show signs of coming loose. Then prepare the pigeonhole partitions. Fig 2 shows the inside of the desk. Partitions A should be fastened seven inches each side of the center of the length of the box, or 14 inches apart and shelves B should be so spaced that there will be a small top and bottom pigeonhole and a larger one between. Holes C in partitions A (Fig. 3) are provided for the rollers of the scroll to turn in. Bore the upper one about three inches below the upper end of A, and place the lower one 10 inches or so below it. Nail partitions A to the end of shelves B; then stand these assembled pieces in the box, set a temporary brace between partitions A to hold them in the right position, and drive nails through the ends of the box into shelves

B, and through the top and bottom of the box into the ends of partitions A.

Cut the scroll rollers D (Figs. 5 and 6)

from pieces of broom-handle, a trifle shorter than the distance between the partitions A, and get four large spools, such as crochet-cotton comes on, for the end knobs E (Figs. 5 and 6). Rollers D turn on the nail pivots F (Fig. 6), which must be long enough to run through the spool knobs E, through holes C in partitions A, and half an inch into the ends of the rollers. The spools must fit tightly on the nails. Wrap nails F with paper, and then coat the paper with glue so the spools will stick fast.

A tough wrapping-paper should be used for the scroll. Perhaps you can find a store dealer who has a roll of paper from which you can get the length you want in one piece. Tack the ends of this paper to the scroll rollers (Fig. 7). Be careful to get the paper square on the rollers, so it will roll up evenly. The pictures should be put on before the scroll is pivoted in the desk. Cut out and paste these in place, or, if you can copy them exactly, draw them upon the scroll.

Fig. 4 shows how the box-cover boards are fastened together by means of the end battens G, and how the pair of hinges are placed for hinging this drop-leaf to the desk. To support the outer edge of the drop-leaf, when the desk is open, a pair of chains must be provided. Screw screw-eyes into the drop-leaf and the other side of the desk, to attach the chains to. A covering of oilcloth will give the drop-leaf a good writing surface.

Putty all joints and nail holes. Then a coat of stain or two coats of paint or white-enamel, will complete the desk.

# Flickering Light Injures Eyes

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Dr. Hirshberg.

If you would do justice to your eyes, you should shun glaring, dim and flickering light. Poor illumination of the printed page, writing, sewing or other work and employment of the eyes in twilight all contribute toward a severe strain of the eye muscles in their vain attempts to dilate the pupils to their widest degree.

Sharp, intense, bright or glaring light produces a contrary effect. The ocular muscles now try to shrink the pupil to its smallest point. This is intended by nature to exclude the cutting, radiating particles of light from the retina. Headaches, eye muscle exhaustion and tired, droopy, sleepy eyelids soon give warning.

Flickering light is produced by a combination of brightness and dimness. The delicate structures of the visual machinery alternately try to keep pace first with poor, then with intense, light. You call this a flicker, but the swift, fine perceptions of the eyes sense the automatic variations and suffer accordingly.

Obviously, all sorts of eye disturbances are the price you needs must pay if you use your eyes in any of these three varieties of light without some sort of corrective eyeglasses.

### Sacrifice for Appearance.

Eyeglasses ought to be worn by a great many beautiful women and handsome men too vain to try to ward off serious eye troubles. When so important a sense as eyesight is sacrificed for personal appearance you can understand the failure in life of the guilty persons.

Of the various kinds of eyeglass materials to be had you should pick out a glass which most clearly defines objects and removes all glare. Glasses that have a pale yellow green tinge are recommended as a means to diminish the glare of light.

The eye is most sensitive to the yellow green light in electric arc welding as well as in the manipulation of melted quartz. A smoky effect introduced, yet almost invisible, and certain tints of dark mica have been found very effective. They exclude the glares and absorb the heat rays.

### Reflections Are Bad, Too.

Finally, the reflection of vivid and flickering flashes from walls, floors and ceilings should be taboo. These damage the eyes as much as a flicker in the actual source of light.

Eyeglasses and goggles made with ordinary pebble or crystal clear quartz do not eliminate the glare and the ultra-violet rays of arc lamps. To protect your eyes these mild, pale tints or plain, clear glasses should be adopted.

# Washington Game Laws for 1918

**Open seasons:**

West of Cascades—

Deer (see exceptions), goat ..... Oct. 1-Nov. 1

Exceptions: Deer in Island and San Juan counties, Jan. 1, 1921; does in Skagit, Snohomish and Whatcom counties, no open season.

Bear ..... Sept. 1-May 1

Quail (see exception), ruffed grouse native pheasant, Chinese pheasant (see exception), blue grouse, ptarmigan ..... Oct. 1-Oct. 15

Exceptions: Quail, in Clallam, Clarke, Jefferson, San Juan, Skagit, Skamania, Snohomish and Whatcom, Oct. 1, 1919. Chinese pheasants, in Clallam, Kitsap and Skamania counties, no open season.

Duck, goose, brant, coot ..... Oct. 1-Jan. 15

Black-bellied and golden plovers, Wilson snipe or jacksnipe, yellowlegs ..... Oct. 1-Dec. 15

Rail ..... Oct. 1-Nov. 30

East of Cascades—

Deer (Kittitas county, Oct 15-Dec. 1) ..... Oct. 1-Nov. 15

Bear ..... Sept. 1-May 1

Goat ..... No open season

Ruffed grouse (native pheasant), blue grouse (see exception ..... Nov. 1-Nov. 15

Exceptions: In Asotin (in precincts of Clarkston, South Clarkston and West Clarkston, no open season), Garfield and Walla Walla. Aug. 15-Oct. 1. Ruffed grouse in Kittitas and Yakima counties, no open season. Blue grouse in Spokane county, Oct. 1, 1919.

Quail in counties of Asotin (in precincts of Clarkston, South Clarkston and West Clarkston, no open season) and Garfield ..... Oct. 1-Oct. 10

Prairie chicken in Stevens county ..... Sept. 15-Oct. 1

Sharp-tailed grouse in Ferry and Okanogan counties ..... Sept. 15-Nov. 1

Sage hen, Hungarian partridge, male Chinese pheasant in Kittitas county ..... Oct. 1-Oct. 10

Bobwhite quail in Spokane county ..... Oct. 1-Nov. 1

Hungarian partridge in Lincoln, Spokane and Stevens counties ..... Oct. 1-Nov. 15

Chinese pheasants in Benton, Stevens and Yakima counties Oct. 1-Oct. 15

Duck, goose, brant, coot ..... Sept. 16-Dec. 31

Black-bellied and golden plovers, Wilson snipe or jacksnipe, yellowlegs ..... Oct. 1-Dec. 15

Rail ..... Sept. 16-Nov. 30

**No open season:** Moose, elk (1925), fawns, caribou, mountain sheep, squirrels (gray, black, fox), quail, prairie chicken, sage hens, introduced birds (except as above), turkey and dove.

**Hunting and fishing licenses:** Nonresident: Hunting, $10; fishing, county, $2. Resident: State, $5; county, $1. Issued by county auditors.

No license required of honorably discharged Union soldiers of civil war to hunt or fish, or of women and persons under 16 to fish, if residents.

**Bag limits and possession:** One deer in counties east of Cascades. Two deer (one buck in Skagit, Snohomish and Whatcom), one goat in counties west of Cascades.

Five in all of partridge, grouse, prairie chickens, Hungarian partridge, Chinese or English pheasant a day or in possession; 10 quail a day; 10 upland birds, but in no event to exceed five if quail are included in bag, and 25 in all a week. In Kittitas county two male Chinese or English pheasants in bag of five upland birds; 20 ducks, geese, brant, golden plover, yellowlegs, Wilson snipe a week (week ends at midnight Saturday), but not more than eight geese, eight brant, 15 in all of plovers and yellowlegs a day; 30 ducks, geese, grant in possession. Possession during closed season permitted under permit, but migratory birds shall not be possessed longer than 10 days after close of open season.

**Sale:** Sale of all protected game prohibited.

**Export:** Export of all protected game prohibited.

**Washington:** No open season on waterfowl on Columbia or Snake rivers or within one-fourth mile of their shores in counties of Benton, Columbia, Douglas, Franklin, Garfield, Grant, Kittitas, Klickitat, Walla Walla, Whitman and Yakima.

# The Farm of Your Dreams

(Continued from page twenty.)

back of the spring, leading the water to a point from which, by means of ditches, the water could be divided about equally over three parts of the field, each part comprising about 100 acres. Dams of simple, but ingenious concrete and steel construction were installed to back up the water, and the arrangement of the dams is such that the amount of water they hold in storage can be increased or diminished at will. The plan is such as to put the water at the very place it is needed and waste none of it.

This year the field produced a rich crop of hay, and when I was there, 150 steers were grazing on the green forage that had come up after the hay-cutting.

This little feat in irrigation is only a small thing. One might pass it by without a thought. But it is one of the many little things on the Hercules farm, the sum of which in ideals of simplicity, economy, the practical and good service, have gone to build the ranch of your dreams.

## GOATS FOR WAR FOOD.

The Hawaiian island of Kahoolawe is to be devoted to lowering the cost of living if production of 10,000 goats for marketing will do it, says the Evening Wisconsin.

The Hawaiian board of agriculture and forestry authorized Chairman Rice to confer with the governor and land commissioner on a plan to withdraw the island from the forest reserve and offer it for lease. This has been done, and Chairman Rice has placed in the hands of Attorney General Smith the drawing up of the necessary papers.

Kahoolawe now produces goats and sand. It is believed that thousands of goats of marketable quality can be exported from the island, and a chance is to be given for some enterprising rancher to become the great goat king of the territory.

## FIGHTING TANKS.

A. F. Knobloch, vice president and works manager of the Cleveland Tractor company, Cleveland, Ohio, has been appointed assistant to L. J. Horowitz in the Ordnance department at Washington. In that capacity Mr. Knobloch will represent Mr. Horowitz in matters having to do with the practical, manufacturing and technical details in providing the fighting tanks required in Europe.

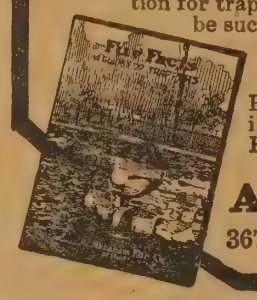
America's Leading Fur House

**Furs Are Worth Big Money**

Furs will be higher than they have ever been in the history of the fur business and the Abraham Fur Co. will again be the leaders in paying trappers more money for their furs than they can get from any other fur house in the World.

We were the only large fur house in the United States that made a gain in number of shipments received last year; all others showed a decline. Why? **Because trappers everywhere have found out that it pays and pays big to ship furs to Abraham Fur Co.**



*Anybody can tell you how high furs are but we will show you with real money. Send us furs you have on hand now.*

For many years we have made a specialty of handling early caught furs and we can pay you a better price for this class of furs than ever before.

We will pay you more than you can get at home—more than you can get from any other fur house and more than you expect yourself—that's going some, but **we are in a position to beat all price records for furs and we are going to do it.**

**Write For Our New Book Today**

—the most complete catalogue of trapper's supplies carried by any house in the United States—quality of goods guaranteed to be as represented and prices the lowest possible. Most valuable information for trappers ever published—will show beginners how to be successful on the trap-line, giving rules and methods for trapping that never fail, contains information for old timers that will surprise them.

Pictures of a Herd of Seals in beautiful colors illustrating how the seal lives in his native state. Free to anyone interested in fur business. Write today.

# Thirty Herds Testing

Professor Woodward, head of the dairy department of the Washington State college, reports that at present about 30 herds in the state are doing official or semi-official testing. The number of Jerseys on official test is larger than that of any other breed, with Ayrshires and Holsteins about equal.

Since Mr. Woodward has been with the college he has systematized official testing until it is now believed to be on a more nearly perfect system in Washington than in any other state in the union. H. M. Coleman, who for three years was superintendent of official cow testing work in Nebraska, came to the college in that capacity March 1, and to him Professor Woodward largely gives the credit for the excellent condition of the cow testing work in this state.

Up to July 31 there had been 1471 two-day tests of all cows; 91 seven-day tests, one 14-day test, one 21-day test, 30 30-day tests, four 60-day tests, one 90-day test, three 100-day tests. There were 20 retests to verify high production. The Waikiki herd has the largest number of Jerseys on test—63. The Clise and Van Tassel herds of Ayrshires and the Hollywood and Carnation Holsteins are the largest herds of those breeds doing official testing. Some months there have been as high as 40 herds on test.

Mr. Coleman says he was agreeably surprised at the number of small breeders doing official work, and feels that there is a great future for the dairy business of Washington. H. A.

**Anyway, He Appreciated It More.**

"My poor man," said the sympathetic prison visitor, "just think, if you hadn't gone wrong and broken the law you might now be enjoying the sunshine and the breeze of the great outdoors."

"Mebby so, mum," said the luckless yeggman. "But I gits three tollerbly square meals a day here, clothes to wear an' a place to sleep. That's more'n I got a lot of times when I wuz enjoyin' th' sunshine and the breeze of th' great outdoors."—Birmingham Age-Herald.

**They Never Heard of It.**

"What's wrong now? The district attorney is sending for books, the judge seems up in the air and the jurors down and out."

"A new point of law. The prisoner says he committed the crime under the irresistible influence of the cosmic urge."

**FARM SERVICE FLAG.**

Honorable David F. Houston, Secretary of Agriculture, Washington, D. C. Dear sir:—The "Washington Farmer," Spokane, Washington, together with the "Idaho Farmer" and the "Oregon Farmer," suggested some time ago a farm service flag intended to stimulate essential war-time activity in food production. It is now used to a considerable extent in the Pacific northwest.

I believe this to be a very appropriate and very useful emblem and one calculated to accomplish the object for which it was designed.

Yours truly,
E. A. BRYAN,
Commissioner of Education,
Boise, Idaho, Oct. 16, 1918.

**Get The Most Money For Your Raw FURS**

The money you get out of your furs depends upon the grading. When you ship us a No. 1 skin, you get paid for a No. 1, not for a No. 2. We absolutely guarantee to pay exactly the prices we quote. Positively no commission charged. We pay all express charges, and refund postage on mail shipments. We refer you to any bank in the U. S. as to our responsibility. Write for Price List.

# A CROOKED TRAIL—By Lewis B. Miller

Copyright by The Page Company, 1911.

A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.

**SYNOPSIS.**

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected. Startling adventures were in store for them, among the first of which was a night in a "haunted" house, the principal haunts being wild animals. The next day they found the stray ox, but suddenly a wall of water from a furious storm rushed down the river between them and the animal.

## CHAPTER IX.

### Water-Bound on the Cowhouse.

N swept the wall of water, resistlessly, raging in its might and fury. We watched it with fascinated eyes. Soon it had rolled by, and not long afterwards it disappeared around a bend below. Behind it the river was a mad torrent.

"I'd heard of walls of water before, but that's the first one I ever got a glimpse of!" cried Frank. "I wouldn't have missed it for a ten-dollar gold-piece! A regular water-spout must have turned loose somewhere above here last night."

"Well, we're completely cut off from our cattle."

"That's just what we are," he replied. We stood gazing across the dark, angry river toward where the three objects of our search had stopped in the shade of a big tree and were unconcernedly chewing their cuds. "So near, and yet so far! Isn't it tantalizing?" he exclaimed.

"Tantalizing's no name for it, Frank. Why did we gab so long with that bearded fellow? Five minutes sooner we could have forded this stream easily. Now the only way to cross is to swim."

"Excuse me from swimming that river today, if you please."

Dismounting and hitching our horses to bushes, we walked down the road to the water's edge. The river, we soon discovered, was rising very fast—a foot every four or five minutes. Vast quantities of driftwood kept floating by, bobbing up and down furiously. Brush, logs, trees, rails, cornstalks and similar objects half hid the troubled bosom of the stream. Evidently the valleys and valley-farms above were already flood-swept. Several wash-tubs went hurrying by, as if running away guiltily from their accustomed drudgery.

So fast did the water climb that it kept us retreating up the bank before it. An army of lizards, spiders and other creeping things, routed from under stones by the advancing flood, were also making a panic-stricken, disordered march up hill.

"Rise fast, fall fast. Soon up, soon down," observed Frank.

"But it won't be fordable before morning," I told him. "And no telling how many miles more old Lep and your yearlings will put behind them by that time."

"Can't be helped, Travis. No ferry-boats along here, I guess, and they wouldn't dare run if there were any. So there's no chance to get across till this big rise runs out. We might as well go into camp and possess our souls in patience."

"Just watch Lep looking across at us," said I, a little later. "I half believe he's laughing to himself over the shabby trick the river played us."

"Waitin' to get across, are you, boys?"

We turned quickly. A man was standing on the bank above.

"Yes. And we seem likely to have a long wait of it," I answered, grumblingly.

"Where you bound for?" the man wanted to know.

"We're bound to catch those three cattle over yonder, as soon as the river gives us permission," Frank replied.

The settler came down, and we three stood together discussing the flood. He lived half a mile above.

"Well, boys, let's go to the house," he soon invited hospitably. "You're not likely to get over today, and maybe not tomorrow. Come up and stay with us."

"Much obliged to you, sir," replied Frank, "but I think we'd better camp here somewhere. We want to keep an eye on those cattle over yonder."

Lep and his followers were lying down now, in the shade. From time to time the spotted fellow would turn his head and gaze across at us with mild curiosity.

"Won't do a bit of good to watch 'em," the settler answered. "If they want to pick up and mosey on, you can't help yourselves."

"No, that's what hurts," I admitted, in an irritated tone. "If we just had that old spotted rascal tied to a tree over there, we wouldn't mind waiting."

"The settler looked thoughtful. "Tell you how we can work that," he said, presently. "See that house on the hill yonder? Jim Edwards lives there. He's got a calf-pasture of 10 or 15 acres. If we can catch sight of 'im, we'll motion 'im down; and then if we can once make 'im understand, he'll look after your cattle for you. Clever fellow, Jim is."

That seemed an easy solution of the difficulty, and we gladly walked down with Anderson—that proved to be our settler's name—till we were opposite the house. It stood two or three hundred yards back from the river. But, as it happened, both Edwards and his wife were on the farther bank, viewing the fast-swelling flood.

The river was still roaring loudly, and not till the three of us had nearly torn our throats shouting did we succeed in making the people on the other bank understand what was wanted. But when once the man did understand, he readily agreed to hold our cattle in his pasture till we could cross over and get them.

As we three walked back toward the road, Edwards walked up the south bank to where the cattle were lying. Driving them up, he started off with them and we watched till they had all disappeared among the thick timber of the bottom-land.

"Thank goodness, we've got them safe at last!" I exclaimed. "Now we can rest easy till the river runs down."

Frank and I proposed to camp near the road; but Anderson insisted that we at least go up close to his house to camp.

"I see another cloud getherin' up t'wards the head of the river. If it keeps on rainin' up there, you may have to hang around here several days."

So, leading our horses, we walked up with him. But we stopped under a big live-oak on the river-bank. Here we established our camp, where we could keep watch over the stream's rising and falling. Anderson invited us to the house, which was very close by; and when we declined with thanks, he urged us to take our meals there. We assured him that we still had plenty to eat, but he made us promise to come over for supper.

I was on the point of asking him if he could lend us some fish-hooks to while away the time with, when he remarked:

"I've got to go to grubbin' myself. Got half a dozen big live-oak thickets up yonder above the field to dig out, and this wet weather is the best time to do it. Want to put in several acres of new ground by spring. I've been tryin' to hire help. I've set three or four men to work, but they don't stick more than a day or two. Grubbin' is the hardest work in the world, I guess; and rootin' up live-oaks is the hardest kind of grubbin'."

This interested me. Idleness was something I was little accustomed to. And, incited by my empty pockets, I was especially eager to earn some money for traveling expenses.

"Here's a boy that won't shy off from live-oaks," I told him. "I've been clearing ground, off and on, for about a year, and I'm up to the work. What will you pay me to grub for you while we wait?"

"All depends on what you can do. If you can clear as

"How long have they been gone?" I yelled.

much land as I can, I'll give you a dollar a day and board. Of if you'd like to grub by the job, I'll give you so much for a thicket, accordin' to its size."

"Frank, you can look after our camp, can't you? I left home without a cent; and I didn't have any money there to speak of. I'd like to earn a little while we're water-bound here."

"Wouldn't mind turning an honest dollar myself," replied Frank. "I'll go up with you."

After unsaddling our horses, and lariating them out on the grass, we hung all our things on live-oak limbs, out of reach of the hogs running about. Then we went out to the house, where Anderson armed us with a mattock apiece.

The land to be cleared was a prairie valley, spotted over with big live-oak thickets.

"I'll give $5 to have that one grubbed out," the settler remarked, on coming to the first thicket.

"Show us something smaller," I said. "Put us on one that we can clean out by noon tomorrow."

"Why not pitch into this, Travis?" spoke up Frank. "It won't take us a great while to finish it."

"But our cattle—what can we do with them while we're working?"

"You can cross over in the mornin' and get 'em, and keep 'em in my pen," suggested Anderson. "I ain't got any pasture fenced, but there's planty of cotton-seed and green corn you're welcome to feed 'em."

"That's good enough!" I assured him. "Now to work!"

We were soon swinging our mattocks; and slowly, very slowly, the live-oak bushes went down before them. The hail-storm, though miles from here, had cooled the air, but before long our faces were wet and dripping. All the rest of the day we stuck to our hard task.

By noon the river had risen 25 or 30 feet. It was flooding all the bottom-land on the other side, and the lower part of the valley we were at work in. But not long afterwards it began to run down, dropping more slowly, however, than it had come up. Just at nightfall, when Frank and I walked down to the road to examine it, there seemed good reason to believe that it would be fordable by morning. But a black cloud was piled up in the northwest, and all night long the electric fires flashed and flamed in it. And when morning dawned we were not greatly surprised to find the water higher than on the night before. And it kept crawling up.

So Frank and I went on with our grubbing. We took our meals at Anderson's, and worked early and late and hard. By the second night we had finished our thicket; and very promptly we received our money.

"Now guess I won't have to beg stamps and postal cards when I want to write home," I remarked, as I pocketed my two dollars and a half, and felt much better for having it.

The weather was fine here, but up the river rain kept falling daily, and one flood followed close on another's heels. One night, I am pretty sure, the water fell low enough for deep fording. But by morning it was booming again.

Once we went down to the point opposite Edward's house, and beckoning him to the river, we inquired about our cattle. He shouted back that they were still in the pasture, with an abundance of water and grass, and that they could stay there a month or two longer, if necessary. Then we returned to our work.

Having finished our first thicket, we spent half a day fishing, then started in on another and larger thicket. This was a longer job, but it paid us a dollar apiece more than the first one.

During this time we had written letters home and sent them to the nearest postoffice by one of Anderson's neighbors. In them we explained that we had overtaken our cattle and had them safely fenced in; and that we expected to start home just as soon as the high water would let us cross over and get them.

After finishing our second thicket, we tried fishing again, then came back and took a contract to grub up a third thicket. We had now been here a whole week, and still the river was too deep to ford. But as we were making fair wages, and had no anxiety about our cattle, that did not worry us greatly.

One night, however, we went to the house to find some news awaiting us.

Anderson's little boy, who had been down the river fishing, came running home to tell his father that Edwards had shouted something across to him. All that the little fellow could understand was the word "cattle."

"Boys, that must be something about your big steer and the two yearlings," Anderson said, turning to Frank and me.

We both agreed with him; and soon we were all hurrying down to see if we could get in communication with Edwards. For some reason a strange misgiving kept tugging at my heart. Edwards was still on the river-bank, and we quickly learned what he had to tell us.

Our cattle, he shouted across, were out of the pasture and gone. He tried to explain how they came to escape, but that we failed to understand. However, it made little difference.

"How long have they been gone?" I yelled.

"Since night before last," came back, rather faintly.

I was thoroughly angry at Lep. "The tricky old scoundrel! Can we never get hold of him?" I exclaimed, hotly.

"He seems pretty hard to put your fingers on," observed Frank, rather glumly for him.

"That settles it!" I declared, as the three of us walked back through the gathering dusk toward Anderson's. "No more hanging around here for me! I've got to get across this river first thing tomorrow morning."

"But how can we cross, Travis?" protested Frank. "The river is as high as ever, and as dangerous as ever. I don't see anything to do but cultivate patience and wait."

"Wait!" I exclaimed, impatiently. "Frank, if that old longhorn had your hopes of getting an education tied to his tail, as he has mine, and a lot of other things with it, the very word wait would drive you frantic. No, we've waited too long already. I've got to cross somehow, and strike out on that old rascal's trail, if I have to swim over and then foot it. Once let him get another long start of me, and I might as well sing, 'Good-by, Lep!'"

(To be continued.)

# SIDELIGHTS

### She Knew Her Husband.

Master—And so you're the new maid. Has my wife told you your principal duty here?

Good-looking Maid—Yes; I am always to keep out of your way.

### He Got the Oyster.

Bill—I was down to the oyster supper at the church last night.

Gill—That's nice.

Bill—And I found two pearls in the oyster stew.

Gill—No! Really? I didn't know they ever found but one pearl in an oyster.

### Absolute Obedience.

When Elsie came home from a neighbor's house munching a chocolate, her mother said reprovingly.

"Now, Elsie, how many times have I told you not to ask Mrs. Gray for chocolates?"

"I did exactly what you told me to do, mother. I didn't ask her," replied Elsie. "I know where she keeps them."—Ladies' Home Journal.

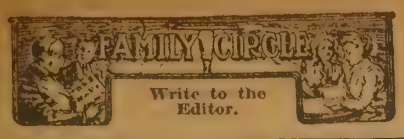
### Of Course.

"Come on" said the first flea as he hopped from the brown bear's left foreleg, "come over and join me in a short game of golf."

"Golf!" exclaimed the second flea, hastily taking a bite of hyena. "Where in the realm of Barnum are we going to play golf?"

"Why," said the first flea, "over on the lynx, of course."

### A Canny Scot.



Sandy and John were sitting in a car when a pretty girl got in and smiled at the former. He raised his hat.

"Do you know her?" asked the Englishman.

"Oh, yes, very weel," the Scot replied.

"Well, shall we go and sit over beside her, and then you can introduce me?" asked his companion.

"Wait a bit," returned the canny Scot. "She hasna paid her fare yet."—Pittsburg Chronicle-Telegraph.

ALICE W. BARLAND, Editorial Contributor.

# Doughnuts and Duty

By CHARLES DILLON.

Farm mothers in every part of America will smile over this pen picture: A soldier stands at the door of a hut behind the lines in France. A girl in the service uniform of the Salvation Army—lassies, they are called—is rolling out dough for pies. He saw the appetizing fabric placed in the tins and slid into the waiting ovens. He was big, ruddy-cheeked, husky son of America, a product of the farmland, with a clear brain, a clean mind and a mighty well-regulated stomach. As he watched the girl at the dough board his thoughts went back to his home, and that, of course, meant to mother. "Fine pies," said the boy, with a catch in his throat. "They make one think of home. Wish I was home today."

But the girl was doing more than make pies. She was making doughnuts—which is a very important job at the front—and every time she handed one to the farmer's son or to any other soldier of the allies she was taking the mothers' kitchen and the heart of home itself right into the trenches. She was keeping alive the love of home and the longing for it, and when a chap's heart is filled that way—remembering mother—why, war can't brutalize him. He may be homesick, but he'll be gentle.

Not so trivial as you might suppose—this scene in the kitchen in France. Millions of men on the battlefield and training for it are fighting homesickness with as much zeal as they are fighting the Hun. It is largely to save the waste of fighting strength by abolishing homesickness that the Y. M. C. A., the National Catholic War council, the Jewish Welfare board and the Salvation Army are all taking home atmosphere along with the men of the army and navy going to training camps and overseas; the first object of the American Library association, which has already collected 3,000,000 books, is not so much the education of the boys as it is to give them something that will occupy their leisure hours and help them forget for a time the errand on which they have left home. The war camp community service gives its entire attention to just this issue while the boys are training in this country.

It does seem far-fetched, especially for a civil war veteran, to be talking about doughnuts and books and comforts of many kinds. But the great leaders of men, generals who know a lot about such things, say the war would be lost without them. We are not "winning the war" with doughnuts and basket ball and moving pictures. We are creating, with these things, the mental state, the morale without which the armies would fail. Help us to get the money—$170,500,000—to keep up the work here and overseas. Help the united war work campaign in its great job of keeping your boys clean and satisfied and ready for the home-coming day.

# Learn to Be Happy

By Ida C. Young.

No person can be said to be truly successful if he has not achieved great and lasting happiness for himself. For the key to happiness is in the hands of every responsible individual, and he who has not learned to use it in the opening of doors that lead to greater and greater joys must asknowledge himself at least partially defeated.

Perhaps it is because it is so easy, this principle that never fails to work, that people continually pass it by and strain and struggle against adverse and foreign forces that keep them beaten back and discouraged. For it is only the simple and easy matter of learning to pray in the right way—learning the lesson of service, the giving freely and gladly of the very best that is in us to every known duty nearest at hand. It may be only the baking of a modest pan of cornbread, or the mending of worn garments, the digging of ditches or hoeing of corn. It may be any and all of the endless round of recurring duties that make up life's plan. There is no person living whose work does not touch others, and just so far as the worker adds to the actual improvement of his work and of those whom his work touches, so far has he advanced upon the way of real happiness.

Then if he has learned to pray so that his prayers are answered he will know for a certainty that no man nor company of men, no government nor system can in any way lessen his comfort and well-being. He may make some miscalculations to begin with, and pray for something he really does not want, but one learns with practice and as the habit of prayer grows and man gets nearer and nearer to the divine spirit the things prayed for approach continually nearer to the ideals of perfection.

Humanity has so long looked upon this life as a vale of tears and a bloody battle that it takes considerable reconstruction to change the viewpoint of the average person and enable him to incorporate into his plan of life this principle that was lost when humanity was young. However, there are among us today continually increasing numbers of those who are succeeding in putting into actual practice this marvelous thing. Humanity is slow to learn, and it has taken all the time from the day of Christ for this wisdom to become an assured fact, but from now on people are going to learn faster and faster; for more and more man is learning that his brother can not save him from danger, his father can not save him, nor his mother nor his sister. Even the powers of his own government are futile. Only at his own hands as he observes the power of prayer, faith and service can man ultimately achieve perfect peace, health, prosperity and happiness.

Then let us be happy; even though at times it may seem as if apparent calamity sweeps the whole sum and substance of our earthly happiness out of existence we surely know that somewhere in the wreckage is a stepping-stone to higher and better joys than we ever knew before.

## THE CHILDREN'S REST HOUR.

By Elizabeth Quaker.

In these strenuous days of junior Red Cross duties and school work the older children need and should have a daily period of relaxation.

They are being trained in mind concentration; parents should see that they learn to rest as well, lest the weak nerve-organization be overtaxed.

This relaxing, or "letting up" may be accomplished in any of several ways. For instance, a change of occupation. Here is where the country children score one over the city youth. What's better to relieve the nervous tension of school than the chores awaiting them when they get home? Cows to bring from the pasture, eggs to gather, anything that affords light exercise in the fresh air.

Outdoor games, just as long as the weather permits, should be encouraged. Let the older girls join these games, better a tomboy than a lady-like invalid.

When the weather is damp and days grow too short to allow time for outdoor games, this relaxation may be taken in form of indoor games, light reading or pictures and music, instrumental or vocal.

With the playing of games often comes the request for "something new." I am prepared for this. When in my reading I find the description of a game or contest with directions for playing, I clip it out and place in a large envelope kept for that purpose. When a new game is desired I simply refer to my envelope.

I keep all the simpler handicraft for boys and girls which I find described in my different magazines in another large envelope. These are very handy on rainy days or for convalescents.

A well-established children's hour in which the whole family joined would leave less demand for nerve and insomnia cures among the old folks.

**Soothe Your Itching Skin With Cuticura**

All druggists. Soap 25, Ointment 25 & 50, Talcum 25. Sample each free of "Cuticura, Dept. X, Boston."

**A Good Piano Is Not Necessarily An Expensive One**

Of course we feel that the finest piano is the **STEINWAY**, but the prices for Steinways, while thoroughly consistent with their high quality, are generally beyond the means of many homes.

For this very reason we have devoted much attention to a group of medium grade pianos—really famous makes—products of old established firms—pianos for which we have been the selling agents for years. In offering such pianos as **A. B. CHASE, KRAKAUER, ESTEY, KURTZMANN, EMERSON, and STROUD**, we can heartily recommend them as ideal for the home or school. The prices of these pianos are within the reach of nearly everybody. Then we carry the **ALDRICH** at a lower price—a good, dependable piano which will give excellent service.

Then again we have on our floors at all times many "used" Pianos (good, reliable makes) which we have taken in part payment for Steinways and Pianolas. These have gone through our shops and have been put in first-class condition—and carry our guarantee. We advise a customer to buy a good "used" piano rather than the cheap new ones offered by some dealers—the prices are the same but not the quality.

Whatever your purpose or your need, we will serve you to our best ability so that the transaction will be to our mutual and lasting satisfaction. We gladly arrange convenient payment terms.

**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**

*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.*

**Sherman, Clay & Co.**

Sixth and Morrison Streets, Portland.
Third Avenue at Pine Street, Seattle

808-10 Sprague Avenue, Spokane
Stores also at San Francisco, Oakland, Sacramento, Stockton, Fresno, San Jose, Vallejo.

**PERFECTION OIL HEATER**

**What 15c will bring You from the Nation's Capital**

*Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.*

The matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 26th year. This paper fills the bill without emptying the purse; it costs but $1a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.

**The Pathfinder, Box 89, Washington, D. C.**

# PATTERNS

Waist 2511—Skirt 2510. Lady's costume. Waist 2511 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2510 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 8 yards of 36-inch material for the entire dress for a 38-inch size. The skirt measures 2 yards at the lower edge. Two separate patterns, 10 cents for each pattern.

2342—Girl's dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 8 requires 4 yards of 36-inch material. Price, 10 cents.

**Only Girl City Controller.**

The only girl city controller in the country is Miss Bessie Townsend, who has successfully filled the office in Atlantic City through three administrations.

# Sweets From Orchard

**Apples cooked in cider**—For a dish that needs neither sugar nor spice, try apples or pears cooked until clear in boiled sweet cider. Serve hot in large portions with meat.

**Apples and raisins**—Simmer raisins in the water in which they were soaked overnight; add quartered apples and simmer together until done.

**Apples and bananas**—Quarter fruit and place in a baking pan; dot each layer with butter and chopped nuts; bake in a quick oven, basting frequently with a sauce made of a half-cup of water, a tablespoon of white syrup and a little lemon juice.

**Baked pears**—On baking days, try baked pears. Place pears in deep baking dish; cover closely and bake slowly until pears are a deep red.

**Steamed pears**—Steam pears until tender with a little water and a tablespoon of white syrup.

**Too Much Economy.**

Economy can be carried too far, but not very often.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

One of our cousings lives by the beautiful Palmer lake, and she wishes the other cousins could be there to fish, bathe and boat ride with her. She is Edna Hodges, of Loomis, and she loves to read all the little letters. Her birthday is July 14. Edna loves to go to school. For playthings she has two dolls, a nice set of dishes and cooking sets. She has lots of tea parties. Some dear little orioles have built a nest in a tree in their yard, and Edna and her brother watch them feed their little ones.

A swimming pond in the creek near the back door makes lots of fun for Malvina Bonner of Rockford. Malvina lives in a log house and goes to the Lone Pine school. Guess what she has for pets. Three dear little chipmunks.

Velma Johnson of Box 93, Dixie, was 12 years old July 3. She wants a twin. Velma likes the Corner letters, and she belongs to the Red Cross.

Laura O'Shaughnessy of Hunters was 13 years old last March 10, and is in the sixth grade. Laura gets the Farmer and loves to read the letters. She lives on a 160-acre farm, and has five brothers.

Esther Jensen, who lives on a 280-acre farm near Kittitas, was 13 years old December 30. She has one war savings stamp and six thrift stamps. She joined the Junior Red Cross and made two handkerchiefs for the hospital. Pussy, the cat; Teddy, the kitten, and Shep, the dog, are her pets. She planted a garden of popcorn, cabbages and cucumbers this summer. Esther is going to write again.

A Junior Red Cross member, Meldon Belknap, of Farmington, lives on a 160-acre farm. He was 10 years old July 21, and is in the sixth grade. He has two brothers and two sisters.

Little Lucille Feenan of Colfax is 7 years old. She has a sister. On their farm they have 50 little ducks, 95 chickens, a little cat, 102 hogs, some guineas and a pony.

Yellowed-haired, blue-eyed Orleana Easterling of Winthrope goes to Bear Creek school, and is 12 years old. She has four sisters and one brother. The week before she wrote to us she spent in hoeing the garden.

"Brother is in the quartermaster's corps of the army," writes Anna Chambers of Sunnyside. Anna was 10 years old February 5. Her father has a car. When Anna wrote to us her brother and mother were visiting in Nebraska. Anna likes to live on a farm. This summer she weeded beets and earned $3.75, with which she will buy thrift stamps.

A cousin, whose home is near Mead, and whose last name is Chalenor, writes to us. He or she is 7 years old, and is in the third grade, has two dogs, two pigs, one cow, three cats and lots of chickens.

"Brother Joe is at Camp Lewis," writes Lillian Litzenberger of Colfax, a Junior Red Cross member. Lillian has three war savings stamps and two thrift stamps. She was 12 years old March 14.

One reason why Stella Lambert is so anxious to buy war savings stamps to help lick the kaiser is that she has two brothers in the navy. Stella lives at Waverly, and will be 15 years old December 31, the last day in this year. Frances Lambert is almost her twin, and Stella wishes she would write to her.

"Cecil Barnett is almost my twin, there is just five days difference in our ages," writes Elsie Butts of Benge, who will be 12 years old November 18. She would like for her twin or some one else to write to her. She has one sister named Velma.

This cousin has a lucky birthday because she has had letters from three Corner girls, two of whom were one day younger than she is and the other one the same age, and then she found another twin when looking over the Corner. Elizabeth Green of R. F. D. 3, Odessa, was 14 years old March 8. She has seven thrift stamps, and is going to save all the money she can to get more. Lake creek runs through their farm, and so they call their place Lake Creek farm. Elizabeth is going to high school this term in Spokane.

Alice Graham of Rocklyn went on a vacation to see her sister 10 miles from Tekoa. Alice has some paper dolls and a real doll. The sister she visited has two kittens, one dog, one calf, three cows and a lot of horses. Alice goes after the cows.

A 200-acre ranch four miles from Curlew is the home of Ethel Copp, who will be 11 years old November 20. Ethel and her brother go to a white school with a green roof. One of Ethel's sisters is in high school, one is a teacher and another is studying to be a teacher.

Mary Alice Brooks of Cowiche would rather live on a farm than in town. Mary was 11 August 16, and she wishes her twin to write to her. There are about 200 pupils going to her school. Her chum is Helen Mehl. Mary is going to write again.

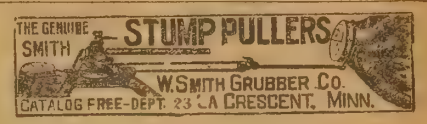
"My brothers caught two chipmunks which they call Skinny and Midget," writes Bertha Keck of Elk, who was 11 years old January 8. Bertha rides six miles to school in a wagon. She thought The Trappers of the Ozarks was a fine story.

Tessie Duffy of Midvale says her papa has been taking the Farmer for four or five years. They used to have three cows, Topsy, Boss and Dairy. They sold Boss, and Topsy got killed on the railroad track. Tessie rides Jim, a horse, to school in the winter. She helps mamma sew for the Red Cross, and she owns a $5 war stamp.

### Vacation on the Farm.

Dear Aunt Nellie: I hope the cousins and yourself have not forgotten me. I live in Spokane, but I came to stay with my aunt and uncle for the summer. They have seven boys. One boy, the biggest, is to go to a city to be examined to see if he is all right to go to serve Uncle Sam. My aunt has two girls, too. I am 10 years old. My birthday is June 25. I am in the five B grade at school. I go to the Hamilton school in Spokane. Have I a twin? I will tell about the farm now. The children have one dog, named Jack. There are three little pigs and three big hogs. There are 11 horses. There are three colts. There are three cows. The calf's name is Tom Thumb. The others are so small they are not named yet. There are 80 big chickens and 20 little chickens. There are 10 ducks and 10 geese.—Melba Hughes, R. F. D. 1, Wilbur, Wash.

### War Garden All Her Own.



Dear Aunt Nellie: This is the first time I have written to the Corner. My birthday is November 27. Have I a twin? If so, will they please write to me? I have for pets a bird, a black chicken and a kitten. I am learning to tat. I have a war garden, all my own. —Edna Colyar, Box 24, Tyler, Wash.

During the last week Aunt Nellie has received letters from the following cousins: Laura Sandbring, Zelda Northcutt, Minola Stoller, Agnes Stoller, Edna Stoller, Irene Benner, Lillian Wendland, Lily Cromar, Frances Cromar, Lorena Bullack, Leila Bullack, Leona Dartt, Marie Newmann, Myrtle Golladay, Nellie Neel, Almeda Green, Virgil Smith, Gala Peed, Lela Detling, Lena Wietz, Ella Payton, Mary Davis, Evelyn Haworth, Mildred Range, Dorsey Shore, Gertrude Hough, June Campbell, George Farmer, Annie Croghan, Nancy Moore, Aubrey Le Plant, Dorothy Krug, Helena Reinbold, Melvin Hadford, Jerome Gottwals.

Don't Let Your Stock Lose their Summer's gain through November neglect

Your animals are now going on dry feed—hay and grain. It's a big change from the succulent, nutritious grasses of summer pastures which supply the needed laxatives and tonics.

Keep your animals' bowels open and regular—drive out the worms—keep their blood rich—keep their digestive apparatus in order—by feeding Dr. Hess Stock Tonic.

A Conditioner and Worm Expeller

Don't allow your stock to "get off feed" and in a rundown condition. Dr. Hess Stock Tonic eliminates waste and gives appetite, good health and good digestion. It enables animals to get the most benefit out of their feed.

Buy Stock Tonic according to the size of your herd. *Here's a suggestion for your guidance:* Get from your dealer 2 pounds for each average hog, 5 pounds for each horse, cow or steer, to start with, feed as directed and then watch results.

Why Pay the Peddler Twice My Price?

You buy Dr. Hess Stock Tonic at an honest price from a responsible dealer in your own town who guarantees it, and who refunds your money if it does not do as claimed.

25-lb. Pail, $2.50 100-lb. Drum, $8.00
*Smaller packages in proportion*

# News for Breeders

The Oregon Pure Bred Live Stock association has adopted a resolution calling upon other live stock organizations to join with it in sending a delegation to Washington to work with the railroad administration for a reduced shipping rate on purebred breeding stock. The association urges similar action and cooperation on the part of the like organizations of Washington and Idaho.

The American Shorthorn Breeders' association, Chicago, desires to make a complete list of all local, county, district, state and interstate Shorthorn associations, and asks that such associations report to Secretary F. W. Harding the name of the association and the name, also, of the secretary. It is desired to have this information in hand as early as possible, and a prompt response will be appreciated.

The influenza has resulted in the postponement of many live stock sales throughout the northwest, thereby working an additional hardship on the stockmen who have announced dates and advertised their sales. All prospective buyers should watch carefully for the announcement of the new dates. This paper will gladly make announcement of such new dates if those holding the sales will send them in.

### BREEDERS FEEL ENCOURAGED.

Two years ago a carload, or about 30 head, of registered Jerseys was brought into the Colville valley, in Stevens county, Washington. About the same time a Jersey association was formed, with Harvey Skeels president and George Lewis secretary. Mr. Skeels reports that there are now about fifty purebred Jerseys and that breeders generally feel encouraged, in spite of two bad seasons.

### READY FOR SHORTHORN SALE.

By Frank Brown, Carlton, Ore.

The Shorthorn sale to be held during the Pacific International Stock show at Portland should attract the attention of every breeder and lover of the noble red, white and roans. They are the cattle that make good in every state of the Union, and they are the breed that is profitable for either the big or the small farmer, while the demand from the range man for Shorthorn bulls can not be supplied.

The consignments this year are from the leading breeders of Oregon, Washington and Idaho and will compare favorably with the best that has been sold in former sales.

At the 1917 Shorthorn sale there were cattle good enough to attract the attention of some of the best eastern breeders, and they were purchased by them at top prices; it is pleasing to note that some of these cattle that went east have been on the show circuit at the leading shows and have been well up in the winnings at every show. This class of cattle should be more appreciated by the breeders of the northwest, and they can be purchased more reasonably here than in the east.

We are offering at this sale a very select lot of breeding cows and young heifers, and they are sired by bulls that took lots of money to bring them west. Some high class bulls are consigned; they have individual merit and breeding combined and should prove high class sires.

Catalogs will be mailed on request by writing Frank Brown, sales manager, Carlton, Ore.

### KEEPS ON WINNING.

Topsy 4th, the Shorthorn heifer for which Day & Rothrock received $1775 at the Pacific International sale at North Portland last winter, has had a successful season of show winning again this year. It will be remembered that Topsy, as a senior yearling, was junior and grand champion at all the fall fairs and at the Lewiston and Portland shows. That she has kept up in good form for another season and is still a great show animal is proved by the fact that in the Indiana, Illinois, Ohio and Kentucky State fairs, she stood fourth at each, in strong competition, and closed the season at the Tennessee fair by winning first in class, senior and grand championship.

The pride of northwest Shorthorn men lies in the fact that Topsy 4th is strictly a northwest product. She was sired by a bull of W. O. Minor, breeding out of a cow of Alex Chalmers breeding, and was dropped on the breeding farm of Day & Rothrock, where she was developed by that prince of herdsmen, Jack Napier. H. A.

### SALE DATES ANNOUNCED.

The new dates for the Shorthorn and Hereford sales at the Lewiston show have been announced as follows: Shorthorns, December 2; Herefords, December 3.

## Get Guernseys

If you want to increase your dairy profits you need to know about the cows whose average production, under test supervised by state agricultural colleges, is three times as great as the average of all dairy cows in the United States. Ask for "The Story of the Guernsey."

# 60 Head Aberdeen Angus

PRINCE ADAM.

Bulls, calves and cows—fine, young stock, all of them, sired by Prince Adam, grandson of the great Prince Ito, famous $9100 bull who, before this year brought the highest price ever paid for a bull of the Angus breed. All cows sold will be rebred to this magnificent sire, Prince Adam.

## 15 HEAD PERCHERON HORSES

will also be offered at this sale—imported and American bred—and all registered with the Percheron Society of America. Every animal a fine, classy, outstanding individual.

## *Date of Sale — November 15, 1918*

TO BE HELD AT

# OHRMANDALE RANCH

**VON HEIM FARM**

KENT, WASH.

HOME of HIGH-TESTING HEALTHY HOLSTEINS

## The Hollywood Farm Offers Four Registered Holstein Bulls

Ready for Service. Well Marked.
Bred for Production. Straight on Top.

Their dams have official records of 28.19 lbs. 20.88 at 2 years old, 21.53 lbs., 17.49 lbs. at 3 years old.

The average of the official records of their 4 nearest dams is:

Bull No. 809, 7 days milk, 494.6 lbs., butter, 27.59 lbs.; average test, 4.5% B. F.
Bull No. 805, 7 days milk, 520.0 lbs., butter, 27.77 lbs; average test, 4.3% B. F.
Bull No. 801, 7 days milk, 502.6 lbs. butter, 26.62 lbs.; average test 4.2% B. F.
Bull No. 782, 7 days milk, 549.3 lbs., butter, 28.27 lbs.; average test 4.2% B. F.

To make room for our increase, these bulls are priced to sell. Consider the high feed prices and raise only high producing stock.

HOLLYWOOD, WASH. Near Seattle. HOLLYWOOD FARM.

### A Rare Chance to Head Your Holstein Herd

We still have for sale five prize-winning purebred males, ranging in age from eight to eighteen months. Weight six hundred to one thousand lbs. Pedigrees furnished on application. Address

THE INTERMOUNTAIN INSTITUTE
Weiser, Idaho.

### 365 DAY HOLSTEINS

breeder of registered Shorthorn cattle, Hampshire sheep and big type Poland China hogs.

Filer, Idaho.

REGISTERED SHORTHORN COWS.

Young bulls and heifers, sired by Scotch bulls; liberal terms.

CALDWELL CATTLE CO., Caldwell, Idaho.

# Grain and Produce Markets

## Grain Market.

CHICAGO, Nov. 2.—Corn averaged lower today, chiefly as a result of the bearish character of war developments. The market closed unsettled at 7-8c net decline to 3-8c advance, with December $1.13 to $1.13 1-4 and January $1.14 1-4 to $1.14 1-2. Oats gained 1-8c to 3-8c, and provisions finished unchanged to 20c off.

Lack of support except from shorts formed the principal feature of the corn market throughout the session. Bears derived advantage from the fact that the movement of the new crop was increasing and that liberal arrivals were looked for next week. Weather conditions were regarded as favorable for curing and handling the grain.

Government bidding put strength into oats.

Provisions sagged a little with corn and hogs. Western receipts of hogs for the week were considerably larger than a year ago, but so, too, were shipments of lard and meats.

**Cash Quotations.**

CHICAGO, Nov. 2.—Corn—No. 2 yellow, $1.40; No. 3 yellow, $1.28@1.35; No. 4 yellow, $1.21@1.25. Oats—No. 3 white, 67@68 1-4c; standard, 68@79c. Rye—No. 2, $1.62. Barley, 80c@$1. Timothy, $7@10. Clover, nominal. Pork, nominal. Lard, $26.20@26.30. Ribs, $23@24.

| Year ago ..... | 127 | 1 | 152 | 12 |
| Two years ago.... | 27 | 4 | 66 | 1 |

Quite a heavy run of cattle in the yards for Saturday. The market opened fairly active, closing at noon about steady. The steer offerings graded fair to good, the best selling at $10 and a few small lots of medium killers at $9 to $9.50. The stockers and feeder trade was quite active, there being a good demand for the good quality and good colored stuff. There were no good cows offered, the most of the receipts being common to medium grades selling at $4.75 to $6. Compared with a week ago prices remain practically unchanged.

| | |
|---|---|
| Prime steers | $12.00@13.00 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Med. to good cows and heifers | 6.00@ 7.00 |
| Com. to med. cows and heifers | 4.75@ 5.75 |
| Canners | 3.00@ 5.00 |
| Bulls | 5.00@ 6.50 |
| Calves | 6.00@ 9.50 |
| Stockers and feeders | 6.00@ 8.00 |

Hogs—Receipts were exceedingly light, the sales as shown being some late arrivals Friday. The market was fairly active and steady. The quality was fair. Compared with a week ago the market is unchanged.

| | |
|---|---|
| Prime mixed | $17.00@17.25 |
| Medium mixed | 16.75@17.00 |
| Rough heavies | 15.00@15.25 |
| Pigs | 15.75@16.25 |
| Stockers and feeders | 14.00@15.50 |
| Bulk of sales | 17.00 |

There were no sheep on the local market, the receipts as shown were 12 decks in transit from Montana summer range to the Yakima valley. The market is steady and unchanged over a week ago.

| | |
|---|---|
| Prime lambs | $11.00@12.00 |
| Fair to medium lambs | 9.00@10.75 |
| Prime yearlings | 8.75@10.00 |
| Prime wethers | 8.50@ 9.75 |
| Best mutton ewes | 6.00@ 8.00 |
| Breeding ewes—1 to 4 years | 12.00@16.00 |
| Breeding bucks | 25.00@75.00 |

## Seattle Market.

SEATTLE, Nov. 2.—The movement of extra fancy apples has increased through the week despite liberal offerings of "C" grade, tree-run and western Washington cooking fruit. Buyers evidently are determined to get the top grades at the present market.

**Purchasing Prices.**

Eggs—Select ranch, 75@76c per dozen; Oregon, eastern Washington and Idaho, normal.

Butter—Fresh dairy, 31c per lb.; butter fat, 70c per lb.; bakers', 46c per lb.; raw milk, $3.50 per cwt.

Poultry—Broilers, live, 1918, 32c per lb.; hens, 2 lbs. and over, 25c lb; under 3 1-2 lbs., 25c per lb.; old roosters, 17c per lb.; ducks, live, fat, 25@26c per lb.; squabs, large, $3.50 per doz.; geese, fat, live, 21@22c per lb.; Belgian hares, 11@14c per lb.; guineas, $7 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up, 30@35c per lb.

Hogs—Light, 18@21c per lb.; heavy, 12@22c per lb.

Beef—Steers, fat, 12@15c per lb; heifers, fat, 12@15c per lb.; cows and bulls, 11@14c per lb.

Veal—Fancy, light, 19c per lb; fancy, heavy, 10@18c per lb.

Mutton—Fat, 22c per lb.; spring lambs, fat, dressed, 25c per lb.

**Hides, Tallow and Wool.**

Bid prices to producers: Salted hides, cows and steers, No. 1, 15c lb. same, No. 2, 14c lb; green hides, cows and steers, No. 1, 12c lb; same, No. 2, 11c lb.; salted bulls or stags, No. 1, 12c lb.; same, No. 2, 11c lb.; green bulls or stags, No. 1, 10c lb.; same, No. 2, 9c lb.; salted or green calfskins, No. 1, 32c lb.; No. 2, 30 1-2c lb.; salted or green kipskins, No. 1, 16c lb.; same, No. 2, 14 1-2c lb.; dry hides, No. 1, 30c lb.; same, No. 2, 29c lb.; dry bulls or stags, 25c lb.; dry salt hides, 24c lb.; dry calfskins (5 lbs. and under), No. 1, 35c lb.; same, No. 2, 33c; tallow, No. 1, 13c lb.

Horsehides, green or salted, each, $2@4; same, dry, each, 50c@$2.

Clean ranch wool, full grown, lb., 30@55c.

Sheep pelts—Long wool, each, $2.50@4.50; medium wool, each, $1.50@2.50; short wool, each, $1@1.50; shearlings, each, 35@75c.

Beeswax, per lb., 25@27c.

## Portland Market.

PORTLAND, Ore., Nov. 4.—Grain prices at the close of the week were steady, but there was little life to the market. Traders believe the near approach of peace has been well discounted and that the coarse grain markets will go but little lower after the war is ended. Last bids at the exchange were 53 cents for sacked oats, $46@48 for bulk oats, $52.50@53.50 for bulk corn and $47.75@48.50 for barley.

**Quotations.**

Eggs—Oregon ranch, candled, 65c; selects, 67c.

Cheese—Jobbers' buying prices, f. o. b dock, Portland: Tillamook triplets, 36c; young Americas, 37c a pound. Coos and Curry, f. o. b. Myrtle Point: Triplets, 35 3-4c per pound.

Poultry—Hens, 25@28c; broilers, 26@30c; ducks, 25@30c; turkeys, 28@31c; geese, 17@18c.

Pork—Fancy, 21@22c.

Veal—Fancy, 18@18 1-2c.

Potatoes—Oregon, $1.75@2 per hundred.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $27 per ton; valley timothy, $29; alfalfa, $28; valley grain hay, $26; clover, $27; straw, $9@10.

Butter—Cubes, extras, 58c; prints, 60@64c. Butterfat, 64@67c, delivered at Portland.

## Spokane Produce.

SPOKANE, Nov. 2.—The following are produce prices paid to wholesalers by hotels, mines, camps and the general retailer:

**Pears**—Russet and Winter Nellis, few sales, $2.50 per box; Kieffers, no sales reported.

**Apples**—Washington Spitzenburgs, extra fancy, $3; fancy, $2.75; Wageners and Jonathans, jumble pack and faced, $1.50@1.75; orchard run, fancy wrapped Jonathans, $2; Winter Bananas, extra fancy, $2.50; fancy, $2; Wenatchee Delicious, extra fancy, wrapped and packed, few sales $3.25; fancy, $2; C grade, no sales reported. Cooking varieties, various, all jumble pack, $1.25 per box.

**Potatoes**—Yakima Gems, good quality and condition, sacked, per cwt., $1.75@2; Montana whites, mostly $1.75; local white varieties, $1.50.

## Spanish Influenza

(Continued from page three.)

there is delirium. Nervous symptoms are not so prominent in a cold, as a rule, and are not profound. The patient often rests and sleeps well if the nose is not completely stopped up.

Notwithstanding these different symptoms, health authorities all over the United States are advising people to suspend work at the first attack that may be either cold or influenza and go to bed.

Dr. Anderson, the city health officer of Spokane, says the patient should take a thorough sweating.

There are a few old and time-proved rules that may well be followed by patients everywhere. The system should be flushed with a good cathartic and every effort made to keep the feet warm and the head cool. A hot foot bath is always beneficial. Diet is vastly important. The patient should take nourishing but not heavy food, avoid meats, hot biscuits and all foods that are difficult to digest. Coffee should be dropped, though mild tea, if the patient seems to crave it, is not injurious. Milk, soft-boiled or poached eggs and certain kinds of fruits may be prescribed, such as sweet oranges, grapes, pears and ripe peaches. Bananas and hard apples should never be a part of the diet.

If, as the case progresses, it is evidently one of Spanish influenza, extraordinary care should be taken so far as possible to isolate the patient from contact with other members of the family. Only those persons who are actually nursing the patient should be allowed entrance to his room, and these should wear a mask made of gauze of several folds or cheesecloth when in the patient's room. On leaving the room the mask should be immediately boiled for 30 minutes before using, and the nurse should wash her hands thoroughly with soap and hot water.

Above all, avoid close, foul air as you would avoid a pestilence. If possible have a stove going in the patient's room, with a cheerful fire, and leave the windows open.

If our readers will follow these hygienic rules promptly and faithfully where a physician can not be quickly obtained they will be taking just the course that a thoroughly good doctor would recommend. Of course, a physician should be gotten to the patient as quickly as possible and wherever possible.

Do not make the mistake of assuming that because you are a strong and healthy person you will be immune from Spanish influenza. The record of the disease everywhere has astonished physicians by its seeming preference for vigorous people, a great majority of the victims being between the ages of 18 and 40. Children and older people are much less likely to be attacked.

Don't make the mistake of administering drugs (except a good cathartic) without the advice of a physician.

**SHIP** you cattle where they will bring you the most money.

OUR northwestern customers have found Kansas City their best market. We specialize on Oregon, Washington and Idaho cattle.

WRITE or wire us for market information at any time.

**"IF YOU GO"**

**Can you serve Uncle Sam in the Auto, Gas Engine or Aviation Department?**

IF THE MOTOR CAR PRODUCTION IN THE UNITED STATES WAS STOPPED RIGHT NOW there would not be enough mechanics left to keep the 5,000,000 autos and 400,000 trucks now in use in repair, not to say anything of the 70,000 tractors now in service. After the war the auto and tractor business will be greater than ever. Auto and gas engine men can readily see why the wages will be better than ever before. Because after the war is over the opportunities all over Europe will be so alluring that thousands of the best mechanics will go to new fields. To keep mechanics here will be almost impossible, regardless of how big the pay.

**"IF YOU STAY"**

**Can you take the other fellow's place who must quit his job in the garage or repair shop to go?**

Look at the proposition from any angle. Think what it means to you! If you take my course of instructions, you will be prepared. **In the army or out of the army—during the war and after the war** your services will be in demand if you have gas engine knowledge. This knowledge is yours if you want it.

Mail this coupon today and you will immediately receive my "big 100-page catalog," full of pictures and letters from the boys "Over There" and "Over Here" who are making good with Autos and Tractors. It is a book that will make you a friend of mine from the start.

**SEND FOR IT TODAY! It's Free.**

# The Real Test

—of gasoline is in its boiling points. In "Red Crown" they form a continuous, uniform chain,—giving easy starting, quick acceleration, power and mileage. Look for the Red Crown sign.

STANDARD OIL COMPANY
(California)

RED CROWN GASOLINE

The Gasoline of Quality

A little advertisement about a big machine: The Yuba 12-20 Ball Tread Tractor is the most powerful machine of its size devoted to farm work. Small, compact and easily handled; its power is mostly delivered at the draw-bar. Mechanically the Yuba is a model of skilful workmanship. The repairs it requires are few and easily made. There are no discarded Yuba tractors, and no dissatisfied Yuba owners. As an investment the Yuba Tractor earns its way and pays good dividends.

*Yuba 12-20's are shipped promptly*
*Write or Wire*

YUBA
MANUFACTURING COMPANY
MARYSVILLE, CALIFORNIA

Emerson's
## OAT KICKER

A new machine in big demand on the Pacific Coast. Takes out every kernel of wild or tame oats from wheat, barley and rye, at the same time cleans out the small foul seeds and dirt; something that no fanning mill or grain cleaner will do.

Run your grain through the OAT KICKER before selling and save yourself the costly dockage. Before sowing, clean your seed free from oats and dirt, foul seeds, etc., you will find it pays back big returns. Three sizes, $40 to $160. Hand or belt driven. Send for descriptive booklet "WF."

The J. J. ROSS MILL FURNISHING CO.
Seattle, Wash.

When answering advertisements don't fail to mention this paper.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

### HELP WANTED—Female 1

LEARN TO DO MATERNITY AND CHILD nursing—Christian women, 18 to 50 years, wanted for girls' institutions and baby homes. Write Pacific Coast Rescue and Protective Society, Portland, Ore.

### HELP WANTED—Male 3

SALESMEN—MANY OF OUR SALESMEN have gone to war and we are filling their places with men exempt from draft. Lack of competition and great prosperity of our customers makes sales the best we have ever known. Selling experience desirable, but not necessary. McConnon & Company, Dept. J., Winona, Minn.

### AGENTS WANTED 9

POWERINE IS EQUAL TO GASOLINE AT 5C a gallon. Salesmen and agents wanted; exclusive territory granted. Powerine is guaranteed to be harmless, to remove and prevent carbon, doubling the life of all gasoline motors, saving repairs, adding snap, speed and power. An amount equal to 20 gallons of gasoline will be sent to any address in the United States, charges prepaid; for $1.00. W. Porter Barnes, Santa Rosa, Cal., dept. 8K.

### SITUATIONS WANTED—Male 21

FARMERS—MAN WITH GOOD FARMING education and experience wants position as farm manager or foreman. Address B, Oregon Farmer.

### EDUCATIONAL 45

IN BUSINESS OR ACTUAL LIFE THE BEST is none too good for you. Write Gooding college, Gooding, Idaho, Charles Wesley Tenny, president, today.

TELEGRAPHY—YOUNG WOMAN'S POPULAR vocation; good paying positions available. Write for booklet. Pacific Telegraph Institute, Spokane.

SEND NEWS NOTES TELLING OF THE work of your school today. Address the Educator, Gooding, Idaho.

### HONEY, BEESWAX—Wanted 58

SEND SAMPLES OF YOUR HONEY AND beeswax. State quantity, price. Oregon Farm Products Co., 380 Halsey st., Portland.

### EGGS AND BUTTER WANTED. 59

WE ARE ALWAYS IN THE MARKET FOR good eggs and dairy butter. Send us your next shipment. Oregon Farm Products Co., 386 Halsey st., Portland, Ore.

WE PAY HIGHEST PRICE FOR LARGE, clean infertile eggs not over one week old. Honey also wanted. J. B. Chaney, Spokane, Wash.

### MISCELLANEOUS WANTED 63

CASH PAID FOR OLD FALSE TEETH. We pay up to $35 per set (broken or not). Send now. Cash sent by return mail. Package held 5 to 15 days for sender's approval of our offer. Highest prices paid for old gold jewelry, gold crowns, bridges, dental gold, platinum, diamonds and silver. Send for fall catalog of new jewelry.
UNITED STATES SMELTING WORKS, INC.
331 Goldsmith bldg., Milwaukee, Wisconsin.

on anything advertised in this paper in which you are interested. Keep a supply of postal cards handy so that when you find something you want to learn more about you can write a card for free literature about it.

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |

Review Bldg., Spokane, Wash.

# Have Your Hens Set a Record

***FOR EGG PRODUCTION?***

Have you given them the solid foundation upon which they must rely to combat weather changes?

Do you know that the question of proper feeding is the all important question to be satisfactorily settled? To get the limit of egg production your flock must have only food that is known to be correct.

You can not afford to experiment with untried mixtures.

To know positively what foods are best adapted to poultry needs is absolutely essential—and can come only after years of experience.

Lilly's Poultry Foods are the result of 25 years' scientific study of the poultry industry, and are backed by a trademark that stands for reliable quality.

LILLY'S

## Scratch Food

*and*

## High Protein Egg Mash

are the foods just at this time that will insure best egg production.

The mixtures are always of the best for their special purpose—and all dust, chaff and other foreign substances are carefully removed with the aid of improved machinery.

You will be pleased with the returns and will know that you are doing your part.

Insist always on Lilly's (trade mark on every sack). Reliable dealers everywhere carry Lilly's.

LILLY'S

# Can You Qualify?

## "Making $5000.00 a Year Mechanics"

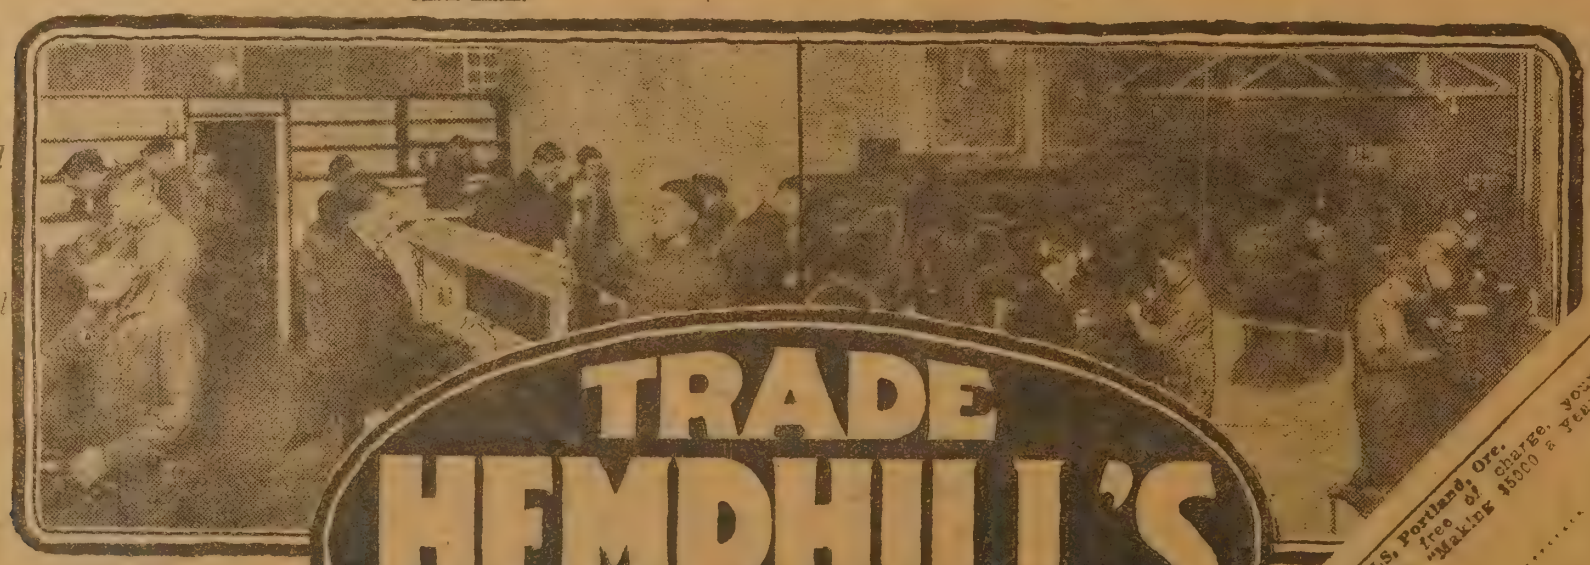
We have printed a little book about an ordinary farmer boy and his success that you will find mighty interesting reading. The coupon will bring it to you free.

## The War Is Draining the World of Mechanics
## The War Is Greatly Increasing the Use of Tractors--Trucks--Automobiles--Aeroplanes
## Peace Will Continue the Increase—

the farmer has learned the value of trucks and tractors—pleasure cars will come back and aeroplanes will come into commercial use.

Never before in the world's history was there such a demand or such an opportunity for men and women to get into a prominent, highly paid occupation.

## Men—Young Men—Girls—Can You Qualify?



**If you can, the biggest trade schools in the world offer you a practical course that has been O. K'd by Uncle Sam and that gives you actual experience and contact with all branches of the trade.**

**You have to be born with a natural ability though, in order to become a first class mechanic, and it is a waste of both time and money for those who have not the natural ability to take this course.**

**Consequently, before enrolling, you are furnished a vocational analysis form which, when filled in and returned to us, enables us to judge of the advisability of your taking it. We give you this service absolutely free of charge, and even if you prove to have the necessary ability, you are not in any way obligated to take the course.**

**Just fill in and send the coupon at the bottom of this page and we will send you your analysis form by return mail.**

# After War Prices on Farm Products

## *And Interest Rates Are Two Questions of Outstanding Importance*

By N. W. DURHAM.

Every farmer has produce to sell. Most farmers find it necessary to borrow money at times—either on mortgage or notes in bank. The prices the farm products will bring after the war and the interest rates that money will command are therefore questions of outstanding importance in every farm home.

He would be a rash prophet who would predict that the present high range of prices of farm products would continue for any extended period after the war. The consensus of expert judgment, however, is that it will be a long while before consumers will see the low prices they enjoyed between the civil war and the present world conflict.

Charles D. Michaels, the Chicago Tribune expert, says a shifting of opinion as to the effect of peace on grain values is noticeable. Some of the most successful and conservative operators, who study conditions closely, incline to the belief that peace has been well discounted in the recent decline of corn. Since that was written the price of corn has rallied on the Chicago market.

**Demand for Surplus Grain.**

Summarizing the opinions of operators who look for a continued eager demand for food products, the Chicago writer says: "They argue that there will be a demand for all the surplus grain and foodstuffs that the world has in the next six or eight months. They believe that the immediate effect of peace would bring lower prices for a time. They base their ideas on statements issued by the food administration and others which show that a large number of people of the central powers will have to be fed, and say the food problem will be greater after than previous to peace, and that the declaration of peace will open our markets to them."

Mr. Hoover's views are set forth in a message which he asked the churches to have read from their pulpits on October 27. The needs of the allies were computed at an inter-allied food council held last summer and the resources from which they could be met were calculated. These schedules show that America must greatly increase her exports of food supplies during the coming year. In place of the 11,750,000 tons of foodstuffs shipped to Europe last year, the shipments this year must be 17,500,000 tons. We are pledged to send 50 per cent more food from the 1918 harvest, which, taken as a whole, is no larger than the harvest of the previous year.

**Continue War Food Program.**

Mr. Hoover plans to carry forward his war program of food conservation just the same as though the war were to go on for another year. While he has relinquished the prohibition against feeding of wheat to stock in the Pacific northwest, that step was taken to save the stock industry here. The wheat thus fed will simply be converted into fats and meats, for which there is even a greater need among our allies than for bread.

The consuming public is urged to save wheat even more carefully than before. The federal food board at New York announces that home cards are to be issued shortly to families aiding in the conservation of grains. Chairman Mitchell says that the government's program of sending 17,500,000 tons of food to our armies and allies can only be attained through conservation in the homes. Chairman Mitchell adds:

"The largest item in the problem of food exports consists of 10,400,000 tons of bread-making flour and grains. Part of that is the surplus of one of the largest wheat crops ever harvested in this country—reduced again by a shortage of corn. Every table should be spread with the idea of the wants of the world in mind. The new home card shortly to be issued will carry this idea to our 20,000,000 homes."

Since the foregoing was written Colonel E. M. House, President Wilson's personal representative to the supreme war council at Versailles, France, telegraphed that the council has adopted a resolution announcing its desire to cooperate with Austria, Bulgaria and Turkey in furnishing the necessaries of life for the suffering peoples of those nations. If the German army should surrender, these relief measures would undoubtedly be extended to the German people; for the American nation, however bitter it may feel toward a ruthless enemy, will never want to see women and children suffer for food.

**Enormous Relief Agencies.**

Undoubtedly enormous relief agencies will have to be organized to save the starving women and children of Russia. With these gigantic demands upon the food supplies of the world Europe will absorb the Australian wheat surplus as a sponge absorbs water. England, Scotland and Ireland alone will need 113,000,000 bushels the coming year, and that need alone will take half of the Australian surplus.

Already Food Administrator Hoover is working out new food conservation plans to assure supplies not only to the nations that have been eliminated from the war, but also the liberated populations of Belgium and northern France and even Germany when that country has accepted armistice terms. It is understood that the plan proposed by Mr. Hoover will provide for a rationing system in Europe similar to that employed in Belgium by the Belgian relief commission. Supervision of this rationing will probably be in charge of representatives of allied and American governments.

**Ocean Freight Rates.**

Another factor that will tend toward stabilizing wheat prices in this country will be the release of large fleets of merchant ships now attached to the allied navies. With the ending of the war hundreds of these vessels can be put immediately into the grain carrying trade and we may reasonably anticipate a very considerable reduction in ocean freight rates that in turn will tend toward the maintenance of the present prices of wheat in this country.

The allied war council further announces that a thorough survey will be made of the world's food supplies. Undoubtedly these supplies will be insufficient to meet the world's needs for some time to come. Food production is at a low ebb over the greater part of Europe. Millions of horses have been killed, the soil has run down in fertility, labor efficiency has been lowered by war, farm equipment of all kinds has deteriorated. World agriculture can not recover instantly from these conditions and it seems altogether probable that for two or three years to come we may expect a large and constant demand upon the food sources of the United States, Canada and Australia.

Turning from the consideration of food requirements to the future of the money markets, we note a growing belief in the minds of financial experts in this country that interest rates, contrary to their prevailing belief, will be lower. Adams, a well-known Boston authority, is quoted as follows in the Wall Street Journal:

"What of money conditions after the war and will history repeat itself? Contrary to the average ideas some of the most eminent bankers believe that peace will be followed not by stringency, but by a prolonged period of easy money. Those who expected a tight money market after the civil war, owing to Uncle Sam's big debt, were surprised in the few years following to see government bonds advance and interest rates decline. After the most devastating wars in history, the Napoleonic wars, money became cheap despite huge borrowing by the governments, and in the next few years British consols advanced over 25 points, while the interest yield of them was cut down from 5 per cent to close to 3 per cent."

It is thus seen that what seems to be the most dependable judgment points to a period of continued prosperity on the American farms. The American farmer has proved himself a bulwark in war and he will prove himself the world's most valuable productive agent in the period of peace and reorganization that now seems imminent. Mr. Hoover well says:

"When the history of the war is written no more glorious page will be found than that which records not only the principle for which the great American republic fought, namely, the principle of justice to all as distinguished from the principle of might by power, but also the wonderful response given voluntarily by a great people to the call for consecration and sacrifice."

## Is Found in This Issue

After war prices for farm produce present big problems. See Page 3.

Water is the one cheap but valuable feed for the dairy cow. Page 10

Nonorganic fertilizer is not sufficient to perpetuate soil fertility. Page 13

"Power, Mechanics and Devices" The Farmer is beginning something new. See page 18.

Cooperative associations can not succeed without adequate volume of business. Read page 14.

A great test of strategy has been going on in Europe. A member of The Farmer staff lets his imagination loose on the subject and writes a gripping story of one way the marshal of France might have brought the kaiser to his knees. Page 20.

Christmas packages for the boys over there must go now or never. Read page 25.

## Special Food Conference

State food administrators for the entire nation were last week called to Washington by Food Administrator Hoover to consider emergency food regulation problems. The conference, which is in session this week, probably will have to do largely with the plan for a national food conservation week, December 1-7. It is probable also that questions arising out of the coming of peace also will be taken up. It is acknowledged by practically every one familiar with the situation that the coming of peace will increase rather than decrease the need for food supply exports from America. This is due to the fact that the cessation of hostilities will enable the shipment of food to peoples that have heretofore been cut off from the allies, including parts of Russia, Armenia and the peoples of the countries which have been at war with the allies.

## Avoid Dockage

### Get a Better Price and Save Feed

Wheat producers for many years have realized that they were burning the candle at both ends when they sold uncleaned grain; that they were often allowing the buyers to give them a lower grade than the grain really deserved, consequently receiving a lower price than they should, and at the same time losing a lot of cleanings that possessed an actual feed value. It is evident that these producers, both individually and through their organizations, are beginning to overcome this problem in many cases by cleaning their own grain.

Under the old system, which is still practiced in perhaps a large majority of cases, the grower shipped his grain or sold it locally, paying the freight on the cracked grain and foreign material, taking the reduced price for his wheat at its reduced grade and bought the cleanings back as feed at a price which included the return freight. In other words, he accepted a lower price for his wheat than it deserved, gave away the cleanings, bought them back and paid the freight on them both ways.

While many wheatgrowers are installing cleaning machinery on their own farms, it is probable that the greatest advance along this line has been through the work of the farmers' union warehouses. These houses all over the northwest have in most cases enabled the farmer to receive his cleanings back at the warehouse after pay a comparatively small charge for the cleaning. This charge has as a rule not exceeded 3 cents a bushel, or $1 a ton. In many cases it has been less, it is reported. This cost is frequently more than made up by the improved grade of the grain, and the farmer has the cleanings left for feed.

President A. A. Elmore of the farmers' union for Washington and northern Idaho is a strong believer in the cleaning of all grain before shipment. He expresses gratification over the success that the union's warehouses have had in this regard.

Considerable benefit can be gained by attachments on threshers to take out considerable quantities of foreign material and cracked wheat, it is pointed out by experienced producers. This is especially true of the combine. Arthur D. Jones of Spokane, who operates a wheat farm in the Spokane valley, says that the cracked wheat which the "third sack" cleaning device on his combine took out brought him 3 cents a pound, as much as, or more than, the first-class, marketable grain.

**Experiences that might prove helpful to other graingrowers along the line of cleaning grain before shipment will be gladly received by this paper.**

## No Restrictions on Silos

### *War Industries Board Favors Their Construction*

It is with much gratification that the following communication from the war industries board is published. When the reported restriction in the use of reenforcing steel for the building of silos came The Farmer wired a strong protest. It appears that many such protests have been received by the board. B. M. Baruch, chairman of the war industries board, now authorizes the following statement made by Judge Edwin B. Parker, priorities commissioner:

"From the flood of telegraphic and mail communications pouring in upon the war industries board, it is evident that some one laboring under the misapprehension that this board had placed or was about to place a definite restriction on the building of silos, has launched a propaganda of protest against such restriction and to stimulate silo building. Without undertaking to make reply to each communication, suffice it to say that no such restriction has been made or is in contemplation.

"In order to release labor, materials, fuel and transportation urgently needed in war work, it has been necessary to restrict nonwar construction. Circular No. 21, issued by the priorities division of the war industries board, as revised October 15, 1918, among other things provides that new farm construction may be undertaken without a permit where the aggregate cost does not exceed $1000. Where the cost does exceed that sum, applications for permits to build may be made through the local representatives of the council of defense and, in proper cases where compatible with the public interest, permits will issue. While as a war measure it is imperative that the strictest economies be practiced, especially to release labor and iron and steel needed in war work, still the war industries board, being mindful of the importance of silos as a means of stimulating production and of preserving feed, will, speaking generally, look with favor upon their construction."

## Trying to Move Wheat

M. H. Houser of Portland, vice president of the food administration grain corporation, returned last week from California, where he was in conference on the grain situation, the results of which conference, he believes, will prove very beneficial to the farmers of the northwest. The complete and detailed program has not yet been outlined. Mr. Houser was to leave for New York and Washington last Friday to confer on the subject of tonnage. He is hoping to get enough tonnage to move enough wheat or flour from the Pacific coast terminal to permit every farmer in the interior to be paid for his wheat by January 1.

**FOUR SCORE POTATOES.**

A report from Okanogan says that Thomas La Neve dug 83 potatoes from one hill this year. Many of them, of course, were exceedingly small, but the report says that the big and little together filled a five-gallon can.

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Don't Let the Chance Go By

There are only two days left in which those who have not yet subscribed to the united war work fund may do so. Don't let the chance go by. No greater opportunity to do a valuable service was ever offered. These seven great humanitarian organizations are doing a wonderful work. They are following the boys over there with those things that add the only real touch of home comfort to warfare. Books, hot coffee, music, opportunity to write home, cheer in a thousand different ways these organizations offer. They are asking those of us at home for money with which to do it. We can not refuse them. How much more valuable a dollar must be spent that way for the boy in the trench or camp than spent for something that we really do not need here. Don't let the chance go by!

Environment can not escape duties.

## Germany's Ingenious Substitutes

One can but admire the ingenuity of the German people in finding substitutes for necessaries of life that the war has taken from them. C. W. Barron, a noted New York financial and economic authority, recently went to Switzerland to make a first hand study of industrial conditions in Germany. He reports a wonderful development of substitutes. Shirts are made of paper and so strong that they can be laundered nine times. There has been developed a wonderful substitute for cloth that can not be distinguished by the casual observer from their best cloths. It is soft, gray and flexible, and the fiber is gotten from peat. Cotton experts in Switzerland have samples of German cloth woven of various other fibers and grasses. They are of wonderful variety in texture and color. The Germans have serges, cheviots and meltons in astounding perfection, and are still experimenting to get an econoimc substitute for American cotton. Shoes are made of paper with laminated wooden soles and big premiums are offered by the government to find substitutes for leather.

Real cotton has practically disappeared from Germany, as shown by the fact that Germany's cotton thread is actually sold there by the yard at the equivalent of six dollars per spool.

The Germans have no longer any real soap, as long ago fats became too scarce and valuable for that utilization, but they have scores of substitutes, none of which, however, are entirely satisfactory.

Notwithstanding the incredible folly that plunged the German people into this cruel and needless war, and the long line of atrocities that have marked their warfare, it must be said that they have shown amazing persistence in their futile and foolish conflict, and developed extraordinary capacities for maintaining their existance with limited natural resources. The entire German empire, with its 70,000,000 people, has less extent and variety of natural resources than are known to exist in any of the four states of the Pacific northwest.

In hospitality, offer what you have; a king can do no more.

## Whom Nature Favors

Illinois farmers used to think that 50 bushels of corn per acre was a good yield. Later they supposed they had reached the climax when they grew 100 bushels per acre. But a boy 12 years old, Jerry Moore, who received the title of "Corn King," grew 212 bushels per acre on land in a locality where only 14 bushels was the average yield. This taught the Illinois farmer that 100 bushels was not the highest possibility.

Nature does not always favor the person most favorably circumstanced, but rewards those who keep her law, harness her forces, and struggle to perfect any line of work under all circumstances.

If business interferes with our patriotic duty right now let's cut out the business. There will be plenty of time for business after the kaiser is whipped.

## Quantities of Foreign Foodstuffs Are Eaten in the United States

Holland, a staff writer in the Wall Street Journal, who has a well-earned reputation for accuracy, finds that the American people were only able to send enormous food supplies to our allies the last year by themselves importing vast quantities of foodstuffs from other countries. Japan sent to us in the last fiscal year nearly 500,000,000 pounds of rice, equivalent to five pounds for each man, woman and child in this country. From Japan, we imported 5,000,000 pounds of crab meat, and Canada sent us nearly 100,000,000 pounds of codfish. We are importing unheard of amounts of tapioca, receiving it not only from the tropical country south of us, but from Africa and the far east. We imported from China in the 12 months ending June 30 last, nearly 15,000,000 pounds of eggs, some of which were dried and some frozen. In the same fiscal year, ending June 30 last, we imported 260,000,000 pounds of cocoanut oil and nearly 500,000,000 pounds of copra, from which cocoanut oil is obtained. These vegetable oils are utilized by processes recently invented, as a substitute for butter.

Four hundred million pounds of cocoa were bought in tropical countries and brought here.

Of course, this commercial process adds very largely to the increased cost of living in this country. Manifestly it would be more economical for the American people to consume their own food products more freely and diminishing, instead of increasing, their imports from distant countries. When the war is over, these are conditions that the American farmers will want to inquire into very closely.

American people are now being trained to a very greatly increased use of foreign food products. When the war is over, markets for our agricultural products may not be so eager as they were in war times, and we may have a condition that will throw vast quantities of foreign products into direct competition with home-grown foodstuffs.

When peace comes we must continue to produce and conserve. We must not forget the lessons we have learned.

## Make Winter Meetings Valuable

The season of the year is rapidly approaching when the farmer and his family will have a little more leisure. It will be the season for meetings of both social and business nature, and these bring great opportunity. Questions of vital interest may be discussed. Problems that need to be settled may be threshed out. Organizations that need to be formed or that need to be strengthened may be formed or strengthened. Social intercourse may be stimulated. Fun, just plain, wholesome fun and amusement may be enjoyed. And there is none too much of it in the life of the average farm home. It will not be amiss for the community gatherings this winter to lay special stress upon this idea of froliesome entertainment.

## Germany's War Debt Stupendous

It is assumed by every one that Germany must be required to pay or in some way make restitution for all the material damage done the Belgians and the people of northern France, as well as those of other countries trampled by the ruthless heel of Prussianism. So far no attempt has been made to estimate what the damages will amount to They are stupendous. It will take years to repair the damage, even though monetary restitution be made today.

But Germany has another financial burden to meet, her internal war debt. That war debt now totals approximately 7,000,000,000 pounds sterling, or nearly $35,000,000,000 in United States money. That is over five times the amount of the fourth Liberty loan just floated in this country. It is equal to about two-fifths of the entire wealth of the German nation. That is, Germany has mortgaged all her property for two-fifths of its actual value to finance this war that has brought to her people nothing but hardship and suffering. If her property could be sold today at full value to pay the debt, it would leave her about three dollars out of every five of her present wealth with which to begin over again. What if this remaining three dollars were confiscated to pay the Belgians and the French for what the German armies destroyed? Is there actual wealth enough in Germany to right the material wrongs she has done? God knows there is not wealth enough in the world to right her moral wrongs. Money can not reunite dismembered households; can not stifle the cries of the fatherless children of girls whose motherhood was forced upon them by the libertine soldier and the damnable system of Germany; can not bring to life the thousands and thousands whom Germany's accursed ambition has sent to their graves.

Stupendous as is the financial debt that Germany must pay to the civilized people of the world and to her own benighted people, it is simply calculated and simply paid when compared to that which she must face at the great, relentless throne of moral justice. Long after the former is settled she will be paying, paying, paying on the latter. Nature never forgives, but requires the uttermost farthing.

## Looking for "Predatory" Bugs

Nature frequently supplies remedies for all her own ills. Possibly she does for all of them if they could only be discovered. The old rule of "dog eat dog" may be applied to modern times in the rule, "bug eat bug." At any rate, bugs do in many cases feed upon one another greatly to the benefit of mankind. To illustrate, the ladybug is a natural enemy of the aphis. County Agent Boone of Walla Walla county, Washington, is now putting a staggering number of these little speckled beetles in "cold storage" with a view to populating the fields of the Walla Walla valley with them next spring so that the aphis which did so much damage there this year, will be unable to propagate himself next season.

There are many, many animate and vegetable pests that can be combated in this manner. Many of them are being now so combated, and scientists the world over are looking for natural enemies of them. It is one of the great works of science.

## Doing Business on Credit

Most of the business of the world is done on credit. There is not enough actual coin or currency in existence to conduct the business of mankind more than a few hours, it is said, if every buyer of every commodity or thing had to hand out actual cash in payment for it.

The time was when it was considered bad business to borrow money, but this is not necessarily true now, if it ever was. One thing is true, however, and that is that it is bad business to borrow money for anything but actual development. To borrow for spending where it will not return itself with interest in one form or another in the regular course of business is fatal to success. Borrow if it is needed to buy seed for a crop. Borrow if it is needed to buy live stock to utilize feed. Borrow if it is needed to put land in shape for crop or buy necessary machinery. But remain on a strictly cash basis so far as things that do not possess a productive possibility are concerned.

# Germany Accepts Peace Terms

## *Kaiser Wilhelm Abdicates; People Take Over Government*

German representatives at the allied headquarters in France signed the stringent terms of armistice offered by General Foch at midnight Sunday, hostilities to cease at 11 o'clock Monday morning, Paris time, or 3 o'clock Monday morning Pacific coast time.

Kaiser Wilhelm and the crown prince, taking with them the last remnant of the family of Hohenzollerns that might claim the German throne, had abdicated shortly before the signing of the armistice terms and sought refuge in Holland.

Chancellor Maximillian of Baden, recently appointed as imperial chancellor by the kaiser, has turned the government over to Friederich Ebert, a representative of the so-called socialist element, who will become chancellor for the purpose of forming a popular government to take over the national wreckage left by the Hohenzollerns and try to build a democratic Germany upon it.

The foregoing are the three events of incalculable world importance transpiring in Europe during the last few days. While there yet remain stupendous problems before the allies, it appears improbable that Germany as a nation will attempt any further warfare. The political and economic situation in Germany is such as to make agreements virtually unbinding, necessitating the maintenance of a military force on the part of the allies until all the peace terms are put into actual effect. It is evident that the German people and leaders are sincere in their attempt to set up a government of the people, but the task is one that will require the best talent of the defeated and war-worn nation and the greatest possible cooperation of the allies. It must be remembered that the allies have been fighting for the establishment of democracy in Germany as well as the overthrow of the autocracy of the kaiser, and undoubtedly they will do all in their power to assist in the setting up of a real popular government.

**THE NEW CHANCELLOR STATES HIS CASE.**

The new chancellor, Friederich Ebert, in his first message to the people of Germany, is quoted in part as follows, indicating a sincere desire to work out the nation's problems in a democratic and conservative manner:

"Citizens: The ex-chancellor, Prince Max of Baden, in agreement with all the secretaries of state, has handed over to me the task of liquidating his affairs as chancellor. I am on the point of forming a new government in accord with the various parties and will keep public opinion freely informed of the course of events.

"The new government will be a government of the people. It must make every effort to secure in the quickest possible time peace for the German people and consolidate the liberty which they have won.

"The new government has taken charge of the administration to preserve the German people from civil war and famine and to accomplish their legitimate claim to autonomy. The government can solve this problem only if all the officials in town and country will help.

"I ask you immediately to leave the streets and remain orderly and calm."

**GERMAN INTERNAL SITUATION IS GRAVE.**

With the abdication of Kaiser William a grave situation developed that manifestly demanded the most careful judgment on the part of General Foch and the allied war council. It was the kaiser's government that authorized the commission from Germany to go to the allied headquarters and receive and consider the allied terms of an armistice. With the abdication of the kaiser that government apparently disappeared, and a new government, from which the commission had received no authority, took charge of German affairs. How capable that new government might prove to handle the difficult situation in their country became an important problem, and another important question was: Could General Foch grant an armistice even if the old government's commission agreed to sign the terms?

The developments up to the arrival of the German representatives in regard to peace may be summarized about as follows: The collapse in rapid succession of Bulgaria, Turkey and Austria; the relentless blows of the allied armies on the western front against the weakening German forces; the repeated application by Germany for an armistice; the sitting of the supreme allied war council in Versailles and its agreement upon terms of peace and its designation of General Foch as the one to present those terms to Germany; and the arrival of the German emissaries at General Foch's headquarters behind the allied lines just east of Compeigne. They arrived there late Thursday night, Paris time. They requested time to refer the terms to German headquarters at Spa, a city in eastern Belgium occupied by the Germans, and urged that hostilities cease during their consideration. They were given 72 hours to accept or reject the terms and were told that there would be no cessation of hostilities until the terms were signed. A messenger was sent to the German headquarters, but it is understood that he had not yet arrived when the official decree was issued in Berlin telling of the abdication of the kaiser and the crown prince. With the report came others also, but unconfirmed, telling of the abdication of other Teutonic rulers, among them the kings of Bavaria and Saxony.

**ALMOST UNCONDITIONAL SURRENDER.**

**In addition to the cessation of hostilities, the terms of the armistice are extremely drastic. They provide as follows:**

**Evacuation of all invaded territory, including Russia, Alsace-Lorraine and Rumania, as well as Serbia, Belgium and France, within 14 days.**

**The withdrawal of the German army, disarmed, to the east side of the Rhine river.**

**The return of all allied prisoners and persons taken from invaded territory by Germany within 14 days, the allies holding German prisoners until they find it agreeable and advisable to return them.**

**The abandonment of the treaties by which Germany subjugated Russia and Rumania.**

**The surrender of all war supplies and munitions on invaded soil.**

**The surrender of 160 submarines, 50 destroyers, six battle cruisers, 10 battleships, eight light cruisers and other miscellaneous ships.**

**The surrender of 5000 guns, half field and half light artillery; 30,000 machine guns; 3000 flame throwers and 2000 airplanes.**

**The surrender of 5000 locomotives, 50,000 wagons, 10,000 motor lorries, the railways of Alsace-Lorraine for use by the allies and stores of coal and iron.**

**The armistice is for a period of 30 days only, though it is heralded as the end of the war.**

**DRAFT MACHINERY ORDERED STOPPED.**

Shortly after the announcement of the signing of the armistice, President Wilson instructed the war department to cancel all draft calls. This stopped the movement of more than 250,000 men already on the way "somewhere," and cancelled the calls for 300,000 more that would have gone to camp during this month. It is announced that so far as practicable all men in camps in America will now be returned to civil life as rapidly as possible.

**HOOVER GOES TO EUROPE.**

Announcement is made that Food Administrator Herbert Hoover is to go to Europe to take charge there of the part the United States is to play in solving the increasingly difficult food problems. The coming of peace throws upon this country the additional burden of feeding millions of people that could not heretofore be reached. Food conservation will be even more necessary for months to come than it has been in the past, it is stated.

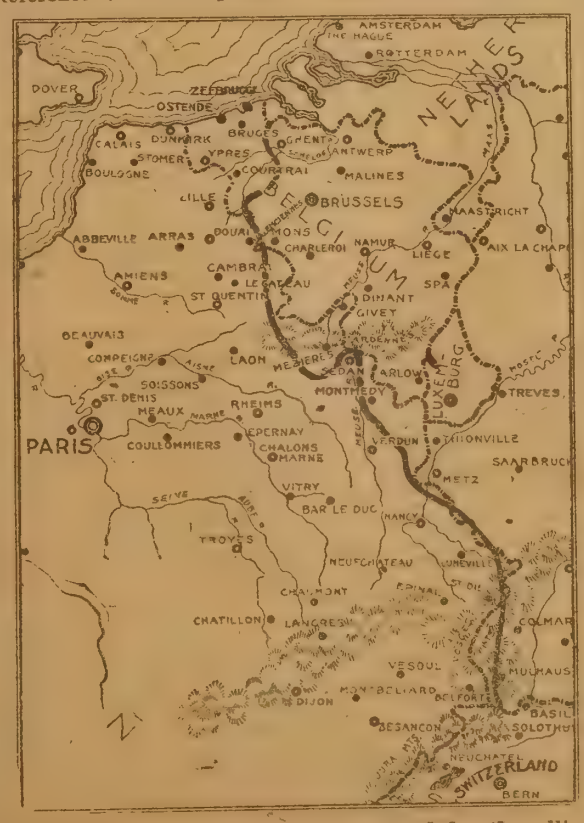
# Voting Is Not Heavy

## All Congressmen Elected Are Republicans

Washington voters responded fairly well last week to the call to election, but the vote was not as heavy as it would have been had not war work and Spanish influenza held much popular interest.

The state of Washington elected five republican congressmen, its full list. C. C. Dill, democratic congressman, who had been charged with un-Americanism, was defeated. The legislature will be strongly republican.

In the nation as a whole the republicans won, giving them an easy working majority in the lower house of congress and probably a small majority in the senate, though the latter is uncertain at this writing.



All republican representatives in congress were reelected in Oregon and the legislature will be republican. The representatives are McArthur, Sinnott and Hawley.

The result of the election in Idaho, where the nonpartizan league has waged a strong campaign for a full state and congressional ticket, showed defeat for all the league candidates except three. Senator Borah, republican; Senator Nugent, democrat, and State Treasurer Eagleson, republican, had been indorsed by the league and were elected. All other league candidates were defeated, including H. F. Samuels for governor. He was defeated by Davis, republican, by nearly 20,000 votes.

In North Dakota, the nonpartizan league retained their control of the state government and the legislature. Only one candidate indorsed by the league for a state position was defeated.

**WHERE THE BATTLES ARE BEING WON.**

During the past week the American soldiers have driven a deep wedge into the German lines north of Verdun. Reference to the map herewith shows the addition of

Sedan to the important points captured by the allies. Other advances have been made, as will be seen by reference to this map and that published last week.

## *Washington Gleanings*

Clarke county dairymen have formed a pool and have ordered 35 carloads of alfalfa from Kennewick.

Prunes grown in Clarke county are said to be among the finest purchased by the United States government.

Water in the irrigation canals of the Consumers' Ditch company at Hanford was shut off last week, ending the 1918 season.

In the Albion schools correspondence work in all the grades above the fourth commenced Monday and will continue until the school is opened.

Live stock is moving out of the Molson country because of the feed shortage. Marketable beef stuff and feeders are also going out in unusual numbers.

Whitman county teachers' institute, which was to have been held November 25, 26 and 27, has been indefinitely postponed because of the influenza situation.

Sheep scab may mean extra cost of approximately $100,000 for holding over this year's lambs by sheep men using the Okanogan national forest grazing ranges.

The soldier students of the two branches of the S. A. T. C. in Pullman are to have a $12,000 Y. M. C. A. building, fully equipped and designed to meet the demand of the men.

Members of the state woolgrowers' association will meet in Yakima probably December 10, according to plans announced by E. F. Benson, state commissioner of agriculture.

The sale of O. S. Johnson's 70-acre farm in the Selzer valley to Charles Johnson was announced last week. The consideration was $13,000. The sale included all stock and farm implements.

Every fruit warehouse in the entire Wenatchee district is now filled to capacity with packed apples ready for shipment and more apples are being received daily than are going out.

The appropriation of $200,000 for the extension of the Sunnyside canal to cover the 48,000 acres near Kennewick, development of which is retarded for lack of funds, has been recommended by Secretary Lane.

Growers of Winesap apples will this year make an average of between $800 and $1000 an acre, according to C. B. Wood, Yakima county horticultural inspector, who has completed a survey throughout Yakima county.

A. P. Gray, on the William Young ranch at Richland, has contracted his entire 1918 corn crop, amounting to something like 10 tons, to Pasco parties at $60 a ton. This corn will be fed to a large herd of hogs by the purchasers.

Fall wheat at Ralston, sown during the last few weeks, has been greatly benefited by recent rains, which have wet the ground down about five inches. The acreage is light, owing to the delayed rain. A few farmers are still sowing.

Fall sown wheat is up in most places in Walla Walla county. In the lighter land sections west and north of Walla Walla more rain is needed before the grain will sprout well. An unusually large amount of wheat has been sown this fall.

The Walla Walla board of education has voted to reduce the insurance on school buildings $156,750. Approximately $2500 in premiums will be saved. It was found that some of the buildings were insured for more than their estimated value.

The 1918 crops in Whatcom county are on the whole pretty good, considering the conditions this year, declares H. B. Carroll Jr., county agent. Some crops are below normal, as in the case of peas, but in nearly all other cases normality or better has been reached.

Gibson Brothers, live stock men of Yakima, have announced what is said to be the record sale of cattle for the Yakima valley for some years. The firm sold 11 loads of cattle to T. H. Masson, representing Frye & Co. of Seattle, for $35,000. There were 375 head of cattle in the lot.

For immediate shipment to the soldiers overseas the United States government has commandeered 2000 cases, or 48,000 cans, of the Yakima valley cherries canned by the Libby, McNeill & Libby company, and has given orders that the cases are to be strapped with iron for the journey across.

The October report of the Walla Walla Cow Testing association shows that in two years the average increase of milk given by the cows is 121 pounds. During the month 27 of the 282 cows tested produced 40 pounds or more of butterfat. The average of butterfat for the entire herd is 25.1 pounds.

Hog cholera was found among three or four bunches of hogs in the vicinity of Raymond last week. One hog raiser had a bunch of 61 hogs, 23 of them died of cholera and examination of the others by W. W. Stewart of Chehalis, deputy state veterinarian, showed them infected and they were ordered killed.

A Snohomish county ranch, comprising a little more than 40 acres, was sold recently for $11,000. The property sold was owned by J. A. Grannell and is situated a half mile this side of English, a point north of Everett, and included horses, stock and implements. Andrew Martin of Colorado was the purchaser.

The forest service has taken steps to rid the Colville and Mount Hull ranges of all cayuses, in order to accommodate more cattle next season. The Knob Hill Cattle association has about completed its fall roundup of horses and cattle from the Colville reserve ranges, about 350 head coming in last week to finish the drive.

# Purpose of Land Bank

## *To Aid Farmers on Business Principles; Not to Distribute Gifts or Bounties*

The Federal Land bank of Spokane completed mortgage loans during October, for which cash was actually paid, in the sum of $1,260,180, making the total of mortgage loans on its books outstanding as of October 31, $21,659,900.

Since the opening of the bank 26,737 farmers have filed applications for farm loans in amounts aggragating $60,785,000. Of those 21,365 farms have been appraised and loans were approved on 15,087, having rejected 6269.

Discussing the organization and operation of the Federal Land bank of Spokane, D. G. O'Shea, the president, says:

In the first place it should be understood that the Federal Land bank is designed to make business loans involving the taking of security and the collection of payments. It is not distributing gifts or bounties. It has nothing to give away but its service. It was organized with a capital provided by law, without surplus and without appropriation, to conduct a loaning business and be self sustaining, earning its expenses out of its operations and selling its bonds to the public, who will buy only if the security be shown to be adequate, the interest paid thereon and the principal returned. The twelfth land bank district comprises the four large states of Idaho, Montana, Oregon and Washington, an immense territory with every variety of soil and product, a territory that has been exploited by promoters and speculators, much of it newly settled by persons struggling to secure homes, with land values fluctuating and variable and affected by seasonable and changing conditions.

Interest rates in these northwestern states were high, the persons engaged in making farm loans were numerous, active and organized. They have fought the Federal Land bank with every means at their disposal to misrepresent and discredit it; we expect and look for their opposition and fear it not; but we do believe we are entitled to the support of the farmer whom we want to serve and of those who profess to represent the farmers.

If there were nothing to the business but the distributing of money to all who asked for it, the operation would be simple. To make loans, however, involves the taking of security, the collection of interest, and the ultimate return of the principal. It involves also the collection of information, the gathering of reports, and reasonable conformity to useful and proper business regulations.

**If every applicant got from the land bank what he asked for, the doom of the system would be sealed ere this, and the farmers of the northwest would be permanently committed to the good old 10 and 12 per cent interest rates, plus commissions, fees and renewal costs.**

That some have been disallowed, and others got less than they sought, naturally causes disappointment. If the "kicks" of those disappointed persons be registered, and no reference made to the thousands who have been beneficially served, the record is assuredly incomplete and misleading.

The Federal Land bank began business without precedent to guide it, and without a form to follow. It has organized and chartered 408 national farm loan associations in a widely extended territory. It has endeavored to conduct a technical business through persons, the great majority of whom were untrained in the work. It has had not only to organize, but to do business as well, in competition with men highly trained and spurred by personal gain; and it has had to consider many problems too numerous to mention in a brief letter, which problems were aggravated by serious crop failures in much of its territory.

It has conceived it to be its first mission to establish itself on a secure, lasting and firm foundation, regardless of individual disappointments, and to demonstrate it has done so, we ask brief consideration of some of the things we have done as well as the things that were left undone.

We have examined and appraised to date, 20,600 farms, and paid the railroad fare, travelling expenses and salaries of the appraisers; All such applications were not approved, and many others were approved in less amounts than asked for. We have had our legal department examine over 10,000 abstracts of title, draw mortgage papers, cure defects and correct titles that were imperfect. We have paid out in actual cash to this date $21,200,000 to the farmers of the northwest in sums averaging from $100 to $10,000 at interest rates—some at 5 per cent, where we sold bonds at 4 1-2 per cent, the others at 5 1-2 per cent, where our bonds were sold at 5 per cent, and we are daily adding to the amount in large volume.

**The farm loan act allows the land bank to charge 6 per cent, and allows it to charge the borrower the cost of appraisal and the cost of examining his title. We have never charged the man who completed his loan $1 for any service rendered him, believing we can operate on the small margin of interest we charge over and above the interest we pay on our bonds; and we are doing so.**

We pay for large supplies of stationery and legal forms, pay for postage the same as any other business concern, pay office rentals and for legal and clerical help, and it may be no harm to say that we know nothing and care less, of the political affiliations of our employes. They are expected to work hard and full time, and results only count. For all we furnish and for all the work we do as aforesaid, we get not a dollar until after the loan has been out six months, and then, if the borrower pays, we get 1-2 per cent per annum profit. That on a loan of $1000 would be $2.50. Operating under those conditions and on those terms and with no other source of revenue we have met all the organization expenses, all the cost of examining and considering thousands of applications from which no results were had, and have been on a paying basis since early in this year, and gradually accumulating a surplus which, by the way, will make dividends for no one but the farmer borrower.

We ask only of all friends of the system that they be fair and constructive in their criticism, not destructive; not joining those who attack us for the very good reason that their profits have been affected. Tell us of the things that will enable us to give better service, and we will endeavor to measure up to the expectations if they are reasonable and right.

Many wise persons sagely shook their heads in derision at the idea that the farmers bank could operate at any reasonable cost; they said it could not sell its bonds; they said politics would get into it and "chair warmers" would get jobs; that common persons without fees or big profits could not deal with financial matters through farmers' organizations; that farmers would not pay and politicians would not make them pay; that the placing of mortgage loans is an abstruse and wonderful mystery to be approached only by a select and chosen class.

Bless them, there is an institution now being developed that even on the small margin it charges, if permitted to work out its own destinies, will within a few years accumulate a surplus that will be surprising; that will pay dividends to the Farm Loan associations; that will accord safety and economies to the farmers of the northwest to the end that they can become financially independent; an institution, the securities of which are already so well established, that its bonds, even in these times, are already selling in the open market at a substantial premium.

### STOCKMEN'S CLUB OF SPOKANE.

**To Have Weekly Luncheons and Furnish Headquarters for the Live Stock Industry.**

The Stockmen's Club of Spokane starts out with the purpose of selecting a permanent headquarters where stockmen may gather together to talk over their business affairs and enjoy a weekly Saturday noon luncheon. The officers are: Grant Copeland, president; D. M. Drumheller, vice president; E. E. McClintock, vice president, and E. E. Flood, secretary-treasurer. These, together with W. T. Day, William Huntley, J. M. Van Kleeck, D. O. Leith, T. N. Conway, W. D. Roberts, D. W. Twohy, R. L. Rutter, Thomas F. Wren, James Davis, F. M. Rothrock, Peter McGregor, Roy Slater and T. H. Brewer, constitute the directors and executive committee.

The Stockmen's Club of Spokane is taking advantage of the undoubted fact that live stock is destined to become more of a factor in the Pacific northwest than ever before. Since the establishment in Spokane of a union stockyards and two large packing plants, the industry has been on its feet as never before. Spokane's central situation was one of the first reasons why Armour & Co. made it their headquarters on the Pacific coast. While the Spokane yards and the packing houses are yet in their infancy, W. D. Roberts, president of the Stock Yards company, says that even with a hard season this year the yards will do a business amounting to $6,000,000.

One purpose of the club is to accelerate the policy of farmers buying feeder cattle at the Spokane yards, taking them home to fatten and then returning them to market in prime condition. To aid the farmers in financing these feeding operations the Spokane Cattle Loan company has been formed and E. E. Flood is authority for the statement that it has placed $1,500,000 worth of cattle paper during the last year.

# The Farmer War Map

**W. H. PAULHAMUS, President Puyallup-Sumner Fruit Growers' Canning company, Puyallup, Wash.:** Very thankful for your good favor enclosing copy of your new map, which I took pleasure in taking home last evening to be delivered to my youngest boy. The oldest boy is in the service and the youngest boy is very much interested in watching the movement of the troops.

**CHARLES HEBBERD, Federal Food Administrator for Washington, Spokane:** I have your favor enclosing war map and also the small map to be pasted on same. This is certainly a very valuable map as well as being handy and convenient. I have same posted in my office and shall be glad to clip the weekly map from the Farmer.

**W. D. VINCENT, Old National Bank, Spokane, Wash.:** I received your letter of the 30th, together with a copy of the war map. Your idea as to additions is a fine thing and will appeal to every one who is fortunate enough to receive a copy of the map.

**R. INSINGER, Hypotheekbank, Spokane, Wash.:** I am delighted with your map, which I am putting on cloth. I feel that your map, with the weekly maps showing the difference in the battle line, is not only of interest just now, but will be of permanent interest after the war is over, and I am going to keep the map you sent me for that purpose and keep it posted up as long as the war lasts.

# Are Planning Cannery

That a big commercial cannery will be erected at Oroville, Wash., by the Food Products company of Keremous, B. C., in time for next season's vegetables and fruit now seems pretty well assured. R. C. Cliff, manager and principal owner of the company, looked over the surrounding country and had a meeting with the business men of the city. He wants contracts signed up for 100 acres of tomatoes, for which he agrees to pay $20 a ton; 80 acres of corn, at $15; five acres of beans at $50, and five acres of pumpkins at $10. Peaches and other fruit will also be canned. Del Hart, who is giving most attention to securing contracts, expresses the opinion that there will be no trouble in securing all the acreage required and, with the big production of all crops, in that region, when irrigated, Mr. Hart points out that it means much development for both town and country.

### TO WATER 12,000 ACRES.

**New Irrigation District Extends Eighteen Miles.**

An irrigation district that will bring approximately 12,000 acres of land under ditch, and mean greatly increased production of the region, is the Whetstone Horsesprings Cooley irrigation district, extending 18 miles west from Tonasket, Wash., to Loomis, Wash. The region watered is all bench land. The water will come from Chopaka lake, Spectacle Jake, Sinlahekin creek and Toats Cooley creek, sufficient water for 20,000 acres being developed, it is claimed.

The new district will take over the holdings of the present Whetstone Water and Power company, which has been developed under the personal supervision of Marion Chase, state hydraulic engineer, and known in the immediate region as the Chase project. J. M. Hall is president; E. V. Latour, secretary; J. A. Meva, attorney, and W. H. Brown and J. M. Walker, directors. They are all Tonasket men and members of the live commercial club there, to whose activities is credited the organization of the district.

H. A.

### POSTPONE ROAD CONVENTION.

The annual convention of the Washington State Good Roads association which was scheduled for November 21 and 22 at Pasco has been indefinitely postponed owing to the prevalence of Spanish influenza. President Arthur D. Jones of Spokane announces that an effort will be made to secure other dates prior to the convening of the legislature in January. If this can not be done the executive committee of the association will meet and endeavor to formulate recommendations and road legislation by the legislature.

### GET READY FOR CONFERENCE.

Reports from various sections of the northwest indicate that fruitmen are holding local meetings where possible to select delegates to represent them at the fruitgrowers' conference to be held in Spokane next month. The Spokane meeting is scheduled to be held for four days, beginning December 11. Important questions relative to the production and marketing of fruit will be taken up, including the proposed revision of grading regulations.

# Farm Labor Problem

## Lessons That 1918 Has Taught

**By BYRON HUNTER, Agriculturist U. S. Department of Agriculture.**

The season of 1918 has taught us considerable regarding the labor problem. With the new draft law in operation, and from our experience during the last harvest, we can be certain there will be a scarcity of labor in 1919. Something can be done to meet this problem in the way of using labor more conomically.

1. The available labor should be kept employed as constantly as possible. In order to get the summer fallow work done in good season next spring and to prevent land from lying unworked, as much plowing should be done this fall and during the winter as it is possible to do.

2. Arrangements should be made on every farm for each man to drive the maximum sized team within the bounds of efficiency.

Last season Charles Moody of Lind coupled three grain drills together and handled them with one man. Mr. Moody's land is reasonably level and we are aware of the fact that three drills coupled together could not be operated very satisfactorily on very steep land. Another man near Edwall, Wash., operated two disks and harrows with one team, cutting 16 feet instead of eight feet. We have known one man to drive 24 horses in plowing, the plows being coupled together in the same manner as when plowing with a large tractor. There certainly is little to hinder an experienced man from driving a team that will handle two gang plows coupled together. In other words, we must use our ingenuuity, meet the labor problem as best we can, and grow every bushel of wheat that good farming will produce. If we do this and if every man who is able to work will consider it his patriotic and sacred duty to produce, be he rich or poor, and to do what he can, we shall grow and care for a bountiful harvest in 1919.

### WALLA WALLA COW RECORD.

Many of the dairymen who have cows in the Walla Walla Valley Cow-Testing association are selling their grade cows and replacing them with registered stock, according to the report of William Dawson, the official tester of that association. The shortage of labor and the high price of feed has also caused many dairymen to sell their herds. The average price of butterfat for October is about 67 cents. All but two members of the association own or use registered bulls.

R. H. Tuttle, a new member of the association, has a registered Holstein cow, Uneda Korndyke Ada, that produced over a ton of milk during the last month.

There are 282 cows in the association, 31 of which are dry at the present time. The average pounds of milk during October per cow, including the dry cows, was 559; average pounds of butterfat per cow, including dry cows, 25.1; average cost of food per cow, $7.30; average feed cost of producing 100 pounds of milk, $1.31. Twenty-seven cows produced 40 pounds of milk or more; the owners are: Washington state penitentiary, R. A. Atwood, R. H. Tuttle, R. E. Bean, Roy Saunders, A. A. Bixby; F. C. Kralman, J. H. Compau, Charles Baker, D. O. Saunders and D. F. Baker. The three high herds for the month are owned by R. A. Atwood, F. C. Kralman and J. H. Compau.

### WOOL MEN WILL MEET.

December 20 has been selected as the probable date of the annual meeting of the Washington State Woolgrowers' association, according to announcement by E. F. Benson, state commissioner of agriculture. The meeting will be held in Yakima, where it is regularly held, owing to the central location of that city. Among the questions that will come up are the enforcement of the sheep dipping law, use of the public range, government regulation of the wool market and feed problems. It is expected that some 200 wool men will attend the meeting.

### LET TREES BE MONUMENTS.

The American Forestry association, of which Charles Lathrop Pack is president, is starting a movement to encourage the planting of trees along transcontinental highways, the trees to be planted as memorials to the nation's soldiers and sailors who have given their lives during the present war. The idea has been presented by the association to the governor of each state in the Union.

### BUY FEEDERS IN SPOKANE.

Seven carloads of two-year-olds have been bought in Spokane by H. C. Biering of Bozeman, Mont., president of the Taylor's Fork Cattle company. These are to be fed on the ranges of the company in Montana. Mr. Biering's company is introducing registered Hereford bulls on his place.

### SHIP OUT LIVE STOCK.

Owing to feed shortage, it is reported that considerable live stock is being shipped out of the Molson district, much of it going to the meat markets.

# Closer Cooperation Is Needed

## Improvement in Both Buying and Selling Is Possible When Farmers Join Together in Facing Mutual Difficulties and Problems

DARRINGTON, Snohomish County, Wash., Nov. 1.—Crops are about all harvested except a few carrots and a few potatoes are yet to be dug. The potato crop is about three-fourths of normal. Practically all of the farmers in this section are able to meet their obligations and go into the winter able to pay for all their needs and buy Liberty bonds besides. As this is not a grain country very little, if any, grain is planted here in the fall of the year. Prospects for next year are reasonably good. So far no fall plowing has been done on account of an excessive amount of rain. Should it clear up so that people can plow some of the land this fall it certainly would help a lot towards getting crops in at least two weeks earlier next spring. I am a firm believer in fall plowing, for the early planting always brings the best results in this section. Feed for stock is not any too plentiful, although hay crop was about normal. The oat straw is of poor quality as it was overripe when cut and not very well cured. Some hay will have to be bought but not a great deal. Some of the farmers have disposed of some of their stock so as to avoid buying high priced hay and mill feeds. Good beef sells here for 16 cents per pound; dressed pork brings 21 cents per pound; butter fat, 69 cents per pound; eggs, 75 cents per dozen. Hogs will be rather a scarce article in this section by next spring. Closer cooperation is what we need around here among the farmers more than anything else. That is the only way they can better their condition both in buying and selling. Not very much land was cleared this fall because labor and powder are two things to be reckoned with. Two new stump pullers have been bought around here helping to get the stumps out without using powder. The writer has one and has very fair success pulling them out without powder on bottom land. There have been no killing frosts and we are still having ripe strawberries on the table. They are the ever-bearing kind.

C. B. NEIDERPRUM.

### HARVEST BIG PRUNE CROP.

VANCOUVER, Clarke County, Wash., Nov. 2.—After harvest notes are coming in and the reports are exceptionally good. All are able to meet their obligations and in several cases the prune farmers are paying off the entire mortgage and back interest. The estimate for the prune crop of Clarke county has been put at 12,000,000 pounds, dried and ready for the market. This means about 10 cents per pound to the grower. This, taken with the other industries, has put Clarke county in the lead, which shows in the last fourth Liberty bond allotment, as they raised $316,200 over that called for, making a total of $978,200 subscribed in the county. Farms have been bought and paid for with this season's crop of prunes, with a good, substantial allowance for the beginning of next season. Potato digging is nearly completed, and the bulk of the crop will be put into the pits or cellars for a better market. Only $40 a ton is offered now and the sales are slow. The potatoes are of very good quality and the yield averages up with the past years. The supply of mill feeds seems to be holding out and farmers say that by holding their best stock they will be able to go through the winter all right. The last month a stream of live stock has been taken from the county to the stock yards, and the report comes from there that cows and feeders are a drug on the market. Fresh eggs are selling at 70 cents a dozen. The shortage of hog feed will compel some to sell off their breeding stock and immature stock. Conditions are changing so fast that there is no basis to work on accurately as to the amount of fall crops that will be planted or the number of producing stock that will be wintered. A great many farms have changed hands in the last month, and most of the present owners are bringing their own stock onto the places. Former owners are auctioning off their stock, and most of it is going to the stock yards and as feeders. This will not help next year's production. The chicken market has fallen off and egg production is on the wane. Storage eggs are on the market at 60 cents a dozen. The apple market is dull. Fall and winter apples are very wormy, especially Spitzenbergs, Spies and Grimes Golden. Farmers are a little short of help, but with the help of the school children and the lateness of the fall, the crop will be harvested without any serious loss. The supply of onions is about normal and bringing a good price. Rutabagas, carrots and beets are reported good and will be used to a great extent in the place of mill feeds for stock. Not very much fall grain will be sown in the county. The ground is being used for pasture, which is the best known in years, and many are regretting that they sold their stock off so close. Sheep are one of the side issues in the stock business. Many are going into this in a small way. Horses are selling as low as $50. Although the bidding at auctions is lively, they usually stop at prices that the owner considers below cost.

C. C. BROWN.

### FEW SELL OFF LIVE STOCK.

CHEHALIS, Lewis County, Wash., Oct. 30.—With but few exceptions the farmers of this county are in good financial condition and will be able to go through the winter without any hardships. There are a few, however, who have considerable stock on hand who will either have to sell their stock or buy high priced feed. Several sales of live stock have been held by farmers in this condition. The 1918 harvest is over, and in spite of the dry year farmers are fairly well satisfied. Fall seeding is about half done, the remainder was too dry to plow until after the fall rains came. It has only been within the last two weeks that plowing with other than tractors could be done. The high price of feed and the scarcity of labor will encourage many to dispose of their poor cows before winter.

A. B. NYSTROM. County Agent.

### FARMERS ARE SATISFIED.

PORT ANGELES, Clallam County, Wash., Oct. 30.—As a whole, Clallam county has had a splendid harvest and the farmers feel very satisfied on this score. They have worked hard, but with the aid of all of the members of the families they have been able to overcome the handicap of shortage of labor. The increased prices of all of the products have put them in a good financial condition and the fruits of all of this will show itself in the purchase of more machinery and also a part of the proceeds will go into the clearing of more land. We look to an increase in the tillable area of at least 10 per cent for the coming year. The harvest is about all cleaned up and the impression is that the farmers are well stocked with winter feed.

J. P. CHRISTENSEN.

### FINANCIAL CONDITIONS GOOD.

CATHLAMET, Wahkiakum County, Wash., Nov. 5.—No one could truthfully state that the farmers of Wahkiakum county are in financial distress. In a dairying section where the pastures remain green for eight months in the year, we usually find that the returns from the products from the farms are sufficient to keep every one fairly well contented. This is certainly true of Wahkiakum county.

The winter feed situation has given some concern. Heretofore the farmers have been able to secure beet pulp, but this year this feed will form a very small portion of the ration. Mill feeds can now be obtained in quantity, but the quality is such that little satisfaction can be gained by feeding them. As a consequence many of our dairymen who practice winter dairying will be be somewhat disappointed in the production of their cows. Several farmers were fortunate enough to secure a good yield of roots and they are now feeding them to good advantage. A few farmers have silos, but there are so few of them that only the few will receive the benefit. This winter presents a wonderful possibility for an excellent demonstration with regard to the use of silos in this section.

The first annual report of the Wahkiakum County Cow Testing association is now ready for publication. The cows which completed the year have an average butterfat production of 317 pounds, which record will undoubtedly be surpassed the coming year. Through the good work of this association, dairymen of the county are taking advantage of opportunities to study feeding problems and breeding problems. The interest in purebred sires was never greater and the good work of Mr. Sonner, the tester, has at last resulted in having every member of the association the owner of a purebred sire.

Farmers as well as business men and fishermen are actively supporting the movement to secure state-wide recognition of the fact that Wahkiakum county needs state assistance in securing road connections with the rest of the state. While we believe Oregon to be a grand old state we are heartily tired of being called Oregonians, because we live in Wahkiakum county, Washington. The recent Liberty loan drive, in which this county subscribed over $131,000, with a quota of $49,000, has demonstrated that this county is worthy of recognition.

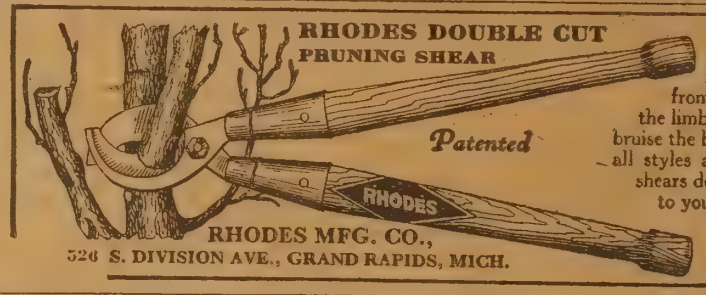
A. T. FLAGG.

### It Requires Judgment.

Hard work is necessary, but hard work must be backed up by judgment.

**My Son Is Lost**

Will you help me, his mother, find him? He is Cyrus Harrison Hollingsworth. He disappeared from his home near Genesee, Idaho, July 22. Is 14 years old, tall for his age, has light hair and blue eyes.



The uncertainty of his whereabouts or what may have befallen him is unutterable anguish to me, and as a nearly distracted mother I appeal to you who read this to notify me immediately if you have seen him or can in any way help me to trace and locate him.

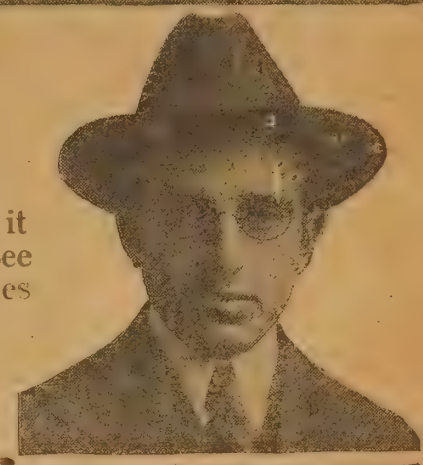
# Try This One Man Stump Puller 30 Days FREE



One Man Alone Handles Biggest Stumps!

Thousands of Kirstin Stump Pullers Now in Use!

## Send No Money!

All I ask is the privilege of sending you the Kirstin to TRY 30 DAYS FREE on your own stumps. I want you to see for yourself what a wonderful, easy-operating, fast working, strong, substantial machine it is. When it comes, hook it to your biggest, toughest stumps. See how quickly and easily one man alone handles them. PROVE ALL MY CLAIMS! If—after 30 days' trial—you are satisfied, keep puller. If not pleased, send it back at my expense. **You don't risk a penny!** Four easy ways to pay.

A. J. KIRSTIN, Gen. Mgr.

ONE MAN ALONE handles biggest stumps! This feature has enabled thousands of farmers to rid their land of money-losing, land-wasting stumps. **No horses or extra help needed!** No digging, chopping or other expense! Kirstin's scientific leverage principle is the reason! A few pounds pull or push on handle exerts tons on stump. One man pulls big, little, green, rotten, low-cut, tap-rooted stumps—trees, hedges or brush. Clears an acre from one anchor. Works in swamps, boggy soil, thick timber, or on steep hillsides where horses can't work. Easy to move around field.

One Man Pulls Big, Little, Green, Rotten, Low-Cut, Tap-Rooted Stumps

One Man Pulls Trees, Hedges or Brush

One Man Moves Bui dings, Pulls Out Stalled Automobiles, Wagons, Tractors, etc.

QUICK SHIPMENTS FROM
Escanaba, Michigan — Atlanta, Georgia
Portland, Oregon — 800, Canada

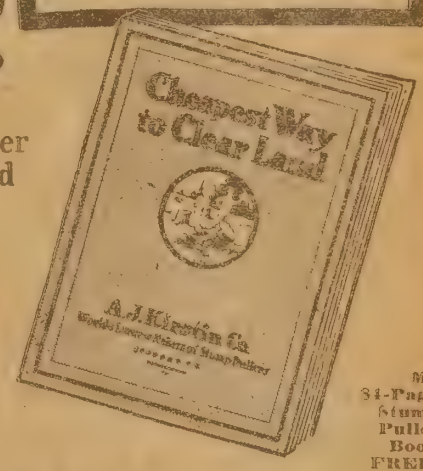
## Read These Letters From Kirstin Users

I have nothing but praise for my Kirstin Stump Puller. It is some puller. Am pulling stumps up to 2 feet without powder—blind maple 8 to 16 inches. Myself and boy pulled a tree 150 feet high and 32 inches at the base, in 15 min. use. It takes them all out. A. H. Jeffery, Goble, Oregon.

Your puller works fine. 25 of my neighbors were present and watched me pull stumps. It pulled stumps we thought it could not pull. Mr. E. A. Buckley, Bay Springs, Jasper Co., Miss.

From what experience I have had with other machines your machine is the best and cheapest of them all. Lewis Packard, Gowen, Mich.

I like my Kirstin. I have pulled old pine stumps as big as 20 inches. I have not hitched to anything but what has come. Earl Rogers, Kelliher, Minn



FULL LINE OF KIRSTIN STUMP PULLERS

We make 14 sizes and models—including Kirstin One Man Clutch; Kirstin One Man Drum, and the speedy, strong, powerful Kirstin Horse Power — the best and most efficient Horse Power Stump Puller you can get.

## Kirstin ONE MAN Stump Puller

SINGLE—DOUBLE—TRIPLE POWER

The Kirstin weighs less and costs less. Has greater speed, strength and power. **Lasts longer! Guaranteed 3 years against breakage—flaw or no flaw!** Pulls stubborn stumps in a few minutes at low cost. Several speeds. Low speed starts stumps—high, **rips 'em out quick!** Patented, quick cable take-up **saves time, cable** and machine. Government officials, university experts, land clearing contractors, thousands of farmers—ALL AGREE it is the cheapest, quickest and easiest way to pull stumps!

My 84-Page Stump Puller Book FREE!

## Send the Coupon for My New Book FREE

Contains 84 pages of valuable land clearing information; tells why labor shortage need no longer prevent pulling pesky stumps; why millions of stumps ought to be pulled **right now** to release fine, rich soil for **more crops—more food!** Reproduces hundreds of letters from Kirstin users like shown above. Describes Kirstin One-Man Clutch Model, Kirstin One-Man Drum Model and Kirstin Horsepower Model. Shows how any Kirstin pays its cost in BIGGER CROPS and increased land value the first season—goes on making money **for years.** Shipment from nearest distributing point saves time and freight. Send coupon for the book and for Special Agents' Offer. Address me personally.

# Dairy Industry

## New Milk Prices in New York

It will be many years before the consumers of this country will see the low and ruinous prices for dairy products that ruled two years ago, when the Farmer made its survey of the dairy industry of the United States. The federal food board at New York has just announced the new milk prices for November, as approved by the food administration at Washington. The authorized prices in greater New York will be as follows:

| | |
|---|---|
| Grade A, bottled, delivered, quarts | 18c |
| Grade A, bottled, delivered, pints | 11c |
| Grade B, bottled, delivered, quarts | 16c |
| Grade B, bottled, delivered, pints | 16c |
| Grade B, bottled, to stores, quarts | 15½c |
| Grade B, stores, to consumers, quarts | 16c |
| Grade B, loose, to stores | 12½c |
| Grade B, loose, by stores | 13c |
| Grade B, wholesale, 10 gals., quarts | 12¾c |
| Grade B, under 10 gallons | 13c |

This table presents some vivid contrasts with the conditions existing two years ago. A single pint of A grade milk will cost the consumer 11 cents. Two or three years ago the producers were getting but little more than that for a gallon. The New York price to the producers is approximately nine cents a quart—more than double the price received by the farmers two or three years ago. Apparently the distributors have been effectively curbed in their former practice of taking excessive profits, for the food administration states that a thorough examination of the accounts of the New York milk distributors shows that they have lost money on milk sold during October, and will lose money during November at the price announced. The distributors, however, accept these rulings rather than have a further increase in the cost to the consumer, which will likely result in a decreased consumption. It is not, of course, the policy of the food administration to require the distributors to lose money continuously. In all probability this examination of the accounts showed that the distributors had earned liberal profits in the summer months preceding October, and that its purpose is to equalize profits over the full period of 12 months.

We think it is now a certainty that the great dairy industry of this country will not be allowed to slip back into the ruinous conditions that forced producers everywhere to organize for self-preservation.

# Value of Water

## Give the Cows All They Require

By A. B. NYSTROM.

No attempt will be made to estimate the value of the water your cows drink in dollars and cents. It is usually the one part of the ration that is supplied in abundance. Still, there are many dairymen who fail to give the cows all the water they want all the time. We must not forget that milk is 87 per cent water. And if we want our cows to be heavy producers we must give them all the water they require.

An interesting incident that shows the value of water came to the writer's attention recently. Joe Kiser of Lewis county, Washington, milks 28 cows. During the summer months his cows run out night and day where they have access to the pastures and plenty of fresh water. His returns from them show they are well fed. When pasture dried up this fall he began feeding silage and grain and was able to keep up the milk flow as long as the weather was warm. When it got cold he kept the cows in at night, feeding them the same as when he turned them out at night. The cows kept going down in their production until Mr. Kiser became alarmed. He fed heavier rations of silage and hay without results. One evening after supper he thought he would go out and see if the cows were thirsty. He carried a bucket full to the first cow, and to his surprise she drank it all as fast as she could swallow it. He went after another bucket full and then another. Other cows drank four pailfuls that evening and before Mr. Kiser went back to the house he had carried a couple of barrels of water to his cows.

In spite of the extra work, which took about an hour each night, Mr. Kiser was determined to continue it for a few days to see what effect it would have on the milk flow. To his surprise and satisfaction the cows came back to their normal flow in a very few days, and now Mr. Kiser is thinking seriously of installing drinking cups in the cow barn.

When asked how much his cows increased, on the average, by night watering he said four pounds per day, and it all showed up in the morning milking. These figures are not guesses, for there is a milk scale and record in daily use in this barn. Others can well profit by Mr. Kiser's experience and provide for watering your cows at night.

### BUTTER SUBSTITUTES.

**Restaurants Using Same Must Display Placards to That Effect.**

J. K. White, state sanitary inspector of Idaho, has notified F. R. Cammack, field dairyman for the extension department, that all restaurants and public eating houses using oleomargarine have been ordered to display placards calling attention to that fact. Mr. Cammack called the inspector's attention to the fact that oleo was being used in some places without the designation required by law. Not very many Idaho restaurants have resorted to the use of butter substitutes, largely through a sense of patriotism because they realize the dairy business is one of the more important industries of the state and to use butter substitutes not only lowers the standard of their places of business, but also serves as a direct rap at the dairymen and a benefit to interests not in sympathy with dairy development.

### FLOUR PURCHASES LIGHT.

So far this season government flour purchases in the northwest have averaged only about 350,000 barrels a month bought by the milling division of the administration last year. A year ago the mills not only had large government orders, but also enjoyed good markets in South and Central America and made large shipments to the southeastern states. This season they are shut out of those markets and the only outlet for their flour is the reduced government business and the small trade available in local territory.

**Twenty-five Million People.**

Nearly 25,000,000 people bought bonds of the fourth Liberty loan issue.

**Holsteins Are Rugged**

The Holstein-Friesian Cow is large, strong and vigorous, full of energy and abounding vitality. It is able to turn to best advantage the roughage of the farm, converting it into large quantities of excellent milk for all purposes. She perpetuates herself through strong, healthy calves, and when useless in the dairy, fattens readily and makes excellent beef. If interested in

LIVE STOCK NOTES

Write to the Editor.

E. J. IDDINGS, Editorial Contributor.

## Paid Back in Two Years

In a statement some time ago on the advantages to be gained by the stockman who uses a purebred bull to head his herd, E. E. Flood of Spokane gave some interesting calculations. He declares that a first-class sire will pay for himself in two years.

"The basis for figuring," he says, "is that the animal be used as the head of a herd of 40 cows that will produce 80 per cent calves the first year. Any live stock man will agree that these calves, 32 in number, will be worth 25 per cent more than they would be from a scrub sire. In other words, we have eight calves as a profit from this experiment. These calves at 8 weeks old will sell for an average of $14 each, which is $100 of the purchase price of the bull and 12 per cent interest, inasmuch as we are financing this bull for a term of two years at 6 per cent interest. In the second year the same results will have been obtained and the animal paid for in two years' time, with a good crop of halfblood calves to show for the experiment."

It is probable that the price of calves for vealing has increased more than has the price of purebred bulls since Mr. Flood made this calculation. If so, his argument becomes stronger.

### CALL FOR REMOUNT STALLIONS.

New and significant evidence of the heightened interest of the national military establishment in thoroughbred breeding and horse racing has been furnished by the appeal of the high-priced officers of the remount department to the Maryland Jockey club for the institution at Pimlico of a race for miliary horses so conditioned that the remount division of the army may, after the finish, purchase at $1000 a head any or all of the horses that may take part in it, says the Baltimore correspondent in the Cincinnati Inquirer. There will be no entrance fee, but the Maryland Jockey club will put up a purse of $2500, which will be split four ways—$1500 to the winner, $500 to the second horse, $300 to the third and $200 to the fourth. In providing for the division of the remount breeding purse among four starters the Maryland Jockey club is pursuing a policy it adopted some time since, in connection with all of Pimlico's big purses.

## VETERINARY

By DR. S. B. NELSON.

**Feed for Young Colt**—I would like to know what to feed my colt. The colt is 3 weeks old and I am raising it by hand by feeding milk mixed with stock feed four times a day, feeding about one quart at a feeding. The colt seems to be getting poor and sucks itself. What is your advice? J. L. M.

Nyssa, Ore.

Dilute the cow's milk one-half and add a teaspoonful of sugar. Do not add any stock food to the milk. Gradually increase the amount of milk that you are giving the colt so that he gets more milk.

**Scab Covers Teat**—I have a thoroughbred Jersey cow 5 years old with calf that gives her milk very hard. There seems to be a scab that forms over the hole of the teat. She is on pasture, also fed corn fodder, cow kale, and mill feed, with dairy food mixed. She has a very good appetite. MRS. H.

Boring, Ore.

The condition that you mention is quite often caused by the invasion of the bacillus aecrophorum. The treatment I would advise is to dip the teat in tincture of iodine before and after each milking.

**Defective Tooth Causes Trouble**—I have a fine horse that is getting no benefit from its feed. The veterinarian says the teeth are perfect, yet after chewing hay or bundles a short time, does not swallow it, but lets it fall from the mouth. This has been the case for over a year. Gets very poor when given anything to eat except when out on green pasture. Will be grateful if you can tell me the trouble. The veterinarian has examined the animal several times and does not know the cause. Please reply in your paper. R. B.

Ashton, Idaho.

The symptoms that you give above are the special symptoms that indicate that the animal either has a tooth with an abscess in it, or a cavity in it and the tooth is tender, or there is a cracked tooth, a slit tooth. The only treatment for this is to remove the offending tooth.

**Stick in Cow's Udder**—My cow run a stick into her bag about three weeks ago. The stick, as near as I can tell, is about one and one-half inches long and a good one-eighth inch in diameter. It seems to be in the milk vein because when I milk the stick comes down and partly stops the milk flow. Can you tell me any remedy for this? A SUBSCRIBER.

Valley, Wash.

The offending piece of wood will have to be removed surgically. Whether you have to make an incision above the teat, and take it out or whether it could be taken out through the teat I do not know. That is the treatment that will have to be given. Of course, if you could do so it would be better to remove the stick through the natural opening of the teat with a pair of forceps, but if that can not be done then you will have to make an incision up in the udder and remove it that way. It is not wise to make an incision in the side of the teat because that is so difficult to heal. Naturally, if the incision is made in the udder every antiseptic precaution will have to be made or you may get infection in the udder and it will be ruined.

The Man in the Tobacco Store Says

—it does beat all how men are taking to Real Gravely, now that they know it costs nothing extra to chew this class of tobacco. All you have to do is to get a man to take his first plug of Gravely. Let him get the pure, satisfying Gravely taste, and learn for himself how much longer the small Gravely chew stays with him than a big chew of ordinary plug.

J. I. CASE PLOWS

IN J. I. Case Tractor Plows the "drag" of furrow bottom and land slide pressure has been eliminated. All the weight of the frame is carried on J. I. Case dust-proof, easy-lubricating, long-distance wheels.

That's why this Tractor plow "rides" like a wheeled vehicle instead of dragging like a stone boat. That's also why more acres per day and deeper plowing are possible—and extreme fuel economy is attained.

In addition, the J. I. Case Tractor plow is easily handled from the seat of the tractor; has a simple, sturdy power lift; and enters and leaves the ground instantly, points first, like a walking plow. Thus less labor is required and a more uniform quality of work is done. The Tractor is made a more profitable investment.

See your J. I. Case dealer today. He is a dealer who will justify your faith as well as ours.

J. I. CASE
Horse Drawn Plows
Sulky, Gang, Walker models. World's lightest draft. Flexible beam and "floating" bottom insure uniform penetration and prevent shares from breaking. Strong, dependable, convenient.
See your J. I. Case dealer or write us.

# Give Hens Room

## If You Would Have Them Lay

The pullets should be got to lay now as soon as possible. This implies that the laying of the eggs does not all rest with the pullet herself. Or, rather, the making of the eggs is under the control of the poultry-keeper largely. No matter how good the pullet may be, or how well bred she may be, no matter whether she is from a 200-egg or a 300-egg strain or not she will not lay eggs unless the owner gives her breathing space at night. She will not lay if the roosting quarters or the house is crowded.

This is the point I wish to emphasize in this article. There are other things under the control of the poultry-keeper that keep the pullets from laying though they have the inherited ability to lay. At this season of the year, however, the special danger is from overcrowding.

It is the crowding that causes 90 per cent of the colds among the pullets in the fall, and a pullet with a cold is not likely to lay eggs. Where they are crowded together too closely the pullets become overheated and they take cold easily. The greater the crowding the less the pure air for each pullet, and this soon shows in lack of vigor and in lack of resistance to colds as well as other ailments.

As the pullets grow they need more house space or air space. The requirement for air increases as their body weight increases. The house may be large enough for two-pound pullets, but too small for three or four pound pullets. They need more air as they grow just as they need more food as they increase in weight.

The trouble is not always that the house is too small; it is very often due to the crowding of the roost perches at the back of the house. The roosts may be so close together that the roost quarters show a solid mass of chickens. There is no space between the rows. The pullets become overheated and they are breathing impure air, and the owner wonders why he gets no eggs. They suffer from colds and lack of pure air. Better close up the house and force the chickens to roost in the trees or on the fence than crowd them too much in a house.

What space should they have? The matter of fresh air for the hen is easily regulated because the hen must roost on a perch. They will not crowd together on the floor; they want perches. All the poultryman needs to do to regulate the fresh air for the chickens is to regulate the perches.

Put them farther apart if you want the fowls to have more fresh air. That keeps the fowls farther apart. Here is a safe rule: Allow six to eight inches space on the roost for each hen, depending on the size of the hen, and set the perches at least 18 inches apart, better 20 inches. With an open front this arrangement will insure ample fresh air and prevent perhaps 90 per cent of the colds among the pullets in the fall. Give them this, and watch them grow and develop red combs.

There is little use in building open front houses, or any other kind of house if the fowls are compelled to roost back in the rear where they are packed close together. Fresh air is the cheapest kind of food and is just as essential as mill-run and corn. J. D.

# What Are Vitamines?

Referring to an article in this department in which "vitamines" were referred to, a reader writes to inquire as to the exact meaning of the term, saying that he fails to find the word in his dictionary.

The word is not found in dictionaries, and I can not at the present time give any information as to its origin. It has been used, rightly or wrongly, to signify a vital substance of nutrition in foods and is used in the Wisconsin bulletin which I quoted in my recent article on "Life-Giving Eggs and Milk." This substance, or element, is as yet an unidentified chemical substance, and Dr. McCollom has taken exception to the use of this word. All that is known, so far as the writer is aware, is that there is a something, or a substance, that is very favorable to growth, but which is found only in milk and eggs. That much has been demonstrated, and that may be enough for the practical feeder.

The fact is, a great discovery has been made through feeding experiments, but the thing discovered remains hidden. The discovery is of great practical value and we will take advantage of it even though science has not given us the whys and the hows and the name of it. It is a fact, so far as the practical application is concerned, just as much as though we could measure it with a tape line, weigh it with a balance, see it with our own eyes, or photograph it with the X-ray. J. D.

# Your Boy Needs Help

By CHARLES DILLON.

If ever you have a doubt about the importance of giving money to the united war work campaiagn you can clear your mind completely by comparing the history of your country's early days with the history of the western front. If, perchance, you have forgotten the history you studied in the eighth grade, or in high school, it would be a good thing to go over it again. When the first American army went into battle a hundred and forty years ago, very little thought was given to anything except fight. There were no comforts and very often there was no food. You will remember Valley Forge even if you have forgotten the story word for word. You certainly remember the picture of Washington standing on snow-covered ground, usually with one foot on a tree stump, worrying about his hungry, shivering soldiers. You know what a terrible time they had all that winter.

Compare the story of Valley Forge with the history of the last three winters in the European war. You haven't heard of any frozen soldiers—not among the British, the French, the Italians or the Americans. Why? Because of the perfect organization for comfort, physically and spiritually, under which the great associations are employed now consolidated in the united wark work campaign. Whether they be in American camps or on the western front, our boys are cared for by some of these organizations. It doesn't matter whether they are Protestants. Jews or Catholics, some competent person with more thought for comfort than for creed is there, ready and willing to help. There are always men and women present to cheer the homesick boy, to keep up the communication line between him and his home. This is the influence that keeps your boy clean and cheerful. It is the influence that saves him, sometimes from himself, because there are certain circumstances you may know nothing about in which boy or man is tempted beyond his strength to resist. A boy accustomed to the freedom of country life is likely to feel himself a strange figure among the thousands of every class encountered in a great army, far from his native land. The seven organizations I mention are asking for money to keep up their good work among the soldiers here and across the sea. They are represented by men and women who understand the country boy just as they understand the man from town. They know something about country mothers, and when they talk to a boy it is with those mothers in mind.

# Profit on Small Farm

Pacific City is a little village or one of the dozen or more little stations in the valley between Seattle and Tacoma. The little farms are very small, not exceeding three acres. But three or even one acre is all one man can handle. Down close to Seattle there are dairy farms, and up this way mostly garden truck is raised. These garden patches are handled mostly by the Japanese. There are lots of berries grown here. Then on the smaller places they raise their own garden and some hay. Every one has some cows, and cream and milk routes have been established. Cattle here are mostly of the best stock. Cows are worth $125 to $200. and even more.

There are some apples raised, though they are not as nice as apples in the Wenatchee valley. Potatoes yield better here than in any part of Washington that I have seen. There is a good sale for all the berries, beans and the like that can be raised. This stuff is all sold to canners. Everything in the fruit line can be raised here except peaches, and it is too wet for them. Horses are used very little. Most of the produce is taken to the markets in autos. MRS. O. ALLENBAUGH.

Pacific City, Wash.

### WANT BETTER LIVE STOCK.

The International Live Stock show will be held at San Francisco beginning November 16 and continuing until the 24th. The slogan of the show this year is "More and better live stock." It is stated that some of the best beef cattle herds in America will be represented at the show, including Shorthorns, Herefords and Aberdeen Angus. An excellent showing of horses is also expected.

### NO SLACKERS ON RANGES.

Persons applying for use of the forest ranges for next season may have to show evidence that they are not slackers by submitting proof that they have bought liberally of Liberty bonds or war savings stamps, according to reports from forest service officials.

### HOLD POWER FARMING SCHOOL.

The J. I. Case company is holding a series of tractor schools. Those for the northwest are at Spokane November 26-30, and at Portland December 3-7.

### Had His Number.

"What made that man jump so and run when I said there must be a draft somewhere about? Do you think he was afraid of taking cold?" "No; I guess he was a slacker."—Baltimore American.

### Lay the Fire at Night.

It is good policy to be ready for a good start the next morning.

**The ECLIPSE for $1.65 a year**
That is the cost per year, figured on a basis of 38 years of service. Eclipse Windmills erected 38 years ago are still pumping water *today—with no repair bills!*
The Eclipse Wood Windmill has been used for 50 years, always giving wonderful service. Its strong, simple construction makes it the one mill to buy.
**Powerful—Weather-proof**
It's a mighty still day when the Eclipse doesn't pump some water into your tank. Automatically turns in and out of wind—requires but occasional oiling—direct stroke—no gears—but little friction—noiseless. Buy the Eclipse Windmill—it's the cheapest in the long run. Figure its cost by its service for years, without repairs—not the first investment. Now go to your dealer—who'll prove these claims.

# Need Organic Matter

## Chemical Fertilizer Insufficient

It is generally agreed to be a mistake to consider that the application of a fertilizing element to soil by direct means, such as the sprinkling of nitrate of soda upon it, is as valuable as the injection of the same element through the introduction of organic matter. A paragraph in a report of experiments along this line at the Hood River, Ore., experiment station of the Oregon Agricultural college, touches strongly on this point. It says:

"While nitrate of soda will stimulate trees and bring them from a devitalized condition back to a normal condition, it will not, however, exert much influence on the soil, and therefore, in order to improve the physical condition of the soil in many orchards it is necessary to add organic matter."

There are many orchardists today who believe that the growing of alfalfa in orchards is not only one of the best ways of introducing this needed organic matter, and the needed nitrate element, but that it is much to be preferred to the clean cultivation that was so long favored by leading orchardists and that is still adhered to by many.

Alfalfa possesses the power of collecting nitrogen on its roots, as do all leguminous plants, including peas, vetch, clover and beans. This tends to put the needed nitrogen in the soil. In addition, and this is a point emphasized by many fruit growers, it penetrates deeply into the soil, serving a twofold end: (1) It aerates the soil deeply, and (2) it leaves a root system deep down to decay into available organic matter when the crop is plowed up and a new crop started.

# Questions Answered

**By Granville Lowther.**

I have a letter from J. B. Weaver, Union, Oregon. Mr. Weaves says: "I read your page in the Farmer with interest, and have a few questions you might be able to answer.

"Can you give me any information in regard to the spray gun? Do you consider it a success for liquid spray?

"Have you tried, or do you know any one who has tried the dust spray here in the west for codling moth, or cherry slugs?

"If dust spray is successful would it not be advisable to add to the powdered arsenate of lead some cheap powderlike gypsum, which can be had for 75 cents per 100 here? The purpose of the gypsum is to increase the bulk and make it so you could distribute the lead cheaper.

"Would gypsum alone kill the slug?"

Thanking Mr. Weaver for his compliment to me in adding to the interest of the Farmer, I would reply as follows:

1. We have tried the spray gun and like it very much. It makes it possible for one man to do the work that ordinarily required two men. We calculate that the last year we saved in labor many times the cost of the gun. We used the liquid spray, and can testify as to the value of the gun for liquid spray.

2. Several years ago we tried the dust spray with the hand spraying machines. We did not consider it a success. Now, with the new forms of spray materials, and with the improved machinery it is a success. I have not tried it personally, but I know of many who have, and am sure it is all right.

3. As to the advisability of adding to the arsenate of lead some cheap powder like gypsum, I do not know. I do know it would kill cherry slugs, pear slugs or any other of that class of insects that are covered with a slimy, mucilaginous substance, at certain stages of their development. Several years ago, I experimented with lime, wood ashes and road dust in order to learn their effects on slugs. I found that all three killed the slugs. The reason seemed to be that the dust adheres to the body, mixes with the mucilage and causes an irritation from which they die. Gypsum would do the same, or have the same effect as the other dust sprays.

My doubt is in reference to the effect of gypsum on the codling moth.

Gypsum is composed of calcium sulphate, and is what is generally known as plaster of paris after it has been dissolved in hot water at a temperature of about 100 degrees. Perhaps that temperature should be called warm water rather than hot, but a much higher temperature injures it for use as a plaster. The calcium has something of the nature of brass, and the sulphate of sulphur. I do not know what effect the mixture would have on the blossoms in the first codling moth spray, nor do I know what proportion of arsenate of lead would be necessary in order to kill the moth. I wish some one would try it out on a small scale and let the public have the benefit of his experiments. I have on hand at this time about all the experiments I can watch successfully, or I would try it myself.

### The Standard Prune.

I have had an inquiry from Mr. Persons of Yakima, Wash., as to the value of the Standard prune.

I am frank to confess that I know very little about it. We have never grown them, and I have never seen them. I consulted my books and bulletins, and the only literature I could find on the subject was from the voluminous publication called The Plums of New York. In that volume, it is said that the Standard is a cross between the Tragedy and Sugar, sent out by Luther Burbank. Professor E. J. Wickson of the University, Berkeley, California, describes it as follows: "Freestone pit, five-eighths inch by five-eighths inch. Flesh yellow, melting, fine grained; very juicy and sweet; skin dark blue, sub-color dark red, medium texture."

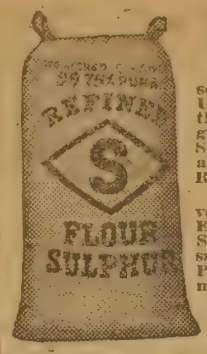
Since the principal difference between the plum and the prune is in the larger sugar content of the prune, I am guessing that the Standard prune is especially valuable on account of its large percentage of sugar. However, if I were planting, I would write to Professor Wickson for any information he may have on the subject. Further, I have faith in Burbank; not all the new things he has turned out have succeeded, but so many of them have that when he gives indorsement to a fruit or vegetable it is worthy of careful consideration.

The question has been raised whether the prune might not be well adapted to California, and not to a colder climate? This is often true, but in this case a prune bearing the same name and similar description is grown in England; and if it could be grown in that climate, it would doubtless succeed in this.

G. L.

# Storing Vegetables

One of the easiest and cheapest ways to store vegetables during the winter is by burying them in a pit. Select a location that is well drained, preferably on sandy soil. Dig the pit long and narrow and about one foot deep. Line with straw and heap the vegetables in. Cover with leaves or straw, on top of which place from four to eight inches of soil. Do not cover too closely in the milder weather, and be sure to arrange wisps of straw at intervals in the peak for ventilation. If the winter weather is severe, a covering of manure over the top will afford warmth and protection.



If the vegetables are to be used during the winter the pit can be arranged with dirt partitions so that one compartment of the stored product may be removed without exposing the remaining portions.

### GANNON GOES SOUTH.

T. A. Gannon, national organizer for the National Catholic War Council in the united war work campaign, has left San Francisco after completing preliminary organization work in this state, and is on his way to do the same work in Arizona, Nevada, Mexico and Texas.

### Women in Parliament.

Women are now entitled to sit in the British parliament.

# Sulphur

It has been proven and so recommended by the University of California that if you sulphur your grape vines and orchards SIX times they will not be affected by MILDEW or RED SPIDERS.

ANCHOR Brand Velvet Flowers of Sulphur, also EAGLE Brand, Fleur de Soufre, packed in double sacks, are the flufficst and PUREST sulphurs that money can buy; the best for vineyards; the best for bleaching purposes, LEAVING NO ASH.

Try our new brand of VENTILATED Sublimed Sulphur, 100 per cent pure, for making Paste—(Atomic Sulphur)—and for dusting.

For Lime Sulphur Solution, use our DIAMOND S Brand refined Flour Sulphur. We can furnish you this sulphur at such a low price that it will pay you to mix your own solution.

To create additional available plant food, drill into the soil 100 to 400 pounds per acre of our Diamond "S" Brand Powdered Sulphur.

It has been proven that sulphur has increased various crops up to 350 per cent.

# The Mighty WADE Outsaws 10 Men!

A money-maker and hard work saver for land clearers and wood-cutting contractors. One man can move it from cut to cut. Simple and reliable. Hundreds in use all over the United States—in the woods of the Pacific Northwest, California, Minnesota, Arkansas, New York. When not in use for wood cutting the 4-H.-P. motor will run feed mills, feed choppers, pumps, etc.

## Read What These Owners of Wade Drag Saws Say:

"One afternoon my brother-in-law and I took my WADE into the woods and sawed three hard maple trees into 16-inch blocks, the trees averaging about two and one-half feet at the stump. He expected it would take me from eight to ten hours to do the job. but it was all done in three hours.—F. W. Hiller, Vernon, N. Y.

I cut thirteen and one-half ricks of cottonwood in six hours.—J. W. Stratton, Atkins, Ark.

One gallon of gasoline will cut six to ten cords of wood; it depends on the kind of timber you cut. —W. D. Thomas, Bull Run, Ore.

Thirty-six inches in diameter, yellow birch, is the largest I have cut and I cut down to six inches.—P. L. Cole, West Duluth, Minn.

My WADE saw paid for itself six times over.—F. W. Taylor, Swisshome, Ore.

I am making $250 a month with my WADE.—F. A. Storts, Orville, Cal.

I cut down to eight inches in diameter.—F. T. Swank, Park Falls, Wis.

**America must burn more wood for fuel. One Wade will do 10 men's work at one-tenth the cost. Write for free book, "How Dan Ross Cuts 40 Cords a Day." Full details and special price.**

# Associations Must Be Patronized

## *Volume of Business Often Spells Success or Failure*

By ASHER HOBSON, Farm Markets Director for Washington.

For the last half century, at least, the farmers of the United States have turned to collective bargaining as a solution of many of their problems. They have associated themselves cooperatively for the purpose of doing collective bargaining along many different lines. Some of the more important of these activities are: Live stock improvement, community development, legislative promotion, manufacture of dairy products, buying supplies, and the sale of farm products. In fact, collective bargaining has been an applied means to many an end. Unfortunately collective bargaining in the sale of farm products has not fulfilled the highest expectations of its adherents. If the history of cooperative marketing associations in the United States were written, the failures would fill many, many more pages than would the successes. These failures, however, have not lessened the belief of the farmer as a class, in the principles of cooperation. They have merely convinced him that the bringing about of successful cooperative effort is a rather difficult and complex matter.

Although there are numerous factors which contribute to the success or failure of cooperative undertakings, two of these factors have proved themselves to be of primary importance.

### Management.

It has been found, in the light of past experiences, that too often boards of directors of cooperative concerns have not been willing to pay the necessary salaries in order to attract managerial ability equal to that employed by competitors. Cooperative marketing organizations by no means manage themselves. Every association must meet competition of some sort. In order to meet this competition successfully, its activities must be supervised by managers as highly efficient as are the managers of the concerns competing against it. Many associations follow the policy that one way to cut down marketing expenses is to eliminate the high salaried employees. This practice often proves a costly one, in that cheap concerns may be cheap in more ways than one—by rendering an unsatisfactory service.

A marked improvement among cooperative marketing concerns has been noticeable during the last few years in respect to their attitude toward managerial ability. At present one is able to find as highly paid managers at the head of cooperative undertakings as are found among many private companies following the same line of business.

A majority of associations follow the capital stock plan of organization. In following this plan capital stock is generally made the primary consideration in determining whether or not an organization should be effected. The general procedure is to bend all efforts in the sale of stock until sufficient funds are secured to begin operation. Then the association is declared to be a going concern. By this method capital is given the prime consideration. Experience has shown, however, that capital, although necessary in most cases, is only of secondary importance to the success of the enterprise. The item that is far more essential is patronage—volume of business. For instance, if a cooperative creamery is to be a successful undertaking it must have butterfat. No matter how much capital a creamery may command, if it handled no butterfat it would be a failure as a creamery. But if it received a sufficient amount of butterfat to run it at full capacity, there is little doubt that it could command the credit with which to borrow the required capital.

In any commercial enterprise there is a lower limit to the volume of business below which the undertaking ceases to be a successful one. The first consideration of a prospective cooperative association is to assure itself that its volume of business will be well above this lower limit. With this precaution, and with a reasonably efficient management, the financial end will cause little difficulty, nor need the association fear the effects of legitimate competition.

### How Much Business Is Needed?

In considering the advisability of organizing a specific association, the first task is that of ascertaining the minimum volume of business required to make the association a thorough going concern. After arriving at a definite estimate of the amount of business required, the next step is to obtain this minimum volume of business before actually forming the organization. If the required amount of business is secured among those in the communities interested, within a reasonable length of time, the organization is completed. If the estimated volume is not pledged, the undertaking is dropped.

Each farmer who pledges himself to become a member agrees to sign a contract appointing the association his exclusive sales agent for the specific product or products which the association expects to handle. Furthermore, he agrees to give a negotiable noninterest bearing note to the association. The amount of this note is based upon the amount of business which he expects his organization to handle for him—so much per acre or so much per ton. This note serves two purposes: (1) It furnishes security for obtaining the necessary capital for financing the company. (2) It serves as security for damages to the association in case the member does not live up to the terms of his contract.

As a rule cooperators consider "loyalty" of members as the keynote to successful cooperation. Patronage is another term for loyalty. A member who patronizes his association is loyal to that association. Consequently, it is advisable to insure that loyalty by means of patronage contracts backed by notes as evidence of a member's good faith to abide by the terms of his contract. If a member is not willing to back his allegiance to his association in this manner, his support is not to be depended upon in times of stress; and every competitive business, private as well as cooperative, has its times of stress.

When the required amount of business has been secured on the above basis, the association is formally organized.

The office of farm markets will furnish upon request suggested bylaws, crop contracts and other forms for the information of those considering the advisability of organizing a cooperative marketing association. Further, the office will personally assist in presenting methods of organization and finance to the people of those communities interested. Requests for this service should be taken up with the local county agricultural agent, who will make the necessary arrangements with this office.

PORTLAND, ORE.
NAMPA, IDAHO.

*This Is a Good Time of Year to Read and Use Our "Want Ad" Page*

If you wish to sell some piece of machinery, advertise it now, when the want ads are being read and when buying and exchanging are active.

This is a good season, too, to offer livestock if you have some surplus animals you wish to sell.

Improved farms and farm lands are also being given consideration now, before winter sets in, and a want ad is likely to bring you in touch with those who are looking for just such a place as you wish to turn.

Poultry is also finding ready sale, especially good breeding stock of good egg-producing strains.

Rabbits and hares can also be advertised now to very good advantage, we believe.

MORE THAN 80,000 FARM HOMES IN WASHINGTON, OREGON AND IDAHO ARE REACHED EVERY WEEK BY OUR THREE BIG STATE FARM WEEKLIES. AMONG THESE TENS OF THOUSANDS OF READERS THERE IS ENDLESS BUYING, SELLING AND TRADING GOING ON WEEK BY WEEK THE YEAR THROUGH. THAT'S WHY A WANT AD WITH US ALMOST ALWAYS BRINGS GOOD RESULTS.

WRITE US THE FACTS ABOUT ANYTHING YOU WANT TO FIND BUYERS FOR AND WE WILL WRITE AN AD FOR YOU AND TELL YOU THE SMALL COST OF RUNNING IT.

CONCRETE FOR PERMANENCE

W.S.S. WAR SAVINGS STAMPS ISSUED BY THE UNITED STATES GOVERNMENT

## New Edible Fat

### Skimmed Milk and Cocoanut Oil

Skimmed milk is a byproduct of the dairy industry. It is very large in quantity, but comparatively small in net returns to the farmer. The United States department of agriculture estimates that annually 30,000,000 pounds of skimmed milk is either fed to live stock or wasted. Fed to growing animals only a small percentage of the solids which represent the food value of skimmed milk are recovered in the animal as meat or other products. Now comes the Hebe company in the market for skimmed milk, combining the vegetable fat of the cocoanut with evaporated skimmed milk, making the fat of the cocoanut oil available for human use, recommending it principally for use in cooking, baking, coffee and on cereals.

Up to a comparatively recent time the edible fats used as human food have been derived solely from the small quantities of fats collected in the bodies of animals. Thus the human race has been dependent upon the herbivorous animals eating vegetable materials and collecting small percentages of the fat eaten in their bodies. This has been the sole source of pure edible fats. Vegetable fats, instead of being collected in comparatively pure masses, are distributed throughout plant material in small percentages and mixed with nonedible substances, from which they can not be separated readily—that is, the human organism can not digest such material as cellulose and so can not digest much of the vegetable material which surrounds the fats distributed in plants. Thus it is impossible for the human organism to digest such material as clover-leaf, alfalfa or grass of any kind. Therefore, in order to get the fats contained in such materials in a form which can be utilized, people have been dependent upon the herbivorous animals to collect and provide the fat.

The first two great sources of vegetable fat which science has been able to bring to a state of purity great enough to make them edible, in the same sense as animal fats, are cottonseed oil and cocoanut oil. In making the latter fat available for human use, due both to the process of purifying it, developed within the last five years, and to the process of introducing it into skimmed milk, the Hebe company offers to the human race a new source of food fat for certain uses.

### FEED RULES IN GREAT BRITAIN.

The effect of war on agriculture in Great Britain is strikingly shown by regulations now in force affecting feeds and bedding. Among restrictions of unusual interest are the following:

"The use of straw for bedding purposes is forbidden. Oat straw, in particular, may be used only for feeding purposes.

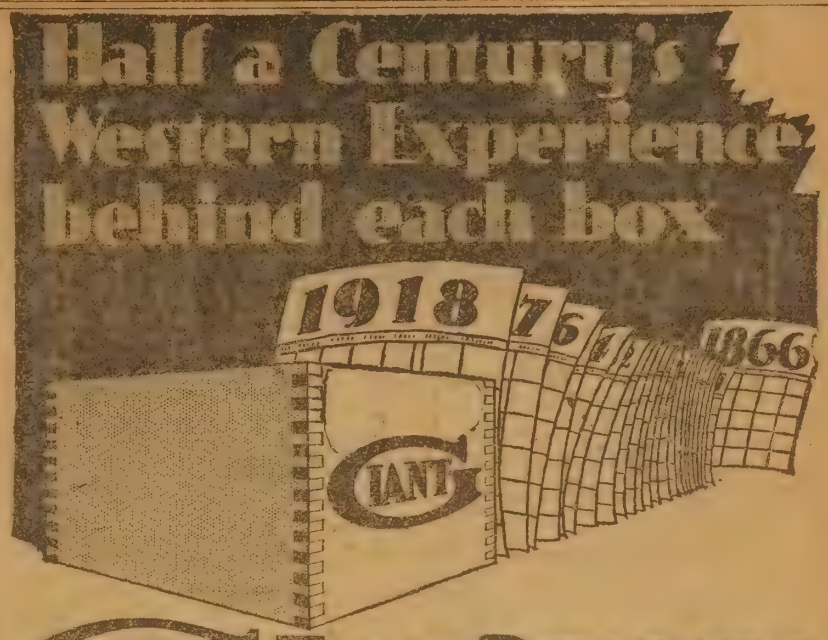
"All persons owning horses, entitled to limited supplies of hay, straw, chaff and cereal feeding stuffs, must keep records showing the number and class of horses, and full facts regarding source, kind and amount of feed used.

"The occupier of an agricultural holding may not sell or part with the possession of any horse which is used or capable of being used for the cultivation of the holding except with the authority of a licensee."

When it is realized that these orders are necessary war measures, the importance of voluntary feed conservation in the United States is apparent. The United States food administration especially asks for elimination of all feed waste and utilization of farm byproducts to which little attention may have been paid in former years. During the year ending July 1, 1919, we must export 2,700,000 tons of feed grains (mostly army oats) overseas. This amount is 750,000 tons more than last year, and must come from our present supplies.

### GROWS FINE POTATOES.

"I could have picked out a ton just as good as these," said Jarvis of Cataldo, Idaho, as he opened a suitcase in the farmers' office the other day and displayed 16 fine, big, white potatoes weighing an average of a little more than two pounds each. Mr. Jarvis had two and a half acres of the potatoes which he sold to the mining and lumber camps in the vicinity of Rose lake at three and one-half cents a pound, at the same time escaping much of the cost of shipping to the city markets. He reports an excellent yield in quantity as well as quality.



### MANY SEEDS IN A SUNFLOWER.

Actual count shows that in some big sunflower heads there are upwards of 4000 seeds. It is interesting also to note that they are in perfect order. It is claimed that if one unit of their curved arrangement is counted the exact number of seeds can be calculated by simple multiplication.

### Slightly Different.

Sarah, the little daughter of a clergyman, was asked if her papa ever preached the same sermon twice. After considering a moment, she answered:

"Yes, I think he does; but I think he hollers in different places."

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

For more than 50 years Giant Powders have cut the cost of western blasting. In all this time they have been constantly improved and adapted to western conditions by a western company. Naturally they make western land clearing easier, faster and cheaper.

Giant Farm Powders—Giant and Eureka Stumping—go further than ordinary dynamites. Farmers and orchardists find that they can do more and better work at less cost with Giant Powders. Hundreds write us that Giant brands "save money"—"give better results"—"have wider breaking power"—"shoot the roots"—and "are always uniform in strength and action."

**Caution:** Be sure you get the genuine Giant Powders, the product of the manufacturers who originated the name. Look for the Giant trade-mark. It is your only sure protection against imitations.

Send coupon (or postal mentioning this paper) for the big free book "Better Farming." It tells you scores of money-saving ways of doing farm jobs. Write for this gold mine of information today.

# THE MILLION-DOLLAR KID WOULD GO A-SAILING

# BOOT MAKES ONE MORE EFFORT TO LOSE PUP

# Brought Alfalfa to Palouse

## *Downen Showed That It Could Be Grown on Dry Land*

By J. E. NESSLY.

E. W. Downen & Son, who recently donated a purebred, registered Shorthorn bull calf to the Red Cross, Knights of Columbus and Y. M. C. A., which brought $1542, giving each of the organizations $514, have been notified that the calf has again been sold and has brought more than $350 for war work.

E. W. Downen is one of the pioneers and best known breeders of Shorthorn cattle in eastern Washington, but probably gained greater fame from the fact that he first introduced alfalfa into the Palouse country and raised it successfully for nearly 20 years on "dry" land, where it had been thought alfalfa would not grow.

Mr. Downen came to Pullman, Washington territory, in 1884, and in 1889 he secured alfalfa seed from his old home in Colorado, where he had seen it raised on his uncle's 12,000-acre farm, and planted it on his homestead on the rimrock above Wawawai, on the bluffs of Snake river. The alfalfa grew and did so well that he increased his acreage to 160. When Mr. Downen first broached the subject of raising alfalfa without irrigation he was laughed at and his proposal treated as a joke. His first field of alfalfa stood for 20 years and yielded a good crop every year before it was plowed up.

Mr. Downen and son have secured several hundred acres of land in Washtucna coulee, located only 750 feet above sea level, where they are successfully raising alfalfa and corn, getting as high as six and one-half tons of alfalfa per year and as high as 100 bushels of corn have been grown by their neighbors. They are stocking the ranch with purebred Shorthorn cattle, and have many of the double-standard (hornless Shorthorns) in their herd. Their ranch is about 90 miles due west of Pullman, and is regarded as an ideal winter ranch for all kinds of stock. They are also raising purebred, registered Duroc swine.

Mr. Downen had been raising alfalfa for several years before it became generally known. The first report of his alfalfa crop ever published was written by the writer and published in the Spokane Spokesman in 1892. The next year E. A. Bryan became president of Washington Agricultural college, and when Professor W. J. Spillman, now with the department of agriculture at Washington, D. C., became professor of agriculture at the college he accompanied President Bryan to Mr. Downen's farm and inspected the alfalfa, which they pronounced "remarkable." Although the seed had come from irrigated districts of Colorado, because of the fact that it was grown without irrigation it became known as "dry-land alfalfa," and many believe it to be a separate variety. Mr. Downen sold that ranch to W. L. La Follette, who kept the land in alfalfa for several years after purchasing it, and it continued to yield well.

Mr. Downen is an enthusiastic stockman, and has secured many of the best individuals in the northwest for his herd, which now numbers close to 200 head.

# Beautify the Farm

## Lawn, Some Shade Trees and Paint

By CARL J. MENZE.

By a carefully worked out plan covering a number of years the farm grounds can be beautified and the results obtained without a great outlay of capital. The work can be done by the farmer himself between the other rushing farm work.

The average farmer has no time for an extravagant plan of work. But a good lawn, a few shade trees, painted buildings, clean fence corners and a neat appearance in general are within the means of all farmers. These improvements not only make the place look homelike, but are an index to the character and are of a monetary value when one wants to sell.

In planting a lawn around the house and front yard it is of no use to plant the seeds without a thoroughly prepared seed bed. But on every farm there is plenty of manure which will aid in preparing the soil. If the ground is rough and cloddy a cultivated crop like potatoes helps to put the soil in good mechanical condition. Before seeding, the ground should be leveled to the right degree, because after the lawn is made this can not be corrected. A good lawn should produce a good turf, and at the the same time a green, continuous crop of grass the entire growing season. The main thing in starting a lawn is to start right; after this the care of it does not take much time, if there are no flower beds in the way to hinder clipping. It is advisable to plant flowers on one side in a bed by themselves rather than in the center of the lawn. For a border on a lawn a trimmed privet hedge is very attractive.

Shade trees are not only a wind-break, but also add to the appearance of any place. In the summer stock like to lie beneath them. On timbered land a group of trees can be left standing in the pasture for the stock. If one has decided where he is going to locate his permanent buildings and leaves a few trees standing, he will never regret it. If trees are planted, they must be protected while young so that the stock will not break them. In the west, where trees are plentiful, shade trees can be transplanted from the forest to the farm.

When buildings are painted they not only are more attractive, but also are protected against the elements and therefore will last longer. In selling a farm they have a greater effect on the mind of the prospective purchaser than otherwise. Old buildings which can not be painted may be covered with vines which will practically cover their unsightliness. For example, in this locality the only way a ripe crop of grapes can be grown is by letting the vines grow unmolested over some building. For this reason they make an excellent covering for buildings and at the same time are a source of revenue and do not take up much ground.

How many farms are there that are full of unsightly fence corners? They are legion. They are full of foul weeds and pests and each year their area increases, unless energetic efforts are taken to destroy them. Every year, after a crop is taken off, the corners should be cut free of weeds and the rubbish burned. At plowing time, plow as near the fence as possible.

On every farm there is more or less scrap which always accumulates. Old rubbers and rags can be gathered in a box or bag and sold. By having a box in an accessible place tin cans and whatever material is useless can be collected and hauled away. At the present time farmers have a good opportunity to sell scrap iron at a good price.

### CANNERY ON THE FARM.

E. B. Gay & Son, Iowa farmers who recently invested rather heavily in irrigated farm lands close to Oroville, Wash., on a little less than six acres raised, picked and canned 2000 cases of tomatoes this season. Each case contains 24 solid pack two-and-a-half-pound cans. Besides this they shipped out 15 tons. Their supply of cans was not received in time or they would have canned a great deal more. This was their first year of farming the land and they built a small cannery on the place, at a nominal cost. The tomatoes have been sampled by local people, as well as travelers, and pronounced as good as those on the market. It is probable the government will take the entire pack. These men expect to plant 15 acres of tomatoes next year, and may erect a commercial cannery.

I did not meet the elder Mr. Gay, but the young man gives their plan of growing tomatoes as very simple. They should be started in a well prepared hot bed, then transplanted to a cold frame and gradually hardened to the spring weather before being planted out. He plants the vines 4x4 feet after thorough preparation of the ground.

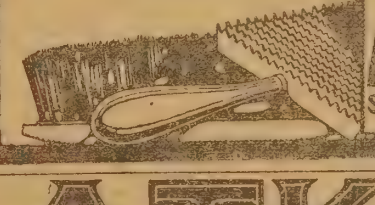
In the tomato fields five roads had to be left for hauling and other purposes. Down the middle of these roads five rows of Carmen potatoes were planted. These five rows yielded five tons. As there would be about 12 of the rows to an acre, a yield of 12 tons is indicated. H. A.

### FOURTEEN POTATOES PER HILL.

C. W. Burbank of Tonasket, in the Okanogan valley, had 20 acres of potatoes which, it is claimed, ran 14 potatoes to the hill. The entire patch is upland and unirrigated. It averaged over five tons per acre of good marketable potatoes.

**Emerson's**
**OAT KICKER**

A new machine in big demand on the Pacific Coast. Takes out every kernel of wild or tame oats from wheat, barley and rye, at the same time cleans out the small foul seeds and dirt; something that no fanning mill or grain cleaner will do.



Run your grain through the OAT KICKER before selling and save yourself the costly dockage. Before sowing, clean your seed free from oats and dirt, foul seeds, etc., you will find it pays back big returns. Three sizes, $40 to $160. Hand or belt driven. Send for descriptive booklet "WF."

**The J. J. ROSS MILL FURNISHING CO.**

STANDARD OIL COMPANY
(California)

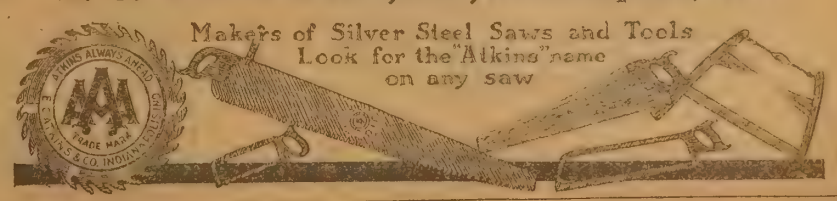
**MICA**
**AXLE GREASE**

**ATKINS**
**SILVER STEEL SAWS**

## How ATKINS Has Made Sawing Easier and Faster

These better saws are made to save you time, labor and material. It costs you money to use a "cheap" saw. A really good saw is an economy.

For instance, only Atkins Silver Steel Cross-Cut Saws are segment ground. The small sections above show why they make sawing easier and faster. Notice, on the left, how the Atkins blade, tapers from the cutting edge to the back, avoids sticking and binding in the wood. On the right, see how ordinary saw blades bind themselves to make sawing a hard, expensive job.



And remember—Atkins saws are made from the famous Silver Steel formulas—the development of three hundred years of experience of the Atkins family—the steel that adds years of service and makes any saw hold its edge longer.

You will find the Atkins name and guarantee on all kinds of saws; one-man or two-men cross-cut saws, hand saws of all styles, hack saws, circular saws, meat saws, buck saws. In fact, there is an Atkins for every purpose. If the name isn't there it isn't an Atkins. Nearly all dealers are proud to sell and guarantee you the time-and-money-saving Atkins satisfaction. If your dealer does not, write us.

**Carpenters' Helps Free**—*"The Saw on the Farm" tells how to make neat joints, how to build things, how to file saws and take care of them, etc. Sent free on request.*

# Power, Mechanics and Devices

How would you like to have a department in THE FARMER under the above heading of "Power, Mechanics and Devices?"

Will you help us to make this department one of the very best in this paper? It is only through your active cooperation that it can be made one of our best features.

It is growing more and more difficult to obtain farm help.

Just what kind of farm machinery are you thinking might help you out in addition to what you already use?

It is just as important that the good housewife should have the help of machinery in her home as it is that you should have machinery on the farm. Possibly you may not have thought of it in just that light, but is it not a fact?

People in the towns dream of what they would like to have in their houses even more than they have now. Why should not farmers and farm women folks have the right to the same kind of dreams? You may not have an electric lighting system in your house, but is that reason why you should give up all ideas of ever having it? You may not have a pressure water system, but what is to forbid you hoping for it in the future?

All these conveniences are becoming more and more common, more and more within the reach of the farmer. more and more within the reach of farm homes.

The farm tractors are now being made for smaller farms as well as for the larger farms.

Gas engines are worming their way into every kind of farm work as well as helping out in the farm home.

One farmer may be able to tell other farmers through this department how to make devices which will help out both farm work and housework. These home made devices are most helpful. This column is open to you all. Send us drawings as well as descriptions and we will have them put in shape.

Let us make this department one of information, one of hope, one of inspiration.

Where there is a will there is a way. This proverb has held its own through many years. It is not out of date yet. If you have got the will, let this department help you to find the way.

Anything and everything in the way of power, mechanics and devices goes in this column that reasonably promises to help out the farmer and the farm housewife during these days of change in farm production and in farm living.

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

Designed by The Washington Farmer.
(Patent applied for.)

### Get a Farm Service War Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe is entitled to real war service recognition. That is the idea back of the farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

Convenient Order Blank.

..... 1918

THE WASHINGTON FARMER,
Review Bldg., Spokane, Wash.

Enclosed find five cents (5c), for which please send me a Farm Service War Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Name .....

## The Farm Cottage

The following schedule of materials, prepared by the engineering bureau of the National Lumber Manufacturers' association, will aid the farmers in ordering and checking up materials necessary to complete any modest cottage:

Posts.
Sills.
Joists and bridging.
Studding.
Plates.
Rafters.
Sheathing, paper and felt.
Shingles or siding.
Flooring, rough and finished.
Interior window and door frames.
Cornices.
Other exterior moldings.
Gable finish.
Attic ventilators and door casing.
Interior ventilators and door casing.
Ceilings.
Base and quarter round.
Closet and pantry finish.
Exterior window and door frames.
Exterior and interior panel doors.
Windows and glass.
Steps and stairs.
Porches.
Screens.
Door and window hangings.
Weight cords and locks.
Nails and hardware.
Valley tin, gutters and spouts.
Lath and plastering, wall board or sheathing.
Paint, putty and shingle stain.

Additional items to be considered are:

Excavation.
Masonry and brick work.
Iron work.
Plumbing and gas fitting.
Heating and electric wiring.
Grates and mantels.
Grading and sodding.
Sewerage and cartage.
Walks and drives.
Gas and electric fixtures.

The division of rural engineering of the United States department of agriculture at Washington has prepared plans of moderate cost farm houses, copies of which are sent out upon application. The plans are most complete, with working drawings giving sizes of timbers, location and sizes of doors and windows, etc., and suggest a modest type of design for the exterior.

### HOGS ARE INCREASING.

County Assessor Hoover's returns for Grays Harbor county, Washington, show that in 1917 there were 1497 hogs in the county, valued at $13,545, and in 1918 there were, on March 1, 2303 head, valued at $28,565. An increase of 806 head, valued at $15,020.

## Block and Tackle

One of the hardest jobs on the farm, in some respects, is swinging the hogs at killing time. This is not always true, but it is in too many cases, and all because preparation is not made for handling the porkers the easy way. A 200-pound hog has to be swung on a hanger higher than the head of a 200-pound man. A hog right out of the scalding vat is hard to get hold of, and one who has handled him knows what the term "dead weight" means. Furthermore, there is no way of taking advantage of the job if you choose to handle him by main strength. Not more than two men can take hold advantageously, and they must lift him to a point higher than their strength can be effectively applied. No big hog was ever hung that way without somebody doing some unnecessarily hard work.

A block and tackle obviates the trouble at once. Attach the tackle at a point a couple of feet or so above the hook or spike or what not on which the hog is to hang. This will prevent trouble when the blocks come together, as they would otherwise have to do. With a block and tackle one man can swing a hog with greater ease than two or three or four can without such device. It reduces the power required by half or three-fourths, depending on the kind of blocks. The workman pulls down instead of lifting up, and he can always keep his body in a natural and advantageous position with reference to the strain.

### AUTO CHANGES FARM HABITS.

It is not uncommon to be reminded that the automobile has wrought great changes in rural life, but it is not commonly recognized that it has actually altered the farmer's fundamental ideas of business. David A. Pepp of Portland, Ore., says that it has, in one particular at least. He declares that when the automobile came onto the market the farmer quite properly wanted it, but that he couldn't buy it without money. Hence, says Mr. Pepp, he began to save money until such time as he acquired enough to secure his car. And since then he has been more in the habit of saving and paying cash than before, resulting in his doing a far larger cash business than ever before. There may be differences of opinion on this point, but the fact remains that the auto has done great things to make the country a better place to live in.

### NEED "LEAN" GAS MIXTURE

"There is much that any car owner, whether he is a mechanic or not, can do to make sure he is getting the most out of his machine," says H. W. Mitchell, an experienced automobile man of Portland, Ore. "In the first place, he can make sure that his carburetor is set to feed the leanest practical mixture of gas into his engine. This makes a world of difference not only in the amount of fuel consumed, but in the condition of the motor.

"If a too rich mixture is used, the combustion chambers and valves will foul quickly, and this means a trip to the service station that will involve considerable expense. If a man does not trust himself to make this slight adjustment, it is only a moment's work for an experienced garage man. Of course, every one finds it necessary to change the carburetor in cold weather, but it is advisable to check up three or four times during the year to make certain of best possible results."

### SCAB CAUSES TROUBLE.

The dipping of some 86,000 head of sheep has just been completed by sheepmen on the Okanogan national forest range. This was to destroy the scab that was introduced into the range by one flock that was brought in from another state. All the sheep that have been on the particular range or driveways over which the infected flock were driven had to be dipped. One result is that many lambs that otherwise would have been ready for market are being held over until spring, which will cost the growers much in feed.

### WILL AID THEIR ENEMIES.

The allies are already planning ways and means of aiding the stricken people of the countries that have recently signed armistice agreements. The need for food is tremendous.

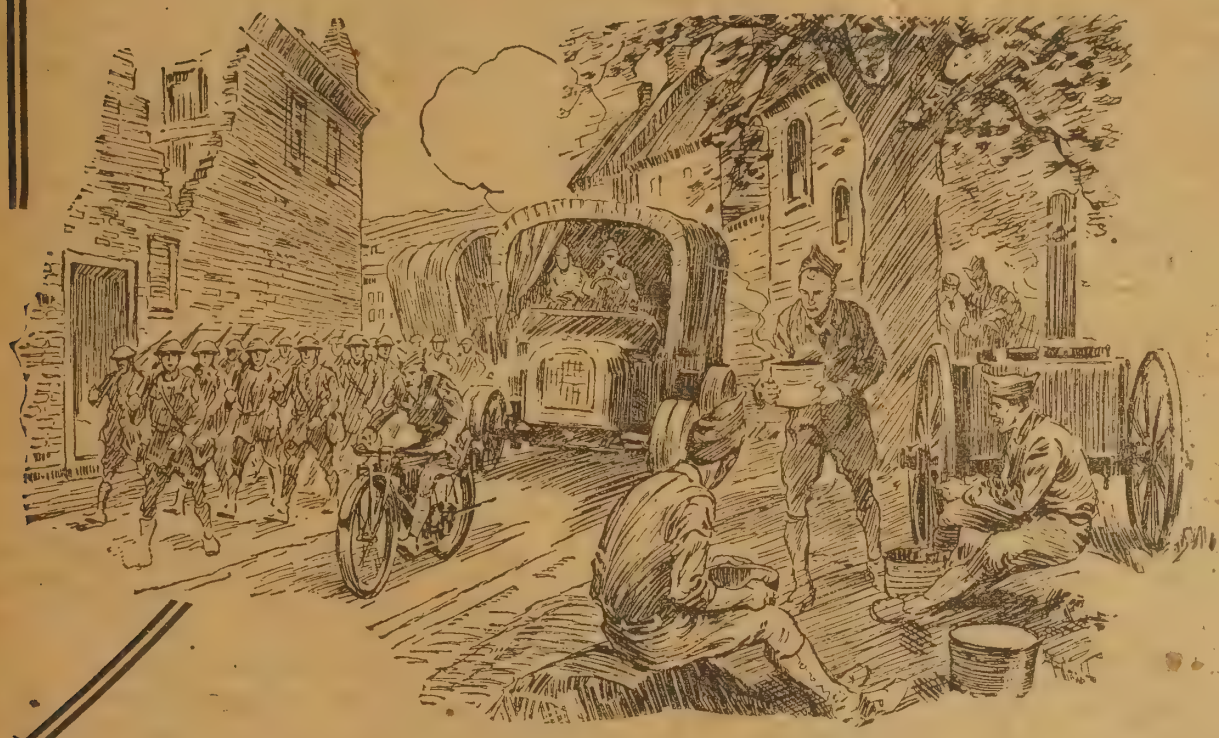
### KEEP OUT THE RAIN.

Now is the season of the year when the pig pen needs a good roof.

## Rubber Footwear in "No Man's Land"

"Over there" our boys are fighting knee-deep in mud. Keeping fit under these conditions is difficult. Rubber footwear has therefore become almost indispensable for men in the trenches.

To keep America's troops supplied with rubber footwear is all-important. Men who are fighting must have first choice. This limits home supplies but saves valuable lives overseas.



Our outdoor-working customers, we are sure, will cheerfully meet this situation. We regret our inability to take care of every demand for "U. S. Protected" rubber footwear. We thank our patrons and look forward to serving them again. Until then, look for the "U. S. Seal" on every pair and remember the name.

**United States Rubber Company**
New York

U. S. Rubber Footwear

# Grave Shortage of Labor for War Work

## *Says Director of U. S. Employment Service*

"As the army increases the situation grows more grave." Help release man power by sending your subscription direct to the Washington Farmer.

Nathan A. Smyth, director of the employment service of the United States government, says:

"Americans must know that common labor when performed for one's country in time of war is worthy of any man, whatever may be his prior position or experience. As the army increases the situation grows more grave. It must be faced resolutely and squarely. There are plenty of men in the country to meet the present crisis, but they are now engaged in non-war work."

"The shortage in skilled labor is becoming as grave as that in unskilled," adds Mr. Smyth. "The available supply of unemployed is rapidly being depleted and the seriousness of the situation can hardly be exaggerated."

That is the problem stated clearly and forcefully. Each and every one of us must do his or her part in meeting it.

By the cooperation of its readers, THE WASHINGTON FARMER has for over a year been able to dispense with its big force of subscription agents. Seeing clearly the need for voluntary action on their part, our friends cheerfully took upon themselves the task of sending in their subscription renewals direct to this paper and mailing the order of a friend or neighbor along with their own.

By thus acting as his own agent, the reader is entitled to and gets his share of the money that formerly went to pay the agent's salary and expenses. The price of your state farm paper is thus cut to the minimum—three years for 50 cents, or less than 17 cents for each of the three years.

All will agree that efforts to save man power must not be relaxed at this critical time. With a loyal body of subscribers such as ours, we know that we can count on united support of our cooperative plan. Send in your renewal without delay and make an effort to send at least one other order with your own.

**Please Act Promptly**

**Rates:-25c** For 1 Year **50c** For 3 Years **$1** For 5 Years

The Washington Farmer. Nov. 14

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

Enclosed is $..... for ..... years subscription. In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# A Test in Strategy

By W. S. CHARLES

Along the whole battle front vague rumors had come that peace parleys were being considered. But these rumors had caused no diminution of the great allied drive that had pushed forward relentlessly for the last three months.

The roar of heavy artillery steadily continued. Streams of prisoners and thousands of wounded were still flowing to the rear. Fresh divisions of soldiers were moving to the long battle front in order to keep to its maximum the relentless pressure by which the allied commander-in-chief, the famous marshal of France, was slowly, but steadily, annihilating the ranks of the foe.

On Saturday these rumors found expression through an order received by the commander of one of the American divisions holding an advanced sector to the east of Metz. This order read that on this portion of the battle line all war activity should cease on Sunday from 10 a. m. to 10:15 a. m. All troops of all classes were to carefully observe this 15-minute respite, but were ordered to resume the drive with full intensity promptly at the end of the time specified. The foe also, stated the order, had agreed to cease activity for the same length of time, in order that the allied representatives chosen to arrange terms for an armistice might safely pass over the battle line in a DeHaviland battle plane under a flag of truce on their way to German great headquarters. Beyond the allied lines it would be met by a battle plane of the Fokker type, which would pilot the allied plane to the place of conference.

When this order was received at the advanced machine gun position, located in the heavily wooded section near Ingweiler, Sergeant Bill Langford, who was in charge, swore roundly.

"—— —— ——! I'll bet that headquarter's bunch will sign peace affidavits before I get a crack at that Hun snipper who nipped me this morning," he growled, tenderly rubbing his left arm, where a white bandage showed through a long slit in his sleeve.

"Aw, take it easy, Bill," grunted Mart Johnson, one of the members in his squad. "If you don't get him now you can visit Berlin and punch his mug after peace is declared."

"Oh, ——, Mart, this guy ain't no Berlin giezer! I think I know this guy. He's one of those cheap skates who used to sling hash on the Bowery in peace times and then slips over the big pond to fight for 'Me und Gott' when war was declared. One of those dirty curs who bite the hands that feed them, and then expect to slip back to the same old job when this scrap is over. That's what makes me see red, ol' timer, every time I think of it."

"Don't blame you, Bill," Mart answered. "The woods is full of the same kind of skunks. If you don't get him here cancel that ticket to Berlin and take a stroll up Broadway when the big push is over."

"I'll get him—sometime," Sergeant Bill snapped back, "but I'd rather get him now. They don't hold post-mortems and ask fool questions over dead Huns over here!"

---

At allied headquarters there was a bustle of activity. The hour was 9 a. m. Sunday morning. The Marshal of France was holding a conference with his leading generals.

A grey-haired, stern-faced general, whose face clearly showed his Scotch ancestry, stood at the side of the table. For three months his English legions, supported by Belgians, French and Americans, had hammered the Hun hordes steadily eastward under the direction and keen strategy of the Marshal of France, who now sat quietly at the head of the table.

"None of us," the English commander said slowly, with distinct clearness, "but have implicit confidence that you clearly and thoroughly understand and measure each war move carefully. None of us who have watched the successful working of your strategy during the last hundred days but must acknowledge that in no single instance have you made a mistake. But, sir, knowing all these things and recognizing the supreme value your military science gives to the allied cause, I, speaking for the British empire, fear you are taking too great a risk in carrying out the resolve you have made to go personally on this mission to German headquarters to arrange terms for capitulation. The past treachery of the foe, who holds no promise sacred, bids me caution you for the sake of the future of civilization not to trust yourself in their power. I plead with you, together with the allied commanders here present, to rescind your decision and send any one of us in your stead. The cause of civilization can not spare you nor allow you to enter the trap of their treachery under the circumstance; while one or all of us, should their usual treachery manifest, could the better be spared."

An acclaim of approval echoed around the table. The Marshal of France only smiled, shaking his head negatively.

"France dares even the Hun in his stronghold and fears not to give all to the cause of liberty! I deeply aappreciate your attitude and the great confidence each and all of you impose in me. But my decision is irrevocable. I shall go in person, lay down the terms for an armistice concerning which we all are agreed as only just, and I shall not fail!"

Turning to an orderly he said:

"My compliments to the commander of the aerial reserves with a request that he report to me at once."

In a few minutes the officer appeared. Drawing from his inner pocket a sealed envelope the Marshal of France handed it to the awaiting aerial commander.

"Emergency Aerial Fleet order 'X21.' If at 1 p. m. today I have not returned to these headquarters in the war plane in which I depart, open these orders and proceed at once to execute. Have you installed and adjusted the wireless automatic transmitter in my war plane so that it is working perfectly with your receiving and recording instruments?"

"It has been installed and tested by two flights of one hour each. Both instruments worked perfectly as to location and distance."

"That is all, sir."

With a snappy salute the aerial commander turned on his heel and departed.

---

"There she goes, Bill! See that old air horse split the ozone!"

Sergeant Bill peered up for a moment as the great war plane of the Marshal of France passed swiftly over the battle lines. Then cautiously parting the screen of bushes in front of him with his uninjured hand, gazed intently out into the tangled maze of underbrush in No Man's Land.

"It's him all right, Mart! That fellow is a goner, take it from me!"

"So says I, Bill! But what in 'ell does the great marshal mean by going over himself to Hun headquarters to get caught in their trap?"

Bill looked around in surprise.

"Marshal of France goin' over to Hun headquarters, you say? You withered turnip, who do you think I'm talking about, anyway! I'm talking about Heinie Schmidt out there in the bushes. That d—d Hun snipper from the Bowery. He's the guy I'm looking for, b'lieve me. That air horse up there can attend to its own funeral. I've got trouble of my own to look after."

Mart looked into the stern face of Bill with a new interest.

"Say, Bill, you're a queer duck," he exploded. "Up there goes the strategic brains of the allies with three or four smaller side lights, right into the jaws of the Hindenburg trap, an' you don't show no interest a-tall! But here you are hugging a grouch against Heinie Schmidt out there in the bushes when you might be enjoyin' a smoke and taking it easy for 15 heavenly minutes. I'll bet Heinie Schmidt ain't lookin' for you just now, Bill. Time enough to look for that polecat when the big ball starts rolling again."

Sergeant Bill spit disgustedly.

"Mart, those orders said 'all classes were to carefully observe the re-spite.' That's just what I am doing. They said to 'resume the drive with full intensity promptly.' That's another thing I ain't forgetting. But they didn't say anything about not maneuvering for position one way or another. I saw Heinie take a sneak just now for a big bush-covered rock about 200 yards to the right out there, and he thinks this Yank ain't wise. But I've got this machine gun dead center on that rock for the first move in the game when the re-spite is up. How much longer does it last, Mart?"

"About six minutes."

"All right. Now listen. You get behind this Browning spitfire and when the big guns begin to bark turn it loose on that rock and keep the air full of lead until you hear from me. I'm going to snake down that little draw to the left and side swipe that Bowery Hun to a fare-you-well. Are you on?"

"Go to it, Bill. But hurry back 'cause that rock won't stand the racket all day."

With the cautious woodcraft of an Indian Sergeant Bill slipped amid the thick undergrowth.

---

At German great headquarters the kaiser and his staff stood looking toward the west, out of which two war planes were swiftly approaching.

At their near approach the thrumming roar of the DeHaviland's great Liberty engine suddenly ceased as with a graceful glide it came to the ground on the level field.

The Marshal of France and his four aide-de-camps stepped from the plane and stood facing the group of war lords. Drawn up on either side of the emperor's field tent was a regiment of imperial guards. On every side were other evidences of the care by which the emperor was guarded. Anti-aircraft guns, machine gun battalions, several high-power armored automobiles, and a squadron of swift Fokker battle planes caught the eye of the Marshal of France as his keen glance swept the field.

At a sign from the emperor a smartly dressed lieutenant approached the allied group and saluted.

"His imperial majesty bids me present his compliments and inquire if you are the authorized representatives sent by the commander-in-chief of the allied forces?"

"I am the commander-in-chief of the allied armies."

A look of perplexed unbelief for a moment crossed the face of the lieutenant. Straightening stiffly he again saluted.

"I have orders to conduct you to the presence of his imperial majesty."

Returning the salute the Marshal of France gave expression to one crisp word:

"Proceed!"

Halting before the emperor and the group surrounding him the lieutenant saluted, announcing:

"The commander-in-chief of the allied armies with his military escort."

The emperor, his withered hand resting upon his bejeweled sword, bent slightly forward, scanning closely the quiet face of the marshal. Apparently satisfied with his inspection he granted the courtesy of a military salute. With quiet dignity the marshal returned it. Then seizing the initiative he addressed the emperor:

"Sir, I am at your service for exactly 30 minutes in the arranging of necessary details looking to the surrender of the German forces."

An angry flush suffused the face of the emperor. He took a menacing step forward.

"Germany, in her expressed desire for peace, has not entertained the thought of surrender. She is willing, however, to enter upon a discussion regarding an armistice. The details can be better taken under advisement at my council table within the tent."

Preceded by the emperor the imperial staff entered the tent. The emperor took his place at the head of the table, Generals Hindenburg and Ludendorff on his either hand. The imperial chancellor, the crown prince and other members of the German group came next. The Marshal of France took his position at the end of the table opposite to the emperor, his aide-de-camps beside him. When all had gathered about the table the emperor seated himself, followed by all present, save the Marshal of France, who remained standing.

The emperor appeared ill at ease. His every move seemed nervous, his manner excitable. There was little in his appearance indicating him as the modern Thor, the mighty war lord of Germany, whose invincible military might could eventually hammer the world into servile submission. At this historical moment he appeared in strange contrast to his military opponent who stood quietly facing him across the length of the table. The Marshal of France, whose strategic genius had broken the picked legions of the mighty war lord into fragments and sent them reeling backward to the shores of the Rhine.

The emperor spoke:

"Do I rightly understand that the commander-in-chief of the allied armies stands before me?"

"You are correctly informed."

"Are you aware that we are at war—cruel, relentless war—and that the rules of necessity developed by this conflict give you no guarantee of safety by coming upon this mission?"

"I am a citizen of France. The citizens of France fear not. France has laid her all upon the altar of liberty and counts not the sacrifice. I am here to proclaim the terms upon which the allied nations will grant Germany an armistice and to secure the guarantees Germany must give to prove her desire for a lasting peace is sincere."

An angry frown crossed the brow of the emperor. His lips curled in a crafty smile. The great hand of the heavy jowled Hindenburg that rested upon the table clinched suddenly at the marshal's words until the flabby creases on its back straightened out like ancient parchment as the general muttered audibly:

"Krieg ist krieg!"

"My general is right," exclaimed the emperor. "War is war. I have heard much of the strategy of the new marshal of France from my commanders in the field. For that strategy to assume it can triumph over my invincible armies is pre-supposing the impossible. But for the author of that strategy to come into my royal presence to proclaim its worth and infallibility is something new in the art of war. Enough of such presumption! I will, however, hear from your lips the allied proposals to see if they contain aught of interest."

There was a shifting of the German staff as each turned to hear the marshal's reply. Slowly and distinctly the measured words fell upon their ears.

"The surrender of the German battle fleet; the complete surrender of all arms and ammunition of German armies operating upon invaded soil; the withdrawal of such disarmed soldiers in military order into the borders of Germany; the surrender of the Keil canal, Essen, Strassburg, Colmar, Mulhausen and all fortified cities and territory west of the Rhine, to the allies; the complete restoration of the devastated portions of Belgium, France, Italy and Serbia; the surrender of the German emperor and his leading commanders at once to the allies without a guarantee of immunity from punishment for the crimes they have committed against civilization——"

The emperor leaped to his feet.

"Gott!" he cried. "Such insufferable insult!"

The Marshal of France smiled. A cold, indifferent smile, at the interruption.

"Such are the allied terms," he continued, unruffled. "I leave the decision with you—accept or reject."

"Never!" the emperor fumed in rage, striking the table with his clenched hand. "Germany will not tolerate such insolence! Our armies in the field and the subjects of the fatherland at home, who are loyal to the head of the divinely appointed house of Hohenzollern, would not consent. With you, their supreme strategist, in my power I am in a position to dictate liberal terms, including the return of my colonies, as a beace basis!"

"I had not finished," quietly continued the marshal. "As an evidence of good faith in the ultimte fulfillment of these terms the supreme allied war council today demands the surrender to me in person of the emperor and his generals, Hindenburg and Ludendorff, and their return with me to allied headquarters as hostages."

"Enough!" snapped the emperor. "I am done with this nonsense!"

Turning to Hindenburg, he commanded:

"General, I give this strategic upstart into your gentle keeping. Send word at once, under flag of truce, to the nearest alied general, that unless hostilities cease at once and a mixed peace commission be sent to me within three days with proposals favorable to the imperial German government I will take as reprisal the life of the commander-in-chief whom I hold as prisoner."

"Wait!"

The words fell like the sting of a whiplash from the lips of the marshal. The emperor turned in surprise at the interruption.

"It is now 12:15. If at 1 p. m. you have not arrived with me at allied headquarters, together with your two generals, the terms I now offer will not hold. If you refuse I warn you as supreme commander-in-chief of the allied armies that the terms I shall later impose will be more severe!"

A sneer curled the lips of the emperor.

"Before that time the messenger I send will have informed the allies that the strategy of the marshal of France has come to naught before the superior strategy of the imperial German high command! Your offer is rejected!"

The marshal bowed low.

"Strategy, sir, has a comparative value. The historians of the future will carefully weigh yours and mine upon its merits. Yours has been here declared. Mine is yet to be considered."

There was a rattle of sabers. A guttural sound of German voices in hasty discussion. Then the marshal of France was led from the presence of the emperor under guard. But that quiet smile failed to desert the marshal's face beneath the brutal scowl of his guardsmen.

---

Out of the gathering dusk toward the west the unremittent roar of thousands of pieces of heavy artillery seemed to increase in volume and draw constantly nearer.

The emperor paced back and forth impatiently, stopping to speak now and then to his two generals, who were closely scanning a battle map.

Every report told of disaster. Defense after defense had crumbled. Picked divisions of the emperor's best reserve troops had been hurled against the allied advance in vain. Headquarters' wires were silent. For the last hour not even aerial messengers had reported. The emperor called his aide.

"Lieutenant, what has been done to re-establish wire communication.

"The emergency wire battalion has been sent forward, but no word as yet. The blowing up of Fort Moltke and Fort Prince Royal by American bombing fleets destroyed the two switchboard systems connecting us with the front. At least, we can expect no repairs under three hours."

"Why no aerial reports."

"The last messenger, who arrived one hour ago in a damaged plane, reported that the allied air forces were coming into action, with thousands of new, heavily armored and swift combat planes, sweeping the air clean. This messenger says he can not understand how he himself escaped."

"Report to me the first information obtained, lieutenant."

Ten minutes later he again called this aide.

"Watch closely that bank of clouds to the north and tell me what you make of those frequent flashes of light."

The lieutenant placed his glasses to his eyes. He uttered an exclamation of surprise:

"Sir, that is not a cloud! It is a great fleet of monster battle planes moving

## Washington Boys in War Service

(From The Twice-a-Week Spokesman-Review.)

**SERGT. C. J. SEVDY, Palouse, Wash.**—Entered the military service of the United States on September 27, 1917, and is now at Carlisle, Wash. He has a brother in France. His parents reside near Beeler, Idaho.

**JESSE A. SEVDY, Palouse, Wash.**—Entered the military service on the same day as his brother, Sergeant Clarence, did. He is now in France, while his brother trains in this country.

## Women War Workers Turn Out Tractors

That its output of farm tractors may continue unabated the Minneapolis Steel and Machinery company has placed much of the work of its large plant in the hands of women and girls whose careful and accurate work is proving a highly satisfactory solution to the problem of keeping up production. The picture shows a little bunch of the women war workers. While they are drawn from all classes, they are on the same level in the shops.

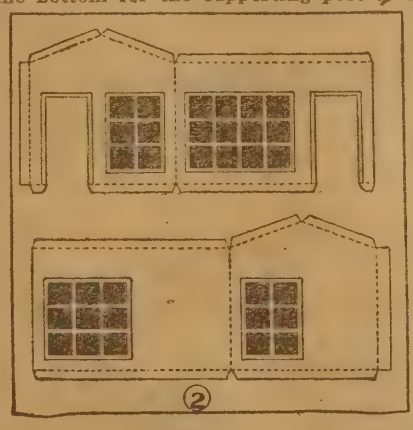
### A JAPANESE GARDEN.

Do you own a Japanese garden? If not, you should get one right away, because it is the latest fad to have one. A garden can be bought ready planted, but it is more fun to plant one yourself.

First of all, you will need a shallow baking pan in which to plant the garden. This may be round or square. For soil you must have some coarse pebbles or pieces of broken stone. This can be had for the asking some place where a building is in course of construction. Half a panful of sand and several handfuls of pebbles will be enough. In addition, you must buy some birdseed or Japanese grass seed to plant in the soil. The rest of the garden material can be picked up at home.

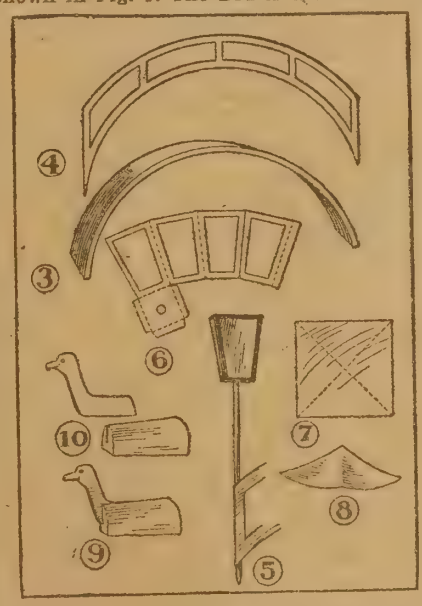


There are any number of arrangements for the garden that can be worked out, and you can replant your garden from time to time to make it different. Fig. 1 shows a good plan to follow for your first one. Pile up the sand around the sides of the pan, forming hills and hollows, and leave an irregular-shaped space in the center, and extending over to one side of the pan, for a pond. Make a shore line of pebbles around the pond, and scatter other pebbles here and there over the sand.

Plant the birdseed or Japanese grass seed in the sand, then sprinkle it with water, and fill the pond. Paths and roadways should be provided for, but these can be weeded out after the seed has sprouted.

One of the hills must be selected as a site for a little Japanese house. This house may be made of cardboard. Fig 2 shows patterns for the walls. The dotted lines indicate where the pieces are to be folded. The strips outside of the dotted lines are to be turned in and pasted to adjoining surfaces, in fastening the walls, foundation and roof together. Faster the walls upon a cardboard foundation (Fig. 1), and glue another piece to their tops for the roof.

A high arched bridge must be built over a narrow portion of the pond, as shown in Fig. 1. Make this of a piece of a peach-basket handle (Fig 3), with a cardboard railing (Fig. 4), tacked to each edge. The arch of the handle will determine the curve of the railings.



The pair of lamps at each end of the bridge (Figs. 1 and 5) have four sides and a bottom, cut in one piece like the pattern shown in Fig. 6. Cut an opening in each side as indicated, and punch a hole through the bottom for the supporting post to fit

in. Fold on the dotted lines, and paste the turned-in edges together. Use short sticks for posts (meat skewers will do), and fasten the posts to the bridge railings.

There must be a bird house similar to that shown in Fig. 1. Cut and fold the sides in the same manner that you did those of the lamps. Make the roof of a square of paper (Fig. 7), fold from corner to corner as indicated by dotted lines, and pinch up the corners as in Fig 8. The round end of a hatpin forms the ball at the peak of the roof, and the pin extends down through the house and is wrapped with paper to form the supporting post.

There must be a number of ducks in the pond, and these are easily made as shown in Fig. 9. The bodies are halves of

corks (Fig. 10), and the necks and heads are made of cardboard and fastened in slots cut in the round side of the halved corks.

With these suggestions to show you how easily a garden is built, you can use your own ideas for devising other garden accessories.

**Peanut Brittle.**

1 cup white corn sirup.
1 tablespoon vinegar.
1-4 teaspoon salt.
1 teaspoon vanilla.
1 cup freshly roasted peanuts, halved.

Cook the corn sirup, vinegar, and salt in saucepan until a little dropped in cold water forms a soft ball. Put the peanuts and this sirup into an iron skillet and stir until the sirup becomes a golden brown. Remove from the fire and stir in vanilla. Have ready a shallow buttered pan, pour candy in and spread out in a thin sheet. Allow to cool, then remove from pan and crack into pieces.

## Fall Food Hints

The shortage of dried fruit in America is a hint to housewives to gather up all the left-overs and store them, either dried or canned. Winter pears, apples, grapes, pumpkins, carrots all furnish material for jam.

Apples are 90 per cent juice, and practically all the food value is in the juice. So store up the windfalls in the form of sweet cider, boiled cider, vinegar, butter, jelly, syrup, pie filling and sauce. All of these can be made and kept without sugar. Reduce five gallons to one for syrup, seven to one for jelly.

Get the best out of the last green vegetables and fruits—stews, hashes, salads, soups, scallops, plain boiled or creamed. Don't draw on the winter supplies until you have to.

Dry a supply of green peppers, sweet red peppers, parsley, sage, mint and thyme for seasoning stews, scallops, salads, sausage and cottage cheese.

When you prepare chickens for roasting why not put aside the livers, gizzards, neck, head, feet, and last wing joint for creamed chicken? These parts add little to the dinner roast, but supply an extra breakfast or supper dish.

**PEANUT BUTTER SOUP.**

Peanut butter is a wholesome and highly nutritious food not nearly as much used as it should be. Pound for pound it possesses higher food value than round steak, though it sells for a lower price. Peanut butter added to any dish raises its protein, fat, and carbohydrate value.

**Tomato and Peanut Soup.**

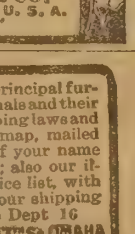
1 1-2 cups seeded and strained tomatoes.
1-2 cup peanut butter.
1 level teaspoon of salt.
1-4 level teaspoon of paprika.
2 1-2 cups boiling water.

Add tomatoes gradually to the peanut butter and when smooth add the seasoning and water. Simmer for ten minutes and serve with croutons. Well-seasoned soup stock may be substituted for the water; if used the quantity of salt should be reduced.

TRAPPERS

A POSTCARD WILL BRING IT TO YOU.

THIS BOOK WILL HELP YOU



To Trap and Hunt, with profit. It shows *when* and *where* to trap, and how to prepare skins, to make the most money from them. *The Boys and Older Men at Home Will Have Control This Year.* There is *Big Money* to be made. There is a great shortage of skins. Prices will be very high. *The War* has shut off foreign shipments. Our house is situated to pay you all your skins are worth. We will grade them honestly, and give you a *Square Deal.* We have standing orders that we cannot fill. *Send name and address,* for the Book. *Hides* wanted, write for Price List.

## Sort Furs

### If You Want to Get the Best Price

"What plan do you follow in getting the best price for the fur you take?" I asked a trapper whom I met in the woods of northern Idaho, last summer.

"Well, for one thing, I don't trap any until fur is prime," he answered. "No use trying to rush that part of it. It isn't how many pelts you get, but how much money you get out of them when you sell.

"Most anybody can trap," he went on, "and most anybody can get some skins; but when it comes to getting what the fur is worth, most trappers fall down."

"Maybe they don't know how to stretch and dry the skins in the right way," I suggested, with the idea of drawing him out.

"There's a good deal in that, too," he said between puffs as he relighted his pipe.

"Some trap too early, some don't savvy stretching and drying and not very many know how to sell to advantage. I nearly always get about a third more for my furs than others that trap in the same territory, even when they have just as many good skins as I have."

"If it isn't a secret," I ventured, "just how do you do this?"

"Simple as anything," he said, "and no secret about it. I just simply sort my pelts before I ship them. I put all the 'firsts' of a given kind together, then all the 'seconds,' and finally all the ones that for one reason or another should be classed in 'thirds.' Most trappers, especially those who don't know much about selling—and a big lot of those who think they do—just bundle up all their pelts together when they get them ready to ship, and let the buyer do the sorting. Consequently they don't get as much for their pelts as they would if they took some pains to do their own sorting and make some estimate from their price list to figure out what the different grades of pelts are worth."

"How do you determine what fur house to sell to?" I asked. "Do you sell to one house year after year, or try different ones from time to time?"

"Oh, I 'shop around,' as my wife says," he grinned. "I write for the prices of a dozen or fifteen houses every season, and sometimes ship to several in one season. One house may be offering more than another for some certain kind of fur, so I scatter my shipments around."

It struck me that this trapper's methods were worth telling about. The lesson to be drawn from his talk is that it pays to sort your skins, tying each grade in a bundle in itself, before tying up the whole lot for shipment, giving the number of firsts, seconds and thirds of each kind, and what the price list of the house you are shipping them to show the lot, so sorted, ought to bring you.

## A Test in Strategy

(Continued from page twenty.)

east toward the interior of Germany! Those flashes of light are signals!"

The emperor seized his own glasses.

"What possible business has our battle planes in such numbers in that region, lieutenant?"

"If I might venture a solution, sir," his glasses still fixed to his eyes, but trained toward the south, "I would say these are not German, but allied planes! Look, sir, to the south! Those lights are signals between two operating fleets!"

The emperor turned his own glasses to the south.

"Gott! Another fleet! How many, think you, are in either fleet?"

"Not less than 1500 to the north. Double that number to the south."

"A trap!" the emperor exclaimed. "My car—secure my documents—sound the alarm! I dare not be taken!"

The lieutenant leaped to obey the command, pausing only long enough to point to the east.

"I fear, sir, you are too late! They are between you and Berlin! I would suggest you escape toward the west!"

A bugle sounded. The imperial guard fell in at double quick, surrounding the tent where the emperor, the crown prince and the two generals were holding a hasty conference. Several anti-aircraft guns began to spit viciously at the nearest battle planes that had begun to circle high in the sky above the camp.

Lights were snuffed. The emperor's car drew up beside the tent. The bulky Hindenburg and the crown prince climbed in as it came to a pause. The emperor stood nervously on the running board, calling impatiently to Ludendorff, who was still within the tent. Suddenly Hindenburg

leaned close to the emperor and muttered something in German. The emperor nodded affirmatively and called Lieutenant Hoffman.

"Bring the Marshal of France beefore me!"

In spite of the fact that the marshal was a prisoner the emperor saluted him as he appeared.

"I am leaving at once, according to prearranged plan, for the interior of Germany. For strategic reasons, incident to a successful termination of the war in favor of my dynasty I have decided to invite you as a hostage to accompany me."

The marshal glanced around before replying.

"I am very sorry to disappoint you, sir, but I must decline with thanks. I am about to start for my own headquarters where the allied war council impatiently awaits my arrival. Rather, sir, it is now my privilege to reverse the order of strategic intention and invite you to change your plan and accompany me to allied headquarters for an indefinite stay as my prisoner."

"Enough of braggadocio! I enjoy satyr; but your insults to my royal station will no longer be tolerated!"

"My words, sir, contain naught of braggadocio, nor insult to royalty. I only state a plain military fact," the marshal replied with quiet precision. "The power of royalty, as vested in the person of William Hohenzollern, has ceased to exist. Look!"

The marshal pointed overhead where the droning of the mighty fleet of battle planes had increased to a staccatic roar as they circled in perfect formation just out of reach of the bursting shells from the flashing guns below.

Suddenly a hundred flashes of intense light fell upon the scene below, lighting German headquarters with the glare of midday as a squadron of planes released parachute flares that swung lazily back and forth in space as if mocking the helpless emperor and his staff below.

"William Hohenzollern, war lord of Germany and imperial butcher of helpless innocents, I demand your complete surrender in the name of the allied armies of civilization! Ten thousand battle planes, each carrying six men armed with repeating shotguns and 20-shot automatic Browning rifles, have you hemmed in! Lieutenant Hoffman, order your guns to cease firing!"

With a snarl of rage the emperor stepped back, attempting to draw his sword. Lieutenant Hoffman seized his arm, saying:

"Your majesty, discretion seems to be the better part of valor! It is only for your own safety that I thus lay restraining hands upon you!"

He pointed to the outer circle of the camp where from every side solid ranks of hooded aviators, heavily armed, were converging on foot toward the center of the camp. As the emperor's eyes caught sight of them the barking of the guns died down as the gunners raised their hands, crying: "Kamerad! Kamerad!" The imperial guards were also repeating the cry as they, too hastily threw down their arms.

Dejectedly drawing his sword, the emperor handed it, hilt first, to the marshal of France. He refused it, saying:

"Sir, your sword is now a useless relic of a barbarous age. Keep it as a reminder that the force of right has made useless the sword of might. Lieutenant Fouck, my aviator, I think is waiting. Let us depart for allied headquarters."

---

Ten o'clock Monday morning. Every gun along the great battle line is silent. Behind the German lines regiment after regiment of the emperor's troops were stacking their arms under the watchful eyes of the allied officers.

Sergeant Bill rolled another cigarette as he listened to the clatter of Mart Johnson's tireless tongue.

"Say, Bill, that marshal of France is sure some he man! Went right over to German headquarters and brought back old Kaiser Bill in that air-horse as a prisoner! Me for him if he ever runs for the president of the world. Some he man! Yes sir-ee!"

"Aw, shut up and give me a match!"

"And they say," Mart continued as he tossed the match, "that the marshal had some kind of a wireless buzzer attached to his air-horse engine that tipped off the allied bunch to where his air-horse had landed in Germany! Last night the allied air fleet slipped out on a big raid and rounded up the whole bunch. Kaiser Bill and all! What d'ye think of that? I'll bet old Kiser Bill never gets back to Berlin again, no sir-ee!"

"That's nothin'!" Bill snorted, as he kicked aside a German helmet that had a bullet hole drilled through it from side to side, "Heinie Schmidt will never get back to the Bowery again, either, b'lieve me!"

# A CROOKED TRAIL---By Lewis B. Miller

Copyright by The Page Company, 1911.

A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.

SYNOPSIS.

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected. Startling adventures were in store for them, among the first of which was a night in a "haunted" house, the principal haunts being wild animals. The next day they found the stray ox, but suddenly a wall of water from a furious storm rushed down the river between them and the animal. The boys arranged to have the steer held in pasture till they could cross the raging river. The meantime they spent working with a farmer in grubbing out live-oak thickets.

## CHAPTER X.

### Rafting on the Cowhouse.

On our way down to interview Edwards, we had noticed a covered wagon approaching the river from the north; and on our way back to Anderson's we saw that the wagon had camped a hundred yards or so from the bank. Near it an old couple, man and wife, were eating their supper by a little camp-fire. Evidently they were waiting for the river to run down.

The night that followed was an anxious one for me. Before falling asleep Frank and I discussed every plan we could think of, practicable and impracticable, for reaching the south bank. There were no ferryboats, either above or below. And, as it happened, an unexpected rise, coming when the river was low the spring before, had carried off all the skiffs along here. The nearest one left was six miles above.

"The simplest way to cross is to swim," Frank observed, as we lay on our blankets, gazing up at the starlit sky.

"If Dick was ever in swimming water, I don't know when it was, Frank. He might go in all right, or he might not. Father was a cowboy when he was a young fellow, only a little older than we are. He was part of an outfit that tried to take 2500 longhorn steers from Texas to California, but they marched thousands of miles and swam rivers by the dozen. He says there's a world of difference in horses. All of them can swim, of course; but some swim well naturally, and some don't, especially with anybody on their backs. And the only way you can find out about a horse is to try him."

"Well, the Cowhouse is not just the kind of a stream one likes to experiment in," answered Frank.

"It's anything else. And a horse is an excitable animal. They sometimes drown themselves. I believe Dick could swim all right. He's a sensible little fellow. But he's too light to hold me up in the water. If I could swim by his side, or hang to his tail it wouldn't be so bad. But to sit up in the saddle—I wouldn't dare risk it."

"And even if you did swim by him or tow behind him, how could you guide him?"

"There's the rub, Frank. I couldn't guide him; at least not in such a stream as this."

"No, I guess not. What Bob would do in the water I don't know. He's bigger than your pony; but then I'm a good deal heavier than you are. It would make me feel shaky to try to swim the Cowhouse on him. I'm only a passable swimmer myself. In fact, I wouldn't dare run the risk."

"A boat's what we need, and a boat we've got to have, Frank. Then we can pull across, and let our horses swim after us."

"Yes, a boat's the thing," agreed Frank. "And the wisest course for us is to strike out up the river tomorrow morning, and keep on the move till we find that one Anderson told us about, or some other."

With this understanding we fell asleep. We were up before daylight next morning, and went down to examine the water. But the stream was still far too deep to ford.

We told Anderson what we had decided to do, and he approved of it as being safer than attempting to swim the river on horseback.

He was going to town, and we wrote two hasty letters home and sent them by him to mail. In them we explained that our cattle had escaped and were gone again, and that we were about to follow.

Just as the sun was rising we said goodby to the Anderson family and rode away up the river. Anderson had paid us all the money due for grubbing, and his wife had stowed a new supply of provisions in one end of Frank's saddle-bags. Our horses were well rested by this time, and we took up the chase again very hopefully.

But a mile above we happened upon something that caused us to change our plans.

In a very low place in the valley—a sort of pocket from the river—back-water was standing. While the river was higher, many logs and rails had been thrust out into this pocket by the stream. And here they remained, floating in the shallow water.

As we were riding around this place, Frank suddenly reined up.

"Travis, let's not go a step further. It's six miles up to that boat and six miles back—a 12-mile trip. The boat's on the other side, and the owner lives a quarter of a mile away, Anderson said. If we don't happen to find him down at the river, and the chances are we sha'n't, we'll have to keep riding till we happen onto a boat on this side. And that may be six miles further—or 16—or sixty. And even after that we'll have to double all the way back here and—"

"And do what, Frank?"

"Make a raft. Plenty of logs here for a good one. A raft is better than a boat, too, for a swift stream like this. It can't upset, and it can't sink—unless you load it to death."

"But I wouldn't know how to handle it."

"Risk me to show you that. One of my uncles lives near the Osage river in Missouri. He and his boys used to make rafts of sawlogs in a big creek. When the creek got up they'd work the raft out into the Osage, and then several miles down that to a sawmill. I helped take three or four down while I was there on visits. Finest fun in the world, too. We can manage a raft all right. Of course we can!"

He was so enthusiastic over his new plan that I quickly caught come of his enthusiasm.

"If you'll right back to Anderson's and borrow an ax and an auger, I'll pick out the best logs and get them together," he proposed.

I readily consented; and when I returned with the tools, Frank had the logs in position and ready for the cross-pieces.

"At first I planned to make a little raft," he explained. "But these logs are nearly all long, and it would take a lot of time to chop them in two. So I've decided that we'll use them full length. The thing will be a little clumsier to manage, but it'll be safer. And our ponies can swim behind a big raft just as well as behind a little one."

With boots and socks off, and his trousers rolled as high as possible, he was down in the shallow water, putting the logs in position.

I now felled a small tree close by, and between us we split it in half. These timbers we laid across the logs, one at each end, and flat side down, and bored holes and pegged them there.

"With as big a raft as this, what's the use of making our horses swim?" I wanted to know.

"Hadn't thought of that. Guess we might as well ferry them across and save them the exertion of swimming. Why, yes, we can do that. Of course we can; and we will."

Now we filled in the hollows between the logs with rails and sticks, so that Bob and Dick could walk over them better.

In a clump of woods on the river-bank we cut two slender poles, each about 15 feet long.

"All ready for business—for navigation!" cried my friend, as we laid the poles on the raft.

While Frank attended to various small matters, I carried the tools back to Anderson's. When I returned, he had the raft against the bank, at a suitable place, and called on me to lead the two horses aboard.

Dick smelt the logs and snorted several times, but gave no serious trouble. Frank's horse was more stubborn, and a quarter of an hour's coaxing was necessary before he would take the venture. But when once on, both stood in their tracks in the center of the raft, too frightened to move an inch. Vic was stampering about over the logs.

Frank now set his pole against the bank and pushed off, and we had started on our voyage. As we poled the raft through the still back-water, nearer and nearer to the swift, angry, angrily-muttering river, it must be confessed that I grew not a little nervous. And when we had pushed out into the stream, and the current had seized the heavy raft and was running away with it, as a mud-bottom cat runs away with a fisherman's cork, I was badly frightened.

Frank, however, showed no signs of alarm, and profiting by his example, I soon shook off most of my fears.

"Yonder's the landing-point I picked out," he said, pointing down the river to a sloping place in the south bank. "I don't know whether we can stop there or not. Let's try, though."

On sped the runaway raft, at dizzying speed, and the place where we had hoped to land was soon left behind. Now even Frank appeared a little dismayed.

"Don't just like the looks of things," he admitted. "No telling how far we may drift before we find another landing-point on that side. Wish my pole had grown a few feet longer. But let's keep feeling for bottom."

Again and again we stabbed the turbid stream with our poles, but nothing solid could we reach. The banks now stood up like walls on both sides; but even if we had seen ever so many landing-places, they would have availed us nothing. The raft was utterly beyond our control. We were riding a wild steed without bridle or halter.

"Maybe the river will grow shallower further down," Frank remarked, as we stood anxiously, poles in hand, watching the green banks hurry by us.

"It ought to," was my answer. "It's at least 30 yards wider at the ford; and I doubt if it's quite as swift. And now that we've started, we might as well run down to the road. It won't take more than a jiffy to get there, if we don't hit a snag or something."

"That's right. We're whooping things up. Nothing slow about this old creek. So we'll wait for the ford. Have to, whether we want to or not. But what if the water's too deep for our poles down there?"

"We'll have to risk that."

"Yes, no help for it now. We can't do anything worse than drift on into the Brazos or into the Gulf of Mexico." He laughed, rather nervously.

Every now and then, as the torrent hurried us along, we passed a place where the current, bobbing up and down, rocked the raft as if it had been a bundle of sticks. Our horses, standing with outspread feet, and trembling, snorted loudly, and Vic set up an excited barking. Once or twice the raft swung around with us.

Soon we had navigated a mile of the stream on our clumsy craft; and rounding a bend, we saw the roof of Anderson's house overtopping the bank. The raft rounded another bend, and presently we could see where the road came down. And I noticed that the old traveler and his wife were standing at the water's edge, observing us.

Now the river was beginning to widen, and we made ready to try our poles again. The raft was rushing down stream at a gallop, so to speak; and when I rashly thrust my pole into the water in front of it, the pole struck a rocky bottom and was jerked out of my hands so violently that I came within an inch of diving head first into the river after it. The raft swept over the pole, but I ran round the horses to the upper end and caught it as it bobbed up.

"Come over to this side!" Frank called to me.

Hastily I complied. Thrusting our poles down at the north edge, we pushed the raft toward the south bank, and kept pushing it further and further and further, till it was out of the swiftest current. After that we had no serious difficulty in getting it to land, at the point where the road led out.

We had fastened a rope to one log; and while Frank leaped ashore and held the raft against the sloping bank, I led the horses off. They went with a jump, well pleased to find themselves on firm land again.

"What shall we do with this old concern, Travis? Let it float away?"

"No. Let's find a grape-vine and tie it to a tree. Somebody else may need it."

Leaving me to hold the raft, Frank struck off through the woods in search of a vine. While he was gone, I noticed the old man and his wife gazing toward the raft wistfully. Finally the man called out:

"What'll you take to ferry us across on that?"

"Too risky!" I shouted back. "We wouldn't dare to bring a wagon and team over."

"The horses could swim."

I did not answer, and the man soon called again:

"I'll give you $2 to raft my wagon across."

"Don't think we'd better try it."

The couple talked together, and then the man shouted:

"Don't know but what I might make it three."

I shook my head. "Rather not undertake it," I shouted back. I had eight pound dollars in my pocket just now, and was more than anxious to get started on the trail of those cattle.

There was another consultation between the couple on the north bank, and the outcome of it was another offer:

"What do you say to $4?"

Again I shook my head, a little less decidedly this time. Finally the man asked:

"Would you do it for five?"

In my eyes this was a considerable sum, and I was very loath to reject it. "Wait till my partner comes back," I shouted, "and I'll see what he says."

"What's that you'll see about?" Frank called out just then, as he came hurrying through the woods, trailing a long vine.

"The folks camped over yonder are very anxious to cross," I explained. "The man says he'll give us $5 to come over and get his wagon. Says his horses can swim. What do you think?"

"Five dollars! That's big money for a job like that. They must be hard up to cross. A whole lot easier than grubbing up live-oaks. Why not rake it in?"

"Would the raft float a wagon?"

"If the wagon's not too heavy." Then lifting his voice: "How much load do you carry?"

"No load to speak of. Just the empty wagon."

"I'm in for trying it," Frank now said. "Good big job to get this old concern over there and back—bigger than I thought at first; but we're the boys that can do it. We'll have to pull up stream about a quarter of a mile, or we can't land at the road yonder. If you want to try it, hop aboard, and keep the raft away from the bank. I'll do the pulling."

After hitching our horses, I jumped out upon the raft, followed by Vic. Frank seized the rope, threw it over his shoulder, and started up stream, along the edge of the bank. With my pole I kept the raft from rubbing the bank; and I also aided in pushing the raft along.

The current offered but little resistance close to land, but our awkward craft moved slowly, and we spent a full half-hour toiling up to a point where it seemed safe to launch out. Then Frank threw the rope aboard, and scrambled down the bank after it, and we pushed off.

The stream was soon hurrying us toward the Gulf of Mexico, but we plied our poles vigorously, pushing the raft across, and doing what we could to retard its downward progress. And we landed at the right place.

"The reason we're so anxious to cross," the traveler told us, "is that the river's crawlin' up. It ain't climbin' so very fast, but it's purty tryin' to wait for a stream to run down that's on the rise. And we're powerful anxious to get on our way."

Now we secured the raft to bushes, against the end of the broken road. Then the three of us went up and brought the wagon down the steep bank by hand, its hind wheels locked fast. It was rolled to the center of the raft, leaving passage-room all around it where we could use our poles.

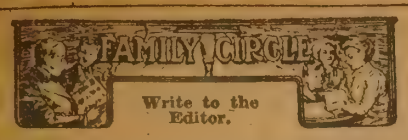
The old man remained on the raft, to keep it clear, while Frank and I went up, and walking along the edge of the high bank, dragged the raft up stream. The woman followed us, leading their two horses.

Believing that the raft would be harder to manage when loaded than it had been when light we towed it nearly up to Anderson's house. Anderson had gone to town, but his wife and children came out to watch us. At a place where a steep hog-path climbed the bank, we brought the horses down. Mrs. Anderson came to the water's edge with the traveler's wife. The latter was evidently very nervous.

"I feel mighty juberous about settin' foot on that thing," she said, tremulously. "If we wasn't so powerful anxious to get along, I wouldn't think of reskin' it. We've been visitin' our married son, up on the Leon river. And while we was there we got word that our daughter back at home had been took bad sick. If it wasn't for that, I wouldn't trust myself on this thing—not for love or money I wouldn't! I hope we'll come out all right, but I don't know—I don't know."

She spoke in a strained, high-pitched voice, which expressed her agitation even better than her words. Mrs. Anderson tried to reassure her, and so did Frank.

'We made one voyage of a mile and a half on this raft," he said, "and we landed all right-side up. Nothing much to be afraid of, I guess."



Now we got ready to push off. The woman was by the wagon and her husband near the raft's edge, holding the ropes that were on his horses' necks. Frank and I, armed with our poles, stood at the corners. As the raft moved slowly out, the horses seemed very reluctant to follow it. And not till Anderson's little boy had pelted them with gravel did they enter the water. But, once in, they swam easily enough.

By the time we had reached mid-river, where the current ran like a mill-race, both the man and his wife were plainly very much frightened. But neither of them uttered a word; and Frank and I were too busy with our poles to give them more than an occasional glance. In one place the bobbing current rocked the raft threateningly.

Having a half-mile to do our work in, we found no great trouble in effecting a landing at the road. As the raft touched solid ground, I heard the woman behind me breathe a sigh of relief.

The horses were now led, streaming, out of the river. After being harnessed they were put to the wagon, and the wagon was pulled up the bank. While I held the raft, Frank followed the wagon up to level ground to get his

(Continued on page thirty-one.)

# Christmas Packages

## For Soldiers, Sailors and Marines

The following rules for sending Christmas packages to soldiers of the American expeditionary force have been promulgated after a series of conferences by the adjutant general of the war department, the postoffice department and the American Red Cross:

1. The war department authorizes relatives of officers and soldiers in France to send Christmas packages, which will be of standard size and weight, one to each individual in the American expeditionary force.
2. In order to insure the limitation of one package per man, which in itself will consume a very large amount of tonnage, a plan has been worked out by which General Pershing is distributing to members of his command coupons on which are inscribed the correct names and addresses of the members of the American expeditionary force. These labels will serve as address labels for the packages. The coupons or labels will be mailed by the members of the American expeditionary force direct to the persons they wish to designate as senders of packages and no package will be forwarded without such a coupon. It is expected that the labels will be received in this country by November 1.
3. On receiving a Christmas package label the person to whom it has been sent should present it at the nearest chapter, branch or auxiliary headquarters of the Red Cross, where he will receive a pasteboard carton 3x4x9 inches in size. The Red Cross is to allot boxes to its chapters, based on the number of men in service from each community. It is expected that these will be ready for distribution by November 1.
4. Boxes may be filled with any combination of articles except those on the list barred by postal officials. Prohibited articles are all intoxicating liquors, all inflammable material, including friction matches and any composition likely to ignite or explode (cigarette lighters come under this classification), liquids and fragile articles improperly packed. Under postal regulations no note or message or written matter of any kind will ber permitted to remain in the boxes. In addition to the list of prohibited articles, relatives and friends of the soldiers are urged to bear these facts in mind when preparing Christmas parcels:

Do not put anything in the package which will not keep fresh until Christmas.

Pack dried fruits and other food products in small tin or wooden boxes. Give preference to hard candy over chocolates unless the latter are enclosed in heavy wrappers. Soft chocolates are easily crushed and may spoil other contents.

Do not put articles packed in glass in the package.

Gifts should be wrapped in khaki colored handkerchiefs 27 inches square.

5. The weight wrapped should not exceed three pounds; unwrapped the weight may be approximately two pounds fifteen ounces. Parcels may bear inscriptions such as "Please do not open until Christmas," "Merry Christmas," "Happy New Year," "With best wishes," and the like.
6. When the box is packed it should be taken unwrapped and unsealed to the nearest collection center indicated by the Red Cross, together with the address label and sufficient stamps to carry it by parcel post to Hoboken, New Jersey. After the package has passed the inspection of Red Cross representatives as to contents and weight and has been wrapped in stout paper, the Christmas label bearing the address of the man for whom it is intended is placed on it. The person sending the package in the presence of the Red Cross worker, is required to affix the stamps which will carry it to Hoboken. A label certifying that inspection has been completed by the Red Cross is placed on the package, which is left in the custody of the Red Cross until delivery to the postal authorities.
7. No package will be accepted for transmittal after November 20.

### Packages for the Sailors.

The following instructions regarding the manner of packing and shipping Christmas packages for men in the naval service, both in home waters and abroad, have been prepared by the bureau of supplies and accounts of the navy department:

1. Packages forwarded by parcels post must comply with the postal regulations and should be inclosed in substantial boxes with hinged or screw-top cover to facilitate opening and inspecting.
2. All boxes shipped by express are limited to 20 pounds in weight. should measure not more than two cubic feet in volume, be of wood, well strapped, and have a hinged or screw-top to facilitate opening and inspecting.
3. No perishable food products other than those inclosed in cans or glass jars should be packed in parcels post or express shipments.
4. All mail matter should be addressed as now prescribed by the postal regulations. All express packages should be forwarded in care of supply officer, fleet supply base, Twenty-ninth street and Third avenue, South Brooklyn, N. Y.
5. All packages must be plainly marked with the name and address of the sender together with a notation indicating the nature of the contents, such as "Christmas present."
6. The supply officer at New York will cause each express package to be opened and carefully examined to see that nothing of an explosive or other dangerous character is forwarded.
7. The shipment of Christmas packages for vessels abroad should be made so as to reach New York as early as possible, and not later than November 15.

### Packages for the Marines.

The war department regulations for Christmas parcels for soldiers overseas will be observed in the case of every marine whose address is American expeditionary force. For all other marines, whether in training or serving actively in this country, at naval posts and stations, at home and abroad, or on ship duty, navy regulations will govern.

**FISH** Salmon in brine, 100 lbs. meat, shipping weight 165 lbs., price $14; 50 lbs., $7. Smoked salmon, 20 lbs., $4.00. Dried cod, 10 lbs., $1.75. Herring, in brine, 50 lbs., $5.00; 25 lbs., $2.75. Cash with order.

T. A. BEARD.
4322 Winslow Place, Seattle, Washington.

## CORN A SUCCESSFUL CROP.

Corn is a most successful crop in Okanogan county, on both irrigated and dry land, according to County Agriculturist W. A. Holt of Okanogan. On the Methow and other tributaries of the Okanogan, where water is plentiful, fine crops of alfalfa are grown, but even there corn has proven its value and this dry year it has surprised many people by its productiveness on dry land. Many silos are being erected to conserve all the possible food value of the corn. Mr. Holt says corn and live stock must be included in the final plans of farmers if permanent prosperity is to endure. H. A.

# What Your Eyes Really See

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Seeing is not always believing, for there are times when you can not believe your own eyes. Moreover, there are more things in heaven and earth under your very eyes, which you do not see, than there are things which you do see, and of those you do see you fail to note most of the truth about them.

Your eyes are insensitive to most particles in vibration in space. Indeed, they are sensitive only to a restricted, narrowed range of illuminated things.

Wave lengths of light or, to be scientific, of the spectrum, from No. 4000 at the beginning of the violet to No. 7600 at the end of red and through violet, blue, green, yellow, pink, orange and red, are taken in by human eyesight, but all waves below 4000 and above 7600 fall on "deaf ears," to mix the metaphors, as far as vision is concerned. In other words, there are billions and trillions of things in existence that are hard, material facts, which the best human eyes can not see because their particles vibrate slower than 4000 times a second or more than 7600 times a second.

Obviously, specters, apparitions and other alleged immaterial objects so called are nothing at all but the suddenly increased or decreased vibrations in the molecules of some real thing that has become more visible than usual or visible in a new way. Thus it is not necessary to believe in spirits or to understand the physical reality of materializations.

Dr. Hirshberg.

### Your Color Perceptions.

This marvelous organ of man, the human eye, selects so few colors, shadows and forms in the world, compared with what are actually present and unperceived, that man was driven to invent spectroscopes, telescopes, microscopes, periscopes and photography to help the unaided eye explore the great unseen realm of reality all around us. Radium, Crookes tubes, X-rays and other unexpected aids have come to the assistance of man to help equip him with knowledge.

The sensation which you call color, which makes a normal person recognize green from red or blue, lies in the back, inner surface of the eye. This is called the retina. You used to be told that sight had its location in the brain.

The color perceiving apparatus with three pendulums, to represent red, green and blue, the three primary sensations for color. It is the swing of these pendulums from the impact of the particles in vibration in space which makes you see these colors. If these outside vibrations beat against the retina 4000 times, your pendulum swings that many times with it and you see violet. Thus, according to the number and size of the pendulum beats, you recognize a particular color.

Form, contour, distance and perspective are perceived visually only within limits. If the human eyes could see things from 1 to 4000 vibrations or with 7600 and all higher vibrations, human knowledge would be greatly multiplied. Perhaps this conclusion can be proved by Professor H. L. Whited's explanation of why a chicken or cow crosses the road in face of danger.

Professor Whited avers that it is due to the fact that chickens and cows have monocular single vision—that is to say, they can see two ways at the same time, and each eye simultaneously can be focused on a different object.

### Some Strange Oddities.

If you drive toward cows or chickens in a roadway, those which face your motor car will turn to one side and let the car pass. Those with a side toward your car will, if on the right side, attempt to run across to the left side of the road. Those headed away will run down the road in front, and turn off then.

The chicken on the right side of the road runs to the left side, and vice versa, because the eye of the creature which sees and recognizes the danger is kept on the car or dangerous object. To turn to the right or to the left and escape would blind the animal as it turns and it can not afford even for that fraction of a minute to take the chance. If a cow or a chicken runs across the road in front of the car, the eye with which it first observed will keep the car clearly and continuously in view and allow the animal to escape pending danger.

If safely across the road and blocked by a fence or other obstruction, a cow or a chicken may turn fully around to perceive her enemy with the other eye and then run for dear life to recross the road.

Children

Children too young to play? Doesn't anyone use that upright piano of yours? And wouldn't every member of the family, all your friends, use it if it were a player-piano?

We can make it into a player-piano—we can change your unused upright into a modern 88-note, new-style player-piano, without remodeling the case or changing the present piano action in the slightest way.

Wake up that unused piano of yours—chase the gloom from the living room with the good old songs and the new, patriotic airs.

The cost is small compared with a new instrument and the guarantee is rigid.

Send for complete data today—mail the coupon NOW.

# PATTERNS

2659—Lady's dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 3 7-8 yards of 54-inch material. Width of skirt at lower edge is 2 yards. Price, 10 cents.

2521-2520—A good combination for business or home. Waist 2521 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 27-inch material. The skirt 2520 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 3 7-8 yards of 44-inch material. The skirt measures about 2 3-8 yards at the foot with plaits drawn out. Two separate patterns, 10 cents for each pattern.

2540—Misses' dress. Cut in 3 sizes: 16, 18 and 20 years. Size 16 requires 5 5-8 yards of 36-inch material. The skirt measurets about 2 yards at the foot. Price, 10 cents.

2657—Child's short clothes set. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. Size 4 requires 3 1-4 yards of 26-inch material for the dress, 1 3-4 yards for the petticoat and 2 7-8 yards for the combination. Price, 10 cents.

2645—Child's play dress. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. Size 4 will require 2 3-4 yards of 36-inch material. Price, 10 cents.

2546—A set of useful bags. The patterns are cut in one size. No. 1 will require 1 3-4 yards. No. 3 will require 3-4 yard, of 36-inch material. Price, 10 cents.

2660—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 4 1-8 yards of 40-inch material. Price, 10 cents.

2650—A good service dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5 7-8 yards of 44-inch material. The skirt measures about 2 yards at the foot. Price, 10 cents.

2498—Lady's apron. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 4 7-8 yards of 36-inch material. Price, 10 cents.

2381—Lady's skirt. Cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. Size 24 will require 2 3-8 yards of 44-inch material. The skirt measures about 2 1-8 yards at the foot. Price, 10 cents.

2306—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 6 yards of 36-inch material. Price, 10 cents.

2349—Lady's shirt waist. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 3 yards of 36-inch material. Price, 10 cents.

## FOOD FROM THE FOREST.

### Careful Preparation of Game for Table Will Prevent Waste.

Do not let wild game be an added luxury; let it take the place of your market meat, urges the U. S. food administration. No more game than can be eaten should be killed. Do not let your desire to tell a big story when you reach home lead you to shoot everything in sight. Good sportsmen will observe these conservation suggestions in addition to the game laws.

Careful preparation of game for the table also will prevent waste. As a rule game is preferred cooked rare rather than well done. Venison steak should be sprinkled well with salt and paprika, if desired, and cooked quickly. Serve immediately on a very hot platter. Venison steak requires at least three minutes longer to broil than beefsteak. When broiled it should be sprinkled well with salt and paprika, and put over a dish of hot water to stand a while before serving. With venison steak serve a tart jelly, such as that made of currants or sour grapes, to which vinegar and spices have been added.

Rabbit is most delicious when roasted. After cleaning well stuff body of the game with a dressing of salt pork, minced onion and crumbs well seasoned with pepper and salt. The body is then sewed up and roasted one hour. A few thin slices of pork are necessary in the roasting pan to supply fat. Rabbit meat is almost entirely lean. A gravy made in the pan after the rabbit has been removed adds to the finish of the dish. Rabbit stew is also delicious.

Wild birds are usually roasted in the same manner as domestic fowl. Since they lack fat they require careful basting to prevent drying out of the meat. Squirrels are cooked in much the same way as rabbit. Squirrel pie prepared in the same manner as chicken pie is a special favorite among most lovers of wild game.

## CONSERVE WHEAT STRINGENTLY.

M. H. Houser, northwestern representative of the grain division of the food administration, recently issued a bulletin urging upon the people that they continue to conserve wheat as carefully as in the past. He says that the coming of peace probably will mean that America must feed a greater number of people than it has been feeding under the conditions of war. He likewise urges the use of substitutes under about the same regulations that have been prevailing.

What 15c will bring You from the Nation's Capital

*Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.*

The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 26th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.

The Pathfinder, Box 89, Washington, D.C.

The Way to Poultry Profits

If you have a bunch of pullets—more than you want to carry through the winter—why not sell some of them this fall?

If, on the other hand, you can add a dozen or so winter layers to your flock, why not increase your revenue from eggs by buying additional birds?

Many poultry raisers can make money by selling.

An even greater number of farms can realize good profits by buying fowls of good laying strains.

Those who have a surplus should get in touch with those who will buy—and the "want" ad page of the three big state farm weeklies—The Washington Farmer, The Idaho Farmer and The Oregon Farmer—makes an excellent market place, where buyer and seller can get together with mutual profit.

Those who have anything to sell should RUN A "WANT" AD in those papers. Those who wish to buy should WATCH "WANT" AD offerings.

RATES FOR "WANT" ADS WILL BE FOUND ON WANT AD PAGE, BUT IF UNCERTAIN ON ANY POINT WRITE

The Pacific Northwest Farm Trio

General Offices, 36 Review Bldg.
SPOKANE, WASH.

Dear Corner Cousins: It was my pleasure the other day to visit a schoolroom and I at once thought of a poster that used to hang in our schoolroom, and I am going to write it here so that the cousins can see what I have in mind.

TO BE OR NOT TO BE.

**To be punctual; to be neat, to be prompt; to speak pleasantly; to stand erectly; to smile brightly; to be frank; to respect your parents; to obey your teacher; to reverence old age; to enunciate (speak) clearly; to be athletic; to be cheerful; to be exact; to be pure in mind; to be pure in body; to be polite; to be helpful to the needy; to be able to hold your tongue; to be at the head; to be in good company; to be attentive to your affairs; to be civil; to be mannerly; to be kind to animals; to be thoughtful; to be humble.**

AUNT NELLIE.

"I have two twins, so I am lucky," writes Hattie Hayden of Benge, who is 11 years old, and in the sixth grade. Hattie has six cats, four little ones, an old mother cat and one little kitten that she found. She also has a very good dog named Tip, and a pony named Peanut. What is the difference between a lady and a soldier?

"I went to the river and had a good time wading in the water," says Hilda Thompson of Benton City. Hilda was 11 years old November 24. She has seven thrift stamps. She wants a twin.

Sophia Havlicak of Odessa hopes that she has at least one twin. She was 13 years old November 24. She has good times riding in their car.

The cutest little pony named Tricksy belongs to Mildred Heidegger of Rice. Mildred was 11 September 11. She wishes her twin would write. They have a cock that chases them nearly every time they go to the barn. Mildred wishes that some of the cousins who live in the city and can hardly get any cherries could live out where she does so they could have all they could eat.

"Baby Jack has fallen asleep, so I will have time to write to you," says Iva May Day of Granger, in her third letter to the Corner. This summer Iva used to go swimming in the flume and had lots of fun. She is in the sixth grade now, and her mamma can hardly realize it. Iva would be glad to have some one correspond with her.

Lowell Eden of Cunningham chops thistles for the two pigs that he has to feed. Lowell set a hen on bantam eggs and five little chickens hatched out. He will be 10 years old November 9.

Hazel eyes, golden hair, light complexion and rosy cheeks describes our little cousin, Margaret Vining, of R. F. D. 1, Malaga. She had a war garden, and is a member of the garden club. She is also a member of the war saving society and of the Junior Red Cross. Her pet kitten, Mischief, surely lives up to his name.

Erma Broyles of Penawawa owns a $250 liberty bond, and with the interest she buys war savings stamps. Erma was 9 years old February 25. She goes to Lincoln schoool, where 21 scholars go. Erma lives on a large farm, and she has eight pigs, a cow and a calf of her own.

Cousin Velma Eichenlaub, who forgot to send her address, says she likes to read the letters. She belongs to the Red Cross. If a man died from eating a green cucumber, what would his phone number be?

**Lives on a Big Farm.**

Dear Aunt Nellie: I enjoy very much reading the letters and thought I would write too. I am 13 years old and in the seventh grade. My birthday is May 11. Have I a twin? If I have I wish he or she would write to me. I live on a 9000-acre farm. We have 50 horses and two cows. I have a pet dog and cat. The dog's name is Nellie. The cat has no name. We drive to school in a buggy. We have four miles to go. I have a pony named Daisy. I like to ride her very much. I am trying to raise corn, but it is almost too dry. Alice Gronewald, Connell, Wash.

**From Our Cousin Sallie.**

Dear Aunt Nellie: I have been away visiting and that was the reason why I did not write. In May we went to Coeur d'Alene, Idaho, where my uncle and aunt live. We stayed there a week and then we came back home. About the first of June there was to be a camp-meeting up at Wellpinit. Some Indian missionaries from Nez Perce were to be there, so we went. There were many children and middle-aged and old people who joined the church. Nineteen days later we went up to Nez Perce for our Fourth of July celebration, and we certainly enjoyed some good times there. We went in a buggy as far as the Spokane river and then we took the evening stage and arrived in Davenport about 7 p. m. We camped there and the next morning we took the stage to Spokane. When we got to Spokane the train to Vollmer was gone, so we stopped in Spokane overnight and on Wednesday we went to a place where we were going the evening before. The place is called Talmaks, and that means "butte on the prairie." I am a regular old traveler, don't you think so? I help my mother can. We canned 152 jars of fruit and about two gallons of currant jelly. We canned some cherries, three kinds of currants, raspberries and strawberries. My cats are getting along just fine, and I have decided what to name them. I have found a twin from the Nez Perce Indians, and her name is Susie Newton. I haven't any more twins, have I? I found one in Fruitland and her name is Margaret, but I have forgotten her last name. I just started to raise chickens last spring and I now have 78. I know Hazel Defreece, for she lives about two or three miles from our house; and I know Ella Brown, because she lives about four miles from here. I also know Annie Phillips. These are some of our cousins. We will all try our best to win this war, won't we? Oh, yes! on the Fourth of July the leader dressed us up. Four girls were Red Cross nurses and they were dressed in white, with red crosses on their foreheads, and, just think! I was "Liberty." I was dressed up in the flag of Old Glory, and I wore a silver crown. One boy was Uncle Sam, and he wore red, white and blue pants, blue coat, white collar, and red, white and blue hat. The Red Cross nurses made offerings for the Red Cross. They made $321. We did pretty good, didn't we? Then Uncle Sam and I led out first, and then our nurses, and about 1000 people, and we raised the flag with 14 stars on it, because there are 14 Indian boys who have gone to war from Nez Perce. We all sang "The Star-Spangled Banner," and we had about three dozen pictures taken. I am 15 years old, and my birthday is March 24. May God bless you all. Aunt Nellie, I thank you a thousand times for my prize, and that letter which you wrote to me.—Sallie S. Garry, Miles, Wash.

**"Thrifties" to Lick the Kaiser.**

Dear Aunt Nellie: I am always very glad when the Farmer comes so I can have my sister read about the other little girls of the state of Washington and what they are doing. I live in the country about five miles from town. I like the farm better than the town because I like to hunt the eggs and ride horseback. Nearly every day I find a little bird who is just learning to fly. I get him some crumbs to eat. We have a car and every year we go over to Seattle and then down to the Washington State fair at Yakima. My birthday is on St. Patrick's day, March 17. Have I a twin? If so I wish he or she would write to me. I go to a country school a mile and a half away. I have a sister, Dorothy, and two brothers, Bruce and Harold. Dorothy and Bruce go to high school. Dorothy graduates this year. Harold goes to the country school with me. My father is helping the Red Cross and buying Liberty bonds and we children are buying thrift stamps to lick the kaiser.—Jean Phyllis Wilson, Meadow Brook Farm, Ellensburg, Wash.

**Likes the Farm Best.**

Dear Aunt Nellie: I am so pleased with the Corner that I think I will help. I am staying with my grandparents. Grandpa gets the Farmer, so I read the letters. I go to the city school, but, let me tell you, the farm for me! I have no pets, but I was raised on the farm and then we moved to the city. I long for the farm more than anything else. I have brothers and sisters, and I will tell you their names: Leddie, John, Oswald and Louie are the boys, and the girls are Rosa, Martha, May and Annie. I have a real twin at home. Her name is Martha. This is the first time I have written to the Corner and I thank the children for such nice letters, for when I was sick in bed they cheered me more than anything else. Now who is sick? I think these letters will help them. If I have a twin, will you tell her to write, please? I am 13 years old and in the sixth grade.—Bertha Luther, R. F. D., Box 35, Penawawa, Wash.

**Swimming in the Creek.**

Dear Aunt Nellie: I am 10 years old and when I was a year old I took the prize in the better babies' contest. I have blue eyes and brown, curly hair, and I also took the prize for being the prettiest little girl. Have I a twin? We have five cows. We have 60 horses. We have a dog, and his name is Joe. I live with my cousins, Fern Lyle and Elmore Lyle. Fern is 12 and Elmore is 10. Elmore likes me. We go swimming every day in the week in the creek behind the barn and sometimes we go riding on a log down the lake. My papa and mama and sister and brothers and cousins and aunts and uncle are very nice to me. My sister and brothers live with my mama and papa. My sisters' names are Mabel, Dorothy, Catherine, Marjorie and Marguerite. My brothers all go to high school, and I am in 2B. I didn't pass twice. When I was little my mama taught me French, and I can speak and write it. My cousin is in France, and he says he likes it. We have a big car and my papa can drive it. My aunty is out picking berries. My sister Dorothy is writing this for me because I fell down and broke my arm. We have a little bird named Nancy Dickey, and he likes me. My aunty is calling me, so au revoir.—Josephine Perkins, Pullman, Wash.

**Lives on a Big Ranch.**

Dear Aunt Nellie: I live on a big ranch near Pullman. There are lots of pine trees here. I am 12 years old. My cousin, Josephine Perkins, lives with me. I have dark blue eyes and dark brown hair. I am in the seventh grade. I am just four and a half feet tall. Have I a twin? I have a little brother named Elmore. I haven't any sisters, but would like very much to have one. I also have a big brother in France. I wish he was home. We have a lot of horses and seven milk cows on the other place. We have nine little calves and one is a pet. We call him Pet. We go in swimming back of the barn nearly every day. This is the first time I have ever written to the Children's Corner, and hope this isn't the last time. We have a dog named Joe, and a big cat that weighs 14 pounds. I have knitted quilts for the Red Cross. I also have two war saving stamps. I like to help my mama work. I milk one cow while my mama milks six, sometimes the old cow gets tired and kicks. We used to have a dog named Uno, but she died, I was so sorry because I liked her so well. She was a good sheep dog. I think my cousin and I will take a little trip in our roadster in a few days. My cousin and I go to school in it. I can drive it pretty well. I sometimes run into a fence or a tall pole. I've run over two dogs, a chicken and a pig with it. Well, we are going to town in our car, and take some eggs in and sell them. The money comes to me when I take them in. I guess I will buy war saving stamps with it. If I have a twin please let me know.—Fern Lyle, R. 2, Pullman, Wash.

**Cousin Ferne Joins the Corner.**

Dear Aunt Nellie: I will be 13 March 12, 1919. Have I a twin? If I have will they please write to me. I would gladly and most willingly answer their letters. I have dark grown hair, brown eyes, light complexion and a few freckles across my nose and I am pretty well tanned up, too. I have a quarter Indian in me also. I have a little gray rabbit. Her name is Miss Rabbit Runaway. Is that not quite a queer name? Well, it certainly suits her character well enough, as she is always running away. I just found the way she escapes. I had her house in the corner by the fence and she jumps up on her house and from there jumps over the fenc. I took her house and put it away out in the middle of the pen so now she can not get out. She seems dreadfully disappointed about it. The other morning mother went out to feed her and found her sitting up on top of her house looking as solemn as an owl. I hope I have a twin who will correspond with me and hope this won't be my last letter to the Corner. I am in the seventh grade.—Ferne Danels, Depublic, Wash.

**Working for Mother.**

Dear Aunt Nellie: I am 12 years old and my birthday is August 23. I am in the sixth grade and go to Mt. View school. I have brown hair and blue eyes. Have I a twin? Mama has been sick over a month, but is better now. Papa and I did the work. Now papa is working out and my two oldest brothers are plowing. I will give some riddles as I have no news. As I went over London Bridge I met a man and if I tell his name I'll be to blame and I've told his name five times. Why is a dead doctor like a dead duck? What is the first thing you set in your garden? If all the women went to China where would the men go? Which is the most important state in the United States?—Sadie L. Olin, Baird, Wash.

**Helps With the Milking.**

Dear Aunt Nellie: This is my second letter to the Corner. I hope it will not be the last. I have one cow and two calves. Their names are Elsie, Pansy and Roy. I have seven little chickens. We have five little mules, three of their names are Ike, Bing and Betty. My birthday is August 26. I help do the milking. Sometimes I milk four cows. For the last two or three days I have milked eight cows a day and helped feed the calves and separate. Have I a twin?—Beulah Hiday, Box 93, Coulee City, Wash.

**Helps to Lick the Kaiser.**

Dear Aunt Nellie: I enjoy reading the children's letters very much. I am 13 years old and am in the eighth grade. My birthday is October 27. Have I a twin? If I have I wish he or she would write to me. I have two sisters and one brother. Their names are William, Anna and Regina. Why does a rooster shut his eyes when he crows? He shuts his eyes because he knows it by heart. Why does a dog try to catch his tail? Because he wants to make both ends meet.

I hope some of the other cousins when they put riddles in will put the answers, too, don't you? I have some war saving stamps. I am helping raise a garden this year. I will do all I can to help lick the kaiser. We have seven cows. We have eight horses and two colts.—Martha Entel, R. F. D. 1, Colton, Wash.

**Iva Is Counted Among the Cousins.**

Dear Aunt Nellie: I have one long row of garden with onions, lettuce, parsley, muskmelons, carrots. I planted my muskmelons and in between every one I would put a parsley and in between the next one I would put a carrot seed. I forgot I did this and I hoed them all up. I am some glad girl because I am in the sixth grade. Aunt Nellie, I wish I got as many letters as you do through the mail. My birthday has passed and I got an organ, a good one, too. I can play some. I was 11 years old May 30. The organ is light oak. Vivian Mirosche said country life was better than city life and she or he is telling the truth, too. I surely do believe it after I have lived on the farm. I am running out of news like the cars run out of gasoline. When they run out they can't go any more. Now count me as a cousin, no matter if I don't write often.—Iva May Day, Granger, Wash.

**Tony, a Yellow Canary Bird.**

Dear Aunt Nellie: May I be a cousin? We have five little kittens and four of them are gray and the other one is maltese. I have school at home and my big sister is teaching me. I am four feet 10 inches tall. I have light hair and blue eyes. When I wrote the first time a girl wrote to me and she was the same age as I am, and her name is Alice Daniel. She lives in Oregon. I am always glad when spring comes because we go out flower picking. We had a Red Cross sale in town and we donated a 6-months-old calf, and she brought $400.96 for the Red Cross. We have a bird and he is a canary bird, and he is yellow with a black ring around his neck, and his name is Tony. I hope this war will end soon. I am 12 years old.—Grace Hicks, Coulee City, Wash.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

**Tommy Tumbles**

The acrobatic doll. The most lifelike toy novelty yet devised. He affords fun and amusement by the hour for old or young.

Tommy stands nine inches high and has no gears or springs to get out of order. Tommy Tumbles makes the finest Christmas present for the girls and boys. 50c brings Tommy to your home.

## News for Breeders

As The Farmer goes to press word comes that the California International Live Stock show has again been postponed. It was scheduled for November 16-24, as announced on another page of this issue, but will not be held until early in February.

### LIKES THE RED POLLED.

Red Polled cattle have their admirers in Idaho, although the breed is not as numerous or well known in the state as some of the other breeds. Recently Adam Blackstock, a well-known farmer and live stock breeder of Owyhee county, bought of Fred Kress of Caldwell the 2-year-old Red Polled bull, Jean De Luth Bollinger, paying therefor $500. The sire of the animal is Proctor Knott, one of the most noted sires in the country. Proctor Knott heads the advance registry herd of Jean Du Luth farm, of Duluth, Minn., which is making a big milk and butterfat record and contesting for honors as a leading dual purpose herd. Mr. Blackstock has 30 head of selected females, and likes the Red Polled very much. He says the animals are very docile and easy to keep and fill an important place on the farm.

### WILL SELL AT PORTLAND.

The dates of the stock sales that will be held in connection with the Pacific International Live Stock show at Portland have been officially announced as follows: Herefords, December 11; Shorthorns, December 12; and Holsteins, December 13.

### Edgewater Sentinel.

E. M. Chandler of Yakima, Wash., reports selling Edgewater Sentinel, 10-months calf, grand champion Washington state fair 1918 and silver cup winner from the Ayrshirt Breeders' association, to Mr. N. T. Frost of Naches, Wash.

### Sure to Find Buyers.

Pacific Norhwest Farm Trio, Spokane, Washington.

Gentlemen:

In the spring of 1916 I advertised a large number of Mammoth Bronze turkeys in your paper and was certainly pleased with results. In fact, we sold our entire stock.

Last spring I sent to East Tennessee and Iowa and secured some extra fine stock from high-scoring prize-winning turkey farms.

I am inclosing my ad herewith because I know your papers are sure to find buyers for all my saleable birds. Yours very truly,

MRS. C. R. LOWERY.
Route No. 2, Boise, Idaho.

# BREEDERS' DEPARTMENT

## One JER$EY Starts a Profit Herd

One Jersey will prove the profit of the breed. She will prove her economy in feed. She will show a return in milk richness truly astonishing. (Vigorous in the hot South; hardy in the cold North.) Get one Jersey and you will never be satisfied until you have more. Ask breeders for prices and pedigrees. Write us for Jersey information worth having. We have gathered it from men who know from experience. It's free to you.

**The American Jersey Cattle Club.** 314 West 23rd Street, New York City.

## Doerfler Farm Jerseys

Awarded first, second and third in milking contest, open to all breeds at Oregon State fair, 1918. Also first for 4 best cows, judged 50 per cent type and 50 per cent production. These were the 4 best prizes awarded. They also received many other prizes in the show ring, but type follows production: A few cows and a dandy bull for sale, with great records back of them.

**F. A. DOERFLER, Prop.** Silverton, Ore.

## Register of Merit Cows

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.

**FOX BROS.** Silverton, Ore.

## WAIKIKI FARM

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

**IRA P. WHITNEY, Manager.**
Route 7, Spokane, Wash.

## Dairymen, $75.00

buys your choice of two bull calves, both two months old; solid color, good individuals; out of register of merit dams and by bulls with heavy R. of M. backing. If you are looking for a bargain here it is.

**JOHN B. STUMP & SON, Monmouth, Ore.**

## Who Wants This Bull?

A double grandson of Kadia F., world's Jersey milk record for senior 4-year-old, 16,191 lbs. He is also a grandson of Holger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.

**N. H. SMITH,** Oregon City, Ore.

## Goldie's Nehalem Beauty

won grand champion of the Jersey breed for production, 1917. Her record, 80 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.08) and 433 lbs. butter. Both have been grand champions in show ring.

**CLIFFORD F. REID.**
Wilcox Bldg., Portland, Ore.

## Jersey Home Jerseys

Young bull out of Olalla 2d, daughter of Olalla (806.25 lbs. butter as junior 3-year-old). Bull's sire, St. Mawes Prince, by Poppy's St. Mawes, and out of Gertie's Fern Princess (842.5 lbs. butter), both 80 per cent. Also other good young bulls.

**THOMAS WILLIAMS, Forest Grove, Ore.**

## St. Mawes—Rinda Lad

The two most popular strains of Jerseys in the northwest. Young bulls from register of merit cows for sale.

**G. G. HEWITT,** Monmouth, Ore.

## HIGH CLASS JERSEY BULL CHEAP

**Last Chance of Rocky Run,** by Doctor of Fair Acres, a register of merit sire; 5 daughters in the list, others on test. Dam, Buttercup of Rocky Run, R. of M. record, 474.25 lbs. fat at 3 years 10 mo, two milkings a day. She is a daughter of Rosaire Olga Lad, out of a R. of M. daughter of the great St. Mawes. Other young bulls and a few cows and heifers at reasonable prices.

**E. L. LLOYD, Monroe, Wash.**

## WHERE CAN YOU BEAT IT?

Young bull, ready for service. Sire's dam, St. Mawes Poppy, 1120 lbs. 85 per cent butter, or 1190 lbs. 80 per cent, in a year. Is 75 per cent same blood as Poppy's Grace, that has recently finished year's test as junior 2-year-old, with 601 lbs. 85 per cent butter. His dam and dam's dam both register of merit cows. Priced at $250 for quick sale.

**F. E. FLYNN, Perrydale, Ore.**

## Edgewater Farm, Breeders

Foundation stock is from most noted Island Jersey families—Golden Lad, Golden Jolly, Oxford Lad, Old Raleigh—names that stand for high production and showring winners as well.

**E. T. SMITH.** Myrtle Creek, Ore.

## Meridian Dairy and Fruit Farm

Oldest Jersey herd in northwest Washington. Young stock for sale, both sexes, from good, producing dams. Herd headed by Kolander's Eminent 148256. A very fine bunch of young stock, both sexes, for sale.

**B. C. CRABTREE,** Lynden, Wash.

## Luckiamute Farm

Register of Merit A. J. C. C. Jerseys. Home of Octavia's Duke breeding. Daughters test as high as 7.58, second highest in U. S. A few good young bulls for sale.

**FRANK LAUGHARY & SON,**
MONMOUTH, ORE.

## ROSE LAWN JERSEYS OFFERS

First prize junior bull calf, Idaho State Fair, Minnidoka Co. and Twin Falls Co. fairs. Sire, Rosys Jolly Golden Fern 135028.

Grand champion bull, above fair circuit. Dam Gem Nehalim Lassie, a reg. of merit cow line bred in blood of Hood Farm Torona, Oonan 2d and Figgis.

**S. H. KAYLER.**
Twin Falls, Ida.

## ASHBURN FARM

REGISTER OF MERIT JERSEYS.

A bred herd, tried out for several generations by every breeding test. Only the best blood lines. Three proven matings. Nothing for sale except from tried sires. Increase of both sexes for sale.

**J. M. DICKSON & SON.**
Shedd, Ore.

## Ashnook Farm Jerseys

Young bulls by Silver Chimes of S. B., whose first 6 daughters average 710 lbs. 80 per cent butter. A few good cows and heifers for sale.

**DEL PERKINS,** Carlton, Ore.

## Golden Glows Chief 61460

One of two gold medal Jersey bulls west of New England states. Bred by us. Two of his sons in service in our herd. A few animals, all ages, both sexes, for sale.

**IRON MINE FARM,** Oswego, Ore.
W. M. LADD, Owner.
D. BROOKS-HOGAN, Mgr.

## All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

**ED CARY,** Carlton, Ore.
Station, La Fayette, Ore.

## Anoka Farm Jerseys

We have some choice young bulls up to six months old for sale, whose sire has a 714-lb. dam and 1120 lb. granddam. St. Mawes breeding. The Best in the West. Prices very reasonable. Address

**R. B. SEELY,**
R. 5, Sherwood, Ore.
Shipping Sta. Wilsonville, on Ore. Elec. Ry.

## LYNDEN JERSEY FARM

Herd sire son of Fororio's Olindes Pogis, of Hood Farm and St. Mawes of Lynden, whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to

**P. MEENDERINCH,** Lynden, Wash.

## Ready for Service

Young bulls of Golden Glow's Chief, and King Melia Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.

**HENRY STEWART,** Albany, Ore.

## Jersey Farm Dairy

Peter Mouw's Poland China hogs, Cotswold sheep, White Leghorn and Buff Orpington poultry, carefully bred, great foundation stock.

**E. S. PELOT, R. F. D. 5, Idaho Falls, Ida.**

## POULTRY AND RABBITS

## Walter Hogan's Famous White Leghorns

hatched by Hogan on April 3d. Pullets $2; cockerels, $3. S. C. R. I. Red pullets, two to ten dollars; cockerels, five, ten and fifteen dollars. I can guarantee these pullets and cockerels to be from pens headed by cockerels from a trap-nested 289-egg hen—the females in these pens being sisters to my pen in the All-Northwest Egg-Laying Contest at Pullman, Wn. These birds have good shape, color and undercolor, plus wonderful winter egg blood.

**MRS. ROMINGER,** Underwood, Wash.
Member of N. W. R. I. Red Club.

## Rhode Island Red Cockerels

Both combs, pedigreed and line-bred. Best color and quality I ever raised. Rhode Island Whites, both combs. Get your breeding stock in fine, large Toulouse geese and Bronze turkeys. Pedigreed Belgian hares and Flemish Giant rabbits—the large kind.

**HIGHLAND FRUIT AND POULTRY RANCH.**
J. NONNENMACHER.
R. F. D. 3, Yakima, Wash.

### MAMMOTH WHITE HOLLAND TURKEYS

Yearlings, Toms and young stock for sale. From prize winners. No eggs.

**MRS. E. D. SITTON,** Carlton, Ore.

### FLEMISH GIANT DOES.

For sale—Young, vigorous Flemish Giant does, bred to order, $2.50 to $3.50 each. Pair, $5.

**W. T. WILSON, R. R. 3,** Weiser, Idaho.

## BERKSHIRE SWINE

## BABY BERKSHIRE BOARS

Also boars ready for service. Best breeding. Will ship subject to approval.

**DR. GREEN & SON.** Wapato, Wash.

## GUERNSEY CATTLE

## Registered Guernsey Cow for Sale,

Will be fresh Nov. 15. Registered Guernsey bull, four years old.

**J. J. BLUM,** Stayton, Ore.

## HORSES

## Percheron Prize Winner

First-prize two-year-old Percheron Stallion, Washington State Fair, 1918, and silver medal winner Percheron Society of America. For sale at my Edgewater farm, Burbank, Wash. Weighed 1890 pounds when 2 years old. If interested in a horse of great promise, look him over and make me an offer.

**E. M. CHANDLER, Yakima, Wash.**

## Handsome Black Percheron Stallion

3 years old, registered; black, registered, 7-year-old mare with colt, and again in foal; 7 fine young work horses, 3 and 4 years old.

**J. J. BAEDER,** Waukon, Wash.

## Belgian Horses

Herd sire, grand champion Idaho state fair. Winnings also include grand champion mare. Correspondence solicited.

**H. H. SMITH,** Nampa, Idaho.

## POLAND CHINA SWINE

## Satisfaction or Money Back

Big Litter, Easy Feeding.

BIG TYPE POLAND CHINAS.

Fifty vigorous young boars, ready for service. Best breeding of the times and quality to equal it.

**H. J. STILLINGS, Hermiston, Ore.**

## BIG TYPE POLANDS

Genuine—Guaranteed.

**GEO. W. BUCK.** Oregon City, Ore.

## HAMPSHIRE SWINE

### HAMPSHIRE HOGS

have won every feeding contest entered since 1914. Weanling pigs, gilts, bred or open. Our blood lines can not be beat.

**TUTTLE BROS.** Asotin, Wash.

**When answering advertisements don't fail to mention this paper.**

## Big Type Poland Chinas

## HOLSTEIN CATTLE

**Hartwood Heilo Hengervold.**

# AVALON ORCHARDS DISPERSAL SALE

**49 Head Registered Holsteins**

## *at AUCTION*

**December 5, 1918, at Kuna, Idaho.**

This is the well known herd of Registered Holsteins brought to Idaho four years ago from Illinois by the Avalon Orchard Tract Co. The affairs of the company are being wound up and the dispersion of this fine herd comes as a natural consequence.

There will be offered at auction the following:

16 Milch Cows, 16 Heifers, 3 months to 2 years; 15 Bulls, 2 months to one year.; and the leading herd sire

# Hartwood Heilo Hengervold

A son of Pontiac Korndyke Hengervold. who already has one daughter with a seven-day record of over 30 pounds. He is a brother of the sire of K. P. Pontiac Lass, the only 44-pound cow of the breed. His dam was a great producer and capable of making 30 pounds. She is a granddaughter of Mooie Mutual De Kol and sire, Korndyke Manor De Kol 24, who is a son of Sir Korndyke Manor De Kol. Hartwood's sire has 30 A. R. O. daughters.

The cows offered were bred by H. Stillson Hart of Barrington, Ill., and were brought from his farm direct to Kuna. The foundation of the herd is composed of some of the finest New York dairy stock.

The young stock will be from 30-pound cow ancestry, all backed by good producers on both sides and trace to some of the most noted sires of the breed.

Everything offered is sound and backed by the guarantee of the Avalon Orchard Tract company.

Send today for catalog.

# Avalon Orchard Tract Company

**Col. E. O. WALTER,** Auctioneer. Kuna, Idaho.

---

## Carnation Holsteins

Over 300 in herd to select from. Herd has been under federal inspection for several years.

Our herd sires are Matador Segis Walker, a grandson of King Segis out of Matador Twisk Minette 4th, with record of 33.69 lbs. His first five 4-year-old heifers to freshen have averaged nearly 22 lbs. in seven days; King Segis 10th; Johanna McKinley Segis, the 40-lb. bull.

Write today your needs. Buy registered Holstein sires when they are young. Save on purchase price and express charges. Careful attention given to mail orders.

**Visitors Welcome---Correspondence Invited**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Nov. 9.—Selling to anticipate bearish results from expected official announcement of the signing of armistice terms with Germany made the corn market today heavy throughout the session. Prices closed weak, 2c to 4c net lower, with December, $1.17 3-4 to $1.17 7-8 and January, $1.19 1-4 to $1.19 1-2. Oats lost 5-8c to 1 3-8c. In provisions the outcome ranged from 5 cents decline to 70 cents advance.

Belief in the probability of the armistice announcement was so general that the directors of the board of trade decided to meet at 8:30 a. m. Monday to consider an adjournment of the exchange in recognition of and thankfulness for the ending of hostilities, and as a tribute to those who had lost their lives in the conflict.

| Friday, Nov. 8 | 173 | 2 | 305 | 204 |
| Thursday, Nov. 7 | 325 | 29 | 240 | 115 |
| Wednesday, Nov. 6 | 192 | 33 | 76 | 52 |
| Tuesday, Nov. 5 | 40 | | 145 | 744 |
| Monday, Nov. 4 | 487 | 31 | 48 | |
| Week ago | 230 | 19 | 4 | 1189 |
| Year ago | | | 50 | 13 |
| Two years ago | 19 | 9 | 119 | 1243 |

There were practically no cattle receipts, due to its being Saturday and a short sales day. Only a few steers of the common grade were sold, and they went as feeders. Compared with a week ago prices on all grades of cattle remain practically unchanged. There is a good demand for fat steers of good quality and weight.

| | |
|---|---|
| Prime steers | $12.00@13.00 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Medium to good cows and heifers | 6.00@ 7.00 |
| Common to medium cows and heifers | 4.75@ 5.75 |
| Canners | 3.00@ 5.00 |
| Bulls | 5.00@ 6.50 |
| Calves | 6.00@ 9.50 |
| Stockers and feeders | 6.00@ 8.00 |

The hog supply for Saturday was sufficient to supply all demands for the day. The market was steady to strong. Quality just fair.

| | |
|---|---|
| Prime mixed | $17.15@17.40 |
| Medium mixed | 16.75@17.00 |
| Rough heavies | 15.15@15.40 |
| Pigs | 15.75@16.25 |
| Stockers and feeders | 14.00@15.25 |
| Bulk of sales | 17.00 |

There were no sheep receipts. The market is steady at Friday's close.

| | |
|---|---|
| Prime lambs | $11.00@12.00 |
| Fair to medium lambs | 9.00@10.75 |
| Prime yearlings | 8.75@10.00 |
| Prime wethers | 8.50@ 9.75 |
| Best mutton ewes | 6.00@ 8.00 |
| Breeding ewes, 1 to 4 years | 12.00@16.00 |
| Breeding bucks | 25.00@75.00 |

## Portland Market.

PORTLAND, Ore., Nov. 9.—Higher butter prices are looked for by local dealers. Cube extras are selling at 60 cents and very firm at that. Price cutting of prints has ceased and all creameries are on the 63-cent basis. Storage stocks are practically exhausted.

The egg market remains firm at 65 cents for ordinary candled and selects are 3 cents higher at 68 cents. Eastern fresh eggs are offering at 59@60 cents.

A 40-cent Thanksgiving turkey market is expected by the poultry trade. A full supply seems assured, but the demand is likely to be very heavy. There is not much doing as yet in live turkeys, few of which have enough weight. Other kinds of poultry are ruling firm. The dressed meat market is steady.

There is a wide range in the quality of apples offering, but the market on the whole is firm at $2.65@2.75 basis for extra fancy Spitzenburgs and Winesaps.

The demand for potatoes is moderate and prices unchanged at $2@2.15 for Yakimas and $1.75@2 for Oregons.

Onions are firmer with Oregon yellow stock bringing $1.75@2.25 and California's, $1.75@2.

In view of the chances of big changes in the grain markets this week all buying and selling here has been reduced to a minimum. Closing bids at the merchants exchange were $53.50 for sacked oats, $48@51.50 for bulk oats, $53@55 for bulk corn and $47.50@49 for barley.

Local flour trade continues slack. Mill feed is unchanged and the demand is still far in excess of the supply.

**Quotations.**

Eggs—Oregon ranch, candled, 65c; selects, 68c.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 36c; young Americas, 37c a pound. Coos and Curry, f. o. b. Myrtle Point: Triplets, 35 3-4c per pound.

Poultry—Hens, 26@28c; broilers, 27@30c; ducks, 25@30c; turkeys, 30c; geese, 17@18c.

Pork—Fancy, 21@22c.

Veal—Fancy, 19c.

Potatoes—Oregon, $1.75@2 per hundred.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30@33 per ton; valley timothy, $27; alfalfa, $28; valley grain hay, $26; clover, $27; straw, $9@10.

Butter—Cubes, extras, 60c; prints, 63@64c. Butterfat, 67c, delivered at Portland.

**Butter and Eggs.**

CHICAGO, Nov. 9.—Butter unchanged. Eggs unsettled; receipts, 1848 cases; firsts, 58@58 1-2c; ordinary firsts, 52@56c; at mark, cases included, 53@57c.

SAN FRANCISCO, Nov. 7.—Eggs, fresh extras, 86@92c; fresh extra pullets, 72c.

PORTLAND, Ore., Nov. 9.—Butter steady; creamery prints, extras, box lots, 63c; half boxes 1-2c more; less than half boxes 1c more. Buying prices butterfat Portland, 67c; cube extras, 60c.

**Raise Plenty of Cabbage.**

This year's cabbage crop is estimated at 18 per cent more than last year's crop.

## Spokane Produce.

SPOKANE, Nov. 9.—These are the actual prices obtained by Spokane wholesalers in their sales to retailers, hotels, mining camps, etc. This information was given by the wholesalers and retailers to the federal bureau of markets in Spokane.

**Apples**—Boxes, extra fancy Spitzenburgs, wrapped, $3; fancy, $2.75. Fancy Wagageners and Jonathans, wrapped, $1.85@2; jumble pack, $1.50. Fancy Winesaps, $3. Fancy Grimes, $1.85@2. Combination extra and fancy Delicious, small, $2.25@2.50; medium, $2.75@3; large, $3.25.

**Cabbage**—Crated, retrimmed, fancy Danish Ballhead, 2@2 1-2c lb.

**Pears**—Winter Nellis, $2.25@2.50. Fancy fall Butters, $2.25@2.50; d'Anjou, $3.

**Potatoes**—Montana-Idaho-Yakima district, sacked white varieties, $1.75@2 per cwt. California Burbanks, quality and condition fair, $1.50. Homegrowns, quality and condition generally good, $1.50. Extra fancy, quality and condition fine, $2.

## INFECTED FRUIT SHIPMENTS.

**Several Shipments Intercepted at Spokane by State Inspectors.**

Yakima reports several attempts to evade the law by shipping infected fruit, on account of the unusual number of cull apples in the valley this year. Several shipments of this character have been intercepted at Spokane by state inspectors and turned over to cider mills. Inspector C. B. Worth claims that it is unlawful for anyone to dispose of cull apples other than through the channels provided by law. He says the department is ready to issue permits for shipping this class of fruit and that it will do all it can to make the operation of securing the permits easier for the shipper. Here is the law:

It shall be unlawful for any person to import into this state, sell, barter, or otherwise dispose of or offer for sale or have in his possession for the purpose of sale or barter any fruit which is or has been infected with peach mildew, peach twig borer, San Jose scale or other insect pests or the larvae of the codling moth or peach twig borer, and the fact that any fruit bears the marks of any such scale insect or is worm eaten by any such larvae, shall be conclusive evidence that the fruit is infected, within the meaning of this section: Provided that nothing in this section shall be construed to prevent the growers of such infected fruit grown within the state of Washington from manufacturing the same into a byproduct or selling and shipping the same to a byproduct factory. (Sec. 15, Chap. 166, Sessions Laws, 1915.)

## INCREASES CAPITAL STOCK.

Announcement has been made that the Cudahy Packing company is increasing its capital stock approximately $35,000,000.

## Seattle Market.

SEATTLE, Nov. 9.—The decline in the market for Winesap apples during the early part of the week vanished as soon as the fruit began moving and prices from extra fancy apples down to worm stings are strong. The best apple seller during the week has been the "C" grade, selling at 75c to $1 per box under fancy. These include numerous stings which do not appear to affect the movement. Orchard run, composed of all winter brands, but without selection as to size or color, has been popular with buyers, and the volume of extra fancy at top prices has increased heavily.

**Purchasing Prices.**

Eggs—Select ranch, 75@80c per doz; pullets, 64@65c.

Butter—Fresh dairy, 35c per lb.; butter fat, 68c per lb.; bakers', 46c per lb.; raw milk, $3.50 per cwt.

Poultry—Broilers, live, 1918, 43c per lb.; hens, 2 lbs and over, 25c lb.; under 3 1-2 lbs, 25c per lb.; old roosters, 17c per lb.; ducks, live, fat, 25@26c per lb.; squabs, large, $3.50 per doz.; geese, fat, live, 21@22c per lb.; Belgian hares, 11@15c per lb.; guineas, $7 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up, 30@35c per lb.

Hogs—Light, 18@21c per lb.; heavy, 12@22c per lb.

Beef—Steers, fat, 12@15c per lb.; heifers, fat, 12@15c per lb.; cows and bulls, 11@14c per lb.

Veal—Fancy, light, 19c per lb.; do, heavy, 10@18c per lb.

Mutton—Fat, 22c per lb.; spring lamb, fat, dressed, 25c per lb.

**Hides, Tallow and Wool.**

Bid prices to producers: Salted hides, cows and steers, No. 1, 15c per lb.; do, No. 2, 14c lb.; green hides, cows and steers, No. 1, 12c lb.; do, No. 2, 11c lb.; salted, bulls or stags, No. 1, 12c lb.; do, No. 2, 11c lb.; green bulls or stags, No. 1, 10c lb.; do, No. 2, 9c lb.; salted or green calfskins, No. 1, 32c lb.; No. 2, 30 1-2c lb.; salted or green kip skins, No. 1, 16c lb.; do, No. 2, 14 1-2c lb.; dry hides, No. 1, 30c lb.; do, No. 2, 29c lb.; dry bulls or stags, 25c lb.; dry salt hides, 24c lb.; dry calfskins (5 lbs. and under), No. 1, 35c lb.; do, No. 2, 33c; tallow, No. 1, 13c lb.

Horsehides, green or salted, each, $2@4; do, dry, each, 50c@$2.

Clean ranch wool, full growth, lb., 30@55c.

Sheep pelts—Long wool, each, $2.50@4.50; medium wool, each, $1.50@2.50; short wool, each, $1@1.50; shearlings, each, 35@75c.

Beeswax, per lb, 25@27c.

**Prevention Rather Than Cure.**

To cure is as expensive as to prevent, and prevention eliminates the loss, as well.

LOOK for the K-W Trade Mark on the MAGNETO

Before Buying Your Tractor Make Sure Of Its Ignition System

Every K-W Magneto carries the K-W trade mark. It is put there for your protection. It is a symbol of quality. It assures you of continuous, reliable, no-trouble ignition regardless of working conditions.

K-W High Tension MAGNETOS

give immediate and easy starting regardless of how cold the weather, how large the motor or how slowly the engine is cranked. K-W Magnetos fire any kind of fuel and increase the power derived from the same amount of fuel over that of any other ignition system. They enable you to plow additional acreage *without additional fuel cost.* They are protected against powder-fine dust, oil and water.

The Time To Avoid Ignition Trouble Is When You Buy Your Tractor

Forty tractor manufacturers pay more for K-W Magnetos but it is their assurance that you—the tractor buyer—are being provided with the most reliable ignition system, guaranteeing to you a "no-trouble" service day in and day out.

If you are *not* using a K-W now write us. Let us show you how a K-W Magneto will give quick and easy starting, and get full power out of the cheaper grades of fuel. There is a type for *your* tractor that will do this.

Before You Buy A Tractor

look up one neighbor or a dozen using K-W Ignition and talk it over with them. Then we know you will *insist* upon a K-W Magneto on *any* tractor you may decide to purchase.

Write for list of K-W equipped tractors and full information.

THE K-W IGNITION Co
2891 Chester Ave. CLEVELAND, OHIO. U.S.A.

# A Crooked Trail

(Continued from page twenty-four.)

grape-vine. He soon returned, with the nine in one hand and a five-dollar bill in the other.

"Here, Travis, take this and give me two and a half in change."

"What do you want with change?"

"Why, I thought I'd hand my half back. You heard what the woman said about their sick daughter at home. And they seem to be rather poor, too. Of course we're entitled to the five dollars if we want it. We've earned it fairly, according to agreement. But somehow I don't want my share."

"Then never mind about the change. Just hand it all back, and call the matter square."

Both the man and his wife declared they could not accept the money; but Frank tossed it, laughingly, into the woman's lap as she sat in the wagon, and then he hurried away.

"We're a thousand times obleeged to you, both of you," the man leaned out to say.

Just as he was driving off, another wagon appeared on the north bank. This one was also covered, or partly covered; and two men sat on a spring-seat in front, but out from under the canvas.

After coming down to the water's edge to look at the river, one of them shouted across:

"What's that you've got there?" And on being informed he demanded: "Can you ferry us across on it?"

"We don't care to try," I called back.

"How did that other wagon get over?"

"We rafted it over."

"Then why can't you come back again for us?"

"We're not running a ferry. And we've lost more time now than we can afford to lose."

The man offered us a dollar to come and get them, and kept adding to it till the bid reached twenty dollars. And if we had held off long enough, he might have offered us a hundred.

Frank had been willing to accept a much smaller sum, but I was obstinate. It was well on in the day, and I felt very impatient to get started after our cattle. Though eager enough to earn money, I reflected that if I lost an ox worth 30 or 40 dollars, I should be greatly the loser in the end.

But when the offer was increased to $20 --$10 apiece—it proved too tempting, and I could hold out no longer.

Again we dragged our cumbersome craft far up stream; and again we launched out into the turbid torrent, upon the most exciting river-voyage I have ever made.

(To be continued.)

### HEAVY HONEY CROP.

Some 40 carloads of honey have been sold, and are being shipped out of the territory covered by the South Idaho and East Oregon Producers' association, the headquarters of which are in charge of Secretary and Manager P. A. Farrell, at Caldwell.

Mr. Farrell says the crop is largely extracted honey, although there is now a considerable demand for comb honey, and that there will be around 15 cars of the latter. The entire output will bring the producers not far from a quarter of a million dollars. The prices, in keeping with other food products, are much higher than usual, and the honey producers are correspondingly elated. They feel that they have needed substantial encouragement, and are now getting it.

## Farmers' Want Ads

**HELP WANTED—Male 3**

SALESMEN—MANY OF OUR SALESMEN have gone to war and we are filling their places with men exempt from draft. Lack of competition and great prosperity of our customers makes sales the best we have ever known. Selling experience desirable, but not necessary. McConnon & Company, Dept. J., Winona, Minn.

**YOU NEED ONE**

**The Farmer's Record and Account Book**

Sent postpaid for TWO subscriptions to your State Family Farm Paper.

THE WASHINGTON FARMER.

Subscriptions may be for one year at 25c; three years at 60c, or five years at $1.

**The Washington Farmer**

617 Central Bldg., Seattle, Wash.
or
Review Building, Spokane, Wash.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

**AGENTS WANTED 9**

POWERINE IS EQUAL TO GASOLINE AT 5C a gallon. Salesmen and agents wanted; exclusive territory granted. Powerine is guaranteed to be harmless, to remove and prevent carbon, doubling the life of all gasoline motors, saving repairs, adding snap, speed and power. An amount equal to 20 gallons of gasoline will be sent to any address in the United States, charges prepaid, for $1.00. W. Porter Barnes, Santa Rosa, Cal., dept. 8K.

**SITUATIONS WANTED—Male 21**

YOUNG MAN, WELL EDUCATED, WITH years of experience in all lines of commercial work, stenography, etc., offers his services in exchange for room and board where conditions are conducive to good health, in order to thoroughly recover from injury received a short time ago; satisfactory references upon application. Address P. O. Box 501, Portland, Ore.

# Applying Win-the-War Policy to the Automobile

## *A Letter to Overland Dealers:*

Toledo, Ohio, Oct. 1st, 1918.

OUR first consideration, as it is yours—and that of every right thinking citizen—is "win-the-war."

Immediately following the American Declaration of War, we offered our production capacity, and the Government is using a very large part of it.

We are ready if need be to devote it entirely to war work.

The Automobile Industry as a whole is on a similar win-the-war basis.

We are building only a limited quantity of automobiles.

How many cars conditions will permit us to build for any future period is problematical—dependent wholly upon the urgency of war needs.

Any existing transportation must be used to its fullest capacity in order to increase the diminishing man-power of our home forces.

The total output of automobiles is fast becoming insufficient to replace cars wearing out in service.

And fewer cars rather than more is the production outlook.

With "win the war" our first consideration—and yours—this condition places a responsibility upon us which we are bound to fulfil.

* * * *

**Because it has assumed its transportation burdens so gradually few realize the extent to which the automobile is performing essential service.**

**—so essential that the rest of the system, railroads, trolleys and every other means of transportation that could be pressed into service, would be wholly inadequate quickly to assume the load were automobiles suddenly not available for the performance of their usual service.**

In even so essential a matter as our food supply the automobile is a most important factor.

**MY war-time conception of the automobile is that it is simply a given number of miles of rapid transportation.**

**It goes into service as a unit of our national transportation system.**

**In placing our restricted output of these units of our national transportation system in the hands of individuals, I want our distributors and dealers to discern the uses to which they will be put and to place each unit where it will best serve in the winning of the war.**

J. N. Willys
President

Few realize that over half the automobiles now in use are owned by and serve the people of the farms upon whom we and our allies are dependent for food.

Farm labor is already scarce.

Lack of automobiles to serve our farmers would mean a loss of untold hours of productive farm labor.

**Lack of automobiles to serve our loyal industrial workers would seriously hamper our industrial efficiency.**

**Lack of automobiles for those who direct and serve our essential workers would hamper our national efficiency as a people.**

* * * *

It is time for public appreciation of the fact that every mile that an automobile is driven needlessly is a mile of wasted transportation that ultimately may be needed for essential service.

It is time for public understanding that these smaller units of our transportation system should be used and maintained with the same thought for national needs as we demand in the use and maintenance of our larger units of transportation.

Failure on our part to take every means available for us to inform the public concerning the importance of this matter would be neglecting an opportunity to perform a valuable public service and a failure to live up to our win-the-war policy in a vital respect.

Let us, as automobile manufacturers, and you, as automobile dealers, put ourselves on a one-hundred-per cent win-the-war basis.

Let us to the full extent of our influence put the war-importance of the automobile fully before the public—you in your contact with the public—we in the public print.

**Let us to the fullest extent realize that when we sell an automobile we are in reality selling miles of transportation—placing a unit of our national transportation system in the service of an individual.**

Let us intelligently discern the uses to which it will be put and place each unit where it will best serve in the winning of the war.

In this spirit of full cooperation we can bring about a fuller understanding and appreciation of the situation and its trend, and perform a service of value to the whole people.

Half the Herd

WELL-BRED STEERS

A SCRUB

*"It costs no more to raise a 1200-pound well-bred steer than a 500-pound scrub."*

# Rising Farm Values Must Be Met by Better Livestock

IN the ten years between 1900 and 1910, according to U. S. Census figures, American farm-lands doubled in value—an increase greater than the entire fifty years preceding. With this land growing costlier year after year, it must bring a greater dollars-and-cents return per acre if it is to yield the farmer the right kind of profits on its higher valuation. Likewise, unless it *does* produce more, the consuming public faces a serious scarcity in its meat-supply, as statistics show population-increase is outstripping livestock production.

These are problems that every thinking farmer is considering, or should consider. Armour and Company, serving both the grower who produces the meat and the consumer who eats it, have a vital interest in the solution of these problems. Hence, whatever best promotes the welfare of both the producer and consumer benefits Armour also.

Breeding for quality that brings maximum weight at lowest cost and in the shortest time is undoubtedly the surest method of guaranteeing adequate returns to the producer and safeguarding the country's meat supply for the future.

## Better Breeds Make Bigger Profits

A well-bred beef animal requires no more feed, and at the same time attains larger size and puts on more quality meat in a shorter period than a low-grade steer. In other words, it costs no more to raise a 1,200 pound well-bred steer than a 500 pound scrub—and the profits are vastly larger.

The same thing applies to hogs and sheep. When there is "too much daylight under a hog" it costs you extra money in feed and you get nothing for it. High-grade sheep produce finer cuts than can be secured from poorer animals; they are worth more and they bring more.

The smaller the farm, the more important good breeding becomes. For quality-bred animals use the feed to better advantage, give the grower more value per pound and cost less to produce.

## Working Toward Higher Standards

Armour and Company recognize the importance of better livestock and better farming practice. To encourage and aid in improving animal-husbandry, we have established a well-organized Farm Bureau under the direction of specialists. Producers everywhere are invited to consult with this Bureau freely in regard to production problems.

At this time Armour and Company are operating under Government control—meat profits being limited to 9% on capital invested. They may be less than that, but they cannot be more. Hence, this seems a particularly opportune time for Armour and Company to discuss with growers the problems which materially affect both, and to set forth the facts frankly without danger of motives being misunderstood.

This is the first of a series of messages that will appear regularly in this paper. Watch for the others.

Armour's QUALITY PRODUCTS

This is the Mark Under Which Your Best Products Reach the Consumer

ARMOUR AND COMPANY
CHICAGO

## "Win-the-War" Preparedness

*A year of bounteous harvests is just closing. Farmers have responded in magnificent measure to the Government's call for food. But there is need for more. Europe is still struggling—provisions for our Army and the Allies' Armies must be assured for another year. We know every producer realizes this and will exceed even former efforts the coming season. To you our strongest pledge is that the Armour organization and Armour facilities will be maintained at the highest point of efficiency to prepare and to ship this food with the utmost economy and dispatch—to best serve the interests of the producer and the needs of our Government.*

## Food Production Supreme Peace Problem

### *Appointment of National Food Production Administrator Is the Imperative Duty of Congress and the President*

The world will be even more clamorous for food in time of peace than it was in time of war. All outstanding signs indicate that the call upon the American farmer for increased food production will be greater in 1919 than it was in 1918. The greater part of Europe is either starving or upon the verge of starvation. Mr. Hoover told a conference of state food administrators in Washington last week that conditions of famine exist in Europe that will be "beyond our powers to remedy." In northern Russia alone, he declared, there are 40,000,000 people who have but little chance of obtaining food this winter. Millions of others throughout Europe, he said, who can be reached, must be fed.

Last year to feed our allies the United States exported 11,000,000 tons of foodstuffs before the peace armistice was signed. Mr. Hoover said exports the coming year would have to be increased to 17,500,000 tons. Now he tells the country that the very lowest minimum of food exports from the United States and West Indies the coming year should be 20,000,000 tons. In other words, America is called upon to supply the coming year twice the quantity of food for the European people that it gave last year and three and one-third times the quantity that it normally exported in time of peace.

It is plainly now more a problem of increased production than of increased conservation by consumers. We can not see how the American people can conserve to a much greater extent than they have been conserving. We fear that the tendency will rather be the other way by the great masses of the consuming public, particularly in the larger cities, who, seeing that the war is over, will feel that they can go back to peace time methods. With all the appeals that it can possibly make, the food administration will do well if it can hold down consumption to the level of the past year.

This thrusts a tremendous and grave problem upon congress and the administration. Now as seldom before the country needs breadth of view and far-seeing vision. We note that Secretary Houston, of the department of agriculture, has just issued a statement urging that steps be taken to secure the better organization of agricultural forces of the country, especially of the local farm bureaus, in preparation for the necessary production program for 1919. Secretary Houston dwelt especially upon the need for an increased production of beef and fats, saying it seems clear that for a considerable period the world will demand particularly a larger supply than normal of these commodities.

"During the war," said Mr. Houston in a merited tribute, "the farmers of the nation have responded magnificently to the appeals of increased production. During this present fall season our farmers have planted an increased acreage of wheat and a large acreage of rye. It is too early now to make detailed suggestions for the spring planting season."

These well-sounding utterances

**What Is It?** German socialism is forming a government to replace the autocracy of the kaiser's dynasty What is German socialism? Dr. L. A. Bryan has prepared an article explaining it. Be ready to read and digest that article next week.

## More Silos

### Okanogan County Has 25 New Ones

About 25 new silos were built in Okanogan county, Wash., this year, which is a 50 per cent increase. County Agriculturist W. A. Holt says all are filled with corn but two. He and his assistant, A. K. Millage, have given assistance in the building of 17 wood hoop silos, which are considered the best by himself and are recommended by the government. The Woodbury Lumber company donated the lumber for a hoop form and Agent Holt had it made to use in making the hoops for the silo. It was designed by Mr. Mickle, county agriculturist of the adjoining county of Chelan, and can be carried on the back end of an auto. It has been in every district in the county.

A few of the silos in the county have alfalfa mixed with the corn and one is filled with weedy wheat and oats. A number of the silos, containing about half the tonnage, are for feeding beef cattle and one or two for sheep feeding. Mrs. McDonald of Loomis, Wash., in the northern part of the county, has a 300-ton concrete silo, built last year. She has one of the largest herds of beef cattle. There are several more silos in that strictly beef region. There are several pit and partly pit silos. While not the best silo, Mr. Holt tells me he believes it is sometimes the best for a man to build, owing to monetary and other conditions. One homesteader built one for a cash outlay of less than $50.

Mr. Holt predicts an increased corn acreage and expects 50 more silos to be built next year, as people see the corn crops and realize the benefits of the silo. He hopes for better stock, more corn and more silos. H. A.

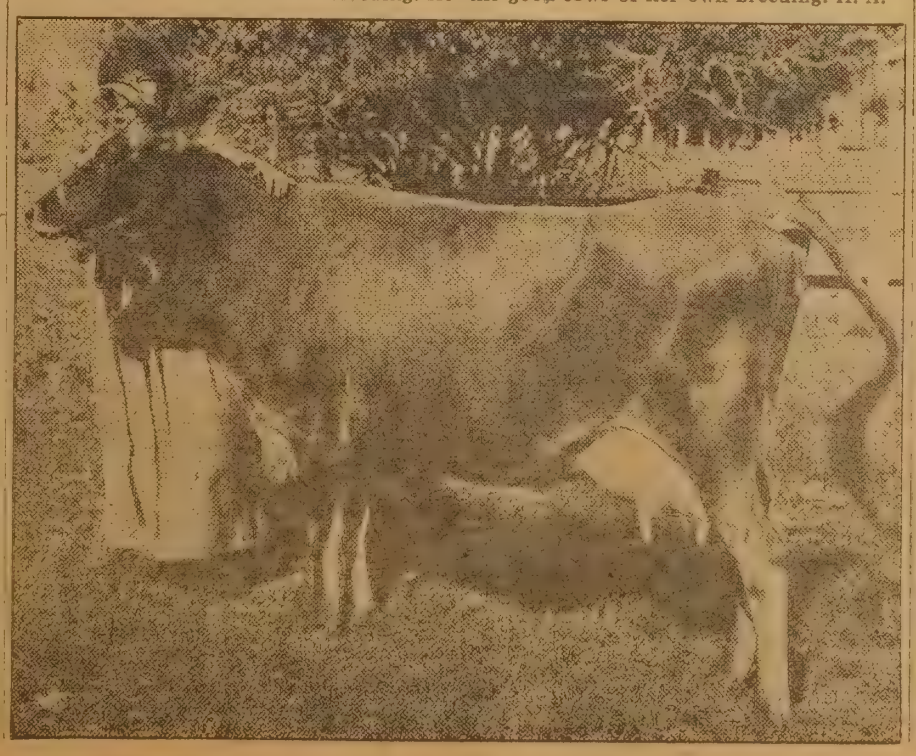
**FRUIT MEN TO MEET IN SPOKANE.**

The State Horticultural association will meet in Spokane December 10, 11 and 12, and on the 13th the Packers' and Graders' convention will be held. This is considered one of the most important meetings of the association ever held and an effort is being made to have Secretary of Agriculture Houston and other men of his caliber present to address the convention. A special effort is made to have a high-class program throughout. Spokane has guaranteed the expenses of the convention and a large attendance and increased membership is expected.

## High Class Herd of Jerseys Owned by Woman

"Illihee herd" of Jerseys received just recognition when it was featured in Great Northern railroad advertising literature. This high-class little herd is owned and was bred up by a woman, Mrs. Charlotte K. Stanton. It is at Oroville, Wash., only four miles from the British Columbia line, and far from any other breeders who might help in keeping up enthusiasm and breed interest.

In 1907 Mrs. Stanton bought a few foundation animals from that constructive breeder, Adam Stevens, of Ellensburg, Wash. Included was a young bull by Gertie's Stoke Pogis, and out of Golden Glow 2d, a daughter of Golden Glow, dam of the noted Oregon bull, Golden Glow's Chief. Golden Glow 2d was a beautiful cow, with broad, straight top line, good capacity and length of body. She was never officially tested. The bull is reputed to have been handsome, of great depth of body, and he never sired a poor daughter. Mrs. Stanton kept him until he died, and he seems to have been worthy the great breeding on both sides of his ancestry.



Mrs. Stanton's second bull was also purchased from Mrs. Stevens, and was out of a daughter of Golden Glow 2d, which shows she had the idea of line breeding. He proved to be a good breeder and put excellent udders and teats on his daughters.

Mrs. Stanton's present herd bull is Mayfield's Buster, by Fabby Shylock, and his dame is Imp. Mayfield's Orphan. Fabby Shylock, it will be remembered, sired Sans Aloi, also Financial Countess Lad, the sire of Financial Sensation, that recently sold for $60,000; so Mayfield's Buster is a half brother to these two famous bulls. He is a handsome animal, but for his horns, has a kind disposition and all his daughters have beautiful heads as well as good udders. He has one heifer in milk that produced almost 50 pounds a day and made 72.9 pounds of 85 per cent butter in 31 days.

Mrs. Stanton has done no official testing. She is too far from any tester and has no other herd to share the test expenses.

Mrs. Stanton has, on account of conditions sold off a good part of her herd. She retains among others, Silver Grace, a cow 16 years old, that is still a good, useful cow. Five head have recently been sold to Mrs. A. D. Craster of Vernon, B. C., at $250 and $200 each, and others of her herd have gone to British Columbia at good prices.

The photo herewith shows Mrs. Stanton holding Lady Velveteen of N. I., one of the good cows of her own breeding. H. A.

**WENATCHEE APPLE DISTRICT.**

**Fruit Becomes Famous With Travelers Throughout the Southwestern States.**

One of the many things of which the famous Wenatchee district is justly proud is the fact that it supplies all the apples for the Harvey system of eating houses. This season's order, made late in October, was for 20 carloads of fancy and extra fancy grades. The largest order was for Winesaps, the sizes being 96 to 113 to the box. Rome Beauties are 56 to 80. Jonathan and Spitzenbergs are the same size as Winesaps and Winter Bananas as the Delicious.

The Harvey system restaurants have made the Santa Fe railway famous. Away out in Arizona and other parts of the hot and arid American desert, wherever Santa Fe trains stop, it is the boast of these restaurants that they serve anything you can get anywhere else, and serve it better.

The Wells & Wade Fruit company have supplied this company for the last four years. Mr. Wade, who supervises the filling of this order, informed me that Mr. McCormick, the buyer, has been buying in the Wenatchee valley for the last 10 years. He does not stop at the question of price, but must have the quality desired. He used to buy from the individual growers, because it was the only way in which he could get extra select apples. H. A.

**COMPILES CROP FIGURES.**

E. T. Marchetti, field agent for the department of agriculture, has issued the following statement as to the production of corn and potatoes by counties in the state of Washington during the season just ended:

| County. | Corn. | Potatoes. |
|---|---|---|
| Adams | 11,500 | 54,500 |
| Asotin | 16,900 | 27,080 |
| Benton | 172,500 | 90,000 |
| Chelan | 79,000 | 143,260 |
| Columbia | 98,000 | 32,060 |
| Douglas | 55,000 | 120,120 |
| Ferry | 5,500 | 23,100 |
| Franklin | 6,000 | 23,040 |
| Garfield | 38,000 | 9,000 |
| Grant | 13,500 | 48,560 |
| Kittitas | 1,500 | 270,000 |
| Klickitat | 8,500 | 103,040 |
| Lincoln | 26,000 | 98,896 |
| Okanogan | 89,000 | 105,560 |
| Pend Oreille | 2,500 | 49,500 |
| Spokane | 49,000 | 178,815 |
| Stevens | 58,500 | 291,225 |
| Walla Walla | 100,500 | 116,880 |
| Whitman | 85,000 | 237,100 |
| Yakima | 690,900 | 2,059,025 |
| State total | 1,634,000 | 8,580,318 |

A special inquiry disclosed that 34 per cent, or 2,917,518 bushels of potatoes are consumed on the farms producing them, leaving an available visible supply of 5,662,800 bushels for the state. Practically the entire corn crop is utilized on the farms producing it.

**Potato Crop Below Normal.**

This year's potato crop is estimated by the department of agriculture at 11 per cent below normal.

THE WASHINGTON FARMER

VOL. XLI. NO. 47

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
414 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## Victories of Peace

"Peace hath her victories no less renowned than war," is a phrase that was never more applicable than today. The victories of war are uppermost in the minds of men; but what about the coming victories of peace?

The victories of peace may be very nearly as strenuous as those of war. They will receive less medals than the victories of war. They must be fought out in the quiet before they are fought out in the halls of legislation, in the parliaments of the nations.

Milton spoke to our own times no less than to the Cromwellian days when he declared that peace hath her victories no less renowned than war.

redevils are not necessarily fools.

## Short Time Farm Loans Next Reform

For most part the bankers of the United States have accepted in good spirit the founding of the farm loan bank system. Occasionally, though, a short-sighted banker, hide-bound in his devotion to the old order, emits an angry protest against what he terms "government favoritism for the farmer."

An utterance of that character was voiced in Chicago last week before the convention of the American Bankers' association. E. D. Huxford of Cherokee, Iowa, attacking the farm loan bank, tried to be sarcastic when he said:

"When federal farm loan banks are firmly established, may we not expect the move to include some provision for a federal packers' loan bank, or a federal manufacturing loan bank, or a federal railway loan bank, and so on, until the 57 varieties are fully covered by federal chartered institutions and every little business has a bank all its own?"

The truth is that all of the commercial and manufacturing interests enumerated by Mr. Huxford have long enjoyed favorable banking facilities through the national banking system. That system, which has served the commercial interests continuously since the civil war, is under government patronage, inspection and regulation. A business man, finding himself held up for excessive interest charges, could readily appeal to the government officials and the offending bank could be quickly and effectively disciplined.

More and more as the years passed by it became apparent that the great farming interests of the United States needed some such government banking system. Long ago European countries had seen the need of farm loan banks and had worked out and perfected systems that were of tremendous benefit not only to the producers but to the nation.

Mr. Huxford and other objectors to the federal farm loan bank entirely miss the point of the legislation that founded it. It is essentially an institution for the public benefit—and of ultimate aid to the consumer more than to the producer, because its unerring effect will be to reduce the cost of production, and in the end the consuming public will get the lion's share of the benefits of that reduction.

Mr. Huxford only wastes his breath in bewailing this wise legislation. He had better accept it in good spirit, and, what is more, he might as well fortify his soul against another reform that is surely coming—the enlargment of the federal land bank system so that farmers can have short-time loans on better terms and easier conditions.

Good health comes from good air, good food and good exercise of body and mind. All modern appurtenences of good health are poor counterfeits.

## The Unanswered Question

As a rule we know little about the things with which we deal, even the commonest of them. What they are we know not, thought we do know, or think we know, something about how they operate. For instance, what is electricity? There is no man living who can tell. It is something that we know exists, for we see its effects. We see it lighting cities and homes and turning machinery. We know how it acts but we do not know what it is. What is this thing that we call mind? What is this thing we call matter? What is hope? What is aspiration? What is life itself? The whole race must content itself with knowing something about how these things operate, admitting that it knows nothing or next to nothing about the thing itself.

Recently there appeared an article in this paper discussing a certain something that exists in milk and eggs that gives them particular nutritive value. The word used to indicate this something was "vitamine" or "vitamines." A reader writes in to inquire what the word means, saying that his dictionary does not contain it. The writer of the article, one of this journal's contributing editors and one of the recognized northwestern authorities on scientific subjects, replied in part:

"All that is known, so far as the writer is aware, is that there is a something or a substance that is very favorable to growth, but which is found only in milk and eggs. That much has been demonstrated. The fact is, a great discovery has been made, but the thing discovered remains hidden. It is a fact, so far as the practical application is concerned, just as much as though we could measure it with a tape line, weigh it with a balance, see it with our own eyes or photograph it with an X-ray."

Use it! What matters whether we know what it is or not? If vitamines exist and are the vital substance of nutrition that it seems proven they are, they may revolutionize the use of foods and feeds. Apply what is known; do not haggle over the unknown. What if we had said: "We do not know what electricity is, therefore we will not use it"? What if we refused to hope because we do not know what hope is, refused to aspire to better things because we do not know exactly what aspiration is or refused to solve our problems because we do not know what the mind with which we solve them is?

How far can the principles of Christianity be applied in reaching terms of peace? It depends upon the interpretation of those principles. The Master Christian said: "I came not to bring peace, but a sword."

## Keep the Feed at Home

The shipment of wheat out of the northwest for grinding into flour and feed in other milling centers has been rightfully criticised. The feed is needed here, and it is manifestly poor policy to pay the freight on it both ways as is necessary when the grain is shipped out and the mill feed shipped back. It is also just as poor a policy to ship uncleaned wheat to market when the cleanings might be taken out locally and kept for feed. The producers pay out annually thousands and thousands of dollars in both-ways freight on these cleanings, besides the price that they have to pay when they buy the cleanings back.

## Selling Prices of Food Products

I read from the daily papers that the government is establishing a system of reports of prices at which groceries and other food products should be sold. These reports are to be based upon the cost of production and shipments in, or into the various sections of the country.

I think this is a splendid movement; one that is necessary in order to make an equitable system of fair profits and no extortionate charges. I think further that every one should write to his congressman, senator, and to the chief of bureau of markets of any speeial cases in order that our agents in Washington may know the conditions we have to face and devise a means to remedy them.

I wrote the bureau a few days ago and gave the following item. Apples that we sold in the Yakima valley, Washington, at $1.50 per box were shipped to Seattle and sold on the fruit stands at, retail, two for 25c, or $12.50 per box. The cost of shipment in car lots to Seattle could not have been more than 50c per box, for that is all it costs to Chicago. Before the war we shipped to New York or Boston for 50c per box, in car lots. Allowing that the cost to retailer for rent, labor, etc., is $1.00 per box, this still leaves a net profit of $10.00.

The grower does not get too much, for he has an investment of $500 to $2000 per acre in land. Then he prunes, sprays, irrigates, cultivates, pays taxes, water rent, insurance, hires labor, buys boxes, paper, nails, picks, assorts, packs, hauls to town and runs all the risks of frost, storms, winds and other conditions damaging to crops. The railroad company does not get too much, for they have large expenses as well as the farmer. But the handlers, with no investment or very little, and but little expense, make the public pay five times as much as the grower and the railroad company combined receive. Yet the grower and the railroad company do the work, have the principal expense compared with which the work and expense of the distributor is very light indeed.

My point is, that these facts and similar facts should be brought to the attention of our agents at Washington, in order that in the course of time these defects in our system of marketing may be remedied.

In a government "Of the people, for the people and by the people," the people are the principal and the officers occupying official positions are their agents. But the agents can not know what the principal wants except as these wants are expressed in letters of information, or at the ballot box. It is no use to grumble and find fault with our representatives if we do not tell them what we want. Generally we find them ready to serve their constitutents as best they can.

G. L.

Brain inspirations are suicidal, unless the heart is at the helm.

## More Bonds Must Be Issued

The first thought, now that the armistice is signed, is that the government will issue no more bonds, but a survey of the situation shows that it is very probable that further issues will be required.

Now that the war is over the allies will need enormous credit in the United States. They will require vast quantities of raw materials for manufacturing, heavy importations of food and probably a great deal of merchandise and equipment. These purchases can not be made in the United States unless credits are created here and such credit can only be created by our government making further loans to its allies. It is to our own commercial and industrial interests that this be done in order that the business situation shall be sustained in the critical period when the war business is disappearing. Bond issues for that purpose will not increase the net debt of the United States. The government at Washington would simply borrow the money from its people and re-loan it to the allies.

Past loans of that nature were attended with some risk, but now that the war is victoriously over we can make the desired advances with every assurance that they will be honorably repaid.

Justice, generosity and our own interest require that we render this service in a big and magnanimous way.

# Army Camps Will Break Up

## *Plans Under Way for Systematic Demobilization of Troops*

The war department has announced that all army camps in the United States will be broken up as rapidly as possible consistent with the maintenance of order and reasonable conditions of traffic. General March, chief of staff, said Saturday that orders had already been issued that would return about 200,000 men to civil life within two weeks, and that when the program of demobilization was in full swing something like 30,000 men daily would leave the camps. These orders refer only to camps in America, as no definite policy concerning the demobilization of the troops in Europe has yet been announced, though it has been openly discussed.

There are approximately 1,700,000 men in the training camps of the United States at the present time. Assuming that 200,000 of these start for home during the next two weeks and that the prediction of General March that 30,000 per day leave camps thereafter, it would require approximately two months to demobilize this entire force. It is probable, however, that a considerable number will be maintained more or less permanently at the camps until such time as the troops begin to return from Europe, when the American camps would probably be converted into demobilization quarters. Many of the men who will be released will be given the opportunity to recalist voluntarily in the army service for regular army duty. The war department, says General March, is going to recommend to congress that every discharged soldier be given one month's additional pay as a bonus, regardless of the rank which he holds.

**LAY PLANS FOR THOSE IN EUROPE.**

Chairman Hurley of the United States shipping board has gone to Europe for the purpose of arranging the details for bringing back the troops that are now over there as soon as the war department decides upon the time and method of their return. He says that if the war department wants them returned as rapidly as possible the shipping board can furnish transportation to bring them back at the rate of 300,000 a month. There are now in Europe something more than 2,000,000 American soldiers. Should they be returned to this country at the rate of 300,000 monthly it would require only about seven months to bring the entire force home. It is certain, however, that they will not be returned at that rate for any considerable length of time, as it will undoubtedly be necessary for several hundred thousand of them to remain in Europe for various forms of duty for one or two years.

**UNITED STATES CASUALTIES ARE ESTIMATED.**

Government officials have estimated that the total casualties of the American army will not exceed 100,000, including all men killed, wounded or missing and those who have died of disease or injuries. An official tabulation up to November 12 showed a total of approximately 72,000 casualties. The daily lists are still being received in this country, and probably will be for a few weeks, as the classification of casualties is far behind their actual occurrence. According to the estimate of the government officials, there probably would be still some 20,000 to be officially reported.

It is not indicated what proportion of the total casualties will be fatalities.

Few official estimates have been made of the losses by other nations who have participated in the war. The semi-official estimate places the total French casualties at 2,500,000. A semi-official statement from Germany says that that nation has lost 3,000,000 men killed or dead as the direct result of battle.

**GERMANY IS WITHDRAWING TROOPS.**

In accordance with the terms of the armistice, the troops of Germany are being slowly withdrawn from the invaded territory of Belgium and France. They are being followed up closely by the allied armies, also in accordance with the armistice terms. The terms require that they be out of the invaded territory and on the east side of the Rhine river by 11 o'clock on Monday, November 25, 14 days after the taking effect of the armistice terms. Little official report of their movement is being made, and little is known publicly of the exact manner in which they are fulfilling the terms which require them to leave munitions and other equipment on the field. Reports that the retreating soldiers were committing depredations in violation of the terms of the armistice brought a vigorous statement from the allied headquarters to German headquarters demanding that any such depredations cease at once.

**GERMAN NAVY SLOW TO GIVE UP.**

After having floated during the entire war in comparative idleness in German waters, with no combat except in the case of the submarines, the German navy was slow to accept the terms of the armistice which required that it surrender to the allies under stringent conditions, many of its vessels and their arms to be turned over to the allies. At this writing, however, a German cruiser carrying German delegates has been escorted into a British port, where negotiations for the fulfilment of the armistice terms are being carried on. Under a revision of the armistice terms just prior to their acceptance by the German delegates at allied headquarters, all submarines owned by Germany are to be surrendered to the allies.

**REVOLUTION HARD TO CONTROL.**

With the food situation desperate in Germany, Austria, Russia and other European countries, the new authorities in these countries are having great difficulty in preventing the spread of a revolution little short of anarchy. The people's government in Germany, under the leadership of the new chancellor, Friederich Ebert, and the socialist leaders, is apparently doing all in its power to prevent the catastrophe which would inevitably follow a state of anarchy. Those in charge of the formation of the new government apparently are endeavoring to stabilize economic conditions as rapidly as possible as the most effective means of combating the spirit of revolution.

**FOOD IS THE GREATEST PROBLEM.**

That it is a food shortage amounting almost to a famine at the present time that has caused the new government to accept all of the drastic terms of the armistice is evident from repeated appeals that have come to the United States urging that this country and its allies do everything in their power to alleviate the distress in Germany in order to prevent a grave disaster. Foreign Secretary Solf of Germany has sent a message to Secretary Lansing requesting that President Wilson allow a German commission to come to the United States to take up the problem of food with this country. Other appeals urge the hastening of the final peace conference, with a view to removing as many barriers to food production and transportation as possible at the earliest possible date. The peace conference probably will meet in December.

**HERBERT HOOVER ON WAY TO EUROPE.**

Food Administrator Hoover left last Saturday for Europe, where he will take charge as this country's representative in the handling of the food situation there as it affects all European nations. Mr. Hoover says that arrangements have long since been completed by which France, England and Italy will be provisioned. He says that Germany can take care of itself if given a chance, but that a blockade of its transportaion facilities must be abandoned. He says this country's first and deepest concern must be for the feeding of the little allies, including the Belgians, Serbians, Rumanians, Greeks, Czechs, Jugo Slavs and others, totaling some 75,000,000 people. While the food problem of the former enemies of the allies is great and affects some 90,000,000 people, Mr. Hoover says that he can not approach this problem without remembering the manner in which the central powers have wantonly destroyed food stuffs during the last four years and the misery and suffering that were caused thereby among the allies. It is expected that Mr. Hoover will visit both Germany and Austria in connection with the duties of his mission immediately.

# Food Production Is Problem

## Appointment of Administrator Is Imperative Need

(Continued from page three.)

will not carry us very far along the road of increased production. Something must be done in a big and constructive way toward helping the farmers to grow the enormously increased yield that is vital to the saving of millions upon millions of people from starvation. Appeal is well enough up to a certain point. What is now needed is real government help to supplement that appeal.

First of all, without a day's unnecessary delay it is imperative that boys from the farms be released for return to the soil. It is idle to talk about doubling our agricultural exports with labor conditions upon the farms as they exist today.

Congress should immediately abandon its niggardly policy of providing very limited credit under almost impossible conditions for farmers in drouth districts who are in need of seed, and not only seed in many instances, but equipment as well. The petty appropriation of $5,000,000 to that end showed a most disheartening lack of comprehension in the congressional and executive mind.

Wise and far-reaching legislation is needed to insure good prices for every farm product that the world so desperately needs today. The crisis calls for extraordinary effort and unprecedented production, and nothing can so effectively stimulate the increased planting wanted by the government as wise legislative steps that will put the farmer's mind at ease and assure him that he will be at least fairly rewarded for his sacrifice, his hazard and his toil.

We do not venture at this stage to lay down the hard and fast program to that end. The problem is so great that reasonable discussion will not be wise, but we do insist that the situation will not be saved if the government goes drifting along on the present lines. There is yet another consideration as yet glimpsed by but few that ought to spur the government to quick action: Europe's hungry call may drain our own supplies and leave our own people hungry before the end of another year.

The government can, with seeming safety, provide price guarantees that are the only true key to the solution of the problems now confronting us. It need not be in the slightest concern about the possibility of over-production, it is the under-production that will hurt. There is every sign that a hungry world will make abnormal demands upon America for food for the next five years. Russia, once a great granary of the world, is drunken and demoralized with bogus liberty. It will take years to restore its farms, restore its wornout machinery, rebuild its ruined railways and bring Russian products back to normal. Throughout the rest of Europe the soil is run down, man-power weakened, horse-power killed off, machinery destroyed and implements worn out.

Will congress and the administration rise equal to the occasion, or will they continue as short-sighted, as niggardly and as unconstructive as they have been since America entered the war?

For the greater part of a year the Farmer has been urging with every emphasis it could put upon the demand the appointment by President Wilson of a national food production administrator—comparable in intellect, energy and resolution to Hoover in the field of food conservation, Schwab in the realm of shipbuilding, and Ryan in the work of aircraft construction. Unfortunately these appeals have gone unheeded, but, while a reparable damage has been suffered from the government's failure to act upon this suggestion, it is not yet too late to take the step. We therefore call upon the senators and representatives from all the northwestern states to give this imperative duty their immediate consideration and press it with insistent urging upon congress and the president.

In response to a telegram from Secretary D. F. Houston of the department of agriculture, calling a conference of representatives of the food producing regions of the nation to consider the present problems of the agricultural industry, the managing editor of this paper is in Washington, D. C., at the present time in the interests of the producers of the northwest.

## *Where the Armies Next Line Up.*

This map shows the neutral zone along the Rhine river that the Germans must establish shortly. They must reach the east side of the Rhine by November 25, and shortly thereafter vacate the 20-mile strip on that side of the river and leave it a neutral strip pending the final conclusion of peace.

## *Washington Gleanings*

Yakima valley "banters," as the larger Netted Gem potatoes are called, are this year being shipped in crates instead of in sacks. Crates, which are being manufactured locally, are cheaper than sacks, which are scarce.

County boards empowered to pass upon mill feed needs for live stock in the several communities are being organized throughout eastern Washington at the suggestion of Charles Hebberd, food administrator for the state.

Commissioners of Walla Walla and Franklin counties, at a joint meeting recently in Burbank, agreed upon changing the ferry landing on the Walla Walla side of Snake river to a point a quarter of a mile below the present landing.

Live stock shipments out of Molson are on the increase. A car of purebred Shorthorn breeding animals from Vincent's Skookum stock farm was shipped to Spokane and Sandpoint buyers last week. Sanger and Burden also shipped a carload of horses to Iowa.

The wheat threshing in the Leavenworth vicinity came to a close last week, according to a report made by O. B. Robertson, who operated the thresher. John Emig had the largest yield, 358 bushels, and W. W. Burgess of Plain, the largest yield per acre, almost 34 bushels.

Installation of two pumping plants, with a capacity of 4500 gallons per minute, will be begun at once by the United States reclamation service at Prosser, announced R. K. Tiffany, project manager. One is located two miles north of Prosser and the other five miles northeast of Prosser.

Last week Joseph Moorcroft and W. A. Davis, two of the most successful farmers in the Big Bottom, shipped a carload each of steers from Morton, which were said to be some of the finest cattle ever shipped from eastern Lewis county. The stock had been pastured this season on Whale Head range, north of Mt. View.

The Bonaparte Irrigation district, near Tonasket, extends about 15 miles east and will water land adjacent to the Bonaparte valley. The water is to be brought from a reservoir at the head of Lost creek and from the flowing waters, sufficient to water 10,000 acres. Harold Smith, W. C. Dobbins, C. E. Verbeck are directors and J. A. Merva, attorney, all of Tonasket.

Miss Mae Mark, county club leader, has completed her report of the activities of the girls' canning clubs in Yakima county. During the season their clubs have canned 16,115 jars of fruit, vegetables and meat, and in addition have dried 645 pounds of fruit and vegetables. Yakima county has 18 canning clubs, with a membership of 182. Margaret Kirk of the Fruitvale club holds the county record.

Growers of the Selah district are this year operating the Selah evaporating plant as a cooperative concern. The plant was formerly a part of the Yakima Fruit Growers' association, but now has withdrawn entirely from the parent body, says S. M. McKee, president. He states that the plant is using 20 tons of green apples a day, taking cull stuff. The cores are sold to another byproduct plant for conversion into apple jelly, and the peelings are made into "apple chops," which in turn are made into apple butter.

While Snohomish county conditions can not be said to be ideal for the general raising of sheep in large flocks or bands, yet it is the opinion of a good many farmers in Snohomish county who have kept a few sheep on their farms that sheep have not the place on Snohomish county farms that they really deserve as a profitable farm animal. It is the opinion of these men that every farmer should make use of his waste land in raising a few sheep Some of the men in Snohomish county who are keeping sheep are: I. S. Thomple, Stanwood; Edward Holcomb, Snohomish, and Henry Frohning of Monroe.

# Need One Standard

## Conference Will Discuss Proposal

BY GRANVILLE LOWTHER.

I have read with care the proposed national grade and pack rules for apples as they will be presented for discussion at the conference in Spokane in December.

One system of marketing has always been misleading unless the consumer had a system of education, corresponding to our local usages and customs. For instance, I was in New York state visiting several cities and towns, a few years ago. I found on the markets, extra fancy, fancy and choice grades. I knew what choice meant, but a friend of mine bought a box thinking that "choice" meant first grade. Oregon, Idaho and Montana had apples on the markets, with their systems of grading, and all were different. Think what it would mean to have a different standard of weights or measures for every state in the Union. If the Colorado yard stick were 34 inches long, Utah 38, Oregon 36, Washington 35, and all the states with their different standards, it would be little more confusing than the present system of grading apples. Besides, state lines are only arbitrary lines, imaginary lines, and not natural divisions like mountain ranges, rivers and climatic differences. The conditions that prevail in the Inland Empire are very similar, no matter if it does include parts of the states of Idaho, Oregon, Washington and Canada. Why should the apples grown in these states, similar in quality not be put up in similar packages and marked with similar brands?

It will be greatly to our advantage to nationalize many of our industries under rules that have formerly been localized.

More and more, our modes of action are to be broadened; the individual into the collective, the local into national, and the national into the international.

This may not seem better from the viewpoint of the individualist, who is afraid he will lose his identity, and not have sufficient scope for the exercise of his powers. But it is in the nature of the evolution of thought! the survival of the fittest; the success of the economically efficient, and the elimination of waste. Corporations and combines in the industries caused labor organizations and federations. The conditions caused by the combinations and organizations have made necessary government regulation and laws for the equitable adjustment of the products which the people must have in order to live. We may not like it, but it is in the nature of evolution, and will come whether we like it or not.

### OMAK APPLE PRODUCTION.

**Better Water Supply Gives Promise of a Constantly Increasing Output.**

About 80 cars of apples will be shipped this season from Omak, Okanogan county, by Wagner & Son, according to J. P. Wantz, the local manager of the firm. Each car holds from 750 to 850 boxes. Mr. Wantz says the crop would have been more than double but for water shortage. The shortage is partly attributed to poor management on the part of the United States reclamation service. Omak people declare it was well known that snow in the mountains was far less than normal last winter and the consequent shortage of water was imminent. While the reclamation service has its defenders those who complain point to the fact that private parties got pumping plants ready for the time when water would be needed. On the other hand pumping plants were not made ready until water was badly needed and crops damaged. The instalment of pumping plants at Salmon lake and Beck lake and other provision it is now said give assurance that a water shortage will not occur again, and it is expected that the Omak output of apples will steadily increase. H. A.

### CANNERY WANTS CONTRACTS.

A campaign is being waged in the Spokane valley to see whether or not sufficient acreage of vegetables may be depended upon by the Spokane branch of the Puyallup & Sumner Fruit Growers' Canning company for next season's canning. The prices which are being offered in the contracts that the company proposes with growers are as follows:

Spinach (cut above the crown), $35 per ton.

Royal Anne cherries, $100 per ton.

Sour cherries, Montmorancy, $100 per ton.

Late Duke, $100 per ton.

Strawberries, to be red, suitable for canning purposes and to cover the entire crop, $140.

Gooseberries, $75 per ton.

Tomatoes, $15 per ton.

Pears (Bartlett) large, desirable, $30 per ton.

Prunes (Italian), $30 per ton.

Pumpkin (Mammoth King, Connecticut Field or Kentucky Field), $8 per ton.

Squash (Boston Marrow), $10 per ton.

Damson plums, $40 per ton.

### SUGAR BEETS AT TONASKET.

Experimental tests of sugar beets grown around Tonasket have shown a sugar content of 19 per cent. There is considerable rivalry for the first factory. 'I was informed at Tonasket the latter part of October that practically 6000 acres were signed up and Tonasket believed she would be the winner. Besides the irrigation project in which Tonasket is now included, the Bonapart district of 6000 acres is tributary and the Whetstone Horse-Spring Cooley district will be under irrigation in 1919. From these districts additional acreage is expected. H. A.

### WHEAT CONDITIONS ARE GOOD.

Reports from various parts of the Big Bend country indicate good prospects for next year's wheat crop. There is said to be a greater amount of moisture in the ground at this time than is usual. Though this came late, the continuation of the open fall has enabled the farmers to sow liberal acreages of grain and it is stated that the acreage of the Big Bend country as a whole is about normal.

### GREW FETERETA AND SORGHUM.

Arthur C. Egbert, who lives on the edge of Okanogan, Wash., this year grew feterета (a species of Kaffir corn) and sorghum on land too dry to mature a corn crop. Each of them made a good crop of fodder and matured good seed. Mr. Egbert believes either of them far better than corn, where moisture is deficient. He uses them for cow feed.

### SWAT THE GRAIN WEEVIL.

A. L. Melander, entomologist of the State College of Washington, gives the following ideas in the matter of treating for insects infesting stored grain:

"The granary weevil is the most commonly met with of the several insects infesting stored grain, meal flour and other cereal products. It is a small, brown, hard-shelled snout beetle, measuring about one-eighth of an inch in length. The females make small punctures with their beak in wheat, corn, etc., and then lay eggs in the punctures. These eggs develop into fat maggots, which hollow out the seed, and if the surroundings are continually warm may develop into new weevils in a month. In infested mills the weevils bore into sacks of flour before they are sold and later produce wormy flour. Whenever any of these insects are discovered the food material must be sterilized. If breakfast foods are to be dealt with at home the easiest way is to place them in a moderately hot oven to kill the insects and any eggs."

### Should Have Plenty of Sugar.

The sugar beet crop of 1918 is reported as 10 per cent greater than that of last year and the sugar cane crop about 25 per cent more than last year.

### DAIRYING IN THE OKANOGAN.

At both Twisp and Winthrop, Wash., is a successful creamery. These towns are in Okanogan county, "up the Methow valley," 36 and 45 miles respectively, from the nearest railroad point. The creamery at Winthrop is owned by Seattle parties; the one at Twisp is cooperative. It is making probably three tons of butter per week, and the one at Winthrop two and a half. These towns are at an altitude of about 1600 and 1800 feet. The valley is practically all irrigated. Seventy cents a pound was being realized for butterfat at Twisp late in October.

While there are quite a number of small orchards and several large ones in the upper Methow valley, dairying is the largest industry. There are a few purebred dairy cattle, some good grades and some poor ones. Among them J. F. Bean, at Winthrow, has Ayrshires and R. C. Garrett, Holsteins. A number of silos have been put up in the last year. Alfalfa on irrigated land made a good crop, but on dry land it made only two light cuttings.

Winthrow ships about 2000 beef cattle each year and the balance of the valley has many more. There is the best beef cattle range, and in addition, 40,000 sheep, owned outside the county, use the mountain range on both sides of the valley, and are driven in and out each season. H. A.

Alfalfa Lands
General Farming

Grazing Lands
Free Range

# Jordan Valley, Oregon

## Opened for Entry November 1, 1918

20,000 acres of rich farming land with full water right; in the heart of a great cattle range. Can be had now at a low price and reasonable terms.

Jordan Valley offers one of the few remaining opportunities to secure a home in a new country where the climate is favorable, the water supply ample, the soil deep and fertile, the prospects for profitable farming and the enhancement of farm values unusually favorable, and the general conditions exceptionally good for rapid development and money-making opportunities.

**Jordan Valley Offers You a Home**
**Don't Overlook This Offer**

Every good farmer will appreciate Jordan Valley and the project welcomes every good farmer. All the leading farm crops can be successfully raised in Jordan Valley—alfalfa, wheat, oats, barley, clovers, corn, seed crops, root crops, vegetables and fruit.

**It Can't Be Beat**
**Investigate and Do It Now**

# Reconstruction and the Farmer

By CHARLES A. LYMAN, Secretary National Board of Farm Organizations.

Now that the war is about over, what plans have the farmers made to make certain that in the readjustments the welfare of agriculture will receive its full measure of consideration?

Letters will be sent out by the national board of farm organizations within a few days to farmers in every state in the Union suggesting that quick action be taken in regard to matters of reconstruction after the war.

Bills are already in congress and others are certain to follow bearing on the methods under which this nation, unhampered by the restrictions of war, shall once more pursue the commercial and industrial pathways of peace.

Unless the farm organizations of this country take a hand in the shaping of legislation bearing on the problems arising out of the war there is grave danger that measures will be enacted which may lead to permanent injury to agriculture. It is high time for farm organizations to get their affairs in order and be ready to act together in the making of wise and constructive plans.

The farmer who belongs to no farmers' organization should join one without a moment's delay; every part of the country has some educational or business organization ready to receive him. Individual's ideas count for little in the framing of laws or in the building of national institutions unless they reflect the thought and accurately interpret the desires of the masses. To weigh evidence in the business experience of many farmers and unite on a program which will give the greatest benefit to the greatest number is the legitimate object of farm organizations. In this way only can the voice of the individual be heard and the needs of communities be made articulate.

Business long before the days of the Hanseatic league has been organized to take care of its own. At this moment wealth, prestige, the power to do great good or evil are in the hands of men who have organized.

These men will emerge from the war still better prepared and with sharpened appetite. Business will reach out in every direction for trade and profits.

It will ask for legislation, special privileges, and get both if it can. On former occasions it has been successful. Unless agriculture develops simultaneously with business there will be no real progress in this nation. There must be greater guarantees in agriculture than now exist. People flock into the businesses that are remunerative. The tendency is to the cities and away from the farm. The number of tenant farmers in this country is increasing too rapidly. Perhaps half of the farms are now operated by renters and tenants who afford the basis for shifting farm populations concerned but little with the responsibility for sound and healthy rural institutions.

Without organizations of farmers and unity of action among them industry and commerce will get more than their share of consideration from the law-makers in matters affecting the creation and division of wealth. Great corporations are now in existence with insatiable desire for profits. New vast combinations are in the making with ambitions for world trade conquest. International combines are already formed, now a necessary arm to military success, and in them lie the seeds of commercial world-wide domination.

# THIESSEN STOCK FARM

## SWEETWATER, IDAHO

# Registered Herefords

Lady Rex 29th.

BULLS IN SERVICE

The Grand Champion

Prince Rupert 80th

Beau Perfection 26th

**In the LEWISTON SALE** I have listed several good bulls for range service.

**In the PORTLAND SALE** I will offer part of my show herd, including Royal Perfection and Lady Rex 29th, both grand champions wherever shown this season.

**ROYAL PERFECTION** is an outstanding senior yearling weighing approximately a ton.

**LADY REX 29th** is a two-year old, safe in calf to Prince Rupert 80th. I consider her the best female I have ever shown.

**HENRY THIESSEN.** **Sweetwater, Idaho.**

# NORTHWEST LIVESTOCK SHOW AND SALE

## Lewiston, Idaho, November 28 to Dec. 4, Inclusive

### Shorthorn Sale, Monday, December 2

(Under the auspices of the Northwest Shorthorn Breeders' Association)

Sixty head of breeding Shorthorns, in strong breeding condition, both sexes.

JOSEPH TURNER, Sales Manager
Meyers Falls, Wash.

### Hereford Sale, Tuesday, December 3

(Under the auspices of the Northwest Hereford Breeders' Association)

Sixty head of breeding Herefords, in strong breeding condition, both sexes.

L. R. McGEE, Sales Manager
North Portland, Ore.

## Dairy Cattle, Draft Horses, Sheep, Duroc Jersey, Poland China and Hampshire Swine

**Sell on Wednesday, Dec. 4th, Under the Auspices of the Northwest Livestock Association**

# $30,000 in Cash and Trophies $30,000

The show with exhibits worth while.

The place worth while to exhibit.

The place where the best specimens of the various breeds will be found.

An educational opportunity for all, old and young.

This is your show and worthy of your patronage.

If you are in the market for purebred stock of any of the breeds advertised, watch the dates on which the stock you are interested sell and be present, or still better, engage rooms for the week, and see the big show and sales from start to finish.

Rooms may be secured by writing the Lewiston Commercial club. Don't forget the time and place. Time, November 28 to December 4, inclusive. Place, Lewiston, Idaho.

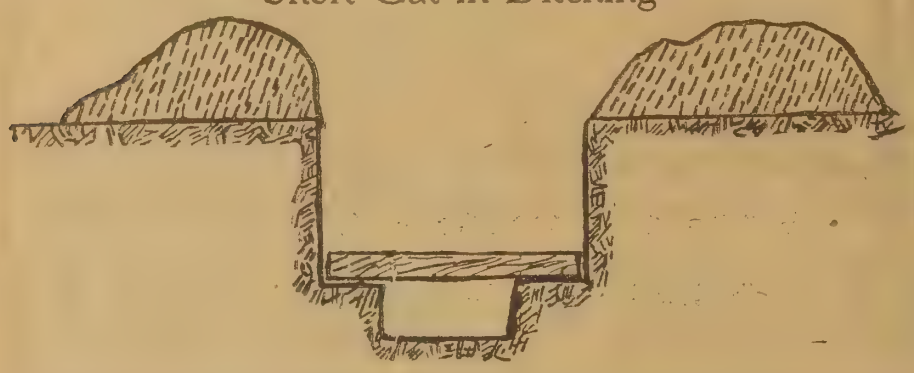
All inquiries cheerfully answered. Address

O. P. HENDERSHOT, Lewiston, Idaho.

# Power, Mechanics and Devices

Of the 1473 county reports which were received by the government bureau of crop estimates, 898 mentioned motor trucks being used in hauling from farms to shipping points. In a large fraction of these counties motor-truck service was just coming into use in hauling products from the farm. There were many more reports of use for light traffic, such as poultry, eggs, vegetables, than for hauling grain. A few reports, scattered from Delaware to the Pacific coast, mentioned the great importance of the light motor-truck service in delivering perishable fruits to shipping points. At least two reporters claimed the truck to be a necessity in their localities to fruit growing on a commercial scale, on account of the long time required for wagon trips and the scarcity of farm labor. In many states, including the north and south central, hogs were hauled preferably in motor trucks on account of the relatively small amount of shrinkage compared to hauling in wagons. Some counties reported hogs hauled exclusively in motor trucks, although these vehicles had not yet come into general use for grain or other products. One of the chief limitations in the use of the truck is the condition of the roads, and several reporters mentioned a beginning of motor-truck use as following closely an improvement in roads. Another hindrange to using motors is connected with the seasonal distribution of farm work. Some correspondents said that after their harvest was over there was no work for their horses to do but haul, and that motor trucks would not be an economy. In other instances, the trucks were reported to have done needed hauling at times when laborers and horses could not well be spared from the farms.

### Efficiency.



The bravery and simplicity of the native soldiers of India is proverbial in the British army. One of these, in the campaign in German East Africa, was in charge of a railway station, where he was besieged by the enemy. This was the wire he sent to headquarters:

"One hundred Germans attacking station. Send immediately one rifle and 100 rounds of ammunition."

### GOOD TO LIVE IN COUNTRY.

These are days when the farmer and his family may be especially glad of their privilege of living in "God's great outdoors." The city folks, with their "flu" masks look like a Hallowe'en party.

## Short Cut in Ditching

The usual method of making a ditch with cedar rails and cribbings after it is dug, is to lay a row of rails on each side of the bottom of the ditch, each rail held firmly in place against the side with small wooden pegs, and then lay the cribbing on top and fill. If the subsoil is of clay the rails may be omitted by simply drawing in the ditch several inches on each side before the bottom is reached. The banks thus formed will take the place of the rails. The cribbing is then laid in place and filled in the usual way.

C. J. M.

## KING OF THE PONTIACS

Here is the opportunity to get some of this, greatest of all, Holstein blood. We will accept a few approved cows for service by our new herd bull.

**KING PONTIAC SEGIS OF BROOKSIDE, 195818.**

Sired by King of the Pontiacs, Dam Queen Segis of Brookside, a 27-pound daughter of Old Pontiac Clothile De Kol 2d, with record of 37.21 lbs. butter in 7 days. The grandest old cow of the breed. He is also grandson of Prince Segis Korndyke, the sire of high priced bulls, and out of A. & G. Inka McKinley, the dam of King Segis.

There is more 30-pound cows and high priced sire in the breeding of this young bull than any other Holstein bull in the Pacific northwest. Write for illustrated pedigree and terms.

Two or three A. R. O. Holstein cows bred to King Pontiac for sale.

**Also Breeders of Milking Shorthorns**
With milk records behind them. One or two high class bull calves for sale.

**A. V. BRADRICK & SON**
PALOUSE, WASH.

Chief's Gold Mine No. 561727

## Do You Want a Herd Sire?

*See This Great Bull in the Portland Sale*

Chief's Gold Mine is by Chief Goods, considered by many good judges to be the best son of the great Golden Goods. He is of a fine roan color, best of Shorthorn type, great fleshing, gentle disposition and a sure breeder.

He and others of my breeding will be in the **Shorthorn Sale at Portland, December 12.** Look him over if in need of a good sire.

**OLEQUA STOCK RANCH**
GEO. BERTRAND, Castlerock, R. F. D. 2, Wash.

# FOXHALL'S FERN LAD 99378

## A Great Jersey Sire for Sale

This bull was bred by H. F. Probert, Jackson, Mich. He was brought west by Robert Burkhart of Albany, Ore., and topped his dispersion sale, being purchased by the pioneer breeder, Charles Miller of Jefferson, Ore. After Mr. Miller's death he topped the Miller dispersion sale. He is now in prime condition and fit to do years of service. His six daughters in the Register of Merit, and more to enter, make him worth more as a herd sire than ever before.

**Foxhall's Fern Lad** was born October 26, 1910; is solid fawn color with light tongue and black switch. He is a very stylish bull, has a lofty carriage, fine head, good eye, wide between eyes, well-arched, good neck, sharp on withers, fine back, straight and level, good tail setting, broad-hips, large barrel, well-sprung ribs, good deep body, soft mellow skin, brilliant satiny coat. He comes from a long line of heavy producers at the pail and churn. This bull has many prize winnings back of him and is himself a great prize winner. Both sire and dam in Register of Merit. This bull headed first prize breeder's show herd at National Dairy Show, 1911. His calves are exceptional, showing remarkable udders and nice, long teats. His sisters are a wonderful lot of producers. H. F. Probert, the breeder of this bull, said: "I consider your bull as desirable a bull as can be bought, and worth several thousand dollars."

**Foxhall's Fern Lad 99378**
sire of
Spozza Foxhall of F. O., 798 lbs. butter at 3 years, 9 months.
Foxhall's Melia Nancy V, 767 lbs. at 3 years, 7 months.
Foxhall's Sunbeam, 639 lbs. at 4 years, 1 month.
Green Meadow Fern, 382 lbs. at 2 years, 1 month.
Spotsie Fern Fox, 376 lbs. at 1 year, 10 months.
Foxhall's Nancy Figgis, 348 lbs. at 2 years, 3 months.
(Above records and all others in this pedigree, 85 per cent butter.)

**Foxhall's Jubilee 76944**
Sire of
Foxhall's Variella, 846 lbs. butter.
Foxhall's Carola, 812 lbs. butter.
Foxhall's Sig-Mardag, 767 lbs. butter.
Foxhall's Oxford Kate, 722 lbs. butter.
Foxhall's Crown Princess, 704 lbs. butter.
Foxhall's Signalome, 685 lbs. butter.
Foxhall's Sweet Rose, 673 lbs. butter.
Foxhall's Pretty Princess, 653 lbs. butter.
Foxhall's Sirona Croton, 611 lbs. butter.
A bull of exceptional quality and beauty, backed by the best-producing blood of the breed. Grand Champion bull Mich. State Fair and West Mich. State Fair, 1911. Shown at National Dairy Show, Chicago, 1911, in the greatest ring of Grand Champion bulls ever shown in one ring. Winner of A. J. C. C. special gold medal, 1911. His daughters are a wonderful lot of great producers; all have the best of udders and teats and are beauties of excellent type.

**Fern of Florence 2d 205059** .....
In Reg. of Merit. Over 600 lbs. butter and over 10,000 lbs. milk in 10 mos., 54 lbs. milk, 3 lbs. 6 oz. butter in 1 day; 357 lbs. milk, 21.42 butter 7 days; 1554.1 lbs. milk, 92.52 butter in 1 month. A prize winner. Dam of 1 in list and 2 bulls heading 1st prize Breeders' Show at National Dairy Show, 1911.

**Flying Fox's Foxhall, Imp. 61435** .....
Sold for $2500. Selected by committee of the A. J. C. C. and sent to the St. Louis test barn, 1904, to breed to many of the cows at the great test. A splendid show bull. Sire of Mermaid's Tiona, test 16 lbs. at 23 mos. Full brother to Flying Fox's Creampot, churn test 20 lbs. 2 1-2 oz. butter from 315 lbs. of milk.

**Blossom of Florence 164108** .....
In Reg. of Merit. In St. Louis test herd. 278.75 lbs. butter from 4906.3 lbs. milk in 120 days. 412.84 lbs. butter from 7560.3 lbs milk in 187 days. On the last day of the test she milked 41.4 lbs and made 2.89 lbs. butter.

**Jubilee's Crown Prince 64383** .....
In Reg. of Merit. 8 tested daughters. Dagmar of Florence, 621 lbs., 11,074.4 milk; Fern of Florence 2d, 586.1 lbs., 10,100.8 milk; Mab's Crown Princess, 511.3 lbs., 9150.85 milk from 3 quarters.

**Fern of Florence 164625** .....
In Reg. of Merit. 650.5 lbs. from 9650.5 lbs. of milk. 25.9 lbs. butter in 7 days. Grand Champion Ohio State Fair. 1 daughter in Reg. of Merit.

**Champion Flying Fox, Imp 61441** ...
Champion over Island, 1899. Sold at auction for $7500 in same sale three of his heifers in first calf averaged $933. Sired many noted daughters.

**Golden Lad Creampot, Imp. 162061**...
1st over Island and Blythwood bowl winner, 1900-1, beating many Royal winners, although only 4 years old.

**Jubilee of Bois d'Arc 29041** .....
The greatest butter sire in the Signal family.

**Variella of Florence 111427** .....
In Reg. of Merit. 584 lbs. from 7972.64 lbs. milk at 12 years old. 258.7 lbs. butter from 384.5 lbs. milk in 120 days. Churn test 15 lbs. 11 oz. in 7 days at 3 yrs. old. Dam of 3 full sisters in Reg. of Merit.

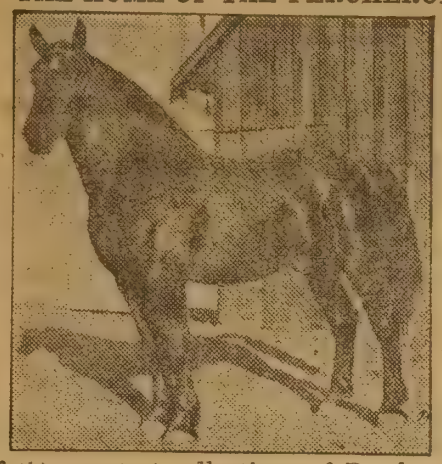
**Jubilee of Bois d'Arc 29041** .....
In Reg. of Merit. 28 tested daughters, 16 with large yearly tests.

**Vida's Crown Princess 76010** .....
16-9 in 7 days, 67-13 1-2 in 30 days. Dam of 1 in list; 2 producing sons.

**Jubilee of Bois d'Arc 29041** .....
In Register of Merit. 28 tested daughters.

**Anselma 2d 92814**.....
Dam of 3 great cows: Fern of Florence, 25-8; Fairy of Florence, 18-9; Anselma Signal, 21-1.

For want of room, the fourth generation is omitted from above pedigree. It includues Golden Fern's Lad, Golden Lad, Ethlecl's 2nd Jubilee, Fancy's Landseer and other great foundation bulls, besides several of the great foundation cows of the breed.



Write us for any further information, also for prices on a few Register of Merit cows.

**FOX BROS., SILVERTON, ORE.**

# STALLIONS AT RIGHT PRICES

Always found at

DEPENDABILITY

## HERCULES STOCK FARM, Sprague, Washington

Owned and Operated by Day & Rothrock Company, 205 Exchange Bank Bldg., Spokane, Wash.

# West Side Silos Are Well Filled

## Best Silage for Years Is Reported From Various Parts of the Coast Section; Dry Season Has Been Followed by Wet Fall

PORT ORCHARD, Kitsap County, Wash., Nov. 7.—Farmers in this county are generally reporting a very successful season just passed and are in good shape to begin another next year. Harvest has yielded a normal return. Prices received for farm products have been above normal and farmers have experienced very little, if any, difficulty in disposing of their produce. The hay crop is short in the county, and many dairymen have been forced to dispose of some of their cows. The best corn silage crop was harvested this season that was ever known of. Every silo in the county was filled and farmers are reporting splendid quality of silage from them all. Frosts have held off remarkably late here. Some corn in a field was noticed last week as being untouched by frost, and the dairyman was feeding from the field as if it was in early fall season. Planting is progressing in good manner. Dry weather delayed plowing for a while, but everything is moving along now towards a big acreage to be seeded this season. Prospects for farmers in this county going over the top in food production for next season are good. C. B. SPRAGUE.

SHORT OF SILAGE FOR FEED.

RAINIER, Thurston County, Wash., Nov. 9.—We have had a warm fall and it was dry well up into October. Then one extreme follows another—for three or four weeks now there has been lots of rain so it is hard to get the grain in. There has been lots of seeding done and there is still some to put in if it will let up raining long enough. The weather is mild, grass is growing and dry stock can get most of their living in the pasture. Considerable wheat for this section will be put in this fall. The last season was so dry that a number were short on material for silage, but those who put up some silage find it helps out in the feed situation. Many do not have silos. It is well to prepare from now on for that crop of silage if you have not already done so. Sow some vetch and wheat, roots and peas, and prepare the ground for a corn crop, also try to have a good patch of cow kale. I have some very large plants of cow kale for green feed. A few cow horn turnips are good to mix in with hay and straw. All this takes work, but to run a farm and have enough for the stock to eat and make anything out of it, it takes work. I think farmers in this coast country, where the land will permit, should sow early and not wait for late spring seeding. L. F. DAVIS.

INCREASE GRAIN ACREAGE.

OLYMPIA, Thurston County, Wash., Nov. 9.—From about 75 per cent of the threshers reports of the total amount of grain threshed in Thurston county is 10,923 bushels of wheat from 971 acres, 42,108 bushels of oats, 1057 bushels of barley, and 4190 bushels of rye. The 1918 acreage of wheat was greatly increased over that of 1917, but the average yield is fully one-third less than that of last season. This is due to the very unfavorable weather conditions during the early growing period. There has been a considerable increase in acreage of fall seeded grains this season over last. Nearly all of the locally-grown fall wheat has been disposed of to local farmers. C. H. BERGSTROM, County Agent.

RAIN IMPROVES ROADS.

NEPPEL, Grant County, Wash., Oct. 31.—The condition of the average farmer, considering the poor crop of wheat in the dry sections, is fairly good, as all have been able to get some fall wheat to sow. Some are not taking any chances, thinking it too dry yet. In irrigated sections the crop has been all gathered and fair prices received and farmers are looking forward to increased food production next season. The labor situation is anything but satisfactory and the only remedy is to import Chinese coolie labor, as the average American will not work at farm labor at a profit to the land owner. If the labor can not be obtained the food prices will soon be so high that a lot of people will do without it if they have not got the price. The stock feed problem is one of the main drawbacks with the stockraiser and is going to decrease the live stock production for the next three years, as the stockers that have been sold and shipped out have brought a low price—3 to 5 cents a pound. This has discouraged the main part of the farmers in raising small flocks and the tendency is to raise only what they need themselves. This condition has been brought about by the unbalance of prices, brought on by war conditions and high cost of production. Alfalfa is being baled and shipped to local points. The rain has improved roads so that people in the wheat sections are able to take their wheat in and return with a goodly supply of potatoes and vegetables and fruit from the Moses valley. MARTIN PENNHALLICK.

# The Pacific International Holstein Sale

## Portland, Oregon

**FRIDAY, DECEMBER 13, 10:30 A. M.**

If you are interested in Holstein cattle you must not pass this great show and sale by. I believe the consignments are the finest lot of individuals, well bred and in calf to WORLD'S GREATEST SIRES, ever offered in a western sale. The consignors speak for this assertion. The cows are young, either heavy in calf or fresh. The heifers are heavy in calf. Young bulls of splendid breeding. All tuberculin tested and consigned by the greatest breeders in the west, viz.:

# Study the Shorthorn Entries

## At Lewiston, Idaho, Nov. 28 to Dec. 4

## and Portland, Oregon, Dec. 9 to 14.

Shorthorn breeders from Oregon, Washington, Idaho, Montana and other states will have exhibits and will afford a remarkable opportunity for ranchmen and farmers to make a study of improved types. It is the **pure bred Shorthorn sire** that is working improvement wherever used. Steers by Shorthorn sires recently topped the market at Chicago, making the **record price of $19.60 per cwt.** Another load of Shorthorns had made the previous high record of $19.50. It was a **Montana shipment, two loads of Shorthorn steers,** that sold earlier for 18c per pound, the **world's record price for range steers** on the open market. Shorthorn steers recently made the highest record at the St. Louis and Kansas City markets and Shorthorn steers have repeatedly won the car-lot championship at Portland, Salt Lake City and Denver.

As the grade Shorthorn is more profitable than the scrub, so the pure bred Shorthorn is more profitable than the grade. There's a swinging back to the Shorthorn in the ranch country as well as in the corn belt.

Don't forget the **International at Chicago, the first week in December.** The most important Shorthorn sale of the year will be held in connection with this great show.

The Shorthorn exhibit at the **California Live Stock Show, San Francisco, November 16 to 24,** will include the pick of western breeders and some of the best blood of the Shorthorn world.

If you are in the market for Shorthorn breeding stock this association will be glad to assist you in locating them through its free service department. Address, at any time,

# The American Shorthorn Breeders' Association

13 Dexter Park Ave., Chicago, Ill.

# Northwest Live Stock Show

## *Has Been Entirely a Home Talent Affair*

By E. J. IDDINGS.

One of the really effective and potent agencies in the development of the live stock industry of the northwest has been the Northwest Live Stock show at Lewiston. This show has been entirely a home-talen affair, conceived, built up and maintained by public-spirited stockmen and business men of the states of Montana, Idaho, Washington and Oregon. The original founders and most influential factors have been a score or more of men located for the most part in the Inland Empire section.

In addition to uniqueness so far as sponsors is concerned, fathered by men of little experience in such matters, but men imbued with the idea and the ideal that such an institution might stand for and attain, the Lewiston show, as it is commonly designated, though it belongs to the entire northwest, is notable for another thing. There are no side issues, no amusements, no carnival—even the bronco, the wild steer and the professional buckaroo have not been featured.

The whole program is live stock. The lesson taught is that of diversified farming, the value of good breeding and good feeding, the true meaning and significance of the pedigree. Yet another feature has been of marked importance, as many visitors have testified. The young people have always been given attention at Lewiston. The show is not only for adults, but has for a fundamental ideal the direction of the minds of the growing generation into constructive channels of thought and attitude in regard to the northwest's biggest business, that of agriculture. The opening day is set aside for the judging contests for college men, high school students and farm boys and girls. Last year at Lewiston something more than 160 young people representing many different sections of at least three of the northwestern states took part in these contests.

The writer has been fortunate in being able to attend each of the annual exhibitions of the Northwest Live Stock show, from the first little affair held on the old fair grounds at Clarkston to the record-breaking exhibition of last year, which unquestionably ranked in importance with the half dozen leading live stock shows of America. Year by year higher standards of excellence have been reached, until the original dream of the founders has become a reality in the wonderful culmination of yesterday and the very great promise of tomorrow.

Why speak of tomorrow? Because the end is not yet, and greater things are in prospect. Even though the past has been a fine record, the future is even more alluring. Our energetic and hustling secretary, O. P. Hendershot, tells us that in value of premiums set forth for the stockman in the premium list the show at Lewiston ranks third among the 1918 shows of America. This year, for the first time, in several different sections of the premium list, cash prizes are offered to eight places. This offers a special inducement for the man with the smaller herd and for the man new to the show ring. The big fellow may take the biggest prizes, but he can not take all the cash awards.

One who has not had the opportunity to become acquainted with stockmen farther removed from the railroad can hardly appreciate the great constructive work of the northwest Live Stock show. The writer was privileged a few days ago to take a trip to the Joseph plains section, something like 50 miles from Grangeville. Some of the most ardent supporters of the Lewiston exhibition have come from this district. Many good Hereford bulls have gone to this great cattle-growing section, unquestionably as the direct result of the show and sale.

Something like two years ago a rancher came to the University of Idaho and picked out a small purebred Poland China boar and pig and ordered it expressed to a station in the central portion of Idaho. This pig was taken from the express office and carried in a hack 60 miles into the interior section, where purebred pigs had not gone before. This ranchman had seen the Poland Chinas at the Lewiston show the year before and realized that such hogs would mean money for his home section.

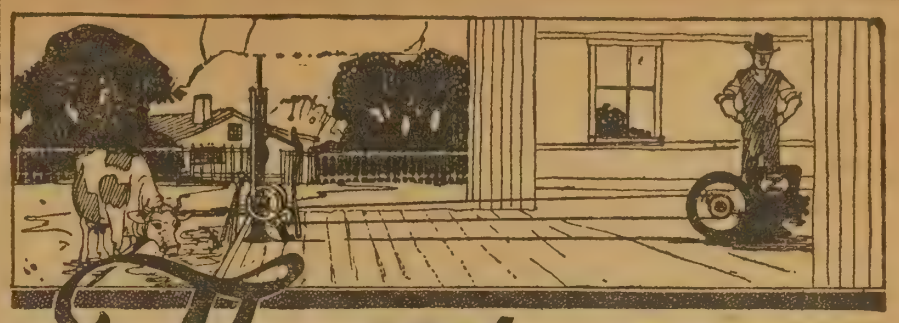
These are only isolated instances of a great impetus for live stock improvement that has come out each year from the show grounds at Lewiston.

The early financing of the show was difficult. The burden rested almost entirely upon public-spirited stockmen of the northwest and the business men of Lewiston. The 1917 Idaho legislature made a reasonable appropriation, and a way has been found to legally obtain help from the city of Lewiston and Nez Perce county. The stockmen expect more support from the 1919 Idaho legislature, and plans are under way for substantial aid from other states. Great is the field of work and undoubtedly great is the future of this wonderfully effective agency for live stock upbuilding and improvement.

The 1918 dates had been set for November 7-13. It did not seem safe, however, to rely upon a lifting of the influenza quarantine by that time. The new dates, therefore, are November 28 to December 4. All danger of influenza should be past by that time, and the weather will undoubtedly still remain good at Lewiston. The later date should be equally as satisfactory for the exhibition of breeding stock and should be even more favorable for the sales of Shorthorns, Herefords, purebred sheep, swine and other live stock.

Immediately following the show at Lewiston the Pacific International will open at Portland, continuing during the week of December 9-14. This makes for the stockman a circuit of two large shows with only a moderate ship between. Those who want a larger circuit may first take in the California shows early in November and still be able to return to the northwest and make both Lewiston and Portland.

There will be stock-judging contests and other special features for the young people. There will be assembled great herds of horses, beef and dairy cattle, sheep and swine. Among the visitors will be the most progressive stockmen of the northwest. Lectures and demonstrations will be given by men of national reputation and influence. Sales will send out purebred live stock potent for herd improvement, and the entire week at Lewiston will be dedicated to features that mean for progress in the live stock industry. Those interested in the live stock business can not afford to miss such an event.



## Raises Big Mangels

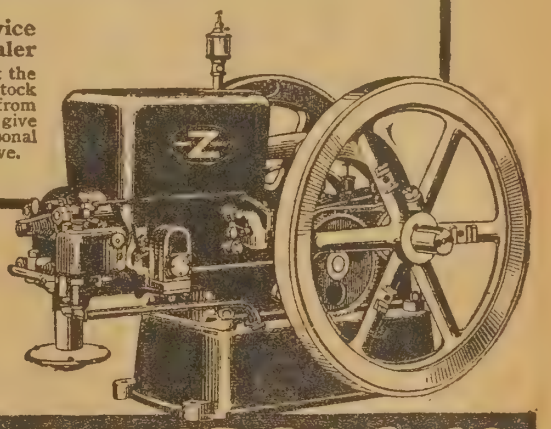
C. A. Cram, whose farm is on Indian prairie near Spokane, has on exhibition in the window of the Inland Seed company of that city a Mammoth Long Red mangel wurzel that is in truth mammoth. It weighs 19 pounds and is as excellently formed and proportioned as the average mangel of one or two pounds weight.

In addition to the size of this root it is especially notable that it was grown without irrigation and without rain from the time it was planted until harvesting. The soil on which it was grown was strictly first class and was to some extent, so Mr. Cram reports, subirrigated by nature.

While the specimen on exhibition was Mr. Cram's most notable one, from the standpoint of size, he reports an excellent yield of first-class roots from his entire patch. They were from local grown seed, furnished to Mr. Cram by the Inland Seed company. A number of persons who have seen the big mangel have made an interesting calculation as to the possibilities of root-crop tonnage, if mangels were grown the size of this one. They were in rows three feet apart and a mangel to each foot in the row, and it would mean more than 135 tons per acre. At the time this sample was put on display it was stated that one producer had just sold his crop of mangels at more than $20 per ton, which would make a gross revenue of $2700 per acre on this mathematically-grown crop. It was likewise pointed out that an acre of the roots one-half or even one-fourth of the size of this one would produce a good profit at even half the quoted price.

That growing large root crops is something of a family trait is indicated by the fact that Israel Fink, father-in-law of Mr. Cram, has on exhibition beside the big mangel an Oxheart carrot weighing three and a fourth pounds. It grew in a patch of less than a city lot in Spokane which yielded about two tons.

The Engine Selected by over 150,000 Farmers



RECORDS made by over 150,000 practical farmers buying over $10,000,000 worth of Fairbanks-Morse "Z" Farm Engines have never been equaled in Engine history.

Demand, as they did:

1. Fairbanks-Morse Quality.
2. Economy in first and fuel cost, and low upkeep.
3. Simplicity and Staunch Durability.
4. Light-weight, Substantial, Fool-proof.
5. Gun-barrel Cylinder Bore.
6. Leak-proof Compression.
7. Complete with Built-in Magneto.
8. More than Rated Power.

You Also Get Service from your Local Dealer

Your local dealer has just the type "Z" for your needs in stock—waiting for you. Buy from him. He is prepared to give prompt delivery and personal service right where you live.

The 3 and 6 H. P. sizes are built to use kerosene, distillate, stove oil, tops or gasoline. The 1½ H.P. size uses gasoline only.

## KEEPS CLOSE RECORD.

### Has Weighed Every Milking of Every Cow for Five Years.

Joe Iddings, a progressive dairyman of Okanogan, Wash., weighs every milking of every cow and has done so for five years. He has preserved his milk records and now he keeps no cow that will not produce at least 200 pounds of butterfat with her first calf and 300 pounds at maturity.

In 1913 Mr. Iddings purchased 10 2-year-old and five yearling grade Holstein heifers. He secured a purebred Holstein bull of George Hill & Son breeding, of Wisconsin. He has used registered bulls ever since. His present herd sire, Sir Bonheur Johanna Fayne, was purchased from J. T. Compton & Son of Wenatchee, Wash. He is of Monroe breeding and goes back on both sides of Grace Fayne 2d's Homestead, for many years the accredited queen of the breed.

By careful breeding as well as careful feeding and weighing, Mr. Iddings is making money dairying, in spite of numerous disadvantages and some poor crops. Mr. Iddings uses a patent churn and butter worker that runs by power. He makes and sells butter and has built up a reputation for his products.

When I was at Mr. Iddings' place six of his 15 cows had been milking for over a year. Seven freshened in September. He makes his own milk sheets, on which the dairy records are kept. H. A.

## AS TO VETCH STRAW.

To the Editor: I would like some information as to the feeding value, palatability and milk-producing quality of vetch straw.—A. S. R., Oroville, Wash.

So far as I know there has been no feeding test made comparing vetch straw with other roughages. However, vetch does not differ a great deal in composition from pea straw, and feeding tests on the latter show it to have a very high nutritive value. With ordinary hays, such as alfalfa and clover, selling at from $30 to $35 per ton, I think it will be wise to use some vetch straw if it is fairly clean and can be obtained at a reasonable price. It possibly will depend upon how it has been cured and how free it is from dust. Using oat silage as succulence, vetch straw would supplement the ration very nicely.

A. B. N.

# VETERINARY

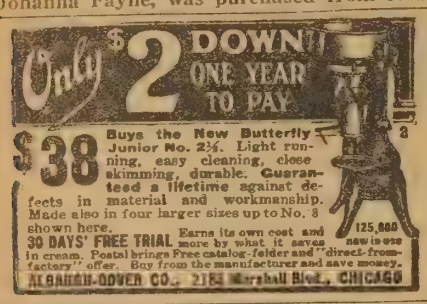
By DR. S. B. NELSON.

**Heifer is ailing**—I have a young Jersey cow. She came fresh in June. She seemed all right for about a month or more; gave one gallon of milk at a milking, and made four pounds of butter per week. Then she acted as though she were sick and didn't chew her cud. We gave her a rag and she chewed again, but seemed to fail and went down in her milk. Now she gives one-half gallon to a milking, and she acts as though she had a cold in her head, blows or sort of coughs when she comes in from the pasture. She was on the hills all summer. Now she is in a clover field. When we give her mangels, etc., sometimes she eats them and then again she won't. Can you tell me what the trouble is? We have no veterinary anywhere near here or no way of testing her milk. T. B.

Kellogg, Idaho.

Give the heifer six ounces of raw linseed oil once daily for several days, after which begin giving her one-half ounce of compound tincture of gentian in a pint of water once daily. She should have this latter treatment for a week or 10 days.

**Eruption on Pig's Neck**—We bought a pig which is now about 4 months old. This pig is apparently in good health, eats well, etc. We feed shorts and vegetables cooked with a little salt. Has comfortable and clean quarters, and is regularly fed. Within last few days there has been a breaking out which scabs over, more noticeable around neck, but also has eruptions on other parts of body. What do you think is the trouble and can the pig be treated so as it will be safe to eat the pork? A SUBSCRIBER.



Newport, Wash.

I can not make a definite diagnosis of the trouble affecting your pig, and would suggest to you that you have your local veterinarian see the pig and examine it. In the meantime you might try the following: Take nitric acid one part, water, six parts. With a glass rod or stick apply a drop or two on the affected parts, treating the tissue under the scab quite thoroughly. Do not get it on the well tissue.

**Cow Gives Bloody Milk**—We have a 4-year-old Holstein cow that has given birth to two nice calves. Her present calf is 5 months old. Since the last calf she has given bloody milk, not all the time but at intervals of perhaps a month to six weeks. She is a very good cow and gives about 12 quarts at a milking. Has the best of alfalfa pasture all the time. What can we do for her? Is there any cure? Is the trouble serious? We do not use the milk, of course, during the time it is bloody. This condition usually lasts about 10 days. Is there any place in Oregon where I could send her milk to have it tested? She is apparently in perfect health. There are no bruises of any sort on her udder. I do hope you can tell us what to do for her, as she is quite a good milker and we would like to keep her if we can cure her or find out the trouble. A. E. J.

Ione, Ore.

I think you could possibly have the milk from your cow tested at the Oregon Agricultural college. Write to Dr. E. T. Simms, professor of veterinary science. In the meantime you might give your cow a teaspoonful of hyposulphite of soda in a pint of water once daily for a week to 10 days. Watch her digestion very carefully and if possible give her a light purge of either oil or salts, if that seems to be necessary.

## For Two Thousand Years

the people of Holland have been developing the Holstein-Friesian breed of dairy cattle. They have developed a breed that most economically turns large amounts of coarse fodder into valuable dairy products, and is valuable for beef purposes. Holstein-Friesian cows exceed all others in milk and butter production and return a greater profit upon the cost of their feed.

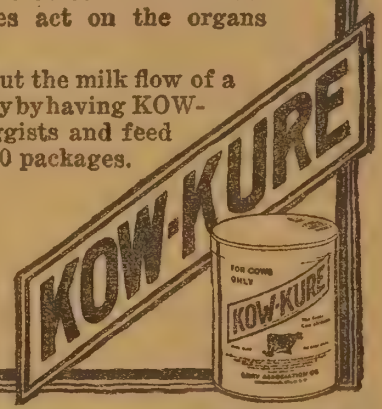
## A Healthy AYRSHIRE

*This champion three-year-old is a notable example of perfect health. Her yearly record is 15,056 lbs. of milk and 589.2 lbs. of butterfat.*

JOIN THE
## "HEALTHY COW" MOVEMENT

Present-day prices for dairy products are making dairymen everywhere think more about the milk production of their cows.



The "poor-milker" is usually non-productive because of some disorder of the digestive or genital organs that is sapping at her health and strength. Even apparently slight troubles of this nature usually lead to more serious ailments so common among dairy cows, such as Abortion, Retained Afterbirth, Barrenness, Scouring, Bunches, etc.

A sick cow should be treated like a sick person—with medicine that will correct the trouble. Kow-Kure is the most valuable and best known remedy for the prevention or treatment of cow ailments because its medicinal properties act on the organs where disease originates.

There will be no trouble about the milk flow of a healthy cow; keep yours healthy by having KOW-KURE on hand always. Druggists and feed dealers sell it, in 60c. and $1.20 packages.

*Free book, "THE HOME COW DOCTOR," is yours for the asking.*

# Draft Horse

## Has Yet a Future on the Farm

By E. J. IDDINGS.

The emergency of the last couple of years has given a highly favorable opportunity for the growth of interest in mechanical forms of power for use on the farm. The various makes of tractors have had powerful organizations behind them, and have to the fullest taken advantage of the opportunity afforded. As a result, the tractor has been advertised as a means of speeding up work on the farm, as a means of doing more than might be done with horses and as a vehicle through which service might be rendered to the nation in connection with its program for making war.

As a result of the work of all of these influences the tractor has obtained greater attention and has made greater progress in securing the interest of the public than might have been possible during a much longer time had the nation been at peace.

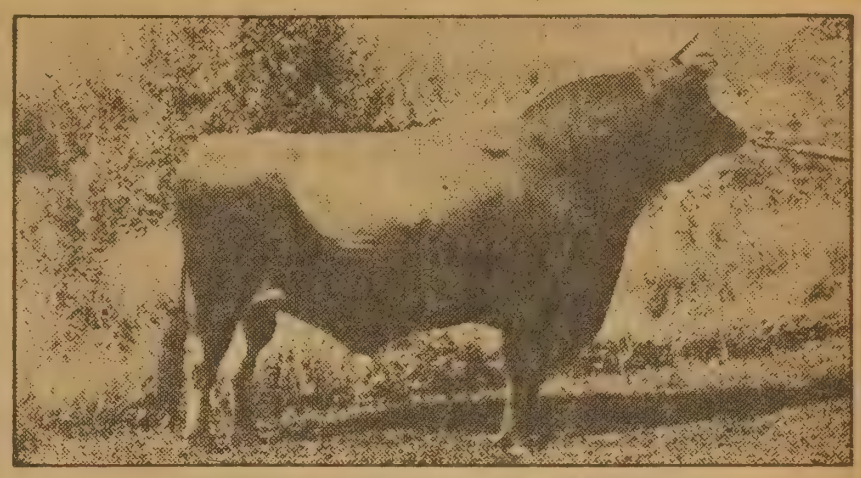
Those interested in the live stock producing industry are naturally wondering what effect this increased public interest and popularity of the tractor has had and will have on horse breeding. The writer is of the opinion that there has been a lessening of interest in the problems of horse breeding. There has probably been less of a disposition to buy the best of stallions. There has been somewhat of a careless attitude in the selection of a stallion for use on the mares of the farm, and in general there has been a lack, in some districts at least, of a highly ambitious attitude to breed only the best of mares to the best of stallions, with the idea of securing constantly better horses for public service.

Many men may not feel that this point of view is correct, but it seems probable that the unprecedented sale of tractors has been unfortunate for the horse business, and, in many cases, has been, to say the least, of no advantage so far as the future of a tractor is concerned. First of all, many farmers have felt that it would only be a question of time until horses would no longer be in demand, and have taken less pride and paid less attention to their horses than formerly. So far as the tractor is concerned, it has been sold to some men, undoubtedly, who will never make a success with the tractor, and in the enthusiasm of the moment has been taken by many men who have thought that it would do much more than it can ever hope to do. Many men will be disappointed, naturally, in the result, and if they come back to horses they will undoubtedly need to start at the bottom and build up a horse supply anew.

That the tractor has a future can not be successfully questioned. Many of the most enthusiastic horsemen of today are recommending the tractor because it will do some heavy work and save the horses thereby. It will work in the busy season and supplement the horse power on the farm, and its use for belt power is also an important factor on a large number of farms. The unfortunate thing is that many men think that the tractor can entirely supplant the horse and can work at any season and on almost any farm. There are undoubtedly many farms of the west that will never successfully operate tractors.

It will be many years, if at all, before the horse is other than the biggest source of power on the farm. It will be many years before good horses will not be in widespread demand.

It is probably not wise to depend too strongly on foreign demand, but there will be an unquestionably heavy call on America's home supply as soon as real peace is declared. Only the other day there was loaded from Canada a shipment of 23 purebred Percheron mares and one stallion, consigned by the Bar U ranch, of Alberta, to England. This is the first shipment of purebred horses ever sent to England from the American continent, and in the opinion of many horsemen it is only a forerunner of a large number of shipments to Europe. Some of the most prosperous and substantial horsemen of the corn belt claim to have already booked orders for a large number of horses to be sent to France, Belgium and other European nations.



The horse is with us and has a future. What constructive measures may we take in the immediate future? One thing is certain, and that is that small, ill-formed, unsound and mongrel types of horses will not be in demand when normal times have returned. The demand will be for the fit, for the well-bred, for the sound; and the premium will go to the man who is producing that class of stock.

There has been much said in regard to size, both in favor of extreme size and against it. Unquestionably, one can get horses a little too large for use on the average farm. On the whole, however, the premium is for size, and where we can have balanced conformation, quality and soundness, increased size means a more ready sale and increased money. Along with the readjustment of our horse business for the future, we need a lot more attention to the kinds of stallions that stand for public service. In practically all of the states of America something like one-half of all the stallions standing for

(Continued on page twenty-eight.)

# Internationals All Kerosene Engines

EVERY engine in the International line, from the smallest to the largest, operates on common coal oil. Every International engine will develop its full rated horse power, at all times and under all kinds of loads within its capacity, using kerosene for fuel.

In these days of war prices for gasoline, extra taxes, and none too plentiful supply, there is both safety and economy, to say nothing of patriotism, in using kerosene engines.

Add to this the economy that results from using an engine that conserves fuel, that is always ready for work and that lasts so long you forget what you paid for it, and you have some of the reasons why International engines sell so fast.

We have all sizes, from 1 to 15-H. P., with a special line, the **International Type M**, in 1½, 3, and 6-H. P. sizes. Here is a line of real farm engines that no farmer can afford to overlook when he is in the market for an engine. See your local dealer or write to us for complete details.

# What 15¢ will bring You from the Nation's Capital

*Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.*

The matter of **15¢** in stamps or coin will bring to you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its **29th** year. This paper fills the bill without emptying the purse; it costs but **$1** a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15¢** to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.

**The Pathfinder, Box 89, Washington, D.C.**

# A Hen Mash

## Compounding Is a Work of Art

I have a letter asking how to make a good mask for laying hens. I think the writer means mash, but the word "mask" has been on everybody's mind, if not on his nose, so much lately that the mistake was a very natural one.

The compounding of a good hen mash is a work of art, if not of science. It means a study of the hen's digestive requirements, of the hen's likes and dislikes, of the composition of foods, and of the market values of foods. The purpose is first to compound a mash that will tickle the hen's palate and the owner's pocketbook at the same time. Those two things don't always go together. Some of our popular breakfast cereals if seasoned with sugar and salt and soaked in cream would be a very tempting dish for the hen; it would be palatable, and it might produce the eggs in abundance; but it would not tickle the pocketbook. The cost would be so great as to eat up the profits. Many mashes are fed that fail to give results in profits just because they cost too much. The fact is that the cost of the foods must be figured on in compounding feeding rations if a profit is to be made, and then a study must be made of the composition of the foods and their hen palatability.

The food must have a certain composition to give certain results. Eggs are made from the food eaten by the hen, and we can not expect eggs from food that does not contain the materials of which eggs are made. Then, again, the foods may have the right food composition. The proteins, carbohydrates, fat and minerals may be there in proper proportions and yet the food may not be palatable and the hen will not eat it in right amount.

The three R's are—palatability, composition and cost. As to palatability, the taste of the hen is susceptible to education, like humans. In the middle west states, or the corn states, the farmer says his hens won't eat wheat, while in the west states, the hens won't eat corn. That is not because one grain is more palatable than the other; it is because the hens have been "brought up" on one grain and have not been used to the other. They are both palatable when they are used to them. The human who has been brought up on the corn mush does not like porridge until he goes through a process of training in a Scotch family.

There is, however, a difference in palatability of grains. Corn and wheat might be given a rating of 100 per cent palatability, while rye would probably be 50 per cent. Fowls can not be taught to eat rye greedily. Barley is another that is not very palatable, say 70 per cent, and oats 85 per cent. This refers to the whole grains. When ground and mixed in a mash they will eat them better.

As to composition of the mash or ration, there must be a balance between the proteins and carbohydrates and fats. A ration of all corn would be too fattening and the fowls would not lay many eggs on that ration, and in time they would die if they had no other food. Bran and shorts are higher in protein and help to balance the corn, and yet that is not enough. There must be meat scrap or some other form of animal food to make the proper balance. Buttermilk or skim-milk will balance and render more efficient the corn. And then to aid in the assimilation or digestion of the food there must be some bulky or succulent food, such as kale, cabbage, clover, or alfalfa.

Now, as to a formula for a mash, would suggest the following for a wet mash under present conditions in most sections of the northwest:

Mill-run (mixed bran and shorts), four parts by weight.
Ground corn, one part by weight.
Mix with buttermilk or skim-milk.

If ground corn is not available at reasonable price, use ground oats or ground barley. If mill-run is scarce, use half as much of it and add one-half part of alfalfa meal, and increase the ground corn one-half part. If cocoanut meal or linseed meal can be had at reasonable price, add one-half part to any of the mixtures. Use fine dairy salt at the rate of one-third pound to 100 pounds of the dry mash.

If a dry mash is to be fed, use the same ingredients and add meat scrap or fish scrap at the rate of 15 per cent of the weight of mash. This makes the mash more palatable and the fowls will eat more. If a wet mash is fed as above, keep a hopper of beef scrap before the fowls all the time. If plenty of milk is available, no meat scrap will be needed, but it will be better not to give water to drink so they will drink more milk and thus supply the need for animal food.

Where good alfalfa meal can be had at reasonable price, it will be well to use it in the mash all the time, giving a little at a time at first till the fowls learn to eat it. J. D.

### THE BREEDING MALE.

It is a good time now to secure the breeding males for next season. Most of the good males will be sold before another month.

The male is half the flock, and often he is more than half. If he happens to be a pedigreed male from trap-nested stock of good layers he is worth considerably more than half the flock if the flock has no particular breeding. By mating a male from high-producing stock to poor layers or average layers, the progeny will average considerably higher than the dams in egg yield. This is the easiest and cheapest way to improve the laying qualities of the flock. A male from high-producing, trap-nested stock is worth $5, or $10, or even $20, where the one from average-laying stock is worth only $1. By all means, begin now planning for increasing the egg output a year from now by securing good breeding males. J. D.

### DISTRIBUTE THE FERTILIZER.

Time should be taken to haul the manure out to the fields or garden patches as it accumulates, not after it has stood for months in a big, over-heated pile. It has much greater fertilizing value and is less of a nuisance.

## Northwestern Ideals

### Great Industry Needs Great Plan

The following was published in these columns many months ago under the heading "Our Purpose in the Northwest," and over the signature of Granville Lowther, editorial contributor to the orchard department of this paper. It sets forth an ideal worthy the great fruitgrowing industry of the great northwest:

**OUR PURPOSE IN THE NORTHWEST.**

"To grow as good fruit as can be grown anywhere on earth, and better than most sections can grow.

"To have roads so good that we can haul as much at one load as we now haul in two, and do it with more comfort.

"To encourage the preservation of the forests so that these forests will hold the snows that furnish water for irrigation, and thus prevent floods in the lower valleys by sudden melting of the snows and the rushing waters toward the seas.

"To be broad enough to see the good in all countries with no less love for our own.

"To be just enough to acknowledge the rights of others, even when they conflict with our own.

"To become so well organized that we can obtain our rights if others fail to grant them.

"To grow a class of men and women who will be noted for their excellence of character, as our fruits are noted for beauty.

"To make our homes places of health, happiness and love.

"We know this can not be done in a day, a month or a year; but if we hold the ideal steadily in mind we shall be surprised at the rapidity of approach toward it."

**FOOD SAVER**

Big money maker for vegetable and fruit growers, farmers, dealers and consumers. This is the best and cheapest saver in the world. Write for further information. Representatives wanted.

**New-Way Drier Company**

## Omak Fruit Growers

### Represent 3000 Acres of Orchard

By HORACE ADDIS.

The Omak Fruitgrowers, incorporated, with headquarters at Omak, Wash., in the Okanogan valley, has about 150 members. It represents about 3000 acres of orchard, mostly in early bearing age. They own a big packing and storage plant and operate it on the cooperative plan.

The packing house is 98x140 feet and the warehouse 50x200. The latter is built of tile, with two inches of cork insulation, making it safe for any kind of weather. It is probably as thoroughly equipped with every modern appliance as any plant in the west. An automatic grader drops each apple in front of the packer using its size. It never makes a mistake. Rollers carry the filled box by gravity from the men who nail on the covers to the car, where they are loaded. A similar device carries the boxes in from the wagons as they are unloaded. Five per cent of each wagonload goes to the grading room (also by a conveyor), and from this sample the grading of the crop is done.

Twenty-five thousand boxes of apples were piled up in the warehouse waiting to be graded and packed. Between 15,000 and 20,000 more were packed and ready for shipment. Car shortage has delayed shipping a little and space was beginning to be a problem when I was there. About 50 people were at work and, although the many labor-saving appliances reduce the work, this was not a full crew. A number of those employed are growers.

To build and equip the plant, stockholders paid a membership fee of $25 and $10 per acre for their orchards. This was in either cash or notes. Notes are liquidated annually at so much per box, as a sinking fund. The charge last year was 4 cents per box. The stock is not issued until $10 a share is paid. Growers are charged pro rata for the expenses of packing and shipping. Earl Barnhill, the manager, says the association has been a great benefit and has caused prices of at least 25 cents a box higher than for cash at the home market here and elsewhere in the valley.

This year the association will ship about 175 cars of good marketable apples, which is only half what the crop would have been had there not been a shortage of water. The varieties grown are Winesap, Jonathan, Delicious and a few Winter Bananas. The last named have stood the shortage of water far better than any other variety.

About 100 cars of apples will be shipped from Omak in addition to those sent out by this association.

## Chief Destroyer

Building up and pulling down are normal conditions. Even the pyramids are not eternal; nor are the mountains; nor are the boundaries of the seas; nor are the establishments of men.

Pride is the chief destroyer of human institutions. That pride goeth before a fall is basic. Knowledge begins to crumble as pride enters. Be it school, or church, or legislature, or pride in arms—all are doomed just to the extent that pride rules them. Arbitrary power breeds its own destruction.

Absence of pride makes the name of Abraham Lincoln immortal. His memory will be cherished when even the proud military genius of Napoleon becomes a discard.

"Nerve" is much desired, to be able to "put one over" is highly prized, and yet there is a day of accounting, even unto the third and fourth generation.

Pride goeth before a fall, and many ever ride to that fall. Perhaps this gives the other fellow a chance. Perhaps this is the way that balances are kept. Perhaps this is the way that ultimate justice is meted out. Perhaps these are the negative and positive poles which guide and control human history.

**CATERPILLAR**

Reg. U.S. Pat. Off.

**"TRADE MARK REGISTERED"**

Over 10 years ago Ben Holt, founder and president of the Holt Manufacturing Company, invented, designed and took out patents on a traction engine with an endless track. For as long before he had already been building round-wheel tractors. Some of them had wheels each 18 feet wide—necessary to provide a big enough surface on the ground to prevent slipping, and to keep the tractor from sinking into or packing soft ground. But when he built the endless track Holt quit building round wheels.

This new tractor, that laid its own track, rolled over it and picked it up again, was named the "Caterpillar," and the name adopted and registered by the Company as a special trade-mark. The Company registered the trade-mark and filed nearly a hundred patents in almost every country on the globe. No one has a right to use that term without this Company's consent, either as a trade-mark or in description or advertisement of any self-laying track, or vehicle using a self-laying track, not of Holt manufacture.

Don't say "Kodak" unless you mean the Eastman Camera—don't say "Vaseline" unless you mean Cheseborough's petroleum jelly—and *don't say "Caterpillar" unless you mean a bug or a Holt machine.*

**Order your 45 or 75 "Caterpillar" Tractor this fall for early spring shipment, otherwise it may be impossible to obtain a delivery.**

# WORLD FARM FACTS — WHEAT

There are eight important distinct wheat growing regions in the world.

1. The plains of south Russia and the Danube valley.
2. The countries bordering on the Mediterranean.
3. Northwestern Europe.
4. The central plains of United States and Canada.
5. The Columbia basin of the United States.
6. Northwestern India.
7. Argentina.
8. South Australia.

Europe produces about 50 per cent of the world's wheat and consumes about 60 per cent.

The Russian Empire leads the world in both acreage and production of wheat, but owing to the low yield per acre, her lead in production is slight.

In Europe, France is second to Russia in both acreage and production of wheat. Notwithstanding this, France consumes about 14 per cent more wheat than she produces.

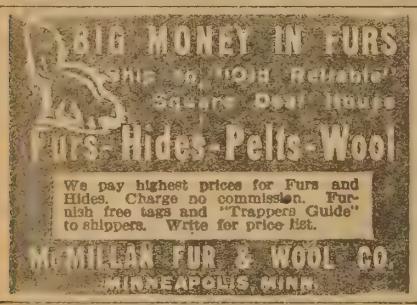
Italy is the only country where a large wheat region is located in rocky land. About one-fourth of the crop is grown on land classed as mountainous; one-half on hilly land and only one-fourth on plains.

The United States produces one-fourth of the world's wheat, ranking next to Russia among the wheat-growing nations, and in some years exceeding that country in production. From one-fourth to one-eighth of the United States wheat crop is exported.

Manitoba and Saskatchewan have more than three-fourths of the wheat acreage of Canada.

Argentina ranks fourth among the nations of the world in wheat acreage, but eighth in production.

Wheat ranks third among the crops of India following rice and the grains sorghums, but occupies less than 14 per cent of the land in crop.



Australia leads in the production of a crop land in wheat, 57 per cent; ranks tenth in acreage and eleventh in production.

## When Is Fur Prime?

There is only one excuse—a poor one for all concerned—for trapping too early. The excuse is, of course, that some other trapper may get ahead of you.

But where the trapper hasn't any competition—on his own farm, for instance—or where an agreement can be reached to wait, the taking of furs at the right time will bring far larger returns.

In a great many cases inexperienced trappers get out too early because they are not quite sure when the various furs are prime. Hence the following may enable no inconsiderable number of trappers to make more money out of their work this year.

Skunk are prime in the north toward the end of October; south, toward the end of November. They depreciate about the middle of March.

Mink is best during November to the end of January in the north and in December and January in the south. The fur depreciates during February.

Muskrat is fair in the fall, when trapping is, of course, easiest. But the prime fur is taken in the period from mid-winter to March. A good condition may be expected in the north up to about the first of June, while the similar date in the south is about the first of April.

Opossum in the north becomes prime toward the middle of November and remains good until March. In the south the prime fur comes about the first of December. It depreciates somewhat earlier than in the north.

If you are after raccoon in northern territory, you will find the fur prime about November 1st. The time is a little later for the south.

Fox, speaking generally, is prime in northern territory from the first of November until the middle of March. For the south the period is from the last of November to the beginning of March.

It will pay trappers handsomely to concentrate their efforts upon the periods when furs are prime.

By having plenty of traps and making every possible preparation to work vigorously during the right season is the way to get the most out of trapping.

BIG feeders of live stock are coming more and more to look upon the silo as almost indispensable and it is not taking much of a venture in prophesying to predict that in the coming days it will be pretty hard to find a feeder without a silo.

Feed for stock means feed for our people and to fully conserve this feed for stock the silo is indispensable. What kind of a silo to have, what kind of crops to grow to put into the silo are questions which every farmer must decide for himself after obtaining all the information he can on the subject.

Have you had any experience with the silo? Tell it to other feeders of live stock through the columns of THE FARMER. Send along your letter. Write to the Editor.

## Removing Honey

### How to Take It From Bee Hives

To the Editor: I would like some information about how to take honey out of bee hives. J. W. H.

Port Angeles, Wash.

George W. York, formerly editor of the American Bee Journal, who has contributed a number of articles on bee keeping to our columns, has kindly answered the above question as follows:

It is a little difficult to reply to your request, as you do not say whether the honey is in the usual square so-called one-pound boxes, or sections, or in the large extracting frames. Perhaps I would better give directions for removing both kinds of honey, and then you can select the suggestions best suited to your own case.

If the honey has been stored in the little one-pound boxes then it probably is in the super or supers directly above the brood-chamber of the hive. In such case it is well to have a bee-escape board to insert between the brood-chamber and the super containing the surplus honey to be removed. Putting in the bee-escape board should be done about 24 hours before you want to remove the super from the hive. At the end of that time the bees should all be out of the super, having gone down into the brood-chamber, when the super with the surplus honey may be taken into the house and removed, and the hive-cover be put over the brood-chamber.

But if the honey to be removed is to be extracted, the same procedure can be followed as to the use of the bee-escape board, being sure that the queen-bee of the colony is below in the brood-chamber. (If there is sealed brood in the surplus honey super, then the queen is very likely in the brood-chamber already.)

After removing the super containing the frames of honey to be extracted, the honey can be thrown out of the uncapped combs with the usual honey-extractor, and the empty combs be returned to the hive for refilling by the bees, provided this is done during the honey-flow. Still, it is much the best to leave the honey in the hives until the close of the season, as the honey will be better ripened then, than if extracted as soon as the combs are sealed over during the honey-flow.

If there is anything in this reply that is not clearly understood, or if there are any other questions to be asked by yourself or any other bee-keeper who is a reader of the Idaho Farmer, I will do my best to supply the information desired. But I can not urge too strongly that everybody who wants to be successful with bees, should possess not only one of the several bee-papers devoted to bee-culture, but should have at least one of the standard bee-books published in the interest of all progressive bee-keepers.

## Sorghum Growing

### Kentuckian Starts It in Oregon

By H. H. BUSHNELL.

Seven years ago John A. Prior came to Oregon from Kentucky, and his greatest craving was for sorghum. He had been used to it and it furnished the sweet that his system wanted and needed. But he couldn't find it locally and there was very little to be had. What there was had been shipped over the mountains.

Last year Mr. Prior, who lives at Umatilla, in Umatilla county, Oregon, decided that he would make an effort to gratify his own palate and help his neighbors as well. He went out among the farmers and made a proposition to them; if they would grow some sorghum he would furnish the seed and buy a portable mill. When it was ready he would grind it and evaporate it.

He made the same proposition to them as that in force in Kentucky—he would take a third of the sorghum as pay for the work.

"I had trouble in getting the seed," he said. "I finally bought seed in California. I prefer the early orange, but had to take early amber. The farmers didn't know me and they were slow about taking hold. Some agreed to take a little and try it, but few of them put much time and effort on the growing. I had the promise of about 15 farmers and they raised anywhere from a little garden patch to as much as three-quarters of an acre. Altogether there was about seven acres in a territory which I covered, about three miles wide and 10 miles long.

"I went around and ground the cane and altogether turned out about 600 gallons of sorghum. The quality I find is as good as that anywhere and I think the quantity would be as good as any if as much care were taken.

"The seed companies advise planting three to four pounds to the acre. My own experience is that this is too much. I advise to sow in drills three and a half feet between the rows and with plants from six to eight inches apart."

# What Makes Your Mouth "Water"?

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Dr. Hirshberg.

"Ah-h, that makes my mouth water," you say, as you sniff the aroma of a juicy steak on the gridiron. If your mouth really "watered," it is one thing. If the fragrant vapors urged your dilated nostrils to flash a message to your gourmand of a stomach and incite an appetite there, that is another thing.

When your belt is loose, your alimentary canal slim and vacant, and your muscles lean and tense, the tang of fresh bread or the smell of roast beef may literally invoke saliva to form in your mouth and hydrochloric acid and pepsin in your stomach. So when you aver that your "mouth waters," you understand only that you are a bit greedy and desirous to have a taste of what you see or smell, irrespective of real hunger.

Actual hunger from a long interval without food, such as an enforced fast or starvation, will at the sight, smell or taste of food arouse the digestive glands of the mouth to pour forth saliva and the peptic acid glands of the stomach wall to spout gastric juices in anticipation of the needed feast to assuage the famished tissues.

### Effects of Emotions.

Contrary to this "mouth-watering" state of alimentary affairs is the dry mouth of the victim of stage fright. Just as pleasure and happiness are apt to inaugurate an extra amount of saliva and gastric juice, so fear and grief check their output to the extent of causing a dry mouth and a hungerless stomach.

The stellar role played by those physical whips and mischief-makers, the emotions, upon the productive tissues of the animal anatomy are perhaps nowhere emphasized more than in the tears, saliva and gastric juice.

The effect of the emotions on the stomach is indicated when many persons tell you they prefer "home cooking" to hotel and restaurant meals. It is the glow and satisfaction, the joy and contentment of the family circle and the motherly and family associations of the home which help the digestive juices to do more than their part.

### A Household Contrast.

Home cooking "tastes good" because the excitement, worry, rush, annoyances, business problems and other irritations are all left behind in the balmy comfort of the home.

On the other hand, the mother and housewife seldom eats her own cooking with zest or pleasure. Her mouth does not "water" for the treasured delicacies her son or husband would travel miles to eat. It is because her stomach has "had such a fill" of the odor, tastes and sight of the good things in course of their preparation that she is surfeited with them and can not enjoy them as they deserve to be enjoyed.

It is on this account also that the man of family may wax fat and lazy, while his worried, busy, industrious housewife remains gaunt, thin and spare. The husband enjoys his wife's appetizing meals to the utmost, and his digestive powers need no artificial urging. The very happiness of his home makes his stomach digest and absorb the delectable foods his spouse sets before him.

The wife, however, frets, stews and worries over the kitchen range. These emotions, the very contradictory of the husband's, give pause to her salivary and stomach glands. Because she does not half-digest her rations she fails to take on flesh or to have the good digestion which waits on appetite.

The remedy is plain and is to be found in the facts. It is up to the all-too-comfortable husband to make it easier for his wife.

## WANT NO USELESS CAYUSES.

The authorities controlling the forest ranges in the Molson, Wash., district, are making a campaign to rid the ranges of worthless cayuses that eat up the pastures that should maintain beef cattle or sheep.

# Romance of 20th Century Progress

By N. W. DURHAM

A valuable and pleasant new agricultural industry has developed on the marsh lands adjacent to the mouth of the Columbia, both on the Washington and Oregon shores. Cranberry culture there yielded a crop this year of 15,000 barrels and the wholesale price in Portland is $12 a barrel. The fruit has never been better than this year and the size is excellent compared with the eastern product in every way. The yield on the better lands around the mouth of the Columbia is amazing. One, a Chinook woman, grew this year 100 barrels on a single acre, for which she will receive more than $1000.

One hundred and thirteen years ago the Lewis and Clark exploring party, sent across the continent by President Jefferson, wintered in the vicinity of these present-day cranberry lands. It was then a most desolate appearing country and the hardy little band, the first white men to cross the American continent, were hard pressed for winter subsistence. They were men of vision and daring, but it may well be doubted if their fondest dreams ever anticipated the wonderful changes that have come over that region with the advent of the white man. Through the long, dark winter of 1805-06 Lewis and Clark and their intrepid followers subsisted on salmon, clams, an occasional elk and deer killed in the mountains. If their brave spirits are permitted to return to earth with what keen delight they will look quietly down on the abundant feasts that will be spread on thousands of home boards in the very region that was so wild, so desolate and so forbidding in that dark winter of their sojourn. Oregon-grown turkeys and Clatsop cranberries will be varied with delicacies from the four quarters of the globe. With tea from distant Asia, coffee from Brazil, bananas from Central America, oranges and grapefruit from southern California, rosy-cheeked apples from Wenatchee, Yakima and Spokane, the rich steaks from the herds of the Pacific northwest and nutritious loaves made from the wheat grown upon the vast grass lands over which Lewis and Clark and their heroic followers trudged, ragged and hungry, more than a hundred years ago. It is a contrast that constitutes one of the romances of twentieth century progress.

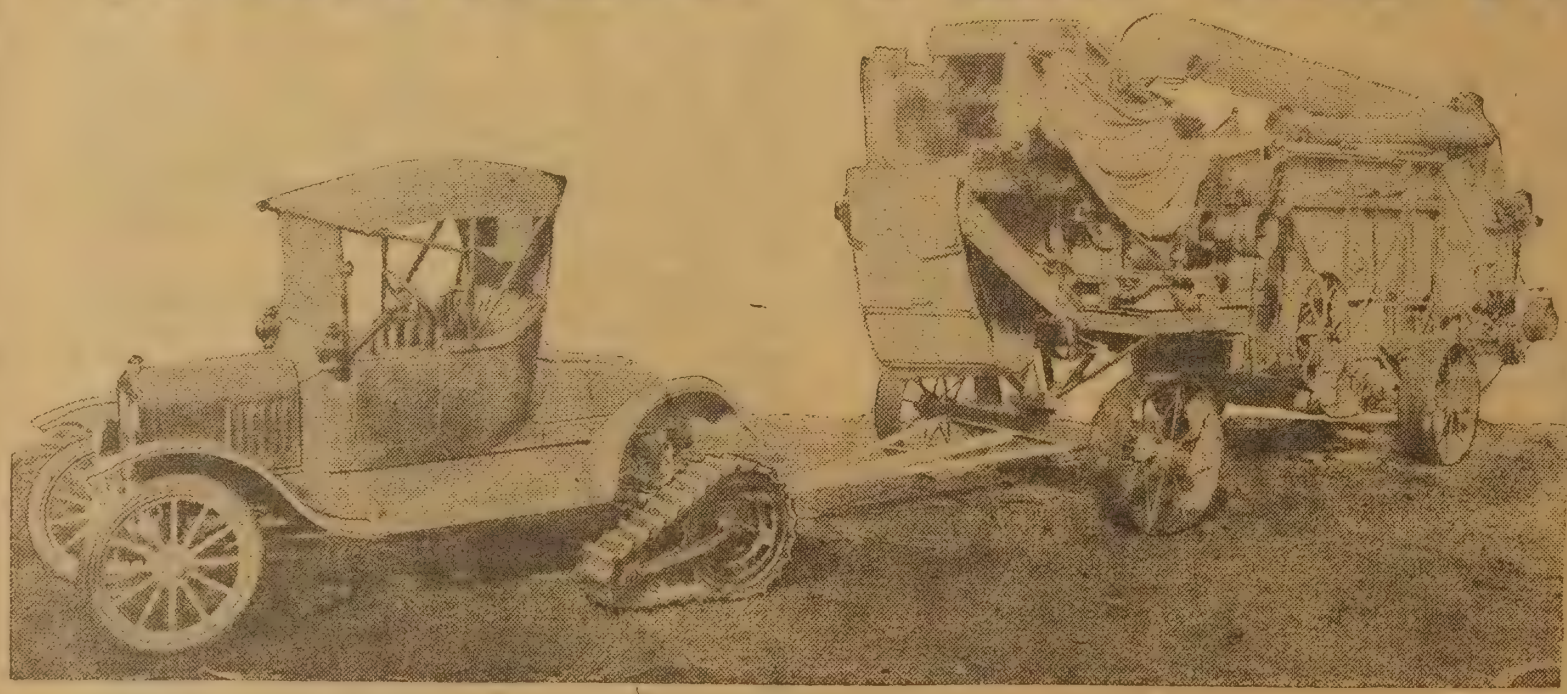
## POTATOES ON FREE LIST.

A report from Ottawa, Ontario, says that the Canadian government has taken advantage of the reciprocal provision of the United States tariff schedule and placed potatoes on the free list.

## SALE OF OLEOMARGARIN.

### Public Hearing at Washington, D. C., to Consider Definitions and Standards.

F. R. Cammack, Field Dairyman of the extension department of the State University of Idaho, has addressed a memorandum to creameries and cheese factories of his state as follows:



I am sending you a notice which I believe is worthy of your attention. We have in Idaho the foundation for a good dairy industry, but its extension is being hampered by the sale of oleomargarin. I need not inform you that the interests back of this product are constantly alert and subtly trying to discourage the enactment of just laws controlling it. I would suggest that all of you who are interested write to the joint committee on definitions and standards, giving your opinion on this matter. The following letter is self-explanatory:

"A public hearing to consider definitions and standards for oleomargarin will be held by the joint committee on definitions and standards at 10 a. m., December 4, at the bureau of chemistry, United States department of agriculture, Washington, D. C.

"All persons interested are invited to attend this hearing and present any facts that will assist the committee in arriving at correct conclusions on the subject. Those who desire may present their views in writing, on or before the date of the hearing, to the secretary of the committee, bureau of chemistry, Washington, D. C. The hearing will be held at the bureau of chemistry building 216, 13th St. SW.

"The joint committee on definitions and standards is composed of representatives of the United States department of agriculture, the association of American dairy, food and drug officials, and the Association of official agricultural chemists."

# "Catterlouse" Pulls Six Tons

READ THIS!

**FARMERS CAN MAKE MONEY WITH A "CATTERLOUSE"**

This attachment on a Ford car does the work of four to six horses. It sells for $265 f. o. b. Spokane. Subject to change without notice. Why pay from $1500 to $6000 for tractive power when you can convert your Ford into a tractor with a "Catterlouse" for $265. The most practical tractor attachment on the market.

**LIMITED DELIVERIES NOW**

Gallagher & Co., Inc., Spokane, Wash. Nov. 8, 1918.

Gentlemen: "In regard to the 'Caterlouse' tractor attachment purchased from you in January, 1918, will say that I attached it to my Ford car and did the work of four to six horses with it. It pulled two fourteen-inch bottoms and walked right along. I used this machine on my 240-acre ranch, which is northwest of Othello, Wash., and did all my plowing and seeding with same, and did not use a horse on the ranch. We pulled our plows seven inches deep.

"Will say that, in a day's work, the Ford consumed about 9 gallons of gasoline and two quarts of oil. The repair expense on the 'Catterlouse' was very slight—only $10. I am going to do my work with it next season.

"The 'Catcrlouse' attached to a Ford is the best tractive power I have been able to find, especially considering the money I invested in same. My soil is of light volcanic ash, and every farmer knows it takes a self-laying track to pull a load in that stuff.

"One reason for my writing this letter and expressing my satisfaction with your attachment, is that it went out and did the work you said it would.

"Yours truly,

(Signed.) "J. W. CUMMINS,
"1612 Spofford Ave., Spokane, Wash."

*Correspondence Solicited*

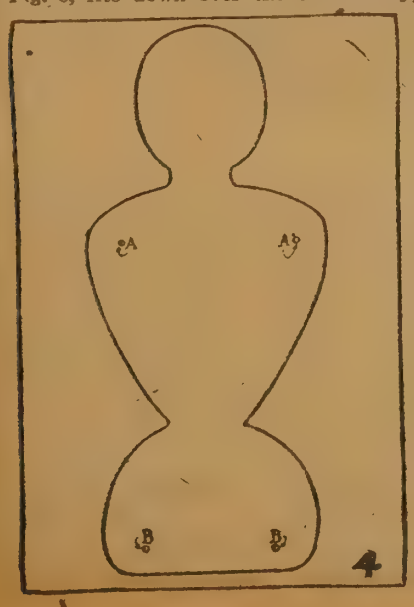
**JOHN BARTELL, Leese, Wash.**—Is a member of the Eighth trench mortar battery, Eighth brigade, at Fort Sill, Okla., and was called to the colors on May 1, 1918. He has been selected for telephone line work. Mrs. Lizzie Crone, his mother, lives on a farm at Leese

**GEO. TREJBOL, Odessa, Wash.**—Entered military service on April 29, 1918, at the age of 23 years. After training two months at Camp Lewis he sailed July 23 for France, where he is now stationed with Company I, 55th infantry. He worked on his father's farm before entering the service.

# Handicraft for Girls

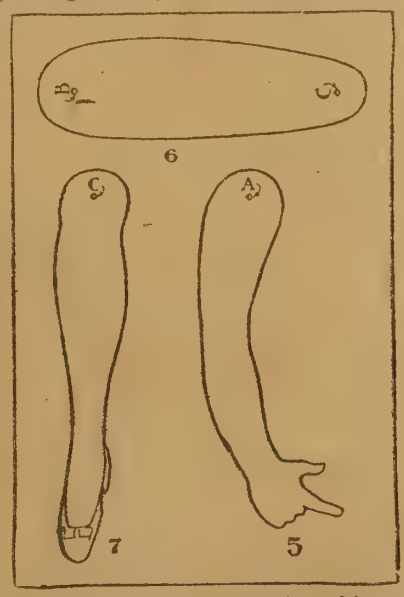
By DOROTHY PERKINS.
(Copyright by A. Neely Hall.)



## A DANCING DOLL.

The little dancing doll in the illustration will dance as gracefully as a fairy and keep perfect time to any music you may furnish. All the materials required to make it are a piece of thin white cardboard, a coarse thread and needle, some pink watercolor paint or a pink crayon pencil, four broom straws, and a piece of tissue-paper.

The first thing to do is to prepare the different parts of the doll, and as these are shown natural size in Figs. 4, 5, 6 and 7, they can be cut right out of this page.



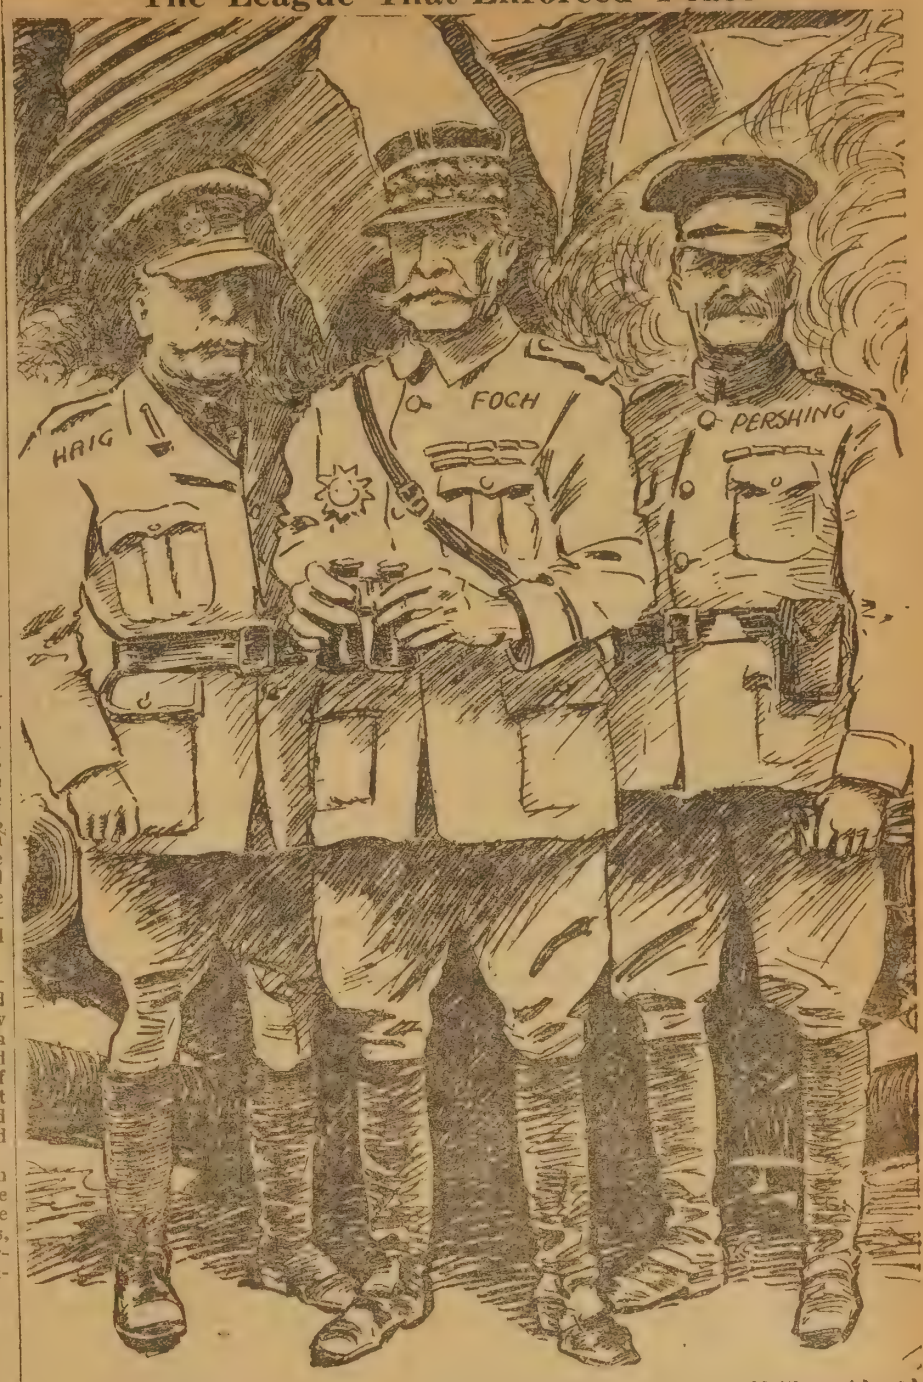
Only one arm and one leg is shown, however, and you will have to use these parts as patterns for marking out the second arm and leg. Paste the paper parts upon lightweight carboard to give them stiffness. To fasten the parts together, pierce holes through them with a pencil point or a hat-pin, at the points A, B and C (Figs. 4, 5, 6 and 7), and join the correspondingly lettered holes with thread, tying a knot on each end of each thread enough larger than the holes to keep the parts from slipping off. Figure 2 shows the doll assembled complete. The circular piece with the center cut out of it, shown in Fig. 3, fits down over the doll's body, resting upon its hips, as shown in Fig. 2. It is cut through on one side to make it easier to slip it over the doll's body. This piece forms the top of the standard which supports the doll while dancing. Pierce four holes through it, near the outer edge, and at equal distances apart; insert a broom straw in each hole, bend over the top, and glue it to the cardboard so it will not slip out. Cut off the lower ends of the straws so they will extend just a trifle below the doll's feet when the doll is stood upon its broomstraw standard.

To dress the doll, cut a strip of tissue-paper three and one half inches wide and 25 inches long; pleat or gather it, and sew it around the doll's waist for a skirt. Then make a waist out of the same material and sew it in place. Cut a pretty head of the right size from a magazine, and paste it to the doll's head; then color the face and arms a flesh pink, and paint the shoes and stockings to match the dress.

When the doll is finished, place her on a piece of cardboard with the end of the cardboard extending over the edge of the table, tap the cardboard with your fingers, and you will be delighted upon discovering how gracefully she can dance. By making several other dolls, using this one as a pattern, you may arrange all upon the piece of cardboard and have a doll's dancing party.

The dolls should not be made to look alike, for the dolls' party, but as different as possible. This will be quite easy to do. A variety of pretty heads will be found by a careful search among fashion pictures and magazine illustrations, and with tissue-papers of different colors to work with, there will be no limit to the number of styles of pretty party dresses that you will be able to devise. Tissue-paper doll dressing is fun, and just the right kind of fun for an afternoon when the weather is too disagreeable for you to play outdoors.

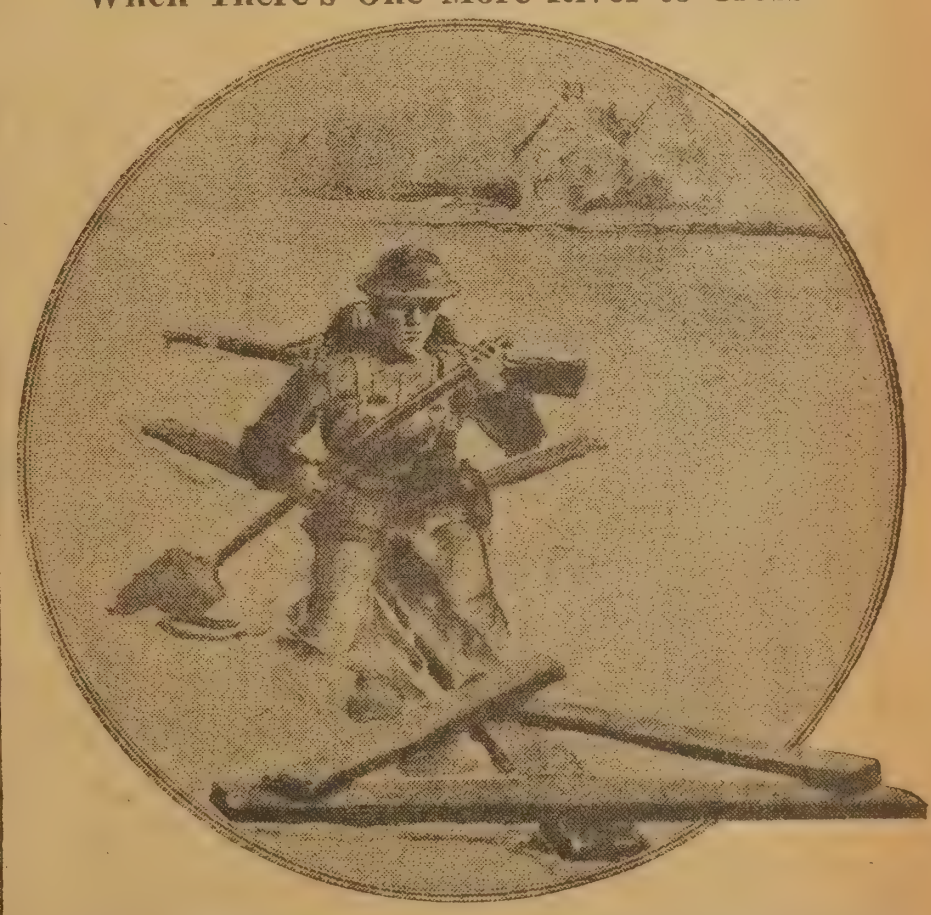
## POTATO CAKES.



Shape mashed potatoes into balls or cakes. Roll in bread crumbs, egg and bread crumbs if desired. Bake on an oiled pan until brown.

Variations: An egg yolk may be mixed with two cups of mashed potatoes, or a whole egg with four cups or one quart of mashed potatoes.

Ground nuts, meat or fish may be added.



Minced parsley may be mixed with the mashed potatoes.

# The League That Enforced Peace

(Cartoon by Morris.) (Copyright by George Matthew Adams.)

# When There's One More River to Cross

A barn door nailed on poles and provided with outriggers makes a good emergency ferry boat for Yank or Tommy; but a single beam with board outriggers knocked from a handy fence makes a splendid catamaran, and a trench shovel a very efficient paddle. High-water trousers are the proper costume for this aquatic sport. Wet clothes hamper a fighter. If the soldier is a good swimmer, his raft becomes a welcome ferry for the arms and equipment of some less gifted pal. The above photograph is from Popular Science Monthly.

# A CROOKED TRAIL---By Lewis B. Miller

Copyright by The Page Company, 1911.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

**SYNOPSIS.**

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected. Startling adventures were in store for them, among the first of which was a night in a "haunted" house, the principal haunts being wild animals. The next day they found the stray ox, but suddenly a wall of water from a furious storm rushed down the river between them and the animal. The boys arranged to have the steer held in pasture till they could cross the raging river. The meantime they spent working with a farmer grubbing out live oak thickets. Some interesting experiences were awaiting them, however, rafting on the flooded river.

## CHAPTER XI.

### That Mysterious Wagon.

By the time we had effected a landing on the north bank, the two men with the wagon were boiling over with impatience. One of them was pacing up and down like a chained bear. Scarcely had our raft butted the shore, when he began to hurry us. He was a fellow of rather striking appearance, with a heavy black mustache, which drooped over the corners of his mouth.

"What are you in such a fidge about?" demanded Frank, half resentful, after being several times urged to make haste.

"Why, we've got a mighty sick man in the wagon up there, and we want to rush 'im to a doctor just as quick as we can."

"Oh, a sick man, eh? That's a different thing. Why didn't you say so at first? Of course we'll hurry," answered Frank, all his resentment gone instantly.

"How can we get our wagon onto your old log-pile?" asked the man with the black mustache.

"You'd better take your horses loose, and we'll run the wagon down by hand," I spoke up. "That's the way we did the other wagon."

"And then we'll put the team on, eh?"

"Your horses will have to swim," Frank informed him.

"They're mighty hot to be put into the water. We've been travelin' like a prairie-fire for the last hour or two. Won't this old contraption float our whole outfit? It's big enough."

"We could make a second trip for the horses; or raft them over first and then come back for the wagon," I suggested.

"No, that won't do—won't do at all. Take too long," the man declared, irritably.

"We might roll the wagon on," said Frank, "and then try leading the horses on, one at a time. If the raft will float them, all right. But if it won't float, they'll either have to swim or we shall have to make a second trip."

The traveler agreed to this; and we all went up and brought the wagon down and rolled it out upon the raft. The sheet, I noticed, covered only the part of the wagon behind the spring-seat. But it was so closed at both ends that nowhere could we catch even a glimpse of the sick man. I wondered why it was necessary to seal him up so hermetically.

When the horses were brought on board, their weight, added to the wagon's weight and ours, settled the raft pretty deep in the water. Not so deep, though, but that we thought it safe to make the voyage over with the whole load.

The two men remained on the raft, one to hold the horses and one to use a pole. Frank and I walked along the edge of the cliff-like bank above, tugging the current. By And a hard, hot pull we had of it. For the heavily loaded, deep-sunk raft fought mightily against the current. By the time we had toiled two hundred yards up stream, in the broiling sun, our faces were dripping. And when the man with the black mustache, still impatient, urged us to come aboard and push off, we gladly took advantage of the first sloping place to do so.

Frank and I were now using the poles, and the men were standing, one on either side of the wagon, and each holding a horse. Before we had moved far out into the river, Frank, whose curiosity must have been aroused, inquired as he passed the black-mustached man:

"What ails your sick friend?"

"Oh, nothin' but smallpox, I guess."

I had happened to overhear both the question and the answer; and so startled was I that I dropped my pole, narrowly catching it again. Frank spun around as if he had been shot at, and I saw him turn pale.

As for myself, for a few moments I came dangerously near to plunging into the river and swimming for land. I had never been much closer to smallpox than a hundred miles. But to me the word was synonymous with a slow and awful death. I had heard of one case where all of a man's relatives had fled from him in terror, leaving him to die alone of the dread disease.

"Why didn't you tell us that sooner?" demanded Frank, in a voice husky with anger.

"Because you didn't ask me," was the innocent reply.

Frank came over to me. "What can we do?" he said, in low, agitated tones. We were both half frightened out of our senses; for neither of us had ever been vaccinated.

"What are you boys doin'? Whur you lettin' us drift to? If you'll git us across right quick, ain't much danger of you ketchin' it."

"Yes, let's push across the first minute we can, Frank!" I exclaimed, arousing myself from my dazed condition. Like a drowning person, I had clutched at the straw of hope in the man's words. "And just look where we are!" I cried out.

While we had stood idle the current had been industriously sweeping us down stream. Already we saw ourselves opposite the point where we should have touched land; and the raft was not yet half-way across.

Both Frank and I took in all this at a glance. And both now fell to poling as hard as we could. The very thought of keeping company for any considerable time with that death-infected wagon was sufficient to fill us with terror. We worked frantically—so frantically that when I dropped my pole into a deep place in the river bed, I narrowly saved myself from tumbling overboard.

Hard as we poled and pushed, we missed all the sloping bank below the road. Below this was an inlet 40 or 50 yards wide, where backwater now reached out into the woods. And immediately below this inlet began a line of low cliffs on that side.

With all our frantic haste we fought to reach the inlet. For a few minutes it seemed that we must be carried by it. But the outer current was weaker, and once in that we could hold the raft. We quickly decided to pole out into the inlet and seek for a landing place at its far end.

Just as we were approaching the trees—those standing knee-deep in the backwater—I heard the rapid beating of hoofs on the north bank, up at the road. Glancing in that direction, I saw three horsemen galloping down the river bank. Another glance, a little later, showed them reining up opposite us, and drawing their guns. This, though a strange proceeding, scarcely attracted my attention at the time. I was too eager to land the raft and put distance between me and that wagon.

"Halt! Halt there!"

Presently a Winchester roared out. The report, tossed back by the hills, went echoing through the woods, ripping and roaring, and seeming to rend the very forest. And a bullet came singing over our heads—singing a tune of death. Other reports followed in quick succession, and other bullets ping-winged over us, clipping off leaves and twigs among the tree tops.

Ordinarily I should have been terrified at this strange proceeding; now I little more than noticed it. I wondered vaguely what it all meant, but neither Frank nor I stopped poling for a moment. There was something in that wagon more frightful to us than bullets.

Our two men were behind the wagon, and one of them called out:

"Push into the woods just as quick as you can, boys!"

The admonition was wholly unnecessary. Guiding the raft between trees, we soon had it deep in the flooded forest, and behind some land, where the horsemen were out of sight. Then, and not till then, did their bullets leave us in peace.

"Mighty close shave for us," I overheard one of the men remark, in a relieved tone. And then he came round and explained:

"Just some fellers after us for bringin' a smallpox patient through the country."

"Pity they didn't catch you!" I answered, wrathfully.

The water kept growing shallower, and within a few yards of dry land the raft ran fast aground.

"Come on, Travis!" cried Frank, as he threw down his pole, stepped off into the water, and made for land. I followed, and we had soon waded ashore, climbed a sloping bank, and started off through the woods toward our horses.

"Hold on there, boys! What are you in such a rush about? Cain't you give us a lift with the wagon?"

We dropped from a run to a walk, but kept on.

"We'd better ride full-tilt for the nearest doctor," Frank was saying, "and try to get vaccinated."

"But isn't it too late now?"

"No. They claim it will do good, even after you've been exposed to smallpox. If you have the disease at all, it will prove very mild."

"Then let's start quick and ride hard. We shall never see our cattle again, I suppose."

"Who cares for cattle?" exclaimed Frank. "I wouldn't have the smallpox for all the cattle in Texas."

"Hold up, boys!" the black-mustached man now called out. "Say, boys, I was just jokin' about that. No smallpox here."

At this we stopped suddenly, in amazement. "Queer kind of a joke," growled Frank.

"You musn't be takin' to your heels, boys. I didn't intend to scare you to death. Our friend in the wagon has got somethin' ailin' of 'im, and we're takin' 'im to the doctor for it. But I doubt if it's smallpox."

"Smallpox!" exclaimed the other man, scornfully. "He ain't got no more smallpox than I have."

Ordinarily we should have been angry at the deception practiced upon us. But so wonderful was our relief at this latest development that we forgot everything else. Now, for me at least, the world seemed suddenly to turn right side up again.

"Why didn't you tell us that before?" demanded Frank. Then he added, in a lower tone, to me: "We were about to forget our money. Let's go back for it. How much shall we charge them?"

"When they first told us they had a sick man in the wagon, I felt that we ought to let them off with four or five dollars, or even less. But after that smart joke, I vote to charge them full price."

"So do I. They shall pay the last cent."

We went back, and, wading into the water, aided in rolling the wagon off the raft and out upon dry ground. Then we helped put the horses to it. The men were evidently in a great hurry to be gone; but so nervous were they both that in their frantic haste they seemed to get very little done. Now they leaped up into the spring-seat, ready to start.

**Rafting Under Difficulties.**

"Our money, if you please," said Frank, a little gruffly, perhaps.

"Your what?" exclaimed the man with the black mustache, in well-feigned surprise.

"Our money," I said. "The $20 you owe us for rafting you across the river."

"Oh, don't mention it, boys—don't mention it!" replied the man, with a wave of his hand, as if waving aside our thanks for some favor he had done us. And up the bank went the wagon, and away it trotted swiftly, through the woods toward the road.

For a full minute, as it seemed, we stood staring after it.

"Well, for downright, bare-faced, devilish rascality, that beats anything I ever ran up against!" exploded Frank, wrathfully, disgustedly.

I was still past speaking. "Come on!" I finally burst out. "Let's get to our horses and follow the scoundrels!"

Frank started with me, but stopped again, rather suddenly.

"It won't do any good, Travis. If they don't want to pay us, I don't know of any way to squeeze it out of them now. If we'd been wise, we'd have collected in advance. We'll know better next time. They're not the right sort, those fellows. There's a big, black streak in them somewhere. Come to think of it, there's something suspicious about this whole business. If they didn't have smallpox in that wagon, what were those fellows shooting at them for?"

"The chances are they did have smallpox, after all, Frank. They lied to us one way or the other, and they're just as likely to have lied last as first. Let's go back. Maybe those fellows are still over there."

We hurried through the woods till we came to the river, at the place where we had left our horses. The three men had dismounted on the far bank, evidently at a loss for some means of getting across. Scarcely had we shown ourselves when one of them, a little man with a big voice—the same voice we had heard before—shouted to us:

"Is there any kind of a ferry on this river?"

"Who are you?" I shouted back.

"I'm the sheriff of Palo Pinto county."

"And what do you want?"

"We're after that wagon that just crossed."

"What for?"

"There's a notorious desperado in it. We've been on his trail for days."

"Has he got smallpox?"

"Got what?"

"Small—pox!" I yelled, spreading the syllables far apart for distinctness.

"No. But he'll get something worse if we capture him."

"Are you sure he hasn't got it?"

"Of course I am! The devil never catches smallpox!"

I was wonderfully relieved. The fellows with the wagon had invented the whole story.

"We can swim the river if we have to," the sheriff was saying. "But our horses are pretty hot and tired, and we'd rather not put them into the cold water if there's any way to ferry."

Frank and I consulted. "We brought those desperadoes across; now let's give the officers a lift," I proposed.

"That we will! Of course we will! And be glad of the chance to!" exclaimed my friend, heartily.

Both of us were feeling pretty sore over that lost $20; and 10 times sorer over the high-handed way we had been robbed of it, and over the horrible fright we had received.

"Yes, we can raft you across," I shouted. "It will take some time, though."

"All right! Be just as quick as you can, boys. Those scoundrels are gaining on us every minute!"

(To be continued.)

# SIDELIGHTS

### A Hard Knock.

During the cross-examination of a young physician in a lawsuit, the plaintiff's lawyer made disagreeable remarks about the witness' youth and inexperience.

"You claim to be acquainted with the various symptoms attending concussion of the brain?" asked the lawyer.

"I do."

"We will take a concrete case," continued the lawyer. "If my learned friend, counsel for the defense, and myself were to bang our heads together, would we get concussion of the brain?"

The young physician smiled. "The probabilities are," he replied, "that the counsel for the defense would."

### Modern Way.

Flubdub—"Isn't there some fable about the ass disguising himself with a lion's skin?"

Synicus—"Yes, but now the colleges do the trick with a sheepskin."—Buffalo Courier.

### Not Much Bait.

Two men were discussing as to what Noah did to pass away the time on board the ark.

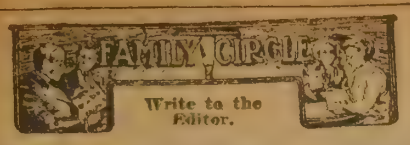
"I guess he did a good deal of fishing," suggested the ardent angler.

But some one is always ready with a wet blanket. "He couldn't do much fishing with only two worms," was the retort.

### Sauerkraut Is Dutch Dish.

The food administration, finding that the use of sauerkraut has been curtailed as a result of ill-advised patriotism, explains that the dish is of Dutch rather than German origin, and is urging its use as a valuable food.

### Hopeful.



The New Parson—Well, I'm glad to hear you come to church twice every Sunday.

Tommy — Yes, I'm not old enough to stay away yet.—London Opinion.

### Safety First.

"Why," asks a Missouri paper, "does Missouri stand at the head in raising mules?"

"Because," says another paper, "that is the only safe place to stand."

ALICE W. BARLAND, Editorial Contributor.

# Care of Clothing

By MARGARET PALMER.

With the prices of clothing advancing, a shortage of clothing materials facing us, the constant appeal of our government to conserve on all these materials, we must do our utmost to help conserve the present supply.

Many garments are discarded before they are much worn or because they have been abused. Clothes, like everything else, need care in order to make them last. This means one must not throw them down, but have plenty of hangers, so that the clothes can be hung on them out of the way and from all dust.

First of all one must repair all little rips, mend torn buttonholes, sew on lost buttons, keep the clothes well brushed, free from dirt, and pressed. Repairing is important, pressing is next and all spots and dirt removed, for nothing will make a garment wear out as quickly as dirt and grime and unmended tears and rips. Pressing keeps the garment in shape.

Sleeves which become worn at the edges should be turned up a little and pressed or they can be faced back. If this will make them too short, put cuffs on.

Skirts that show any wear at the bottom should be turned back a little or braid sewed all the way around. Do not wear good clothes roughly; that is, do not lie down in them, cook or do other work that will be hard on them. Have clothes for this purpose. Many garments are discarded because they are badly faded. These can be re-dyed.

I dyed a lot of faded stockings black and they will last two or three summers for every-day use. I had some gingham dresses that were faded, one was blue, one pink, one green, that is, they were blue and white check and so on. I dyed each one different; the blue and white, blue; the pink and white, pink; the green and white green. I added white collars to them, which were bought at the 10-cent store. The dresses made very good house dresses and will wear a year or so.

Wool garments can also be dyed, but one should rip them apart and make them over as they are apt to shrink some.

Summer clothing should be put away in good condition. It is always disheartening to bring forth a lot of garments in the spring not ready for immediate use.

Mend all those that need mending and lay aside those which are to be made over or altered.

Hats should be carefully brushed, wrapped in tissue paper and stored in boxes. Children should be taught the importance of caring properly for their clothes. Never allow them to throw their clothes around or kick them about as so often boys will do, but teach them the importance of conserving our supply of clothing.

# School Lunches

## Made Nourishing and Pleasing

It is most essential to good health that the school child have a nutritious, well packed lunch, says Dorothy Taylor, home demonstration agent from the University of Idaho. These lunch meals, which must be packed in a closed container and often carried some distance by the child, must supply materials for health and strength as well as growth. Its preparation, then, requires a knowledge on the part of parents and teacher of the different foods which supply these materials and of their combinations to make a nourishing and pleasing lunch.

If possible, the lunch should include a warm soup or drink, as such articles are conducive to slower eating and improved digestion. It is also necessary that these lunches observe the rules of conservation. Bread made from victory flour, sweets from chopped, dried fruits, and fish, eggs, poultry in place of more solid meats may be used.

Suggested bills of fare for the lunch basket:

1. Sandwiches with sliced tender meat for filling; baked apple, oatmeal cookies.
2. Slices of meat loaf or bean loaf; bread and butter sandwiches; stewed fruit; gingerbread.
3. Bottle of milk; thin corn bread and butter; dates; apple.
4. Cottage cheese; rye bread, celery; and honey drop cakes.
5. Egg and lettuce sandwiches made of oatmeal bread; cornmeal cakes; and fruit.
6. Rice cooked in skim milk and molded in cups; corn meal wafers; and baked or stewed apples.

Lunches prepared partly or entirely at school:

1. Creamed potatoes, corn biscuits and fruit paste made from chopped figs, dates and raisins.
2. Sand codfish chowder, corn meal wafers, orange or sliced oranges, and oatmeal cookies.
3. Spoon bread, cocoa, raisin sandwiches, and an apple.
4. Bean or pea soup, crackers, lettuce sandwich made with corn meal and wheat yeast bread, and stewed figs.

### ESCALLOPED POTATOES.

Arrange a layer of raw or boiled potatoes in an oiled baking dish. Sprinkle with flour, seasonings and bits of fat. Repeat until the dish is filled. Pour enough milk over the potatoes to cover them within half an inch of the top. Cover with crumbs and bake about 20 minutes if cooked potatoes are used, or for an hour, or until tender, if raw potatoes are used.

Variations: Minced meat, grated cheese or sliced hard-cooked eggs may be added between the layers of potatoes.

White sauce may be substituted for the flour, fat and milk.

### Wash Dresses for Children.

Among the dresses for the older tots are colored chambrays and crepes, most of them made with yoke or guimpe of white organdie or nainsook, the edges finished with piping or chain stitching in black or contrasting color.

Some of the little dresses have skirts buttoned to high waists with large pearl buttons, nearly all featuring cunning little pockets. Suspender effects are also seen in these dresses, the simulated suspenders apparently held in position by large buttons.

### Along the Food Lines.

England tries to overcome the fruit shortage by using vegetable marrows for jam. This suggestion might be taken up by housewives of the United States now that sugar is more abundant. Carrots, pumpkins and squash can be used for jam-making.

*"My, what a relief!"*

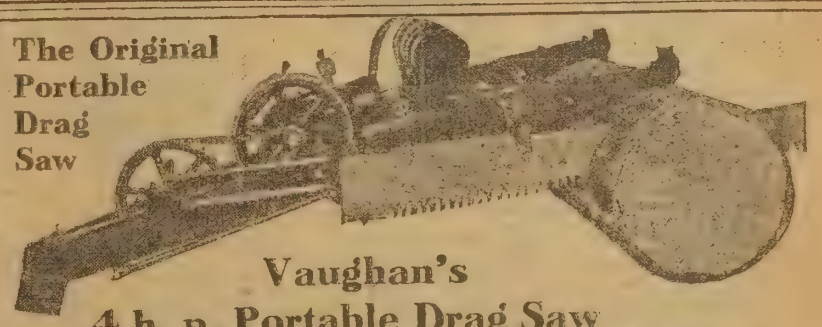
THAT *rheumatic twinge* doesn't bother you long after you've had the aching part bathed with the old standby — Sloan's Liniment. You just put a little on —it doesn't stain the skin — gently pat it, and it penetrates, sending a *warm, soothing glow through the tortured part.*

It stands alone in promoting quick relief from *after-effects of exposure, lumbago, sciatica, muscle and joint strains, pain strains,* and *stiffness, neuralgia, bruises.* There's a successful record of 37 years back of Sloan's Liniment.

Keep a big bottle ready for use—it may be any minute. The big bottle holds six times as much as the small one, so get the most for your money.

**Sloan's Liniment Kills Pain**

**PERFECTION OIL HEATER**



**U. S. Government Positions**

have drained the country of the best gasoline engine mechanics everywhere. Thousands of positions are now open to qualified men. Learn the AUTOMOBILE and TRACTOR business in the largest and best equipped AUTOMOBILE and TRACTOR schools in the west. We teach this business in a thoroughly practical manner. You actually work on the engines of tractors and automobiles just as you will be required to do in a garage, repair shop, or as an operator. Do not waste your time in a poorly equipped motor school when you can go to a real school.

Our school is equipped with the latest types of AUTOMOBILE engines and stationary engines from one to twelve cylinders, TRACTORS of the heavy type and caterpillar or crawler systems. We have every type of electric starter, magneto, carburetor, generator and transmission made. We have brand new engines with which to test magnetos and carburetors. We teach the use of heavy fuels. Our instructors are the best informed men in the country, being originally superintendents of factories and service stations. Our school is well located, well ventilated, steam heated, is fireproof and is equipped with sanitary drinking fountains, etc. Do not delay, but learn this wonderful, fascinating and well paying business at once. Don't spend your money to go to a school a thousand miles farther away that is not as well equipped as this school. Call at main office or write at once for information and free catalogue. Special rate for a short time to those that are alive. Address

Did you ever stop to think what a difference there is between READING the advertisements in this paper and just GLANCING THEM OVER? In the advertisements we publish week by week there are frequently bits of practical information that may be the means of making or saving you hundreds of dollars. Don't "skim over" the ads. Read them. It will pay you.

DEAR TOMMY: I invented this fire escape after Papa and I had a scare in a hotel last week. I got Johnny Jones to help me build it, and his father insisted on trying it, but got excited and broke the brake cord. He also broke a feather bed.

Yours, etc.,
WILLIE.

# WHAT BOOT GETS FOR BEING JEALOUS

# PATTERNS

2652—Girl's dress. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 10 requires 3 yards of 36-inch material. Price, 10 cents.

2273—A dainty set for dolly. The pattern includes all styles illustrated, is cut in 6 sizes for dolls: 16, 18, 20, 22, 24 and 26 inches in length. The dress requires 1 1-4 yards of 27-inch material, the petticoat 1-2 yard, and the combination 5-8 yard for an 18-inch doll. Price, 18 cents.

2666—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 will require 3 1-2 yards of 44-inch material. Price, 10 cents.

2261—Lady's dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 5 1-8 yards of 46-inch material. The dress measures about 2 3-8 yards at the foot. Price, 10 cents.

2654-2653—A smart coat suit. Coat 2654 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2653 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It will require about 8 yards of 44-inch material for a medium size, for the entire suit. The width of skirt at lower edge with plaits drawn out is about 2 yards. Two separate patterns, 10 cents for each pattern.

2672—Lady's apron. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 4 yards of 36-inch material. Price, 10 cents.

2190—Lady's one-piece corset cover. Cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 1 3-8 yards of 36-inch material for a medium size. Price, 10 cents.

2664—Misses' dress. Cut in 3 sizes: 16, 18 and 20 years. Size 16 will require 5 1-4 yards of 40-inch material, with 1 5-8 yards of 27-inch lining. Width of skirt at lower edge is 1 7-8 yards. Price, 10 cents.

2220—Girl's dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 years requires 3 1-4 yards of 44-inch material. Price, 10 cents.

2221—An ideal under garment. Cut in 4 sizes: Small, 32-34 inches bust measure; medium, 36-38; large, 40-42, and extra large, 44-46. Size medium requires 3 3-8 yards of 36-inch material. Price, 10 cents.

2241—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 5 5-8 yards of 44-inch material. The skirt measures about 2 5-8 yards at the foot. Price, 10 cents.

2259—Boy's suit. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 8 requires 3 1-2 yards of 44-inch material. Price, 10 cents.

**Even Fur Substitutes Are Here.**

A clever little scarf may be made of fur or fur fabric, or of velvet or plush. Inasmuch as the shops are showing wraps of this type at high prices, the woman who makes one for herself is to be commended. A perfectly straight section of fur or fabric, about 19 or 20 inches wide, and as long as desired, furnishes the major part of the wrap, and this is held in at the waist by a simple, straight belt of self fabric three or four inches wide. Small pockets are set in or on the ends of the scarf, and the ends may be finished with fringe if desired.

# Liberty's Light Shines for All the World

PEACE HAS COME TO THE WORLD and autocracy has been crushed. For many months, however, manpower will be at a premium. A big army will be kept in Europe for a long time, shipbuilding will be carried forward on a gigantic scale, and thousands of men will be called upon to lend a hand in the great work of reconstruction. There is every reason to continue to save manpower whenever possible.

## The Washington Farmer Subscription Plan Conserves Man Power

To do its share, The Washington Farmer is doing without its usual big force of subscription agents. In place of these we urge our readers to send in their own and their neighbors' subscription orders direct.

This plan gives the subscriber the benefit of every penny which would ordinarily go toward paying the salary and expenses of the subscription agent. It brings our friends their state farm paper at a fraction of what it used to cost and at a price far below that which other high-grade farm and family papers generally are obliged to ask.

In order that our readers may continue to save money on their subscriptions, we ask every subscriber to send in his or her renewal well in advance of the date of expiration stamped on the address label on the wrapper, and that you will also make an effort to send in the orders for your friends and neighbors with your own. Assistance of this kind, so cheerfully given by hundreds during the past year, will assure the success of our second year of cooperation.

**Remember—you receive The Washington Farmer every week—fifty-two great big issues in a year, chuck full of the best of all-around family reading at the remarkably low cost, under our cooperative plan, of only 50 cents for 3 years. Send your orders in today and get your share of the money saved.**

**Rates:-25c For 1 Year 50c For 3 Years $1 For 5 Years**

**The Washington Farmer,** Nov. 21.
Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.**
In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

Dear Corner Cousins: So many of the cousins have asked how to make rose petal beads that I shall have to tell it to you all instead of writing to just those who have asked. Pick a quantity of freshly opened, dew-laden, dark red rose petals of the most fragrant varieties. Grind the petals through a food-chopper, using the very smallest blade. Grind them the second and third time, each time allowing the pulp to fall on a sheet-iron baking pan. It is absolutely necessary that this pan be sheet iron. Collect the juice as it falls from the chopper and turn it over the mass of pulp. Set the pan of pulp in a cool place for 24 hours. On the second and third mornings, repeat the grinding, three times each morning. Grinding for the fourth and fifth morning is advised, but not necessary, if the mass is smooth. On the fourth morning mold by rolling the pulp in bead form at least twice as large as the desired bead. Shrinkage varies with climate. If pulp crumbles, moisten it. Before the beads are quite dry, mark them with the round end of a hatpin. Pierce with a hat pin and stick the hat pin on a cushion until the beads are dry. Afterwards polish them with a touch of vaseline and a bit of velvet. String beads alternately with silver, gold, glass or steel beads and they are very pretty. The beads are dead black, owing to having put them on the sheet iron. Other rose petals than those of the red rose may be used and essence of rose may be used to make the bead fragrant.

AUNT NELLIE.

### Cousin Effie Writes Again.

Dear Aunt Nellie: I am corresponding with Olive Cummins, and I think, from her letters, that she is a nice and companionable girl. She is seven months and 18 days older than I am. Elna Mattson, your riddles' answers are these, if I am not mistaken: (2) a river, (3) water. I will give some riddles: When is a rope like a child at school? When taught. When should a person always make a stop? When they come to a period. What force or strength can not get through, I, with a gentle touch, can do; and many in the street would stand were I not a friend at hand. A key. We have increased in stock since last I wrote to the Children's Corner. We now have seven little baby rabbits and two old ones, one kitten named Nig, one dog named Taft, one pig and 30 chickens. I have one war savings stamp and am saving money on the clothes I wanted to buy for this winter. I can knit, crochet and tat, also embroider some. I would knit some for the Red Cross, but they can not get the yarn now for any one. I have one twin who lives in Gentry county, Mo., but I would like to find a twin in good old Washington state. I was 15 on October 20, 1918. I would be glad to correspond with any of the cousins.—Effie Lewis, Colville, Wash.

### Chickens Are Ready to Fry.

Dear Aunt Nellie: I would like to be a cousin. I am 9 years old. My birthday is December 29. We have two cows, a little calf and four horses. How many of the cousins have seen the building the Farmer is printed in? I have lots of times, and I am going in to see Aunt Nellie some time, if she will let me. We have a good war garden. We have lots of young chickens ready to fry. I would like to have Aunt Nellie come out and see me some time. School is going to start in three weeks, and mother's cousin is going to teach. I like her fine. I have been reading the Children's Corner every week. My uncle has got a little brown dog named Sport. We have three little kittens and a mother cat, seven little pigs and an old mother pig. I have two sisters, Elnora May, aged 5, and Edna Ruth, aged 1 year and 11 days. I have a brother named Melvin Le Roy. He is 7. I am in the fifth grade at school. My brother is in the first grade. Mama is swatting flies now, but if Noah had swatted the two flies that roosted in his ark, she wouldn't need to be swatting them now. I will come again.—Rovilla Fletcher, R. F. D. 2, Fairfield, Wash.

### Entered High School This Year.

Dear Aunt Nellie: I enjoy reading the letters very much. I have two sisters and three brothers, Lucile, Mae, Hial, Roy and Forrest. My oldest brother, Forrest, enlisted in the mechanic service in the war last June. I live on a 104-acre farm. I am 12 years old and my birthday is October 29. Have I a twin? If so, I wish he or she would write to me. I entered high school this coming year. My sisters are in the fourth and sixth grades. We have a truck, a binder and a touring car. We have four horses and a pony. Their names are Pete, Polly, Nib, Maude and Betsy. Our dogs' names are Shep and Fritz. I had to help my dad mow hay last week. Elna Mattson, is the answer to this riddle a brook or a river? I often murmur, but never weep, I lie in bed but never sleep, my mouth is larger than my head, and from my sources I am fed. I am ever running, feet I've none, the harder I fall the faster I run. I hope I am accepted as a cousin—Lois A. Turnley, Route 5, Yakima, Wash.

### Chosen Four-Minute Speaker.

Dear Aunt Nellie: I am in the seventh grade and am 11 years old. Have I a twin? If so I wish he or she would write to me. My brothers' and sisters' names are John, Catherine, Jane, Thomas and Griffith. We play hide and seek, steal sticks and bear. We live on a farm. We have two horses, two cows, one heifer and we have one black cat and two little ones, one of them is black and the other is gray. The gray one is mine and I am going to put a ribbon around its neck if I can find one. We have one dog and 20 little chickens. I hope Uncle Sam will win the war. I can knit and I have one war savings stamp. We have a garden. I have read Trappers of the Ozarks and some of the letters in the Corner. My birthday is April 16. I was chosen the four-minute speaker in our school. —Eleanor Jones, Box 38, R. F. D. 1, Almira, Wash.

### Still Watching for Her Twin.

Dear Aunt Nellie: I was 13 June 30. I am in the seventh grade at school. I have been watching for my twin for a long time, but have not found one yet. If I have one, I wish she would write to me. We have four white Angora cats. They have blue eyes, and two of them are deaf. I have a pony. Her name is Dolly. I have a little colt that I named Junior. She will shake hands with me and kiss me. We live about one mile from the Columbia river. I have to herd the cattle along the river almost every day. I have one brother, Wilbert, who was 10 years old November 2. He is in the fourth grade. Has he a twin? I like to tell riddles. Why is a slacker like a lemon pie? Because he is yellow all through and hasn't got the crust to go over the top. Why do we go to bed? Because the bed won't come to us. Why is a dressing gown like a cake of ice? Because they are both easy to slip on. I have knitted one sweater for the Red Cross, and I am knitting another one. I belong to the Junior Red Cross. I have helped to cut blocks and helped sew them together to make quilts. I play on the piano. I think every one should save all they can. Grandma makes corn bread for us all the time. If we didn't save, the soldiers couldn't fight the Germans over there, and the Germans would be fighting us over here.—Agnes Annis, Attalia, Wash.

### A Story of Pet and Pat.

Dear Aunt Nellie: This is the second time I have ever written to the Children's Corner. I am going to tell a little story about Pet and Pat. Pet and Pat lived in a house at the edge of the wood where the mosquitoes were thick. One day Pet said to Pat, "Let's go to bed." So they climbed into bed and covered up their heads. In the morning Pat awoke and said, "Oh! Pet they got a lamp looking for us." But Pet did not awaken until it was gone. But Pet and Pat never knew that the mosquito with a lamp was a lighting bug. My hardest thing to do is to pick beans.—Margaret Lee, Penawawa, Wash.

### A Pig Named Wig.

Dear Aunt Nellie: May I become a member of the Corner? I enjoy reading the letters very much. They are interesting. I am 11 years old. My birthday is September 2. I am in the sixth grade. I have one brother and he is in the fifth grade. His name is Clarence. We live a half mile from school. We live on a small farm and have five cows and two heifers and 20 pigs. My brother and I have a pig and we call him Wig. We will sell him and buy war savings stamps. We each have a Liberty bond.—Elmer Benson, Mabton, Wash.

---

During the last two weeks Aunt Nellie has received letters from the following cousins: Valla Parfitt, Verna Parfitt, Chester Johnson, Eleen McDonald, Judith Thompson, Maysel Parish, Floyd Brady, Dorothy Tuten, Elma Wilson, Anna Anderson, Nita Anderson, Ralph Kisler, Mildred Self, Thelma Lifener, Ruth Naught, Ruth Dearing, Ethel Strausbaugh, Oren Strausbaugh, Dorothy Erdman, Matilda Lautenschleger, J. Wright Baylor, Neva Baker, Eva Baker, Deana and Donna Earl, Shirley Case, Arvilla Armour, Sybil Pipton, Esther Menke, Pauline Menke, Leslie Palmer, Eva Priddy, Dorothy Sampson, Mary Simpson, Helen Wicks, Lester Olson, Georgia Young, Gladys Waterman, Lillian Waterman, Telma Lakin, Florence Rafosos, Evelyn and Belva Latimer, Iva May Ward, Christina Olsen, Cecile Cason, Alice Lindskog, Lenora Dorothy, Helene Nagel, Madeline Wiesenbach, Margaret Thompson, Mildred French, Esther Miller, Dessie Jones, Opal Jones, Hilda Knutson, Emma Bennett, Elizabeth Bowen, Allie Wright, Mildred James, Chauncey Beeman, Anna Wasem, Delphine Smith, Lewis Kime, Erma Olson, Annabell Campbell, Ethel Purdin, Viola Thornbrue, Minnie Cardwell, John Cardwell, Lena Baumgart, Bobby Baumgart, Eileen McMillan, Dorothy Canary, Gladys Thomas, Ella Brown, Dorothy Hathaway, Elma Hathaway, Bernard Hathaway, Lena Straub, Thomas Harper, Cecilia Hanlon, Viola Tarbert, Hazel Hammer, Clara Pohle, Harold Miles, Pearl Miller, Alberta Miller.

Why

Why don't you play that unused upright piano of yours? You can do it—HERE'S HOW:

We can convert your upright piano into a perfect playing, modern player-piano. And we can do this without altering the case or changing any of its present construction or mechanical action. When the change is made it will look exactly as it does now except that it will be a new model player-piano on which you can play any and every 88-note player roll ever written.

Interested, are you? Then send the coupon below for illustrations, descriptive matter, prices, terms, etc., on converting your upright into an instrument that will play any classic or popular air you care to pick out.

*The Cost is Slight.*
*Terms are Attractive.*

*Experts Say*
"ZEROLENE IS BETTER"

—because it holds better compression, gives better protection to the moving parts and deposits less carbon.

Zerolene is the correct oil for *all types* of automobile engines—the correct oil for your automobile.

Get our Lubrication Chart showing the correct consistency for your car.

STANDARD OIL COMPANY
(California)

The "T"-Head type engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the cylinders and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

ZEROLENE
*The Standard Oil for Motor Cars*

# News for Breeders

R. L. Burkhart of Albany, Ore., has a Jersey cow by the same sire as the great bull, St. Mawes. She is now 14 years old and is milking over 40 pounds a day. Her calf, a bull, is by Mr. Burkhart's Moose o' Fernwood, and is a handsome little fellow. Mr. Burkhart's Karnak Noble heifer that produced 550 pounds of fat with her first calf is fresh again and starting off with promise of a decidedly larger record.

The well known registered Holstein herd of the Avalon Orchard Tract company of Kuna, Idaho, is to be sold at auction December 5, according to announcement made recently by R. T. Walbank, president of the company. The affairs of the company are being closed up and the sale of the herd follows as a natural consequence. Included in this splendid bunch are 16 milk cows; 16 heifers, ranging in age from 3 months to 2 years; 15 bulls, 2 months to 1 year, and the herd sire, Hartwood Heilo Hengerveld, a son of Pontiac Korndyke Hengerveld, that has one daughter with a seven-day record of over 30 pounds of fat. The foundation of this herd is composed of some of the best New York dairy stock.

"I breed to type," said R. W. Hogg, Poland China breeder, of Salem, Ore., "just as carefully as a Jersey or Shorthorn breeder. By this I do not mean merely the choosing of a sire, but the selection and mating of all the breeding stock, year after year." Clymers, Mr. Hogg's old boar, is now 8 years old. He proved his worth as a breeder while young, and that is why he is now in service. Mr. Hogg has a herd that looks to be fully equal to the one with which he made such winnings at the P. P. I. E. stock show. Both boars and gilts have good hams, good heads, deep bodies, and are up on their feet. His sows bring big litters, too, when bred to Clymers, from nine pigs up. His young boar, selected to breed on Clymer's offspring, was purchased from his neighbor, Herbert Wilard, because the type suited him. He has great bone, stretch and strong back, and is a worthy successor to the old boar.

About a year ago Hirshberger & Steele, of Oroville, Wash., brought in a carload of registered Shorthorns purchased from H. B. Drake & Son of Wisconsin. The shipment included three fine bulls and good big breeding cows of quality. Two of the bulls have been sold and the firm now has 35 head, including a few good young bulls, though they have found the demand much exceeds what they can supply. The herd sire they retained is Roan Baron 435849, by Stanford Royal and out of Rosamond 182097, by the great Broadhook Prince. One bull calf by him, now 10 months old, weighs 800 pounds.

These men own land some miles from Oroville, and were hit by the dry weather, having almost a crop failure where wheat has produced 40 bushels per acre. Mr. Steele informs me that one firm owns over 3000 head of beef cattle and that there are probably 7000 in the valley and ranges surrounding Oroville. H. A.

### STOCK SHOW SALE DATES.

The Northwest Live Stock show will be held at Lewiston, November 28 to December 4. On December 2 the Shorthorn sale will be held, and on December 3 the Herefords.

The Pacific International Live Stock show will be held at Portland December 9 to 15. On December 11 the Hereford sale will be held; on December 12 the Shorthorns, and on December 13 the Holsteins.

### Gainsford Perfection.

The photograph on the cover page of this issue is that of the head of Gainsford Perfection, one of the great Shorthorn herd leaders of the Hercules stock farm of Day & Rothrock, at Sprague, Wash.

### GRAZE STOCK IN FORESTS.

A report of the Bitter Root and Lolo forest reserves shows that during the last season these reserves pastured about 87,000 sheep and about 3,000 horses and cattle. The fees collected by the forestry department for this pasture totaled $8819.

### PUREBRED CALVES.

Boys' calf club members in Georgia are planning to use purebred calves in their work next year.

### GREATEST STOCKER MARKET.

Kansas City claims the distinction of being the world's greatest feeder and stocker market.

# Draft Horse

(Continued from page thirteen.)

public service are not registered stallions. Why this condition should persist in our day, when there is every reason why the benefits of pure blood and of good breeding should be universally known, is hard to explain. One of the measures of peace should be to make vigorous war upon the mongrel and grade stallion.

Along with this should go more discrimination in the kind of mares that are used for breeding purposes. Many men who are highly discriminating in their judgment of the male for use in horse breeding have no scruples in using for reproducing horses misshapen, unsound and in some cases diseased mares. Discrimination in this respect must go with increased appreciation of the value and importance of a stallion of breeding and of outstanding individuality.

The writer, therefore, simply wants to impress upon horsemen that their business is a highly important one, with an invaluable function in connection with the reconstructive days of peace. If there is any need of losing faith at all it is because we relax from our high ideals in regard to horse type and from our strict observance of the well-grounded and important rules of horse breeding.

## Shorthorn Beef Records

An Illinois load of yearling Shorthorn steers made the world's market record at Chicago October 3, selling for $19.60 per cwt.

An Iowa load of Shorthorns sold for $19.50 September 16, averaging $301 per head, the previous record.

A Wisconsin Shorthorn load made the Wisconsin record at $18.35 and a Shorthorn load bred in Montana made the record for range steers at $18.

**American Shorthorn Breeders' Association**
13 Dexter Park Ave., Chicago, Ill.

## Get Guernseys

If you want to increase your dairy profits, you need to know about the cows whose average production, under test supervised by state agricultural colleges, is three times as great as the average of all dairy cows in the United States. Ask for "The Story of the Guernsey."
THE AMERICAN GUERNSEY CATTLE CLUB.
Box W., Peterboro, N. H.

## SHEEP

### Romneys, Lincoln, Corriedale

AND HAMPSHIRE EWES AND RAMS.

FLEMISH GIANT DOES.

For sale—Young, vigorous Flemish Giant does, bred to order, $2.50 to $3.50 each. Pair, $5.
W. T. WILSON, R. R. 3, Weiser, Idaho.

Hartwood Heilo Hengervold.

## AVALON ORCHARDS DISPERSAL SALE

49 Head Registered Holsteins

*at AUCTION*

December 5, 1918, at Kuna, Idaho.

This is the well known herd of Registered Holsteins brought to Idaho four years ago from Illinois by the Avalon Orchard Tract Co. The affairs of the company are being wound up and the dispersion of this fine herd comes as a natural consequence.

There will be offered at auction the following:

16 Milch Cows, 16 Heifers, 3 months to 2 years; 15 Bulls, 2 months to one year.; and the leading herd sire

## Hartwood Heilo Hengervold

A son of Pontiac Korndyke Hengervold, who already has one daughter with a seven-day record of over 30 pounds. He is a brother of the sire of K. P. Pontiac Lass, the only 44-pound cow of the breed. His dam was a great producer and capable of making 30 pounds. She is a granddaughter of Mooie Mutual De Kol and sire, Korndyke Manor De Kol 2d, who is a son of Sir Korndyke Manor De Kol. Hartwood's sire has 30 A. R. O. daughters.

The cows offered were bred by H. Stillson Hart of Barrington, Ill., and were brought from his farm direct to Kuna. The foundation of the herd is composed of some of the finest New York dairy stock.

The young stock will be from 30-pound cow ancestry, all backed by good producers on both sides and trace to some of the most noted sires of the breed.

Everything offered is sound and backed by the guarantee of the Avalon Orchard Tract company.

Send today for catalog.

## Reconstruction

(Continued from page seven.)

Since last year the farmers of America have been affected by regulatory powers vested in the national food administration. On this body have sat the leaders and representatives of some of the greatest industrial and commercial interests of the nation. Packers, millers, manufacturers, processors, dealers and vendors of foods and feeds have been called to Washington frequently to determine policies affecting the financial condition of every farmer in the United States. The same thing is true of the war industries board, the fuel administration and other governmental agencies. The last year has called for the patriot and found him fighting on land and sea and in the air and unquestionably on the war boards. The national danger has stirred men's nobler impulses. With few exceptions, the representatives of business who have sat on the war boards have sought to protect the public interests as they understood the meaning of the term.

Few, if any, farmers have been asked to become members of these boards. There are a number of men in the food administration who own fine farms. But ownership of land does not make a city man a farmer. His business connections and instincts throw him into sympathetic association with the urban trend of thought whenever it conflicts with that of the farmer. The farmers' part in determining policies has been largely negative. A small handful of wealthy and influential farmers have been called into consultation at Washington from time to time. Several leaders of farm organizations, among them members of the national board of farm organizations, are consulted in times of emergency. The job of the national food administration has been to get sufficient food at the lowest cost to the non-producers of food at home and abroad. Farmers believe they are entitled to what is fair and rightfully theirs. They are still asking that they be assured the cost of production for wheat, live stock, milk and other products. Whatever concessions have been made to the farmers have been made slowly, reluctantly, of necessity, and from fear that the food program would fall down.

Military necessity alone justified such a policy, in the carrying out of which captains of industry have directly or indirectly had a hand. Working patriotically for a dollar a year on the government boards some of these people have secured an insight into trade conditions and human psychology which at the close of the war may be capitalized for countless millions by the interests these men represent.

The farmers of America should know and consider these facts and be ready to protect themselves. Nobody else will do it for them half so well. There is talk of continuing these boards after the war. Then patriotism will not be so strong a motive in men's hearts. Farmers are not wholly unselfish. They are but human. But the structure of their plan for cooperative business is sound and democratic. It is based on the principle of "self-help through mutual help." It is a more altruistic conception than that of the modern business world and as one of the builders of true democracy its voice should be heard in the reconstruction.

## Historic Towns

METZ is almost directly east of Paris, and just across the line into Lorraine. It is at the junction of the Seille and Moselle rivers. By the Romans the town was called Divodurum, which means "on the two rivers." This idea was also conveyed when in the sixth century it was called Mettis, which means "in the midst of waters." It is the strongest fortress of German-Lorraine, and before 1871 was the principal bulwark of the northeastern frontier of France.

This fortified city has had a somewhat stormy career through its history. The last great event was the surrender of Metz to the German forces on the 27th of October, 1870. This surrender included Marshals Bazaine, Conrovert and LeBouf; 66 generals, about 6000 officers, 173,000 men, including the imperial guard; 400 pieces of artillery, 100 miltraifleuses and 53 eagles or standards. Later on, Marshal Bazaine was tried and condemned to death for surrendering Metz and the army; the punishment being commuted to 20 years' imprisonment. He escaped from Isle Ste. Marguerite in France in August, 1874.

The cathedral of Metz is remarkable for its vast size and its architectural lightness, and has a beautiful spire of open work 363 feet in height. In the northern cemetery is a memorial to 8400 Frenchmen buried there in 1870. Its population was little less than 70,000 in 1910.

### Negro Elected to Legislature.

William M. Riley, a negro of St. Louis, was elected a member of the Missouri state legislature at the recent election. He is said to be the first of his race ever elected to the Missouri legislature. He is a republican.

# Breeders' Department

## HOLSTEIN CATTLE

**A Rare Chance to Head Your Holstein Herd**

We still have for sale five prize-winning purebred males, ranging in age from eight to eighteen months. Weight six hundred to one thousand lbs. Pedigrees furnished on application. Address

# Grain and Produce Markets

## Grain Market.

CHICAGO, Nov. 16.—Famine conditions in Europe brought about fresh advances today in the corn market here. Prices closed strong, 1½c to 3⅝c net higher, with December $1.25½ and January $1.26⅛ to $1.26⅝. Oats finished ¾@⅞c up, and provisions at a range varying from 17c off to a rise of $1.

Corn went upward from the start, and closed at nearly the top figures of the day. Interest continued to center chiefly in the need of large supplies for transatlantic countries that were represented as on the brink of starvation. Wet weather, which threatened to hinder the crop movement, was an additional bullish factor. Besides, country offerings were light.

Strength and activity characterized the trade in oats as well as in corn. Hedging sales, however, became plentiful on the bulge.

Provisions ascended with grain. Current gossip dwelt mainly on indications of immense quantities of meats and fats required for export.

### Cash Quotations.

CHICAGO, Nov. 16.—Corn—No. 2 yellow, old, $1.38; No. 3 yellow, old, $1.37; No. 4 yellow, old, $1.30@1.31; No. 4 yellow, new, $1.28. Oats—No. 3 white, 73@73½c; standard, 73¾@74c. Rye—No. 2, $1.64@1.65. Barley, 85c@$1.05. Timothy, $7@10.50. Clover, nominal. Pork, nominal. Lard, $27.10@27.15. Ribs, nominal.

### SPOKANE UNION STOCK YARDS.

| | Cattle | Calves | Hogs | Sheep |
|---|---|---|---|---|
| Saturday, Nov. 16 | 83 | 3 | 100 | .... |
| Friday, Nov. 15 | 136 | .. | 217 | .... |
| Thursday, Nov. 14 | .. | .. | 139 | .... |
| Wednesday, Nov 13 | .. | 17 | 147 | 1166 |
| Tuesday, Nov. 12 | 107 | .. | 146 | 26 |
| Monday, Nov. 11 | 279 | 23 | 88 | .... |
| Week ago | 22 | .. | 130 | .... |
| Year ago | 216 | 3 | 240 | .... |
| Two years ago | 33 | 7 | 136 | 27 |

New arrivals in cattle were very light Saturday, there being but three straight loads appearing. Those cattle, together with a few mixed ends held over from Friday, afforded scarcely sufficient material to supply the week-end demand. Closing sales on all classes were made in line with the average for the week, with a firm market prevailing at the following quotations:

| | |
|---|---|
| Prime steers | $12.00@13.00 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Med. to good cows and heifers | 6.00@ 7.00 |
| Com. to med. cows and heifers | 4.75@ 5.75 |
| Canners | 3.00@ 5.00 |
| Bulls | 5.00@ 6.50 |
| Calves | 6.00@ 9.50 |
| Stockers and feeders | 6.00@ 8.00 |

One carload and a few small driveins constituted the hog offering. While the run was light, the quality and condition were considerably above the average, demanding $17.25 for the best sorts, which price carried with the bulk of sales. The market is steady at the following:

| | |
|---|---|
| Prime mixed | $17.15@17.40 |
| Medium mixed | 16.75@17.00 |
| Rough heavies | 15.15@15.40 |
| Pigs | 14.75@16.25 |
| Stockers and feeders | 14.00 |
| Bulk of sales | 17.25 |

Again the market opened without an offering of sheep. Although the sheep demand has not had a tryout during the last half of the week, indications point to steadiness at the following:

| | |
|---|---|
| Prime lambs | $10.00@11.00 |
| Fair to medium lambs | 8.50@ 9.50 |
| Prime yearlings | 8.00@ 9.00 |
| Prime wethers | 7.50@ 8.50 |
| Best mutton ewes | 6.50@ 7.50 |
| Breeding ewes, 1 to 4 years | 12.00@15.00 |
| Breeding rams | 25.00@50.00 |

## Spokane Market.

## Farmers' Want Ads

### AGENTS WANTED 9

POWERINE IS EQUAL TO GASOLINE AT 5C a gallon. Salesmen and agents wanted; exclusive territory granted. Powerine is guaranteed to be harmless, to remove and prevent carbon, doubling the life of all gasoline motors, saving repairs, adding snap, speed and power. An amount equal to 20 gallons of gasoline will be sent to any address in the United States, charges prepaid, for $1.00. W. Porter Barnes, Santa Rosa, Cal., dept. 85.

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |
| Castle Rock Independent, Castle Rock, Wash., and The Washington Farmer | $1.50 |
| The Cheney Free Press, Cheney, Wash., and The Washington Farmer | $1.50 |
| Chehalis Bee-Nugget, Chehalis, Wash., and The Washington Farmer | $1.50 |
| Cashmere Valley Record, Cashmere, Wash., and The Washington Farmer | $1.50 |
| The Everett Tribune, Everett, Wash., and The Washington Farmer | $3.00 |
| The Colville Examiner, Colville, Wash., and The Washington Farmer | $1.50 |
| Goldendale Sentinel, Goldendale, Wash., and The Washington Farmer | $2.00 |
| Puget Sound Mail, La Conner, Wash., and The Washington Farmer | $2.00 |
| The Montesano Vidette, Montesano, Wash., and The Washington Farmer | $2.00 |
| Oak Harbor News, Oak Harbor, Wash., and The Washington Farmer | $1.50 |

# "NOW IS THE TIME"

**Before Long Skilled Auto and Gas Engine Men Will Be at a Premium**
**This Is Your Opportunity if You Prepare Now**

HISTORY SHOWS THAT AFTER A BIG WAR THERE IS A LONG PERIOD OF PROSPERITY. AMERICA IS NOW FACING A BIG TASK. THINK OF THE VAST AMOUNT OF REBUILDING! WE MUST JUMP INTO THE WORK OF RECONSTRUCTION AT ONCE. EVERY WHEEL OF INDUSTRY WILL BEGIN TO HUM. WE WILL HAVE GREATER PROSPERITY THAN THE WORLD HAS EVER KNOWN BEFORE. THOUSANDS WILL BE NEEDED "OVER THERE" TO SPEED UP THE WORK. DRIVERS, REPAIRMEN, ELECTRICAL EXPERTS, ENGINE MEN, ETC., MUST GO WITH ALL THE CARS AND TRUCKS.

L. L. Adcox, President.

You, who have been waiting to get out of the rut, your opportunity is here. Don't be content to stay with a job that any one can fill. Prepare yourself for a position in the greatest business in the world—a business that needs you, wants you right now—you can be a success and command big pay.

You can have my wonderful, big catalog full of pictures and letters from my graduates "right on the job" making good at the Auto and Tractor business. It is a book you will like. You will read it two or three times—it will make you a friend of mine from the start. It's yours for the asking. Fill in the "Opportunity coupon" below.

The opportuinties away from home will be so alluring that thousands of the best auto men will seek new fields. But pause for a moment—what are we going to do here at home? We now have 5,595,499 autos, to say nothing of the 70,000 farm tractors, and the increase in the next five years will be at the rate of more than 1,000,000 per year, if men can be trained fast enough to keep the wheels turning.

It is a serious situation for the auto factories and shops, but a pleasant one for you if you are prepared. There never was a greater opportunity for you to fill a useful job—help your country and advance yourself. But you must act quickly. It is the quick thinkers, the ones who realize the big opportunity before them, that will fill in the coupon below and get my catalog. The moment the coupon is filled in you have taken the first step on the road to success.

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

ONE year ago wanton destruction was stalking through a stricken world—devastating, slaying, maiming. Today the thought and energies of all mankind are turning in hope and thanksgiving to the tasks of peace.

One year ago shells were shrieking, cannon were booming, bombs were dropping down upon the innocent and the helpless. Today quiet and restfulness reign on last year's blood-red field.

One year ago factories were humming, farmers were plowing, ships were speeding to feed the raging fires of war. Today they hum, they plow, they speed on missions of mercy and of restoration.

One year ago might threatened right; the dark clouds of autocracy and oppression hung low over the weary world. Today right is might and the light of liberty is penetrating the clouds and melting them as mist before the sun of the morning.

Though the heart of the world still aches for the wounds of yesterday, though crosses rise on myriad nameless mounds and many homes in many lands are broken, the fruits of the struggle are greater than its sacrifices. Already, out of its wreckage a new world is rising in which human justice and human liberty will rule. The dark past is behind; a bright future is ahead. With thanksgiving and praise to the God from whom all blessings flow, mankind marches on.

# The One Way to solve the Problem of High Insurance Cost!

## *Every Property Owner of the Pacific Coast Should Know*

**THAT** seventeen years ago the Northwestern Mutual Fire Association of Seattle was organized, being then at the bottom of the list of fully two thousand other mutual companies in the United States, several of which were more than a hundred years old.

**THAT** it has passed all these companies and is now doing the largest mutual fire insurance business of any company in the United States.

**THAT** the company is really an organization of fifty thousand property owners co-operating to keep down fire waste and to provide payment of any losses they do not succeed in preventing.

**THAT** the fire losses of its policy holders are proportionately less than of any other group of property owners.

**THAT** it avoids the ordinary expensive and wasteful local agency system, and that through the savings in expenses and losses it has returned to its policyholders cash dividends and savings of more than $2,800,000.00, and has also accumulated more than $1,000,000.00 in cash resources for the protection of its policyholders. These figures represent only a fraction of the real service of the organization. The saving in fire waste and the influence of the organization on the rates of other companies have saved property owners many, many times the amount represented by dividends and accumulations.

**THAT** it has more cash resources proportionate to risks and the amount required to carry its policies to expiration than any one of the ten largest American stock companies.

**THAT** it has taken a step in advance of all other fire insurance companies in the United States in issuing a paid-up, non-assessable dividend-paying policy. In this it is following the example of all the larger successful life insurance companies in the United States.

**THAT** its policies cover a selected class of carefully inspected property so that its policyholders do not have to contribute to the payment of losses on hazardous and poorly protected property.

**THAT** its policy holders never have to worry about insurance rates, as higher rates simply mean larger dividends. It all eventually comes back to the policyholder, with the exception of the necessary losses and expenses.

**THAT** cooperating with the Northwestern Mutual Fire Association is the Martin General Agency, having the capacity of all the other strong mutual fire insurance companies doing business on the Pacific Coast. The Martin General Agency is the largest fire insurance agency in the Northwest. This agency enables the office to care for the largest lines of insurance.

**THAT** with such service and facilities at the command of every property owner there is no cause for worrying over insurance rates.

**THAT** the company has the highest class insurance experts and inspectors obtainable. These experts are at the service of every property owner, and many of the heaviest property owners of the state are having this office care for their entire insurance interests.

**THAT** this organization is owned entirely by the property owners. The whole ambition of the management is to render the most valuable service possible in reducing losses and in rendering the best possible insurance service at actual cost.

**We are gratified by the results accomplished, but not satisfied. We ask the cooperation of every property owner toward the enlargement of this service. If you are not getting the benefit of this service, why delay? A line to the head office will bring results.**

## Farmers Went Ahead and Won

### *In Spite of All Handicaps They Produced Food Supplies*

By GIFFORD PINCHOT.

I do not believe that the farmers of America begin to realize that what they have done is the greatest and most splendid patriotic service rendered by any class of our people in the great war. Without adequate labor, credit, or farm supplies, neglected by the government, misunderstood and abused by the city press, nevertheless and farmers produced the food we had to have. When it seemed to those who really knew that human strength could not suffice, American farmers grew the two great crops, without which we would have lost the war.

Their wonderful achievement was accomplished in the face of difficulties that were wholly unnecessary.

Three great blunders were made in dealing with food production while we were at war. The first was in giving our principal attention to the conservation of what food we had instead of to the production of more food. If even a small part of the effort and exhortation which have been devoted to saving food had been given to growing more food, there would have been vastly more food available, and most of the painful need for saving would have been done away.

The second blunder was in failing to make it possible for the farmer to get enough labor, farm supplies, and credit to give him a reasonable chance to raise the crops the nation and the world required.

The third blunder was in excluding the farmer from partnership in the conduct of the war, and especially from that part of it which had to do with food supply. Yet, according to the United States census, a full half of all our people live in the country and in small villages and towns, which are for the most part dependent on farming for their prosperity, and which have the same interests and the same outlook as the farming communities which lie about them.

In spite of all these blunders, needless, dangerous and exasperating as they were, the farmers went ahead and won out. There has been nothing finer outside of the conduct of our men at the front.

Although the guns are silent at last, for the American farmers the war is not yet ended. They have been fighting the Germans by sending men abroad and raising food at home. But now that our own splendid boys, side by side with the wonderful fighters of our allies, have beaten the Germans into submission, the farmers of America can not lay down their fighting tools. Two great enemies are still to be defeated. One is world-famine, which can be prevented only if the farmers of the United States keep up their marvelous record. The other is the persistent refusal of common justice and a fair share in our government to the men who feed us all.

Our farmers have seen their government advancing hundreds (if not thousands) of millions of dollars to help other industries, but not to help them. They have seen a limit set on the price of what they have to sell, but not on the price of what they have to buy. Their own problems were decided for them, and very often wrongly decided, without their being consulted. Their legitimate demands for a share in the management of the war, voiced again and again through the national board of farm organizations, were persistently denied. But looking beyond the ignorance and shortsightedness of officials, in the presence of the nation's need, they forgot everything but their duty as Americans, and they brought to pass what seemed altogether impossible.

All honor to the men who set patriotism above party, disregarded abuse and neglect, turned their backs upon selfishness and resentment, and in the face of the greatest difficulties accomplished what the safety of our country and the world absolutely required.

Every farmer knows that since the civil war this nation has been managed by city men for the advantage of city people. Laws and policies have been, and are still, in city hands. For example: There are today in congress 531 members in both houses, and only eight of them even claim to be farmers. One-third of our people live on the farm; and all of our people are dependent on the farm; yet only 1 1-2 per cent of our lawmakers are farmers. If an exact proportion were possible or practicable, which it is not, no less than 178 of our congressmen would be farmers.

It goes without saying that the farmers of America have no desire to deprive other classes in our population of the proper influence and just representation which is their due. Conditions which are unfair in the case of the farmers would be equally unfair if applied to others. What the farmers want is justice all around.

Every farmer knows that ever since the civil war what the government has done to help the farmer has been done still more to help the city man. Even in the matter of food production, the city man's point of view has been in control. What the city man wanted was cheap food. Therefore what was done for the farmer was directed almost without exception toward helping or inducing him to grow cheap food. But what the farmer got for himself and his wife and family out of what he produced was a wholly different matter.

A good example of the hostile city mind is supplied by the Baltimore Evening Sun of November 7th. In enumerating the causes behind the recent election it says:

"Possibly a still more potent influence was the farmers, who were sore because the government would not allow them to 'charge all the traffic would bear' for their wheat and limited them to twice the normal price and more instead of allowing them to gouge America and her allies to the limit. The farmers pay far less than their share of the income taxes and are reaping a rich harvest on their crops, including wheat, but they apparently strike at Wilson because he would not give them a free hand at profiteering."

All this is wrong and ought to stop. That is why the national board of farm organizations has undertaken, through its nation-wide agricultural reconstruction committee, to find out just what the farmers of America believe they are entitled to in the reconstruction after the war. To find out just what you want is the first step toward getting it. When a farmers' plan of reconstruction, thus formulated, has been criticized, corrected, and adopted by the organized farmers of America, there will be a real chance that justice for the farmer can be brought out of the great changes which must follow the conclusion of peace. But the whole united power behind it of one-third of our people, the farming third, will be none too much to change the old bad order and begin the new.

There ought to be a change. If the farmers of America make up their minds to get that change they can have it. To get it they must go after it all together. If they continue to scatter their forces the city mind will continue to dictate and decide for another 50 or 100 years.

**McIntosh Wrote It**—The article on page 8, discussing a scientific way to calculate the cost of producing milk, was written by C. J. McIntosh of Oregon Agricultural college. It is an article worthy of deep study by every reader who has a cow.

**The Farm Bureau**—H. W. Hochbaum of Idaho, in an article on page 7, tells how it operates.

**Who's Running Germany?**—A clue is given in Dr. Bryan's able discussion of German socialism on page 14.

## Call Off Stock Shows

Owing to the fact that the influenza epidemic has not abated as it was believed and hoped that it would, the state authorities have ruled that the Northwest Live Stock show must be called off for this year. Hence the board of directors have announced that it will not be held, though elaborate plans have been carried out to make it one of the best ever held in the west. The show was originally scheduled for several weeks ago, but was postponed because of the epidemic, which now necessitates its complete abandonment until next year, when it is expected a great show will be held. It is announced that the Shorthorn and Hereford sales which were scheduled for show week will be held on the show grounds on December 18 and 19, respectively. Joe Turner of Meyers Falls, Wash., is sales manager for the Shorthorn men, while L. R. McGee of North Portland, Ore., is manager for the Hereford men.

A dispatch from Portland says that the Pacific International show has also been called off with the exception of the fat stock show. The sales of purebred stock will also be held, it is stated, but it is not at this time announced definitely whether the fat stock show and the sales will occur on the original show dates or not. The show was scheduled for December 9-14.

## Famine Cannot Be Prevented

### *Europe Calls for More Than America Is Able to Provide*

Before starting for Europe, there to take up the stupendous task of providing for supplies for the hungry peoples of Europe, Food Administrator Hoover took a survey of the different great groups of commodities that will be available until the next harvest.

He finds that of wheat and rye there will be sufficient world supplies, with economical consumption—not sufficient for the real needs of the hungry nations, but as much as can be moved by the available ship tonnage.

Of high-protein feeds for dairy animals he reports a shortage of about 3,000,000 tons and of other feeds sufficient supplies, with economical consumption. The same is true of beans, peas and rice. The beef supply he considers sufficient to load all refrigerating ship capacity. Of sugar there are sufficient supplies for our normal consumption if other nations retain their present short rations. If they increase their ration we shall be confronted with a shortage. The only commodity of which there is a surplus is coffee.

The big shortage is in pork products, dairy products and vegetable oils, and here is where the American people will be asked, in all probability, to make extraordinary efforts to conserve.

Mr. Hoover frankly admits that there are conditions of famine in Europe that will be beyond our power to remedy. We have not the adequate food supplies to relieve all of the hunger in the war-stricken countries, and even if we had them there are not enough ships available to move the supplies to the stricken regions.

Yet extraordinary effort must be made to do our utmost. As Mr. Hoover says, vast masses of people in the European countries are now confronted with engulfment by absolute anarchy.

"If we value our own safety and the social organization of the world, the preservation of civilization itself, we can not sit idly by and see the growth of this cancer in the world's vitals. Famine is the mother of anarchy. From the inability of governments to secure food for their people grow revolution and chaos. From ability to supply their people grow stability of government and the defeat of anarchy. Did we put it on no higher plane than our interests, the protection of our institutions, we must bestir ourselves in the solution of this problem."

In other words, there is the same insistent demand in peace now, as well as in war before, for increased production and continued conservation by the consumers of the United States. Before leaving for Europe Mr. Hoover sent an earnest message to food administration officials and workers all over the Union to continue unflaggingly their efforts to prevent waste. That work seems in excellent hands, but it appears doubtful that the problem of increased production will have as intelligent aid and direction. Congress and the administration seem bewildered, and no one in authority has brought forward a definite program to help the farmers increase food production in 1919. The outlook would be much more encouraging if the government had a high-class national food production administrator—a man of the type of Mr. Hoover, who would now be doing in that realm what Mr. Hoover is doing so ably and vigorously in the field of world-wide conservation.

## Northwest Land Bank Is Leader

### *Has Loaned Farmers Over Twenty-One Million Dollars*

The federal farm loan bank, with its 12 branches, has loaned the farmers of the United States $139,378,156 since its organization less than two years ago. In this work the Spokane branch, which serves Washington, Oregon, Idaho and Montana, has led the field, having loaned to the farmers of these four states $21,659,900. In the entire United States more than 61,000 farmers have secured loans, of this number 9145 being in the four states of the northwest.

During the month of October $7,580,736 was loaned to 3075 farmers of the United States by the land banks. Again the bank at Spokane leads in amount of loans closed, with $1,260,180, with the bank at St. Paul running slightly behind in amount, $1,053,500. The other 10 banks closed loans in October as follows: Wichita, $760,600; Houston, $753,320; St. Louis, $708,406; New Orleans, $576,675; Omaha, $519,900; Louisville, $459,300; Berkeley, $456,000; Columbia, $402,925; Baltimore, $322,400, and Springfield, $307,530.

The following table shows the amount of loans applied for, approved and definitely closed since the bank was originally established:

| District: | Applied for | | Approved. | | Closed. | |
|---|---|---|---|---|---|---|
| | No. | Amount. | No. | Amount. | No. | Amount. |
| Springfield | 2,940 | $ 9,593,194 | 2,738 | $ 7,111,195 | 2,045 | $ 5,482,875 |
| Baltimore | 3,558 | 9,545,672 | 3,333 | 7,591,865 | 2,239 | 5,441,950 |

### BEET GROWERS RECEIVE PAY.

The sugar companies for whom beets have been grown in the intermountain territory and the northwest this year have recently paid to the growers approximately $7,000,000 for this year's production. The payment covers receipts of beets for the first month of delivery season at 22 sugar factories. The Utah-Idaho Sugar company paid growers of Utah, Idaho and Washington approximately half of the $7,000,000 total. The Amalgamated Sugar company, of Ogden, Utah, paid its growers approximately $2,600,000, while other smaller companies paid amounts totaling about $1,000,000. It is said that this amount covers approximately one-half of this year's beet production. The beet tonnage of Utah, Idaho and Washington for this season is estimated at about 1,200,000 tons, and should make about 3,000,000 sacks of sugar, with a value of something like $30,000,000.

### INCREASE FAIR BOARD.

At a recent meeting of the directors of the Spokane Interstate fair it was voted to increase the membership of the board from 15 to 23 with the view of expanding the scope and usefulness of the fair by including additional men actively engaged in live stock or agricultural work.

T. S. Griffith was reelected president, F. M. Rothrock was elected treasurer and W. L. Tennant secretary. The enlarged board of trustees consists of the following men:

H. S. Martin, W. G. Paine, L. C. Barrett, M. Openheimer, R. Insinger, T. S. Lane, W. L. Tennant, D. L. Huntington, E. E. Faville, T. S. Griffith, F. W. Branson, E. F. C. Van Dissel, J. L. Smith, J. Goldstein, F. M. Rothrock, E. E. Flood, J. W. Graham, J. M. Van Kleek, George Harding, Grant Copeland, R. E. Bigelow, Charles H. King and John H. Roberts.

### NONPARTIZAN LEAGUE TO MEET.

A national convention of the national nonpartizan league is announced for St. Paul, December 3. President Townley has issued the call for the gathering.

THE WASHINGTON FARMER

VOL. XLI. NO. 48.

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
444 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.
To either of which communications can be sent, but to avoid delay address office nearest you.

ABC Member Audit Bureau of Circulation. Associated Farm Papers. Agricultural Publishers' Association.

Eastern Representatives:
S. E. Leith, Fifth Avenue building .....New York
Tom D. Costello, Steger building .....Chicago
C. A. Cour, Fullerton building .....St. Louis
R. R. Ring, Palace building .....Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## A Psalm of Thanksgiving

Praise ye the Lord. Praise God in his sanctuary; praise him in the firmament of his power.

Praise him for his mighty acts; praise him according to his excellent greatness.

Praise him with the sound of the trumpet; praise him with the psaltery and harp.

Praise him with the timbrel and dance; praise him with stringed instruments and organs.

Praise him upon the loud cymbals; praise him upon the high-sounding cymbals.

Let every thing that hath breath praise the Lord. Praise ye the Lord. —Psalm 150.

## Who Pays the Price of Regulation?

Now that the war seems over, the government ought to find a practical way for rewarding the American farmers, particularly the wheat growers, for their sacrifices growing out of government regulation of the prices of farm products. Undoubtedly, if the government had not fixed the price of wheat, but had left the markets to the law of supply and demand, the wheat growers of this country would have received much better prices.

The purpose of our government in holding down the price of wheat was to help the European allies win the war by enabling them to buy cheaper bread products in the American markets. That was wise and generous, but who paid the price of that generosity? Not the American nation, which justly might have paid it, but the individual wheat growers of the United States.

The effect of government limitations of the price of wheat was also to give the American people cheaper bread than they would have had if the grain growers' markets had been left open to the law of supply and demand. That was charitable to the American consumer and the people of the states that grow little wheat, but who paid the charity? Again the farmers and the wheat growers, not the American people.

These facts are so apparent that they admit of no controversy and they should be taken into consideration by the government authorities at Washington when they come to deal with the future price of wheat.

The world's hunger is so great and the demand for bread is so extraordinary that many observers think that if the government were to take its hands entirely off of wheat prices there would be a runaway market and there is no telling where the price would go to.

Even though the war is over, a runaway wheat market would not be desirable, and the generous American farmer does not want it. His sympathies are keen for the starving people of Europe and he is more than willing to forego some part of his natural profits to prevent suffering and distress among the women and children of the afflicted countries.

We think the government could very properly and wisely strike a happy medium by fixing minimum and maximum prices for wheat. Say the present guaranteed price as a minimum, giving the farmer assurance that for his extraordinary efforts he will have a price at least as good as the present, and a higher maximum price beyond which the government would not allow wheat to be sold—perhaps three dollars a bushel. That would hold down speculation, give the farmer recognition for his patriotic attitude in the war and give the European people bread at fair prices.

Self-tinctured oratory may charm rather than convince.

## Pinchot Makes Strong Appeal in Behalf of the Farmers

In another column we give space to a thoughtful communication from Gifford Pinchot.

Mr. Pinchot, who is a man of fine ideals, unquestioned honesty and unfaltering interests in the public welfare, is entitled to a hearing. As chief forester under the Roosevelt administration he sprang into national prominence as a leader of the forces that stood for wise conservation of the country's natural resources. He made a long and gallant fight to protect from seizure by great capitalistic interests of what remained of the country's forests, water power and deposits of coal, oil and soil fertilizers. More recently he has been active in reorganizing the national board of farm organizations, and in that connection issues the communication in question.

Mr. Pinchot declares that the three great blunders were made in dealing with food production while we were at war. They are precisely the three blunders so often pointed out by The Farmer.

1. Giving our principal attention to the conservation of what food we had, instead of to the production of more food.

2. Failure to make it possible for the farmer to get enough labor, farm supplies and credit to give him a reasonable chance to raise the crops the nation and the world require.

3. The third blunder was in excluding the farmers from partnership in the conduct of the war, and especially that part of it which had to do with food supply.

These three blunders grew out of the government's failure to create a national food production administrator. If the country had had such an official, a man of preeminent ability, he would have formulated a clear-cut, helpful program of increased food production. He would have called on congress to drop its niggardly policy of providing ridiculously inadequate labor, farm supplies and credit and he would have insisted that the farmers of the nation have proportionate representation with organized labor on all of the war boards and commissions.

Mr. Pinchot makes a strong case and his appeal should make an impression upon official Washington.

You gain in knowledge as you grow in distinctions.

## Sightseers Should Stay at Home

Two or three years ago there was much discussion in this country as to whether or not the people of the United States were justified in traveling on the high seas, thereby increasing the possibility of a break between this country and Germany, because of the latter's submarine warfare. Many urged that Americans should stay off the water rather than cross Germany's ruthless path, but the opinion of the majority, that Germany should not be allowed to intimidate American citizens, ruled.

The situation is different now. There is no fear of Germany. She is not trying to bully the world today. Instead, she is begging for food to save many millions of her unfortunate people from starvation. Russia is hungry to the point of threatened starvation of a score of millions of her people. Belgium, France, England, Italy, Serbia, Rumania, Austria, Turkey, Armenia—the peoples of all these countries are in desperate straits, and America must rush to the rescue with every pound of food that all the available ships of the world can carry. Sightseers have no right today to occupy space on ocean vessels. If they have no better part to play in this tremendous crisis than wandering about the world to satisfy their curiosity, let them restrain that curiosity until the starving are fed. But better yet, let them join the world-patriotic producers, and help save humanity from terrible disaster.

He who masters definitions masters men.

## Don't Forget the Road Question

While the problems of war and of the first stages of reconstruction have been absorbing our interest, it has been wise and patriotic to forget some of the problems of normal times in our own communities. But it is now time to resurrect one of them with a whoop. Roads! There are no greater requirements for the welfare of rural life than good roads. Even the automobile can bring only half satisfaction to travel between farm and town when the roads are muddy and heavy. The wagon or the buggy trip is one so uninviting that it is not made often enough. But a good dirt road—it doesn't require pavement always to make a good highway—cuts the distance in two for man and beast. County and state authorities should be ever on the job to make the best roads possible and keep them in the best condition possible consistent with judicious expenditure of the people's money. And the farmer who lives along the road should be watchful for the appearance of cuts, poor drainage, chuck holes and the like. Half an hour and a dollar spent to correct a fault will often prevent weeks of bumpy or muddy travel and the expenditure of half a day and several dollars for later repair.

Some see with the brain; some only with the eye.

## Prices Go Down; Prices Go Up

A recent market report contained the following two consecutive sentences: "Packer dressed hogs have declined 3 cents a pound, and country dressed hogs from 2 to 3 cents a pound. Ham, bacon and lard have advanced 1 cent a pound."

In other words, on the same day that the producer was receiving 2 or 3 cents a pound less for his dressed meat, the consumer was paying 1 cent more for his cured meat. Many persons will ask why, and few of them will receive a satisfactory answer. Did the cost of curing meat increase 3 or 4 cents a pound during that day? Did the cost of rendering lard and putting it in containers go up 3 to 4 cents that day? If so, why? If they did not, who pocketed that 3 or 4 cents that was lost somewhere between the producer and the consumer?

Most friends are fortune made.

## Farmer Will Save Democracy

The central office of the national board of farm organizations appeals to the farmers of the nation to save democracy by the one and only method in this time of stress—by feeding the starving world.

We have won democracy by the sword, but nothing will hold democracy except food, says the appeal.

Every farmer should bear it well in mind that the efforts which have been made in the last two years are nothing compared with the efforts that must now be made in the light of the demands of a hungry world.

Organized business is already preparing to send agents with catalogs of machinery into these countries. Organized business is efficient, but it is madness to think of capturing the commerce of the world without first providing food.

If the American public is deluded by the cry of the city papers as to the high prices of farm products, if it is so short sighted as to try to force farmers to produce goods below the cost of production—a manifest impossibility—then it is clear that there will not be food enough for ourselves, let alone the new young democracies which so need our help.

The business man should understand that the only way to save the world from the bolsheviki is by feeding the world. Any other policy will make all our holy efforts turn to dust.

# Part of Army Is Coming Home

## *Pershing Will Keep Strong Force for Occupation Servic*

General March, chief of staff of the war department, announced last week that plans were under way to return to this country something like 400,000 of the men of the national army now in Europe. This number will be returned as soon as possible, and others will come later. The first to come are sick and wounded who are able to make the trip. Already a few transport loads of the latter are en route to America, according to reports from London. Some of the soldiers to return are some who have never reached France, but had arrived in England only. There is a double purpose in bringing back all the men who can be spared as soon as possible—first, to get them back into the industries of this country, and, second, to avoid the necessity of transporting supplies to them.

It is announced that General Pershing will retain in Europe about 1,200,000 men to use in occupying German territory, assisting in the reconstruction work and policing various disturbed sections whenever necessary.

**CASUALTIES HIGHER THAN ESTIMATED.**

The statement by General March shows that the American casualties are more than double the earlier estimate. The total casualties, including the trivial wounds as well as the deaths and the serious wounds, are given as over 236,000 up to the date of the signing of the armistice terms. Since that date there have been some deaths from disease and wounds previously received. The deaths up to that date totaled about 53,000. The total casualties were made up as follows:

| | |
|---|---|
| Killed and died of wounds | 36,154 |
| Died of disease | 14,811 |
| Deaths unclassified | 2,204 |
| Wounded | 179,625 |
| Prisoners | 2,163 |
| Missing | 1,160 |
| Total | 236,117 |

**GERMANY COMPLIES WITH TERMS.**

While definite official information as to the extent to which the Germans have carried out the terms of the armistice is not given out, it is evident from news dispatches that they are vacating the invaded soil of France and Belgium and that of the Rhineland as rapidly as they can. The allied armies are following them up closely in all their moves, so that any infringement of the terms of the armistice can be punished. All of French soil is freed of the invaders at this writing, and in several sections the allied armies are on German soil. Alsace-Lorraine, which was stolen from France by Germany after the Franco-Prussian war of 1870, is again occupied by the French, assisted by the Americans and British. Luxemburg has been freed, with American and allied troops occupying it. King Albert of Belgium, for four years driven out of this country by the invaders, and all that time fighting with his armies, has returned in triumph to his former capital. Reports tell of the leaving behind of large quantities of guns and munitions by the Germans in compliance with the armistice terms.

**GERMAN NAVY IS SURRENDERED.**

The most spectacular and dramatic naval event in the history of the world occurred last week when the German navy began the actual surrender of itself to the allied navies in compliance with the terms of the armistice. After lying at anchor for more than four years, bottled up in its own harbors by the British fleet and her allied fleets, taking no part in the war save through her submarine activities, the German fleet, second greatest in the world, steamed out into the North sea in a column more than 20 miles long and turned over its magnificent warships to commanders and crews of the allies. The surrender is not complete at this writing, though there is evidently no intention of avoiding the strict terms of the armistice. The major portion of the German fleet is anchored under heavy guard in British ports, commanded by allied naval officers and manned by allied crews. This includes a large number of the submarines that for three years have roved the sea, destroying life and commerce. The reports say that about 400 war vessels of various types, representing all the allied nations, were drawn up along the route of the surrender march to officially receive the conquered navy. Not a demonstration of any kind took place. No conversation, official or otherwise, except the barest orders necessary passed between the officers and those of the German fleet. No celebration was made in any respect.

**GERMAN GOVERNMENT TAKES HOLD.**

It is evident from the reports that sift through from Germany that the government in that country is coping fairly successfully with the great revolutionary conflict that has been threatening to engulf the nation in anarchy. The fact that the armistice terms are being carried out with comparatively little actual complication is evidence that those in charge are to a remarkable degree masters of the situation. The naval surrender could not have been effected so peaceably and orderly had there not been some actual authority in control of it.

**PRESIDENT WILSON GOING TO EUROPE.**

President Wilson has definitely announced that he is going to go to Europe to attend the peace conference. He probably will go immediately after the convening of congress, early next month, and it seems that he is planning to spend several weeks in Europe. It is not officially stated, but it is understood that he contemplates making the American embassy in Paris his official headquarters while in Europe, thus being technically enabled to continue in charge of affairs in this country as president, the embassy in a foreign capital being considered American soil. If President Wilson goes to Europe as planned it will be the first time that a United States president will have been out of the nation during his term of service.

**SECRETARY M'ADOO RESIGNS POSITIONS.**

William G. McAdoo, secretary of the United States treasury and director general of the railroads under government administration, has announced his resignation from both positions and President Wilson has announced his acceptance of the resignations. McAdoo leaves office on January 1. He gives as his reasons for quitting that the salary he receives is not sufficient for his family requirements. His salary is $12,000 a year. He has been generally considered as the most likely democratic candidate for president in 1920, but it is considered doubtful what effect his resignation will have on this possibility.

**KAISER STILL IN HOLLAND.**

The kaiser is still in Holland, whither he fled upon receipt of the terms of the armistice from General Foch. Whether he can be taken out by the allied authorities to be punished is a question that is being taken up by authorities on international law. There is great speculation as to what fate awaits the kaiser and his accomplices for the crimes committed. It is claimed that England has several definite legal indictments for murder standing against him and that the British authorities may endeavor to extradite him from Holland in order to put him on trial for these crimes. Execution and exile are talked as possible punishments.

**WORLD WAR CASUALTIES ESTIMATED.**

Many attempts are being made to estimate the losses of the nations that have participated in the war. Nothing official is available, and will not be for many months, probably. The allied military leaders have arrived at estimates that give an idea, though they must not be taken as accurate. They estimate the total losses at something like 26,000,000 men, including killed, died of wounds and disease, wounded and missing. Nation by nation, except Italy, which has not bene estimated, these estimates are as follows:

| | |
|---|---|
| Russia | 6,000,000 |
| Germany | 6,900,000 |
| Austria | 4,500,000 |
| France | 4,000,000 |
| Britain | 2,900,000 |
| Turkey | 750,000 |
| Belgium | 350,000 |
| Rumania | 200,000 |
| Bulgaria | 200,000 |
| America | 236,000 |

**WAR PROHIBITION BILL IS PASSED.**

Congress has finally passed and President Wilson has signed the agricultural appropriation bill which carried the amendment prohibiting the sale in this country of intoxicating beverages after June 30, 1918, until the demobilization of the army has been completed.

**WILL IMPROVE THE RAILROADS.**

It is announced that the railroad administration plans to expend $900,000,000 during the remainder of this year and next year in extending and improving the railroads of the country. This announcement comes with a view, in part, of allowing the steel mills and other factories that produce material needed by the roads to continue to operate actively for the purpose of stabilizing as much as possible the nation's industrial life.

**FOOD PRICES 16 PER CENT HIGHER.**

Statistics gathered by the United States bureau of labor indicate that the average increase in the price of 20 of the principal foods during the last year has been 16 per cent.

**DROP CASE AGAINST LA FOLLETTE.**

The United States senate committee on privileges and elections has voted, 9 to 2, to drop the case against Senator Robert M. La Follette of Wisconsin, who was charged with seditious utterances more than a year ago.

## *Territory Germany Had to Evacuate*

This map shows several vital features. All the shaded portion is the territory that Germany was required to evacuate on the western front. It shows how much of Belgium and France was still occupied when the armistice was signed. It shows Luxemburg. It shows the "Rhineland," that territory between the Rhine and the borders of Belgium, Luxemburg and France, which had to be evacuated. It shows the neutral strip some 20 miles wide along the eastern side of the Rhine river that Germany must get out of in a few days more.

And then it shows one other vital feature—the line held by the American armies alone at the time the armistice was signed. From Sedan southward nearly to Nancy the double line to which the two black arrows point was held by the Americans. This is a 52-mile stretch, nearly one-fourth of the entire battle line.

## *Washington Gleanings*

Mr. and Mrs. Joseph Parker and family moved last week from their farm home near Burlington to their residence in Mount Vernon.

George P. Hedger, recently of La Monte, Wash., has purchased the Bailey & Wicks farm of 640 acres, just west of Clarkston, for $30,000.

The state convention of the Good Roads association, which was postponed on account of the influenza situation, is now scheduled to meet in Pasco on December 5 and 6.

Louis Sonny of Centralia has purchased 80 acres of coal land in the Salzer valley, east of Centralia, from Jack Salzer. Mr. Sonny will open a small mine on the property.

Arthur A. Prouix of Almira has the contract to grade and gravel two miles of road from Grant county line west. The grade connects with the completed work of the Sunset highway.

Tentative arrangements were made by the Walla Walla board of education to extend the school year to June 20, eliminate one week of Christmas vacation and if possible eliminate the teachers' institute.

A. W. Bridge sold his newly purchased residence property at the south end of Rainier avenue, in Eatonville, to J. J. James, recently from Oregon but formerly the owner of a ranch on Lynch creek, near here.

The South Bend Canning company increased its sales one-third this year, the total sales amounting to $32,000. On account of the dry weather the loganberry crop was small this year. The Bean crop was also light.

The last of the Entiat apple crop going through the packing houses was hauled in from the orchards last week. It is expected that packing will finish by December 15. This year's tonnage handled by the Entiat Fruit Growers' league will be well over 135,000 boxes.

The byproducts plant at Wenatchee formerly owned by the Skookum Packers' association is now in operation under the management of D. DeShane of the Puyallup and Sumner Canning company. The plant has a capacity of eight to ten tons of fruit daily. It is now running about half capacity.

The apple shippers of the Wenatchee district loaded and turned over to the Great Northern 75 cars of apples in one day and night recently. In some cases the sidings were emptied of loaded cars twice during the 24 hours, which represented some unusually swift work on the part of the warehouse and loading crews.

The sale of John Arveson's 55-acre dairy ranch at the city limits of Centralia to Joseph Kuffer has been announced. The consideration was $12,000, the transfer including all stock, implements and crops. The sale of W. H. Hurd's 40-acre farm, four miles northwest of Centralia, to Fred Rickenbach, also was announced.

The United States bureau of markets has opened a branch office at Yakima. W. C. Quick and F. W. Allen are in charge of the offices. E. S. Coe, formerly district inspector, is also assigned to Yakima. The staff is to continue investigating and demonstrating proper storage and the best manner of handling fruit in storage.

A. E. Charlesworth, a business man of Vancouver, B. C., has purchased 87 acres of the Richard Hogan estate, known as the Scammon place, at Chehalis. Mr. Charlesworth expects to build a number of modern farm buildings and equip the farm with all the latest modern equipment. A son now at Pullman will assist in operating the place.

Lewis county is to have a land settlement bureau, organized along lines that will bring effective results to take up the great work of reconstruction following the return of the American soldiers from France, and the demobilization of the army and navy. N. B. Coffman of Chehalis is chairman of the work, and will be assisted by A. F. Marsh.

Following the sixth annual meeting of the Washington irrigation institute, to be held at Yakima December 17 and 18, there will be a session of the Washington State Land Settlement association. At the land settlement meeting plans for the development of the state by the returned soldiers, under some form of national aid, will be discussed.

The organization of the recently incorporated Yellow Pine Box and Lumber company of Entiat was held last week and the following executives elected by the board of directors: A. E. Case, president; John A. Gellatly, vice president; H. F. Williams, secretary; C. E. Gray, general manager and treasurer. Work on the new factory will commence in the spring.

The largest potato deal ever consummated in the Yakima valley was made when the Yakima Potato Growers' association agreed that Denney & Co., of Chicago, should market the entire 1918 crop held by members of the association. Growers in the association have 3000 acres planted in spuds, from which the crop will be betwen 1200 and 1500 carloads. Han Benz of Toppenish will act as manager.

Sugar beet growers of the Yakima valley were paid the sum of $40,000 as the first monthly payment for beets by the Utah-Idaho Sugar company, which pays for the beets delivered on the 15th of each month. But few of the beets have been harvested, and it is estimated that the December 15th payment will amount to $450,000. The amount paid represents 4000 tons of beets, approximately the crop from 250 acres.

During the shipping season, which is about completed at Yakima, 110 cars of winter pears were rolled from Yakima, according to the report made recently. The winter pears this season sold for betwen $45 and $50 a ton, so the total crop represents a gain of about $123,000 paid to the Yakima growers. Most of the winter crop was Winter Nellis pears, which were exceptionally good in quality this year, while the trees bore heavily.

# Corn and Hogs

## On Land Usually Summer Fallowed

By J. E. NESSLY.

Seventeen thousand dollars gross receipts from 280 acres is the returns C. A. Hood of near Pullman, Wash., received from land that would otherwise have been summer fallowed, had he not decided to raise corn and hogs instead of allowing the land to lie idle last summer. He has the land in fall wheat, with a good stand and prospects of a good crop of wheat next year, probably better than if the land had not produced a crop this year.

Mr. Hood is a successful grain farmer, but he also raises hogs and corn successfully, as shown by his record for this year. He has 45 acres of his land in alfalfa. He pastures hogs on this during the early summer months. Last spring he had 280 acres that he planned to plant to wheat this fall. Had he followed the usual practice of the Palouse country he would have plowed this up and let it lie idle until fall and would have sowed it to fall wheat. Of course he would have had to cultivate it several times and that would have meant added expense. He decided to try a new experiment and it has proved a success.

He planted 100 acres to peas and 180 acres in corn. He had several hundred head of hogs. These ran on the alfalfa and had a little grain until the peas were turning ripe. He cut and threshed 45 acres of peas and "hogged off" 55 acres. By the time the hogs had cleaned up these peas and had the ground in fine condition for fall seeding the corn was ready to begin feeding. The hogs were fed corn and as soon as a carload was ready for market they were sold. Mr. Hood has sold three carloads and "topped" the Spokane market with his cornfed hogs. The three carloads of hogs brought him $11,000. Two carloads averaged 260 pounds each and he got 17 1-4 cents a pound for them in Spokane, which made them average $44.84 each.

Mr. Hood has two carloads of hogs on hand. He is "topping these off" with corn and expects them to bring at least $6000, making a total of $17,000 that he will get from his alfalfa and the corn and peas grown on land that would otherwise have been summer fallowed. The difference in the cost of raising the corn and the peas over the cost of summer fallowing the ground is very little, and he figures that he has made at least $50 per acre net profit above what he would have made had he summer fallowed the land instead of raising a crop on it.

Another farmer, near Pullman, who has made money this year by raising a crop of hog feed on land that he would have summer fallowed is C. E. Jennings, who lives south of town on the Genesee branch of the Northern Pacific. Mr. Jennings raised a lot of squashes, getting a yield of almost 23 tons per acre. He found these to be excellent hog feed when mixed with a little grain and is getting splendid results from feeding squashes to hogs. His success in raising squashes for hog feed has induced a number of his neighbors to try the experiment next year. He has also sold a large amount of seed of these squashes to his neighbors who will raise squashes and corn on their summer fallow land next year and raise hogs to eat these products.

# Grades in Apples

## About the Different Grading Rules

By GRANVILLE LOWTHER.

There seems to be some confusion in the minds of people in general as to what the agitation about apple grades means. "What are the present grading rules?" "What are the proposed changes?" These questions may be answered by copying the present rules, and publishing, for comparison, the proposed rules. But even then, there might be some confusion, and I have concluded that perhaps the better way is to rearrange the requirements of the present grade rules, so as to make comparison less difficult. I will therefore arrange them in different order from that in which they appear in the state laws.

Washington state apple grading rules season 1918, require that apples for grade 1, first grade, or extra fancy, be clean, hand-picked, mature, smooth, sound, well formed. Apples must not have blister rot, blemishes, bruises, diseases, dry rot, insect-pests, limb rubs, russet (except within the base of the stems), scab, scald, scale, skin broken at stem, skin puncture, watercore (visible), worms, worm holes, worm stings.

**Rules Proposed by Government.**

1. They use the term, first grade, instead of extra fancy, or grade 1.

2. Instead of saying, "clean, hand-picked, mature, smooth, sound," they say, "handpicked, properly packed apples of one variety, normal shape, uniform size, free from dirt."

3. Instead of saying that they must not have "bitter rot, dry rot, russet, scab, diseases," they say, "free from diseases."

4. Instead of saying that they shall not have "blemishes, bruises, limb rubs, skin puncture or skin broken at the stem," they say, "free from mechanical injuries." They also have a clause reading, "except those so inconspicuous as to not be detected in the process of efficient grading." This latter clause is intended to give to the grower of high-grade fruit assurance that a buyer or inspector can not reduce the grade (as is sometimes done if the market drops), on account of "minute, unimportant or microscopic defects."

**Prefers Tentative Rules.**

My preference for the tentative rules is based in part on the fact that they are broader, simpler and more comprehensive. Then, if they are adopted, they become governmental, therefore universal in so far as the boxed apple business of the United States is concerned. This is better than a different measure or standard for each and every section or state.

The Washington state rules define second grade, grade 2 or fancy, as "Apples complying with the requirements of the first grade, except that slight sun scald or other blemishes not more than skin deep shall be permitted up to a total of 10 per cent of the surface of the apple."

The tentative grading rules define second grade in a similar manner, but define more clearly and fully, that apples of "this grade must have a perceptible blush of color, and be free from any defects that would affect the keeping quality or materially affect the attractiveness of the specimen." They define further what insect injuries, fungus injuries and mechanical injuries are permitted, and what not permitted.

Under the Washington state rules, third grade, C grade, or fancy, includes all remaining apples free from infection, except that two stings to each apple shall be permitted if shipped in closed packages and marked third grade, or C grade.

In the tentative rules, two healed-over stings are permitted in the second grade; also pin holes or other surface injuries that are healed over and do not injure the keeping qualities of the apple. Fungus diseases and mechanical injuries are interpreted more liberally than in the state rules, and apples are permitted in the second grade, that, according to a strict interpretation of state rules, would be placed in third grade.

The state rules provide for a combination grade "which may include all other apple varieties not provided for in first and second grades."

The tentative rules provide for "an orchard grade" that shall consist of handpicked apples of one variety, from which the culls have been taken. It shall be unlawful for a person to sort from a lot of apples any of the larger sizes or better grades and then pack the remainder as orchard grade.

According to the tentative rules, "culls consist of apples which do not meet the requirements of third grade."

The third grade, according to the tentative rules, includes many apples generally ruled as culls. It would not include apples showing decay, worm holes, scale, or apples which are badly deformed. But it would include windfalls, stem punctured, bruised, hail-pecked, sun-scalded, watercored, seriously blemished by scratches, russet, limb rubs, spray injury, slightly deformed, discolored by scab, Baldwin spot, storage spot, uncolored apples from red varieties, and all other apples not included in second grade except culls. This grade does not require uniformity in size. They are supposed to be a cooking grade, to be pared before eating and, therefore, may lack the appearance or quality of dessert fruit.

Uniform in size shall be construed to mean that apples shall not vary more than one-half inch in their greatest transverse diameter.

In the provisions of the tentative rules, there is what is known as tolerance; which means that variations may be permitted in all grades to the extent of 10 per cent below the standard; provided that not more than 5 per cent of culls shall be permitted in each grade. Tolerance shall be computed by weighing, measuring or counting the specimens judged to be below the standard of the grade. An additional tolerance of 5 per cent shall be allowed for apples below the size as specified on the box.

Our present grade rules have been developed by evolution of thought growing out of our experiences. They have been changed and better adapted from time to time, but they still need changing. Perhaps changes will continue indefinitely, as we gain in experience and knowledge.

Among the growers, there is considerable agitation for a "two grade pack." This will probably be one of the main points of discussion at the Spokane conference, December 10-14. It is argued that this would simplify and cheapen the work of sorting and packing. This contention is doubtless true, but whether it would cheapen the second grade so as to result in final loss, I am not sure.

# Working Plan of Farm Bureau

## By H. W. HOCHBAUM, Idaho County Agent Leader

The county farm bureau is an organization of the representative rural people of the county. They are brought together in this organization to work out some of the outstanding farm and home problems of that county, under their own leadership. They are the people of a county who are most interested in the more profitable development of farming and the development of more satisfactory home and social conditions, brought together to determine just which are the most important problems that stand in the way. They then look about for the men and women of experience, best fitted to lead in the solution of these problems and, with the help of the county agent or other county extension leaders, get to work to meet these problems in organized fashion. In all this they will draw on the experience, interest and enthusiasm of the rural leaders throughout that county. Through the farm bureau a plan is carefully worked out to determine just how each problem may best be solved with the help of these leaders.

Thus, for example, a certain disease may be causing such losses of cattle throughout the county that profits are materially cut down.

The first essential is to recognize the problem.

The second, the determination to meet this problem over the county by getting every one to help.

The third, to show a practical method of meeting the problem with the help of local live stock men of experience and live stock specialists from the state or federal government.

Then a campaign may be made. Farmers throughout the county are shown the cheapest and most efficacious way of preventing losses from the disease. Farmers themselves lead other farmers to become interested in the methods and in getting every one to do it. The great majority are interested and, through the results obtained, take more active interest in the other problems a farm bureau may have outlined.

### The Working Force.

The governing head of the farm bureau is an executive committee. This is made up of president, vice president, secretary and treasurer and from five to seven other members, elected by the members. Each is chosen because of special fitness, by experience, to lead some phase of the program on which the farm bureau is working and to guide, advise and help the county agent in carrying forward that program.

The executive committee appoints a leader in each community to serve as chairman of a community committee. This community committee, comprised of from three to seven leaders, is selected again because of the experience and leadership of the individuals. Every committee member represents the farm bureau in his or her community, and the community in the farm bureau. Each serves to interest the people of that community in the problems on which the farm bureau is working. Each acquaints the farm bureau as a whole, with the local problems of that community. This committee is the working unit of the farm bureau in a community, the force through which the farm bureau reaches the people of a community, nonmembers as well as members. In all of its work the farm bureau tries to reach all the people. All the meetings are open to every one. There are no meetings of the members alone.

### Bureau for Every One.

The farm bureau is nonpolitical, nonsecret and nonsectarian. Democrat works with republican, and the granger with the man from the Farmers' union in getting others interested with them in working out the outstanding rural problems. There is in no sense competition with existing rural organizations nor any attempt at federation. The farm bureau's job is to help improve the farming and home life of a county, and people join it because they want to work with the farm bureau in carrying out this program. The main thought back of the membership fee is to find thereby just those rural people who are most interested in the better development of farming and home life, and who will work and lead because of this interest, and because of their faith. The officers and committeemen are selected because of their ability to lead and their experience. Many of these belong to other rural organizations. But in this more informal organization all work together to carry on the farm bureau's program. Summed up, the farm bureaus spell organized self-help.

# Plan Fruit Program

The program committee having in charge the Northwest Fruit Growers' conference, which meets in Spokane December 10, 11, 12 and 13, is planning on having a number of noted speakers present. Among them will be John Y. Beaty of Chicago, managing editor of System on the Farm. He will speak on the subject, "The Business Side of Fruit Growing." Other speakers will include W. S. Thornber of the state college extension department, Professor Whitten of California, for many years in the horticultural department of the University of Missouri; J. L. Dumas, well known northwest fruit grower; President E. H. Lindsley of the University of Idaho, and President E. O. Holland of the State College of Washington. It is also planned to have a representative of the bureau of markets from Washington, D. C., in attendance, but that one will be available is not yet definitely announced.

### Yuletide Candle Popular.

The lovely Yuletide candle is again in the window and bids fair to be a popular Christmas gift. The cheeriness of a great red candle makes it welcome this season when we cast about for a simple and cheery gift.

TO the Editor: Enclosed find five cents for farm service flag. As there are nine of us in the family and we all work, I guess we are entitled to nine stars. There are myself and wife and seven boys who all help. I am also enclosing herewith 50 cents for a three years' subscription to The Washington Farmer.

# Skimmed Milk Value

Recently a commission representing the food administration, the dairy commission of Wisconsin and the University of Wisconsin made an extensive investigation of certain phases of the dairy industry in that state, especially with a view to determining an equitable value for skimmed milk. The result of the investigation was the agreement that 80 cents per 100 pounds was a fair value of skimmed milk in that state. The commission determined this value on the basis of the value of corn, the value of the skimmed milk to be made the same as one-half the value of a bushel of corn. It was calculated that of the average 100 pounds of whole milk delivered at creameries 85 pounds should be considered skimmed milk. At the 80-cent per 100 pounds rate that would make the skimmed milk to each 100 pounds of whole milk worth 68 cents, which the producer should receive in addition to the price of the butterfat, in cases where he does not desire to receive the skimmed milk back for feeding on the farm.

These figures naturally would vary for different producing districts, especially when corn is used as the basis upon which they are determined. For feeding pigs and chickens skimmed milk has a value which in many cases would lead a producer to bring the skimmed milk home rather than sell it for the equivalent of half a bushel of corn.

# Figuring Cost of Milk Production

## *The Cost of the Main Dairy Feeds Is Used as the Basis*

Assuming prices as in the following table the cost of the 100 pounds of milk is ascertained in accordance with Dr. Pearson's figures thus:

| | | |
|---|---|---|
| Grain, 44 pounds at $55 | ($55x .022) | $1.21 |
| Silage, 188 pounds at $8 | ($ 8x .094) | .75 |
| Hay, 50 pounds at $27 | ($27x .025) | .67 |
| Bedding, 39 pounds at $10 | ($10x.0195) | .19 |
| Labor, 2.42 hours at 40c | | .97 |
| Average yearly herd cost, per hundredweight | | $3.79 |

This average herd cost in the nature of the case can not be the exact cost in practice, for the reason that so many varying factors enter into the consideration.

The above rapid method of figuring the cost of producing 100 pounds of milk anywhere that prices of feeding materials and labor are known is deduced from tables on milk production cost prepared by F. A. Pearson of the dairy division of the University of Illinois for the dairy districts of Chicago. The method is based on the cost of each of the three main classes of dairy feeds in a well-balanced ration—concentrated, succulence and roughage—plus cost of bedding and labor involved. The tables were prepared from data obtained from 35 dairymen, milking 1000 cows.

The approximate cost of producing 100 pounds of milk is found by multiplying the prevailing price of grain by .022, of silage by .094, of hay by .025, of bedding by .0195 and of one labor hour by 2.24, and adding the products.

These figures are less mysterious than they seem, being merely the cost of the grain, silage, hay, bedding and labor requisite to the production of 100 pounds of milk at $1 per ton and the number of man hours of labor. The amounts of these materials as ascertained by Dr. Pearson are as follows:

Grain, 44 pounds; silage, 188 pounds; hay, 50 pounds; bedding, 39 pounds. The first set of figures used in this article was obtained by multiplying each of these amounts by a dollar-a-ton price. It gives a sort of common denominator by which any dairyman or farmer may determine the cost with a fair degree of accuracy.

Among the varying factors entering into the computation are the efficiency of the cow, the quality of the feed, the efficiency of management and intelligence of labor. But the method will enable producers and consumers alike to reach a working knowledge of the cost, which should enable them, dairymen say, to adjust their differences due to lack of knowledge of what milk production costs under average production conditions.

"In addition to the above," says Dr. Pearson's report, "debits are horse labor, interest, buildings, equipment and miscellaneous costs. Credits not included are stock increase, manure and miscellaneous items. Both of these may be disregarded in the computation, because it may be assumed that they about offset each other."

Another varying factor is the fluctuating cost of production at different seasons of the year. The average cost of production for each month of the year may be obtained from a table of monthly deviations from the average monthly cost prepared by Dr. Pearson as follows:

| | P. C. | | P. C. |
|---|---|---|---|
| January | 119 | July | 83.7 |
| February | 114.3 | August | 94.2 |
| March | 116.5 | September | 96.7 |
| April | 94.2 | October | 109.2 |
| May | 73.2 | November | 118.3 |
| June | 70.6 | December | 126.3 |

By multiplying the average monthly cost by the percentage for any given month the cost of production for that month will be obtained. This will be true only to the degree that the production cost in Oregon or other dairy districts varies with the cost in the Chicago district. Due to the exceptionally fine dairy conditions obtaining on the western coast, the variation in summer and winter production cost may be considerably less than the variation in the Chicago district. The table is based on the record for 1000 cows in the Chicago district, over the 10-year period from 1907 to 1917.

(Note by writer: The Illinois data were submitted to the writer by Dr. W. H. Dreeson, who for several years worked on the records carried by the dairy farmers and who has recently joined the staff at the Oregon Agricultural college as instructor in rural economics. The cooperation of Professor E. B. Fitts, dairy extension specialist of the college extension service, in checking over the figures is also acknowledged.)

### Bells Invented by Egyptians.

The invention of bells is attributed to the Egyptians, who are credited with having made use of percussion instruments to announce the sacred fetes of Osiris.

Increase Your Cream Profits!

## Basis of Hay Value

There is no hope for the hay producer unless there is live stock to eat it, says G. R. Hyslop of the farm crops department of the Oregon Agricultural college. Professor Hyslop says that there must be a proper balance between the amount of hay produced and the amount of live stock produced, as hay value is determined ultimately by the live stock that there is to consume it. He says that if the present tendency of stockmen to dispose of their stock rather than to buy feed for it is continued there will inevitably be a surplus of hay next season and a corresponding period of low profits or loss for the hay producer.

## VETERINARY

By DR. S. B. NELSON.

**Catarrhal Enteritis**—I have a 5-year-old cow that has been well and in good flesh. She was all right and gave her usual amount of milk in the morning, but during the day she got sick. She would lie down and get up and seemed in pain and did not eat much. That night and next morning she gave very little milk and during the night she passed from her bowels what looked to be a small intestine or the lining from a large intestine. It was three or four yards in length. In a day or so she was giving her usual amount of milk and seems all right again. She has been on pasture of mixed grass and I feed her a little grain hay. Could you tell what was her trouble from the symptoms I have given? H. D.
Lyons, Ore.

Your cow is affected with a catarrhal enteritis and the portion discharged was a cast of the internal surface of the intestine, due to the exudation of semi-carbonous material from the mucus membrane. It may have been to a very large extent mucus in character.

**Cow Has Lost Her Cud**—We have a Holstein cow that has lost her cud as she doesn't rechew any more and is getting pretty thin. Would you kindly have Dr. S. B. Nelson tell us what to do for her? S. B.
Alberton, Mont.

The losing of the cud is a symptom in the cow that she is affected with some trouble and has lost her appetite, and her digestion has been stopped. Whenever the animal recovers from the trouble digestion resumes and the cud comes back. As you give no other symptoms except the losing of the cud I am going to take liberty of suggesting that in the majority of cases this occurs from digestive trouble, and therefore the digestive canal should be cleaned out and purged the very first thing. Give the cow, according to her size and strength, from one pound to one and three-quarters pounds of Epsom salts in three to four quarts of water. If she is not very strong try giving in lieu of the salts a pint of raw linseed oil night and morning, and with a quarter to half a pound of Epsom salts once every other day. After two or three days give her one ounce of compound tincture of gentian, one tablespoonful in a pint of water once daily. Do not be in a hurry to feed her, but begin very gradually with a small quantity of either green or easily digested food, such as a scalded bran mash, with plenty of liquid in it and a little bit of salt mixed with it.

**Catarrh and Goitre.**—Seven months ago we bought a 10-year-old horse that had a lump the size of a tea cup on throat, also slight swelling from temples to throat. When he lowers head to eat there is a thick whitish matter, sometimes green, runs from nose. It smells similar to skunk. It affects breathing when worked and seems sore. Doesn't cough, but makes an awful noise like he was snoring when resting and sleeping. Was worked hard and very poor when we bought him, but is fat and eats well now. Bowels and urine in good condition. What can we do for him? K. A. W.

I am of the opinion that your horse has two troubles, and that there is no relation between the lump on the throat and the condition of catarrh which he seems to be affected with. The lumps on the throat are probably swollen thyroid glands, generally known as goitre. Possibly the application of the U. S. P. iodine ointment, daily applied for a considerable period of time, may be of some value. The other condition, that is, the catarrhal one of the nostril, is due to some trouble up in the head. The fact that he makes a noise like snoring would seem to indicate that there is a lessening of the nasal passages, due either to the swelling of the tissues in there, or to foreign growth. Only the personal examination could make a positive diagnosis.

**Pigs May Have Rheumatism**—Could you please tell me what is wrong with my four month pigs? They become lame in their left hind legs then stiff over their backs, which becomes a continual paralysis in their hind quarters. Could this condition come from lying on the damp ground during the day. I feed carrots and shorts and they run on alfalfa. Could you give me an early reply through the Farmer, as I am anxious to know what to do. M. S.
Davenport, Wash.

It is quite possible that your pigs are suffering from rheumatism. I would suggest a purge of one ounce and a half of castor oil to each pig. The next day begin feeding 10 grains of potassium iodide in a little slop before you feed them their full amount. Give this once daily for five days.

**Pumpkins as Cow Feed** — Please advise through your paper if pumpkins are a good feed for milk cows as I have plenty of them, but have had no experience in feeding them. J. L. S.
Rockford, Wash.

Pumpkins are good feed for milk cows when they are fed as roots or mangels would be with sufficient grain and hay feed. They generally have very beneficial results.

*The Fellow who argued with Jim the other night*

*ran up against the shock of his life.*

*Jim knows tobacco.* And before he got through, Jim made the fellow admit that Real Gravely tastes better and gives a satisfaction you can't get out of ordinary tobacco. A small chew of Gravely lasts so much longer that it costs nothing extra to chew this class of tobacco.

# Wheat Ban Removed

The order of the food administration removing the ban on the feeding of wheat to poultry and other live stock is welcome news, first, because it removes the specter of a bread famine, and second, it relieves to some extent the feed problem for poultry keepers in the northwest.

It is not desired nor expected by the food administration that large quantities of wheat be fed, but only in cases where it is difficult to secure other feed at a price that will make feeding profitable, or in cases where farmers may not have a market for the wheat. It will still be a patriotic duty to conserve the supply as much as possible, but there will be no particular patriotism in the farmer selling his wheat at $2 a bushel and buying corn or other feed at a higher price.

It has been pretty well demonstrated in these strenuous times that the feeder has gone through, that a good egg yield may be secured with whole grain entirely omitted from the ration. Corn, oats and barley have given good results. If the poultryman has the wheat by-products, bran and shorts, he can leave the whole wheat out of the ration and the egg basket will not show any lack of munitions.

There is no particular necessity now for the feeding of wheat. The prices of other coarse grains, corn, oats and barley, are now considerably lower than several months ago. With the large corn crop in the east and with December corn quoted at about $1.20 a bushel at this writing, that will mean that corn can be laid down in this territory at $50 a ton or less. At that price it will be poor business to feed wheat at $2 a bushel or better. Corn and a few oats with mill-run and the usual other extras will meet all the requirements of a good egg ration. J. D.

### WESTERN POULTRY WIN.

The final report from the Storrs experiment station, October 31, sums up the year's contest as follows:

"The seventh international egg laying contest at Storrs ended late Wednesday afternoon when hen 982, a White Leghorn from Lakewood, N. J., laid the last egg. The two outstanding features of the competition just ended are the remarkable performance of a pen of birds from Corvallis, Ore., and the individual work done by White Wyandotte hen No. 195 from Bridgeton, R. I. At this point it may be said that during the last five years the poultry department at Storrs has trapnested over 5000 hens, representing 30 different breeds and varieties, from 20 states and including birds from Canada and England. The pen of 'Oregons,' entered by the Oregon Agricultural college has beat them all. These 10 birds laid 2352 eggs, as compared with the best previous record of 2265, made two years ago by a pen of White Wyandottes."

The second best pen laid 2179 in the contest just closed. The Oregons, therefore, had a considerable lead of 173 eggs. The average pen laid 1589 eggs, or 763 eggs less than the Oregons laid. The latter average was 235.2 a hen.

It is believed that the record of the Oregons establishes a world record in laying contests for a pen of 10 birds. In one or two other cases with five birds in a pen this record has been exceeded. The smaller the number in a pen the greater the chance of a high record.

The Hollywood pen of Leghorns from Hollywood, Wash., won third place with a production of 204.3 a hen.

There were 100 pens in the competition. The best individual record was made by a hen of the Knight pen of Wyandottes, which laid 308 eggs, the first 300-egg record secured in that competition. The Press Bulletin says of this hen: "This bird is second best in a class of only four American hens with official records of more than 300 eggs each. The following table shows these four leading layers with their records, and where they were made:

White Leghorn, Delaware contest, 314 eggs: White Wyandotte, Storrs contest, 308 eggs; "Oregon," Oregon Agricultural college, 303 eggs; White Rock, Vineland contest, 301 eggs.

# Why Not a Fur Farm?

When one talks of a farm where fur-bearing animals are bred and raised for their fur, it too often seems that he is talking something more fanciful than practical. In the same way it is probable that if any one had suggested to the old nomads or the Indians that farms might be developed where horses and cattle and the like could be domesticated and produced for their labor or their meat, they would have dismissed the idea with a gutteral "Humph!"

There are many fox farms in the northland where foxes are raised for their fur, and, where logical methods are followed, the results are successful, just as logical methods of cattle or swine breeding produce success. In many parts of the world skunk farms are operated for the same purpose, as skunk fur is rapidly becoming one of the world's valuable products.

The question arises: Why could not domestication of many of the fur-bearing animals be effected in greater or less degree profitably? Muskrat fur, for instance, is valuable. Why could not a boy, through whose farm a stream runs actually fence in a part of that stream and raise muskrats? Or, if the locality were right, the mink? There are sections of the northwest where the raccoon is a common animal. Could he be domesticated or confined and produced for his fur? Weasel fur is worth taking whenever the slender little pest appears. Possibly it would be worth production under supervision.

It probably will be a long time before fur farming will become common. Possibly it never will. But it is not a far stretch of the imagination to see the time when the fur-bearing animal will be rare unless some steps are taken to increase, rather than diminish his numbers.

### WET ROADS BAD ON TIRES.

It is said that wet rubber is much more easily destroyed than dry rubber, and that for this reason travel over wet roads is much more destructive on auto or truck tires than is an equal amount over dry roads.

### Long Submarine Cable.

One of the longest submarine cables in the world is to be laid between Aden and Hong Kong at a cost of $8,000,000.

### Woman Is Deep-Sea Diver.

This country has one woman deep-sea diver.

# Power, Mechanics and Devices

The common term, "horsepower," used in connection with machinery has nothing to do with the power that an average horse is capable of developing. It is simply a term used to indicate the capacity of a machine for doing work. One horsepower is that capacity which will do work equivalent to raising 33,000 pounds one foot in a minute of time, or 550 pounds one foot in a second of time. This does not, of course, mean that a machine must be strong enough to lift or pull 33,000 pounds, but that it is capable of exerting a pull or lift of something much less than this, perhaps, through a much greater distance than one foot. For instance, a machine that had a pulling power of 330 pounds would do one horsepower of work if it exerted that 330-pound pull through a distance of 100 feet in one minute.

### ELECTRIC BUTTON ON THE FARM.

It's a great day for the farmer and his family when they can press, for the first time, an electric button in their own home. How much easier it is to press the button than to operate the pump by hand for an hour or more, and how much time it saves. While electricity is pumping the water, the farmer can be doing something else, perhaps pushing other electric buttons and starting other machines and appliances about the place.

By pressing an electric button, the farmer can also have plenty of safe, bright electric light wherever he wants it. There is no more groping about in the dark when he does the chores early in the morning or late at night. He can have a safe light in the hay loft, in the grain bin, behind the stalls, in the yard, in the cow barn and other buildings. He no longer needs to worry about the lantern upsetting and starting a fire—and how much better he can work with plenty of electric light!

The farmer's wife welcomes electric service with even greater joy and gladness than the farmer. The washing machine, churn, cream separator, sewing machine, vacuum cleaner, electric iron, electric fan and many other household appliances can all be operated by electricity. The electric light plant also makes it possible to have running water in the kitchen, bathroom and other parts of the house.

### RURAL MOTOR EXPRESS.

In a report to the members of the National Automobile Chamber of Commerce S. A. Miles, member of the motor truck committee, showed both an increase in the food supply of the country and a growing appreciation of the necessity for motor trucks for rural routes to the saving of the time of the farmers and to the lowering of costs of the food supplies to the general public.

What may be accomplished is indicated by a report of the Motor Truck Overland Express, which runs between Albert Lea, Iowa, and Mason City, Iowa. The company operates a three-quarter and a one and one-half ton truck, which recently made a trip of 42 miles in a rainstorm, over new dirt road, 84 miles for each car, in six hours and 40 minutes. The smaller truck carried 2200 pounds and the larger 3800 pounds. The expenses of the trip of both trucks, including overhead, depreciation, interest, etc., was $24.80. The same loads by freight would have cost $41.40.

U. S. Government Positions
have drained the country of the best gasoline engine mechanics everywhere. Thousands of positions are now open to qualified men. Learn the AUTOMOBILE and TRACTOR business in the largest and best equipped AUTOMOBILE and TRACTOR schools in the west. We teach this business in a thoroughly practical manner. You actually work on the engines or tractors and automobiles just as you will be required to do in a garage, repair shop, or as an operator. Do not waste your time in a poorly equipped motor school when you can go to a real school.
Our school is equipped with the latest types of AUTOMOBILE engines and stationary engines from one to twelve cylinders, TRACTORS of the heavy type and caterpillar or crawler systems. We have every type of electric starter, magneto, carburetor, generator and transmission made. We have brand new engines with which to test magnetos and carburetors. We teach the use of heavy fuels. Our instructors are the best informed men in the country, being originally superintendents of factories and service stations. Our school is well located, well ventilated, steam heated, is fireproof and is equipped with sanitary drinking fountains, etc. Do not delay, but learn this wonderful, fascinating and well paying business at once. Don't spend your money to go to a school a thousand miles farther away that is not as well equipped as this school. Call at main office or write at once for information and free catalogue. Special rate for a short time to those that are alive. Address
MODERN AUTOMOBILE & TRACTOR SCHOOLS, A1803 3rd Ave., Spokane, Wash.

GRANVILLE LOWTHER,
Editorial Contributor.

# Grafting Fruit Trees

I have a letter from Melvin J. Knorr, Medimont, Idaho, asking about the best time to graft orchard trees, the best method of grafting and the best kind of wax to use.

First in importance is selecting the grafts. Care should be observed to select grafts from wood of the previous year's growth, not water sprouts, for they are later in bearing. Select from the best bearing trees of the variety you desire, for trees, like animals, transmit their individual characteristics. The best time to select grafts is late in the autumn or early winter, before the wood freezes. But spring cuttings are generally used. If cut long before grafting, they should be kept in a damp place so that they will not become too dry before grafting.

The best time to graft is in the spring, after the sap begins to flow, as the buds are beginning to burst.

The ordinary method of grafting is called "cleft grafting," in which the scions are cut into wedge-shaped bases, then the stalk split and the wedge inserted into the cleft stalk. Care should be used to have the inner bark, or cambium of the graft come into contact with the cambium of the stalk, in order to insure proper circulation. Two grafts, and if the stalk is large, four are inserted into each and every stalk.

The formula for grafting wax most commonly used would be resin seven pounds, beeswax two pounds, tallow one pound. Heat, mix well together, pour into cold water, grease the hands and work it like taffy. I would not cut off all the top in one year. I would cut half or one-third the first year, one-third the second and one-third the third. Grafts and trees do better by this method than if all the grafting is done in one year.

G. L.

# Care of Trees

## Whitewashing and Painting Parts

BY GRANVILLE LOWTHER.

I have an inquiry about whitewashing the trunks, butts and large limbs of trees. Also a question about painting with linseed oil and white lead. The questions are from George M. Reasoner, Pasco, Wash. Mr. Reasoner asks further, "Do you think it possible that something will be found to destroy the codling moth?"

Now in regard to the first question, would say that whitewashing with lime has always been considered good for trees. However, if I were doing it, I would mix sulphur with the lime and put it on about twice as strong as for the ordinary spray for scale. This will get all kinds of scale, codling moth hibernating in the bark, and other insects.

The government whitewash for trees is recommended to be good. I have never tried it, but I have faith in it because it has the right ingredients and because it has been tried out by the government authorities. The formula is as follows:

Air-slacked lime, 30 pounds; tallow, four pounds; salt, five pounds; water enough to make the wash flow well.

As to painting the trees, authorities differ. There is no question in so far as I know about painting wounds to exclude the air; but when it comes to painting the whole surface of the trunk, it is claimed by some that it checks the circulation of air by stopping the pores of the bark and thereby causes the same kind of damage as would be caused by painting the skin of the human body, only not so severe.

Now in regard to the control of codling moth: I do not know what we can do except what we have been doing, but we will have to do it with greater vigor. There are contributory remedies. For instance, if we would scrape the loose bark off the trees many of the codling moth pupa that hibernate in the bark during the winter would be destroyed, provided the bark is burned or chickens allowed to gather them up. Then to whitewash the trees would kill scale and other insects. As orchards grow older and the bark on the trees furnishes better hiding places it will be harder to control pests. Now if all the contributory methods known are used in connection with the ordinary methods, which are the main remedies, then I think we will bring the pests under control. In all the fruit growing districts of the northwest there have been complaints during the last few years of the damage to fruits by orchard pests. I think that it is partly due to the fact that we are growing alfalfa in the orchards in order to improve the soil, and that often at the proper time for spraying we are cutting and saving the alfalfa hay. To spray at the right time would poison the hay enough to damage stock, and we wait until the hay is off—perhaps two or three days too late. However, this is not by any means the whole trouble. One man in our community has a theory that to have coal oil burners going in the orchard, one or two for each acre, at night would attract the moth, for like other moth they hide away in daytime and work at night, but would destroy themselves in the night by flying into the light.

# Our War Time Plan

## Saves You Money in Days of Peace

The subscription plan which was adopted as a war measure will be no less valuable in times of peace and reconstruction. For many months—perhaps for years—man power will be at a premium for building ships, tilling the soil and many other activities. You can release men for these tasks, and at the same time make a worth-while saving in money by sending in your subscription orders direct.

He used to drive a rig, gathering subscriptions. Now he is driving rivets in the shipyards.

### *The Washington Farmer Subscription Plan Conserves Man Power*

To do its share, The Washington Farmer has dispensed with its usual big force of subscription agents. In place of these we urge our readers to send in their own and their neighbors' subscription orders direct.

This plan gives the subscriber the benefit of every penny which would ordinarily go toward paying the salary and expenses of the subscription agent. It brings our friends their state farm paper at a fraction of what it used to cost and at a price far below that which other high-grade farm and family papers generally are obliged to ask.

In order that our readers may continue to save money on their subscriptions, we ask every subscriber to send in his or her renewal well in advance of the date of expiration stamped on the address label on the wrapper, and that you will also make an effort to send in the orders for your friends and neighbors with your own. Assistance of this kind, so cheerfully given by hundreds during the past year, will assure the success of our second year of cooperation.

**Remember—you receive The Washington Farmer every week—fifty-two great big issues in a year, chuck full of the best of all-around family reading at the remarkably low cost, under our cooperative plan, of only 50 cents for 3 years. Send your orders in today and get your share of the money saved.**

**Rates:-25c For 1 Year 50c For 3 Years $1 For 5 Years**

**The Washington Farmer,** Nov. 28.

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# German Socialism Defined

## *Will Fanaticism or Sanity Control Germany?*

By E. A. BRYAN, Idaho Commissioner of Education.

What class of people are the United States and the allies dealing with in Germany today? Will they be able to set up a government that can be depended upon as safe and sound and stable? Dr. Bryan has written the following article discussing the German socialist philosophy at the special request of this paper that its readers may better understand the great, new problem with which the allies must deal in bringing in an era of constructive world peace—Editor.

THERE have been many brands of socialism, or rather many uses and misuses of the term. Each man who calls himself a socialist makes his own definition and repudiates all others. So, whether his beliefs are merely for a broad philanthrophy on the one hand, or verge to the opposite extreme of red-handed anarchy on the other, he describes his position by this much-used and much-abused word.

What I call "German socialism" refers to the third great movement of socialistic thought in which the leaders were practically all German, and in which the system was characterized by the German despotic and all absorbing conception of the state.

Built upon this foundation, it has certain broad characteristics.

First, all the people in civilized nations are divided into two distinct and opposing classes—the proletariat and the bourgeoisie. These are foreign words and hard for the American to use and understand, but everybody belongs to the one or the other group.

Roughly speaking, the proletariat are non-property owners and the bourgeoisie are property owners; roughly speaking, the proletariat are the unattached wage-earners; the bourgeoisie are property owners and employers of labor. In Europe a bourgeoisie is a middle-class man, above a peasant or wage-earner, and below the gentry, socially speaking. He is a farmer, merchant, manufacturer or business man. Professional men are likewise classed as belonging to the bourgeoisie.

Oftentimes, the educated, whether owners of property or employers of labor or not, are classed as bourgeoisie. Oftentimes, too, socialist propagandists, highly educated, and perhaps rich, frequently described as the "intellectuals," class themselves with the proletariats and espouse their cause.

According to the theory, there is perpetual and eternal war between the proletariat and the bourgeoisie. Allegiance to the proletariat, or workers throughout the world, is superior to any national allegiance. Indeed, it is generally assumed that governments as they now exist are but instruments in the hands of the bourgeoisie for the exploitation of the proletariat. The war between these two classes can end only when all are reduced to the status of the proletariat. To reach that end, all the "instruments of production" must become the property of the state, and private property, except in consumable commodities, must cease to be. That is to say, not only must all railways, manufactures, mines, forests, etc., but all farm lands, tools, machines, live stock, and all other instrumentalities by which wealth is produced, must become public property, and must cease to be private property.

The farmer sometimes is fooled into thinking that he belongs to the proletariat. On the other hand, he is the most distinctive representative of the bourgeoisie or middle class. If ideal German socialism should prevail, he would lose his lands, horses, live stock, tools, machinery—everything by which he creates wealth, except his bare hands.

Second, the German socialism conceives of the supremacy of the state (the government) and the subjection of the individual. Officialdom, since all production would be by the state, would multiply almost infinitely. We would still have two classes, for there would be officialdom and the rest of us. The German autocracy, in which the autocratic bureau would be chosen by the people, but would be none the less but even more autocratic, would supplant present governments and not only production, but the minutest domestic affairs would be governed thereby. Enforced labor of each individual must follow such a scheme.

Third, the system is founded upon a purely materialistic theory of the race. Happiness, progress, self-expression, is determined wholly and solely by our material surroundings. Wealth brings happiness; its absence brings crime and misery. It is the one determining factor in the status of the human race.

It goes without saying, and yet is boldly professed by its great philosophic leaders, that the family as it now exists would disappear under such a regime. The church as it exists would disappear—and that is hailed with delight. The "overthrow of the existing order," of which the orators prate, but which is not understood by the commonalty, means the overthrow of society as it is founded on property and property rights, and the erection of a visionary Utopia, of which the world has no historical example upon the ruins of the present social order.

The commonalty does not fully understand when the orator talks about capitalism. They think he refers to some capitalist—J. P. Morgan, or some other. They do not refer to a capitalist or speculator. They refer to that system of government by which you own your farm, your plows, your stock—that system by which you have earned your living and saved something for a rainy day, that system by which you provide for your children and the old age of your parents.

Property, which is fundamentally attacked by bolshevism and other forms of socialism, was not made by any government or any class. It grew up and was not made. It is more fundamental than law and constitution and governments, whether monarchical or republican. Laws and constitution came to regulate it and secure it and prevent its abuse.

There are two fundamental institutions of human society—the family and property. The overthrow of the latter would render the former a breeding pen. Property is essential not only to the welfare and progress, but to the survival of the human race. All history shows this. No doctrine which arrays class against class can or should survive. The Christ doctrine, "All we are brethren," must be the foundation of all society. Economic inequality is both necessary and desirable. Its evils, governments must correct, and forever be the champions of the weak against the strong.

There is no more poisonous doctrine than the socialistic theories which are fundamental to bolshevism and German socialism. Whether the end is to be secured by murder and arson or by slower methods of evolution, the doctrine is equally false.

It is because of the belief that there is an eternal state of war between the proletariat of all nations and the bourgeoisie of all nations that we have spikes driven in saw logs to ruin the machinery, ties cut too short for use, matches thrown into wheat shocks, sabotage practiced by employes, work stopped under any pretext. It is war. The design is to make ownership unprofitable; to destroy the class that saves and owns and creates. I. W. W. ism, bolshevism and German socialism are fundamentally one—all alike aim at the overthrow of the existing order of society established on property and property rights.

One word more. The socialist party and the social democratic party of Germany today include thousands of men who do not accept the fundamental doctrines of German socialism or bolshevism. They are political parties and as such are primarily a protest against the oppression and injustice of the autocratic dynasty, by which Germany has been crushed. They are united in political protest against a political system whose overthrow they jointly seek. The members of these parties, perhaps a majority of them, would repudiate the economic and social doctrines of German socialists. It remains to be seen whether by intrigue, as in the case of the bolsheviki of Russia, the fanatics who hold to the fundamental theories of German socialism get control of the political organization which bears the name.

# SIDELIGHTS

**His One Mistake.**

"We played fool," declared the crown prince. "I see it now."

"Huh?"

"We had the whole world to pick a fight with."

"Well?"

"And look at the crowd we picked out."—Louisville Courier-Journal.

**His Preference.**

"I'm a very busy man, sir. What is your proposition?"

"I want to make you rich."

"Just so. Leave your recipe with me and I'll look it over later. Just now I'm engaged in closing up a little deal by which I expect to make $3.50 in real money."—Brooklyn Citizen.

**Completely Scrambled.**

A case of new-laid eggs upon his back, the toiler made his way along the pavement.

Guess what happened?

It did!

Ruefully the man regarded the scattered debris of shells and running yolks. Then he proceeded gingerly to collect the few eggs that had remained unbroken.

A passing pedestrian volunteered a cheering word.

"My poor man!" he exclaimed. "Have you dropped your eggs?"

"Oh, no, sir!" he answered, acidly. "No, indeed! I'm just giving a free demonstration of our new system of open-air cooking. I'm maikng an omelet!"

**Child Strategy.**

Janet, aged 9, was taken by her mother to lunch at the house of a friend.

The hostess was of the talkative variety, and, in her enjoyment of certain interesting little incidents she was relating, quite forgot to give Janet anything in the shape of food.

After a lapse of several minutes Janet could endure this situation no longer. So, raising her place as high as she could, she demanded in a shrill voice:

"Anybody here want a clean plate?"—From Everybody's Magazine.

# Cleveland Tractor

## Serviceable the year 'round

The Cleveland Tractor is serviceable *every season of the year.*

It is an all-purpose machine.

When winter weather or crop conditions make the Cleveland unnecessary in the field *its usefulness in other lines of work begins.*

It is tractor and stationary engine in one. It will saw wood, pump, drag logs, haul grading or road-making machinery and do practically everything formerly done during the winter months with horses and stationary engines.

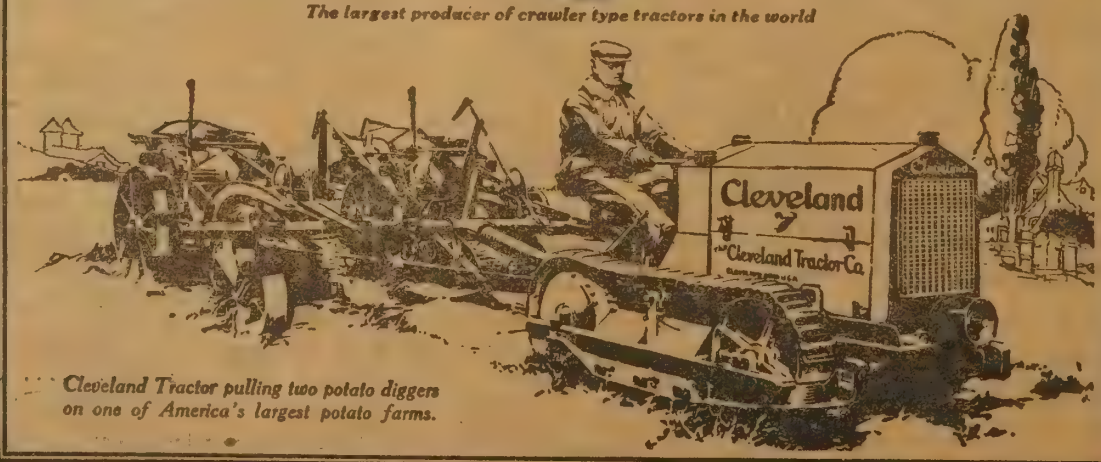
The Cleveland lays down its own tracks, travels on them and picks them up again like the famous battle "tanks." It will go practically anywhere—over rough uneven ground, on the side hill or over soft plowed fields.

A traction surface of 600 square inches with a weight of less than 3200 pounds *effectively prevents the Cleveland from packing the soil.*

You can house the Cleveland in less space than is required for one horse. But in spite of its small size it develops 12 horsepower at the drawbar and 20 at the pulley for stationary work.

Under medium soil conditions the Cleveland Tractor plows 3½ miles an hour with two fourteen inch bottoms. This is eight to ten acres a day—equal to the work of three good three-horse teams and three men.

It burns either kerosene or gasoline.



Don't wait till spring to get your Cleveland Tractor. Order it *now* and get the full advantage of its all-purpose, all-season ability *this winter*—and be prepared for the first field work of early spring.

Write for descriptive matter and name of the nearest Cleveland dealer.

The Cleveland Tractor Co.

19087 Euclid Ave. Cleveland, Ohio

*The largest producer of crawler type tractors in the world*

*Cleveland Tractor pulling two potato diggers on one of America's largest potato farms.*

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**LIEUTENANT E. A. OLSON, Malo, Wash.**—Deserting his ranch for service with Uncle Sam, he enlisted in March, 1916, with the First replacement regiment at Camp McArthur, Texas. Mr. and Mrs. B. O. Olson are his parents.

**BERT FREEBURN, Prescott, Wash.**—Enlisted at Walla Walla, August 3, 1917, and is now at the front in France as a member of Battery D, 146th regiment, field artillery. He is the son of Mr. and Mrs. W. S. Freeburn.

**JAMES O. KURTS, Barry, Wash.**—Is a member of the United States marine corps, and is doing his bit for Uncle Sam now, serving at Bremerton navy yard. Before his enlistment in the service he was a homesteader of Roy, Wash.

# Works Both Night and Day

The above picture shows a tractor plowing at night using lights. This tractor saved the owner and his neighbors' crops by working both night and day. The machine is owned by L. S. Thom of Moorhead, Minn.

# Handicraft for Boys

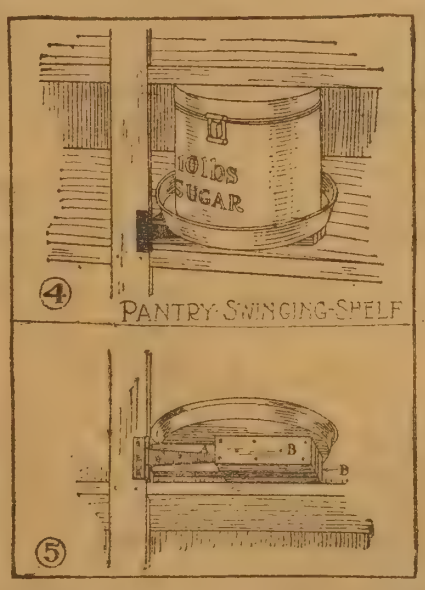
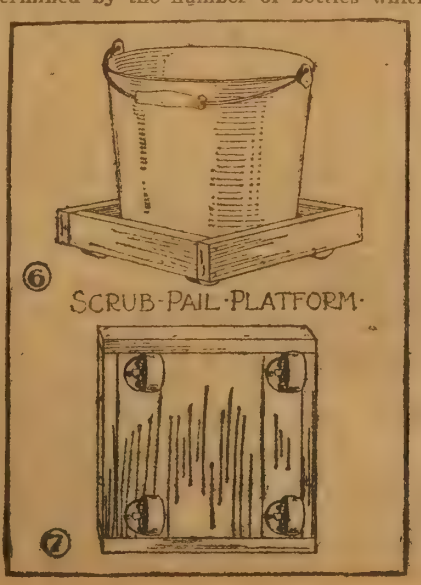
**FOR MOTHER'S KITCHEN AND PANTRY.**

Here are a few contrivances for the kitchen and pantry which will be appreciated by mother if made by her handy boy. Nothing better could be selected for her Christmas gift.

The tool rack shown in Fig. 1 is most convenient when hung directly over the kitchen worktable. The length of the hook strip will be determined by the space in which it is to hang, and by the number of



forks, spoons and other tools which it will be required to hold.



The appearance of the rack will be improved by planing a bevel on the face edges of the hook strip and the end blocks, as in the illustration. Use brass screws or galvanized nails for hooks, and screw a screweye into the top edge of each end block to hang the rack by.

The bottle rack in Fig. 2 will hold your mother's bottles of extract, catchup, sauces and dressings and eliminates the possibility of upsetting bottles when reaching for the one wanted.

Narrow strips should be used for the division strips of the rack, to save space and make the rack light in weight. Laths planed smooth on all sides will do for the

side and center strips, also for the cross strips. The ends must be about three inches wide. The lengths of the strips will be determined by the number of bottles which

it will be required to hold, and you can estimate the number after making an inventory of the bottles on your mother's pantry shelves.

Be careful to cut like pieces of uniform size, so they will fit together nicely. Also be careful to make the pockets large enough so the bottles will fit loosely in them. Use brads for assembling, and fasten together the front and rear portions separately so you can drive the brads through the long strips directly into the ends of the short cross strips (Fig. 3). Then connect the two frames by means of the end strips. Nail the bottom board to the under side of the end strips.

The swinging shelf shown in Fig. 4 is an excellent provision for the sugar and salt crocks, as it makes it possible to swing these out from between the pantry shelves, then back into place after using, without lifting them.

Fig. 5 shows how the swinging bracket is made of a strip two inches wide and 10 inches long (A), with a block two inches wide and six inches long nailed to each side of it at one end (B), and how to the top of this bracket a cake tin is screwed or nailed on which to set the crock. Hinge the end of the bracket strip A to one end of the shelf supports, or else set in an upright piece between two shelves to screw the hinge to. Use a medium-sized T hinge for this bracket.

In the same way that the swinging shelf eliminates the lifting of the sugar crock, the platform shown in Fig. 6 saves the lifting of the scrub pail from place to place while scrubbing, as it is provided with castors so it may be pushed about.

Fig. 7 shows how the castors are screwed to the platform, and how strips are nailed to the edges, forming a rim that prevents the pail from sliding off.

Either paint or shellac each article after assembling it, and if you have done your work carefully, mother will have something to be proud of.

# "Making Hay While the Sun Shines"

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

### SYNOPSIS.

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected. Startling adventures were in store for them, among the first of which was a night in a "haunted" house, the principal haunts being wild animals. The next day they found the stray ox, but suddenly a wall of water from a furious storm rushed down the river between them and the animal. The boys arranged to have the steer held in pasture till they could cross the raging river. The meantime they spent working with a farmer grubbing out live oak thickets. Some interesting experiences were awaiting them, however, rafting on the flooded river. Unwittingly they aid some cattle thieves to escape from the sheriff, at the same time getting farther behind in their race with the runaway ox.

## CHAPTER XII.

### The Mill Among the Mountains.

E now ran for our raft and after poling it out of the back-water inlet, we dragged and poled it up the south bank. But, prompted by the necessity for hurrying, we stopped considerably short of the point from which we had launched out on our previous voyages across the river.

This was a mistake, as we speedily learned. For scarcely had we got halfway across when it became plain to all of us that the raft must miss the intended landing-place by at least a hundred yards. And below the road there was nothing but upright bank.

In this emergency the sheriff, hastily knotting two of their lariats together, coiled them and hurled the end at us. Frank caught it dexterously, and then both of us, throwing down our poles, grasped the rope and braced our feet. Now the three men on the bank pulled us to land, in defiance of the current.

The sheriff's name, we were informed, was McCracken, and the two men with him were his deputies. They were armed to the teeth, every one. Though small of stature, Sheriff McCracken was big in courage as well as in voice. And we afterwards learned that he had some reputation as a catcher of outlaws. Indeed, his name was a terror to evil-doers. With the tenacity of a blood-hound he had been known to trail a criminal from one edge of the wide state to the other.

For a few days the three men had been hot on the trail of a notorious desperado, Bill Edsell by name. Both Frank and I had heard and read much of this fellow. He was guilty of many crimes. More than one officer of the law had gone down before him; and there was a price on his head, to be paid for capturing him, alive or dead.

When hard pressed by his pursuers, the desperado had suddenly disappeared, as if the earth had opened and swallowed him up. But just as they were about to abandon the chase as hopeless, the officers had learned, by the merest chance, that some of Edsell's friends had concealed him in a covered wagon, and were trying to get out of the country with him.

McCracken's party informed us that all the shots had been fired over our heads. But the sheriff declared that if Frank and I had not been on the raft, and in the most exposed position, he would have stopped the raft or riddled that wagon with bullets.

"I wonder what made those fellows lie to us about smallpox," said Frank.

"They may have done it to hurry you," McCracken answered. "But I rather guess they wanted to make sure you didn't get curious and go to nosing around their wagon."

"Well, they succeeded beautifully," I spoke up. "The wagon looked a little mysterious, and I might have been tempted to take a peep under the cover. But after smallpox was mentioned, I wouldn't have lifted that canvas for a gold-mine."

When we had explained that it would again be necessary to tow the raft a few hundred yards up stream, the sheriff said:

We haven't got a minute to spare. You boys stay on there, and we'll do the pulling."

After fastening their lariats to the raft, the other end of each lariat being looped over the saddle-horn, they led their horses up the hill, then sprang into their saddles. Immediately Frank and I had all we could do with our poles, and the raft was plowing the water up stream with the speed of a steamboat.

"This will be far enough," Frank soon called out.

The men now dismounted; and after we had loosed and they had coiled their lariats, they led their horses down a steep path and out upon the raft. Promptly we pushed off, and a few minutes later the raft butted its head against the south bank at the road. The officers at once led their horses ashore and mounted.

"Well, boys," said the sheriff, "you've rafted us across nicely, and we're many times obliged to you for it. There's a reward out for that desperado, and if we capture him there'll be at least ten dollars apiece coming to you for the information and help you've given us. And you shall have it as we pass back. But here's something for your trouble till then." He tossed us a five-dollar bill.

"We don't charge—" Frank began.

But the three were already galloping away, their spurs jingling, their holstered Winchesters hammering their saddles, and their holstered six-shooters flopping against their sides.

"Well, our hard half-day's work panned out something, didn't it?" remarked Frank, as he stooped and picked up the money. "They wouldn't give us time to explain that we didn't charge them anything, nor that we don't live here. Hope we shall not be hanging around the cowhouse when they come back by."

"That we won't! We've lost time enough already. Let's be moving."

We untied our rope, but left the raft moored to a tree with Frank's grape-vine. Some other traveler might have need of our makeshift ferry-boat.

It was now past dinner-time, but without stopping to eat we mounted our horses and started for the Edwards house, where we hoped to strike the trail of our cattle.

But before arriving there we met Edwards, coming on foot. He had been away from home, and had just returned. His wife had told him of the shots fired by McCracken's party, and he was curious to find out what they meant. Of course we had to relate the whole story of our morning's experiences.

Afterwards he insisted upon taking us home with him for dinner. While eating we learned how our cattle had happened to escape.

One corner of the pasture reached down into the bottom-land along the river, where the fence crossed a little branch, for water. After our cattle had been in the pasture a few days, the river rose so high that the back-water, following up the branch, floated the rail-fence and let it tumble down. The water retreated during the night, and before morning, it was supposed, Lep and his two followers had passed out through the broken fence and gone.

Edwards had not missed them till the afternoon of the following day. Then he rode a good many miles hunting for them, in different directions, but failed even to hear of them.

"The minute they got out they probably struck a bee-line for southwest Texas," I informed him.

A short time later Frank and I were in pursuit. We took the road we believed Lep had followed, and after riding several miles, we succeeded in finding a settler who had seen the three animals pass. Encouraged by this news, we pushed on faster.

The further we advanced the more broken the country became. Few people lived here, and those were well hid in the deep, narrow valleys. When night overtook us, there was no house at hand, and we camped on the bank of a creek. By daylight next morning we were in the saddle again.

During this day we had no end of trouble following the trail. The roads were so rocky that we could rarely distinguish a hoof-print. And the houses along the road were so few and far between that we seldom had an opportunity to make inquiries. More than once we strayed off on a false scent and had to retrace our steps.

Rougher and rougher grew the country as we advanced, till we found ourselves among cedar-brakes. Now there was little or nothing but mountains. Settlers were few, and roads ever fewer; and there was not much danger of our going astray.

Not long before night, while following our dim road as it wound through the odorous cedars and around the foot of a mountain, we came upon a small boy. He was sitting flat in the road, picking up some spilt corn grain by grain, chicken-like. His horse was browsing near by. The boy was on his way to mill, he told us. His sack had come untied, allowing half of his corn to spill and the other half to drop to the ground.

The accident had happened not long after noon, and the patient little mountaineer had been picking up his scattered corn ever since. There were but a few grains left now, and I dismounted, tied the sack, and lifted it upon the horse for him.

"That's what's been worryin' me 'most to death," he said.

"What's that?" asked Frank, as I picked up the freckle-faced, hardy-looking little knot of humanity and set him on top of his grist.

"Why, how to git this here sack up ag'in. Ain't many folks comes along here."

The boy rode with us. At length we came to a not very large, but very clear mountain stream. A hundred yards above the road, at a natural fall in the creek, stood a little water-mill. The mill-house, which was of cedar logs, was small; and the wheel was now in motion, the water pouring over it noisily.

The boy turned up toward the mill, and Frank and I went also. The miller, gray with the evidences of his calling, sat outside by the door, in the shade of the house, his chair tilted back against the rough wall. As we approached, he came out to carry in the boy's grist.

"Get down! Get down and come in!" he invited. And then he said to the boy: "Want it ground or swapped, Jimmy?"

"I did want it ground, but it's so late now—." He glanced toward the sun, which was almost touching the mountain-tops.

"Better swap it then," said the miller. "Just as good, anyhow.

He disappeared inside, but soon came out again, bringing the sack, well filled with meal now instead of corn. He put it upon the horse, behind its owner, and the boy rode back the way he had come.

Thinking that this man might have been watching the road, we explained what we were looking for.

"Yes, boys, I saw the very three animals you describe go by down there—let's see now, when was it? Oh, yes, about the middle of yesterday evenin'. I was settin' here by the door. The big, spotted fellow was in the lead, but the others kept right close behind him. The young cattle stopped every now and then to nibble a bite of grass, but the old one just kept joggin' along steady-like I couldn't help noticin' 'em."

"Well, we're glad to hear of the sly rascals once more," Frank assured him.

"How fur have you come lookin' for 'em?" the miller inquired, with a glance at Frank's saddle-bags.

"I'm nearly two weeks from home. Can't say just how many miles I have traveled," was my answer.

"I've been on the road about 10 days," said Frank. "But we were water-bound a good share of that time."

"You don't say so!" exclaimed the miller, dusting his clothes vigorously. "Well, you're nosin' the scene like old trailers. But get down—get down and stay all night with me. I'm here by myself, and I'll be the gladdest kind to have you."

We declined, telling him we would buy a few feeds of corn for our horses, if he had any to sell, and then go down the creek several hundred yards and camp. The grazing was rather too scanty here to depend on. But the miller insisted so earnestly that we finally consented to spend the night with him.

He furnished us shelled corn for our horses, and when we tried to pay him he refused to accept a cent. During the conversation which followed he made use of a favorite saying of his, which was a key to the man's character:

"Fellow that won't get down off of his horse and pour out his corn, to lend his neighbor his sack to go to mill with, ain't no neighbor at all."

The miller cooked and slept in two small rooms adjoining the mill-room; and in one of these we ate our supper, the mill grinding steadily all the while.

After we three had washed the dishes, the miller lighted a smoky lamp in the mill-room, and refilled the hopper. Then we all went out, taking our chairs, and sat in front of the door. The water had a musical sound as it poured down, broken by the step-like turning of the overshot wheel, and by the soft, gentle grinding, inside, of the little mill, not much larger and scarcely as noisy as a big coffee-mill.

"Powerful sight of company, that water is, after you once get used to it," the miller assured us. "When I first put up this mill here, nearly 15 years ago now, the noise bothered us a little, me and my wife. But after we'd been livin' by it awhile we just naturally come to like it. My wife used to say that when she got out of hearin' of this water-fall, she always felt kind of lost and lonesome-like. And when she died, three years ago last June, though she'd never said a word about it, I kind of thought she'd like it better; and so we dug her grave right out there at the foot of the mountain, in plain hearin' of the water. And I've let all my neighbors understand that when my time comes to go, I want to be laid out there, too."

After telling us this, the man remained silent for a minute or so, and we respected his silence.

But he was far from being a morbid or gloomy man, this mountaineer miller, living alone though he was. Indeed, we found him very cheerful. And he had become something of a philosopher in his way. He had settled here with the very first settlers. And not long afterwards he had started this water-mill. He told us many interesting experiences of those early days, some strange, some exciting, and most of them laughable. For he had a way of picking out cheerful things to talk about.

When bed-time came, the miller showed us our bed, in the room adjoining the mill-room.

"You two sleep there," he said.

"But where are you to sleep?" I wanted to know.

"Oh, I do most of my sleepin' in a chair these nights. You see, I'm behind with my grindin' just now, and have to run day and night to ketch up. My mill's little and grinds mighty slow. But I don't keep awake all night long—not me. I just fill the hopper chuck full of corn, then set down in my chair and tilt back against the wall and go to sleep. The mill makes a different noise when it runs empty, and that always wakes me. Then up I bounce and fill the hopper with corn ag'in. That way I get a lot of grindin' done at night, and don't lose much sleep either."

To shut out some of the noise, the miller closed the door between our room and the mill-room. But the sound of the little mill, chewing away steadily on its dry supper, came through the partition. And the music of the splashing water and the revolving water-wheel filled all the air. Instead of keeping me awake, as I had half expected, these sounds quickly lulled me to sleep.

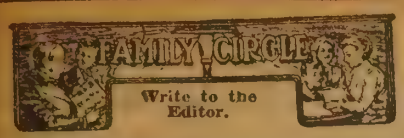
Voices in the mill-room awoke me. The miller's was among them, but there were two others, both louder and harsher than the miller's quiet tones. I had not heard the men enter, but they had evidently just come, for one of them was explaining:

"I'm a sheriff, and this is one of my deputies. We've been trailing some cattle thieves, and just at dusk tonight we ran onto the rascals. For a little while, you'd better believe, we had it hot and heavy. They all got away—I don't know how much damage we did them. But they left my friend here with a bullet in his leg to remember them by. We saw your light and thought we'd stop in and try to dress the wound."

The voice of this speaker was strange, but the voice that followed was one I had certainly heard somewhere before, though I could not recall where.

"Thing got to hurtin' me so bad I couldn't hardly ride," the wounded man was complaining. "Like stickin' a knife clean through me every time the horse moved."

While I was wondering whose the familiar voice could be, the men in the other room were examining the wound, as I could make out from their conversation. Presently the miller said:



"Wait a minute, till I fetch a pan and some water and my bottle of turpentine. Best thing in the world to put on a wound, turpentine is."

He came through the partition door, leaving it partly open, and passed on into the kitchen.

From my position in bed I could now look into the mill-room, and could plainly see the two visitors. The one who had announced himself as sheriff was standing. He was an utter stranger to me. The other man was sitting in a chair, with one leg mostly bare, save for the dried blood crusted on it. At the sight of his face I gave a start, for I recognized him instantly, especially by the black mustache drooping over the corners of his mouth. He was the principal man in charge of the wagon we had rafted across the Cowhouse—the wagon with the desperado concealed in it.

"But who is the other man?" I questioned myself. And

(Continued on the following page.)

ALICE W. BARLAND, Editorial Contributor.

# Discontent

## Leads to Progress and Improvement

Dear Family Circle: It has been some time since we have had a quiet little chat together, and a number of things have been circling around in my mind lately that I want to put up to you.

This little personal letter is for those of you who are dissatisfied. I guess that will include all the readers of the Farmer and "then some."

It is a fine thing for the human race that people are not satisfied with things as they find them. Otherwise all progress would stop.

Before we go into this phase of the subject let us get it clear we are speaking of profitable discontent, and not the kind that makes every one around unhappy. A good healthy dissatisfaction brings about improvement and that is the kind we mean. Let us say that Mrs. Brown is dissatisfied with her house and every thing in it. She doesn't quite know what is the matter with it, but thinks if she had better furniture, like Mrs. Jones, she could have a pretty home. Now that the discontent germ has begun to work something is likely to happen.

Let us go into the living room, which of all the rooms in the house should be the most cheerful, and see what can be done.

We wouldn't dare make so free in Mrs. Brown's house if she had not started this discontent germ to working, but since she has we will look things over with her.

It is a good thing to walk through your house once in a while and take a look at it as if you had never seen it before. It is surprising how many things you will see that you hadn't noticed for a long time, and you will wonder why you have left them there and will swiftly consign them to the kitchen stove.

So Mrs. Brown, with critical eyes, scans her living room. She begins at the windows and notices that no two shades are drawn on the same line, and straightens them at once, noticing that the windows need washing and she gives them a good cleaning. Then she takes a look at the curtains, finds one tucked back over a picture to let in more light, and left there pulling the picture all crooked. As she straightens the picture she notices that the curtains are dusty and resolves to wash them as soon as she can, to match the clean windows. Next she begins to scan the walls of the room one by one. On one wall she discovers three calendars, hanging one over another, all of them out of date, all more or less soiled, and she takes them all down and puts them into the stove so no one will hang them up again. Along the casing of a door are three or four picture postal cards which have come to some member of the family, and have been stuck into the casing and allowed to remain there for months. She takes them down and is amazed that she has not done so before. On another wall is a shelf where the clock stands. On this "catch all" place there is a motley array of all kinds of things which should not be there. Mrs. Brown stands and looks at this as if she had never seen it before, and with determination in her eye, she begins to unload it. There comes down a pair of gloves, a bag of tobacco and a box of matches, a necktie and a pocket-handkerchief. These things were on one side of the clock. From the other side she takes a vase with some old withered and dusty autumn leaves, a picture advertising some new kind of jello, a clothes brush, a screwdriver, a sewing machine oil can, and an empty candy box. She straightened every picture, took down three that had been put up just before they were there, not because they were any improvement to the room, and were serving only to make a clutter.

She cleared the long reading table of papers that were some of them six weeks old, took off the wrinkled and dusty cloth, and put it away to be washed, leaving the pretty polished table top exposed, and decided to leave it that way always.

Next she looked the furniture over piece by piece, and it did not seem very promising, but it was all good hard wood, and she went for a bottle of furniture polish, long left unused, and with a woolen cloth she transformed that furniture in a short time, so she hardly knew it. She washed and polished the glass of every picture, swept the rug, then freshened it with a damp cloth dipped in ammonia and water, and washed all the dust from around the edges of the floor left uncovered by the rug.

She arranged the furniture conveniently around the room and put out the latest papers and newest magazines

The effect of these few changes was amazing and Mrs. Brown could hardly believe the place was hers. She no longer envied Mrs. Jones, for now her own living room at least was as bright and cheery, and as well furnished as her neighbor's.

This happy change came about because Mrs. Brown became discontented. I want to repeat, that progress and improvement follow a wholesome discontent, and when one becomes satisfied with himself he becomes uninteresting to others. A. W. B.

# Kewpie and Bib

By WINIFRED WORTH.

Bib.

These popular features are for the children. Every mother or relative of a child will want to make them:

1st Row—Ch. 35.

2d Row—Ch, 10 and join to 10th.

3d row—Ch. 15 and join to 15th.

4th Row—Ch. 10, 2 dc., 2 ch., 2 dc., turn, ch., 3, 2 dc., 2 ch., 2 dc., ch. 10.

5th Row—Make 42 t., ch. 10, 2 dc., ch, 3, 2 dc. ch. 3 and turn.

6th Row—2 dc., ch. 3, 2 dc., ch. 10, sk. 1, 1 sc. in outside across same until narrowed to 2, turn, join.

Edge—2 dc., 3 ch., 2 dc. in 1st, or end ch. 4, between 2 rows same. 2 dc., 3 ch., 2 dc. in ch. 4, join, ch. 4 on to next ch. 3, join all around, insert doll.

The Kewpie also can be made into a pincushion or hairpin holder by padding the front of Kewpie.

Ch. 33.

1st Row—I dc. in 3 st., 14 dc., 1 in each ch., 3 dc. in next ch., 15 dc., tu. and rib, continue until bib is required size, increase in same place with 3 dc. every row, work 1 row, c, all ro. and add ch, on each of neck to measure 11 inches.

# A Crooked Trail

(Continued from the preceding page.)

the answer that flashed into my mind was: "That must be the fellow that was in the wagon; that must be Bill Edsell himself." And I lay there staring at him.

Presently the miller passed back into the mill-room, shutting the partition door after him, and shutting the two men out of my sight. Instantly I sat up in bed.

"So that's the way the wind blows, is it?" I said to myself. "You fellows are at your lying tricks again. Instead of being officers, you're outlaws. And instead of getting that wound from cattle thieves, you got it from some sheriff. Yes, that's it; you've met Sheriff McCracken."

(To be continued.)

Pig-a-Boo DIGESTER TANKAGE

Hogs do better if their feed includes Pig-a-Boo. It helps to make good pork, and it is unequaled as a balancer in the hog ration.

Be sure to give the pattern number and the correct size.

### SWISS STEAK.

Have the frying pan smoking hot. Remove a piece of fat from the steak (round) and rub the pan with it; let the fat remain in the pan as for broiled steak, and cook until both sides are seared. Remove the steak from the pan, season with salt and pepper, and sprinkle with barley flour. Pound the steak with a potato masher or the blunt side of a butcher knife, to cut across the muscle fiber and send the flour into the meat. Return the steak to the hot frying pan; add enough boiling water to cover the steak. Cook slowly 16 minutes. Make a gravy from the liquid in the pan and pour over the steak.

# Use the Apples

Every surplus fall apple has in it possibilities for winter desserts or relishes. With the drain on transportation during the coming winter likely to make the importation of fruits more difficult, the pantry shelf should be well-stocked with local, home products preserved in some form as jelly, conserve, juices, or dried.

Canned fruit, canned tomatoes, dried fruit and bottled juices may be made into winter preserves. Let nothing go to waste at this season, urges the United States food administration; pumpkin, squash and carrots combine well with fruit in the making of jam. So can any surplus that can't be taken care of in other ways.

### Chipped Apples or Pears.

Hard fruit (apples or pears), 8 pounds.
Sugar, 1 pound.
Syrup, 2 pounds.
Ginger root or crystallized ginger.
Lemons 2.
Water, 2 quarts.

Wash and prepare fruit. Weigh after it is prepared. Add sugar to syrup and water. Add lemon juice and chopped rind and fruit. Cook slowly until fruit is tender and product is thick and dark.

### Peas 1000 Years Ago.

The discovery in Sweden of a loaf of bread made from pea flour in the time of the Vikings has disclosed the fact that peas were cultivated in Europe more than 1000 years ago.

# Your Christmas Shopping Problems

SUCH of these problems as can not be solved by inspecting the stocks of your home stores will receive sympathetic and prompt attention on the part of our Mail Order Department, upon receipt of a letter or postal card with particulars.

**The next best thing to being able to shop personally in this, the Northwest's finest store, is to have at one's disposal the efficient Frederick & Nelson Mail Order Service.**

Christmas stocks are completely ready—more delightfully diversified than ever before—with plenty of toys, of course, for the children's Christmas.

If you can conveniently come to Seattle for part of your holiday shopping, you will thoroughly enjoy a visit to this store, with its unusually complete provision for the convenience and comfort of its customers.

FREDERICK & NELSON
AT FIFTH AVENUE AND PINE STREET, SEATTLE.

(Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.)

Part of the time this summer Lucile Turnley of Yakima drove a derrick and she helped to mow the hay. Lucile was 11 years old March 31, and she lives on a 40-acre farm. She walks two miles to school.

Every Friday at school Naomi Ensley has sewing, and the pupils are making quilt tops for the Red Cross. Naomi can tat, but she likes to knit for our soldiers best. Her address is R. F. D. 1, Box 22, Almota, Wash. Her birthday was June 15, when she was 12 years old. If you are her twin she wants you to write.

High in the air, not on a tree, homeliest thing you ever did see. Florence Evans of Warden wants to know if the cousins can answer this riddle. Florence likes to read the other children's letters. She was 13 years old June 29. She has a little colt named Jack.

Glendale is the name of the school that Emma Bennett goes to. Emma's address is R. F. D. 2, Box 41, Addy, Wash., and she is 10 years old. Katherine Habura is her schoolmate. Two of her sisters are married and one of them has a dear little baby boy. Snap and Tip are pet dogs.

June is the name of Mary Harbison's doll. Mary lives at Nespelem and is going to raise some rabbits next year. She has joined the Junior Red Cross and will be 7 years old December 30.

Evelyn Amon's father farms a section of land near Kennewick. Evelyn tells about the live stock on their farm. They have 48 little pigs, 18 head of horses, two cows and a pet kitten, Tom. Evelyn was 9 years old August 10. Has she a twin?

For a pet Lorene Demaris of Dixie has a chicken with only one leg. Lorene was 9 years old November 14. On the farm they have two cows and two rabbits.

Mildred Demaris of Dixie has joined the Junior Red Cross and made about 100 gun wipes. Jack and Bunny are her two pet rabbits. Mildred is 10 years old.

Lucile Weaver has a cute little baby sister. For a long time Lucile has been reading the Corner, and she just wrote a letter to her Corner twin. She lives on a wheat ranch of 900 acres. We are glad she is a cousin now. Her home is near Eureka.

January 27, 1910, was the day that Zelma Parkinson of Twisp was born, and she is looking for a twin in the Corner. There are four horses, three colts and seven cows on the farm where Zelma lives. Zelma goes three and one-half miles to school.

"I have 15 chickens and the little girl next door has four chickens, so we had a great time keeping our chickens on their own side of the fence this summer," writes Ethalee Magee, who lives in a town called Twisp. Ethalee was 9 years old July 19. She is knitting a wash rag for mother and one for father, too.

This summer Virginia Wilson went to Spokane, and when she was there she rode on the merry-go-round. As she rode she reached out and caught a ring, and when she got a gold ring she had a free ride. Virginia lives on a 500-acre farm about 15 miles from Harrington.

Brother and Elsie Oshmore of Monse had a war garden this summer. In it they planted lettuce, peas, beans, corn and watermelons. It was watermelon time when Elsie wrote and she was wishing that Aunt Nellie and all the Corner cousins were there to help eat watermelons. We wish so, too. Elsie has a calf of her very own. She calls it Buttercup.

Sterling Saunder of Selah lives on a 140-acre farm. He has two sisters and three brothers. On the farm there are six horses, two mules, about 300 hogs and some cattle.

"Mother and I picked berries this summer and I made $15," writes Pearl Chaney of Yakima, who was 11 years old June 5. Pussy, Peggy and Pete are her pet kittens.

Gladys McNeilly of Colfax goes to school at St. John's academy and is in the sixth grade. In the summer she has lots of fun on the farm. Gladys was 11 years old August 22, and she is going to write again.

Three dear little kittens and two dogs, Jack and Bobbie Bum, are Phyllis Curtis' pets. Phyllis lives on a 480-acre farm near Fruitland and enjoys living in the country better than in the city. She is 7 years old, and her birthday is May 28. She wants a twin.

Helen McBride of Bickleton rides horseback a great deal. She lives on a 500-acre farm. Helen has two brothers and a married sister. One of her brothers runs a header in the summer time. Helen was 14 years old May 18, and she expects to graduate next May.

How do the cousins like Hooverizing? Elfreda McNeilly of Colfax likes it fine. Elfreda was 12 years old April 11, and she has blue eyes and dark hair. She likes to go to school. She can knit, crochet, embroider and sew.

We have room in the Corner for one more cousin, Ruth Harbison, of Nespelem, who is buying thrift stamps and knitting socks for the soldier boys. Ruth goes to Sunday school every Sunday. Will her twin please write to her? She will be 11 years old December 14.

The oldest brother of Mae Turnley has gone to war. Mae's addres is Route 5, Yakima, Wash. She was 9 years old, October 23. For pets she has one kitten, named Buster, and two dogs, Shep and Fritz.

"We have lots of bees on our farm and so has grandpa, who lives near us," writes Tessie Duffy of Midvale. Tessie rides Jim, a pony, to school. She was 9 years old October 30, and is in the fourth grade.

A fawn that will drink milk out of a pan is Phoebe Galbraith's pet. Phoebe lives seven miles from Welpinit, and she was 9 years old May 26. Grandma gave her a hen which set and hatched out 10 little baby chickens. Phoebe wants a twin.

(Address all letters to Aunt Nellie, Care of The Washington Farmer, Spokane, Wash.)

"Some dear little Orioles came and built a nest in our front yard," writes Florence Markham of Centerville, who was 9 years old December 24. Every night Florence goes after the cows. Her chum's name is Cora Wilson. King is her pony. Florence's hair is light and her eyes are blue. Another letter is coming from her soon.

No more candy or gum for Evalena Courch of Grandview, for a while, because the soldiers need the money more than she needs the candy, so she is going to spend her money for thrift stamps. Evalena was 11 years old last December 13. During vacation she went to Seattle.

Right in the pine woods, 16 miles north of Davenport, on a 260-acre farm on the Spokane river, lives Hazel Emmett, a cousin of ours, who was 12 years old June 20. Her father teaches there and Hazel is in the seventh grade. This summer she had about half an acre in garden and she raised winter beans, field corn, potatoes, tomatoes, Hubbard squash, and a few melons.

Carl Tubb of Corfu, is a splendid rider, and he has a pair of riding boots, a saddle, a bridle and the whole outfit. Carl is going to school and likes his teacher very much. He wants to correspond with some of the cousins. This is his second Corner letter.

The third letter that Henry Besel of Farmer writes to the Corner tells us that he has one $5 war stamp and six little stamps and that he is going to fill the book in which you can put $100 worth of stamps.

The sun shines beautifully where Ruth Noah lives, near Orin. Ruth was 11 years old last February 17. Has she a twin? May and Jocelyn are her sisters and Grandison is her brother. Mollie, Dandy, Tot and Babe are their horses.

Mae Noah of Orin was 9 years old May 22. She lives on a 160-acre farm, and has two calves and two cows.

"Grandma has come to visit us," writes Ruth Cory of Dairy, who has written to the Corner once before. Ruth can crochet and knit. She was 8 years old June 18, and if she has any twins she wishes them to write to her.

October 12, Myrtle Green was 7 years old. Has she a twin cousin? Myrtle lives near Almira and this is her first letter. She will write more next time.

Alice Knapp of Harrington has two brothers and two sisters. Cricket is the name of their pony. Alice is in the second grade at school.

"My aunt is a Red Cross nurse and one of my cousins is in the army," writes Ollie Ervin of Mead. Ollie likes to go to school. She would be glad if Goldie Smith would write to her and she would surely answer her letters.

Have any of the cousins ever driven a combine? Laura Lee wants to know, because one afternoon this summer Laura drove the combine with 20 horses. During harvest most every day some of her girl friends and she would go out and ride on the combine. Laura is 14 years old and in the eighth grade. She would like to correspond with any boy or girl cousin. Her address is P. O. 494, Ritzville, Wash.

Helen McGinnis, R. F. D. 1, Box 79, Ellensburg, lives on a farm of 13 acres, and will be 12 years old January 18. Helen enjoys reading the letters. Miss Pearson is her teacher.

"We have 39 rabbits and 12 of them are mine," writes Flossie Packwood of Entiat. Flossie was 11 years old July 25. She has two brothers and two sisters.

Maybe Effie Van Potter of Outlook is going to send us her picture. Effie will be 14 years old December 31, and she is looking for a twin. Effie reads the Corner every time. She has five sisters and three brothers.

This summer Elizabeth Cook of Mansfield helped mama do the canning. Elizabeth will be 9 years old March 15. She had a little vegetable war garden and a flower garden this summer. She has knitted eight squares, eight wash cloths and one pair of socks for the Red Cross.

Kinley, one of Jane Adams' brothers, is on the U. S. S. Alabama, a patrol battleship, and he enlisted in 1917. Jane lives near Sunnyside, and she was 9 years old September 3. She has a war saving stamp and three thrift stamps. She knows how to knit and tat.

George Schew is a farmer's son who used to live on a 160-acre tract about 14 miles from La Crosse and about nine miles from Hay, but father died and so now George makes his living on a 40-acre tract with his grandfather. One of George's brothers is a soldier in France. George will be 13 years old November 29. His address is route 1, La Crosse, Wash.

"Nobody should eat white bread until the war is over," says Beulah Shaw of route 1, Grandview, who writes about the war. "We should all buy thrift stamps and war savings stamps." Beulah knows how to knit. She sends love to Aunt Nellie and all the cousins.

When has a man four hands? What has a face but no mouth? What has an eye but can not see? Which is the best day for making pancakes? Do you know the answers to any of these riddles, which Agnes Jensen of Kittitas sends? Agnes was 11 years old April 26. She has three brothers and two sisters.

Every Friday at school, Naomi Ensley has sewing, and the pupils are making quilt tops for the Red Cross. Naomi can tat, but she likes to knit for our soldiers best. Her address is R. F. D. 1, Box 22, Almota, Wash. Her birthday was June 15, when she was 12 years old. If you are her twin she wants you to write.

During the last week Aunt Nellie has received letters from the following cousins: Iva Cook, Edna Newbry, Margaret Gullison, Reeva Carr, Edith Ruchert, Doris Godsey, Rovilla Fletcher, Marguerite Dobie, Veda Copeland, Evelyn Kiehn, Hazel Steiner, Alice Fredrickson, Edna Wolverton, Fanny Fay Brim, John Ranlon, Lela Swift, Marie Ames, Bernice Black, Leona Martin, Lee Martin, Teresa Germont, Myrtle Owens, Lois Stallcop, Harley Wynne Stallcop.

# News for Breeders

H. I. Shotwell of Wenatchee, Washington, who, through E. W. Van Tassell purchased eight head of the Groves herd of Ayrshires, says that he considers Ayrshires the best breed to meet commercial needs in the production of milk. He says their milk has about the right fat content, and they are easy keepers. Mr. Shotwell runs a retail dairy in Wenatchee and speaks from experience. He buys most of his milk, but has a dairy farm of his own and expects to build up a big purebred Ayrshire herd.

---

Herman Steffins of Monroe, Wash., was expecting a large official record this fall when his cow Madison Haydie 2d freshened, but the state college was at that time unable to furnish a tester. Haydie made an official record when 2 years old, two months after freshening, of almost exactly 18 pounds of butter. She was in better condition in every way at this, her second calving. Mr. Steffins has about 40 head of registered Holsteins. He used a son of the great cow Morgie Newman for a herd sire, and is now using Chimacum King Korndyke Sadie Vale, a son of Morgie Newman 2d. The young bull's three nearest dams average over 33 pounds of butter in seven days.

---

J. B. Stump & Son, of Fair Acres Farm, of Monmouth, Ore., recently sold to H. R. Hartley and J. C. Hebinger of Harbor, Ore., a 6-month-old Jersey bull calf for $250. The calf is out of the imported cow Sulton's Elmo, that in an official test has produced 444 pounds of fat in 204 days from 8800 pounds of milk. She is practically sure of qualifying for a gold medal. The calf's sire is the Stump herd bull Dominus, whose dam and sire's dam are each gold medal cows. Harbor is on the coast, in the southern part of Curry county, and after being shipped to Grants Pass by rail the young bull still had a 125-mile ride to take by auto truck. Among the other cows on test in the Stump herd, Diamond of Fair Acres, a 3-year-old by Noble Peer, has 9881 pounds of milk and 464 pounds of fat in 184 days, and is milking very persistently.

---

J. T. Compton & Sons, who are breeding Holsteins near Wenatchee, Wash., have the 2-year-old bull, Pride Fayne Valdessa, that has a remarkable producing ancestry. His three nearest dams' official records average over 33 pounds of butter in seven days, his five nearest dams over 30 pounds, and his 16 nearest dams over 28 pounds. His sire's dam long held the world's record for a year, and still has the second highest record. The dam's dam, Valdersa Scott 2d, has a seven-day record of 41.86 pounds of butter, and the grandsire on the sire's side, King Hengerveld Aaggie Fayne, is sire of 127 A. R. O. daughters, 35 of which produced over 30 pounds each. Mr. Compton now has 25 head of registered Holsteins, a majority of them from the Monroe herd. He has a few A. R. O. cows, and will test all his cows as soon as conditions warrant. One beautiful cow, Suza Kleiterp Pontiac, is of New York breeding, and was purchased from Mr. Royce of Tacoma. She has a record of 22.48 pounds of butter in seven days. Two acres of corn filled Mr. Compton's 40-ton silo. The corn is a yellow dent, with large ears, grown for years by Mr. Horan, another Wenatchee Holstein breeder. H. A. .

HAMPSHIRE HOGS

have won every feeding contest entered since 1914. Weanling pigs, gilts, bred or open. Our blood lines can not be beat.
TUTTLE BROS. Kotin, Wash.

**The JERSEY** Makes a Dollar Worth More

Poor cows are like poor help—the more you feed them the less profitable they are. Jerseys make a dollar worth more because they give the biggest yield with the least amount of feed. In these days of conservation, the Jersey is the only breed for the working farmer who wants to lay something by for a rainy day. The least expensive breed to keep, the most beautiful and satisfactory breed to have. Buy one Jersey and you will never be satisfied until you have a herd. Write to breeders for pedigrees and prices. Ask us for the facts that have changed many a cow barn from a liability to an asset.
THE AMERICAN JERSEY CATTLE CLUB 314 WEST 23D STREET, NEW YORK CITY

**Goldie's Nehalem Beauty**

won grand champion of the Jersey breed for production, 1917. Her record, 80 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.08) and 433 lbs. butter. Both have been grand champions in show ring.
CLIFFORD F. REID,
Wilcox Bldg., Portland, Ore.

**Who Wants This Bull?**

A double grandson of Kadia F., world's Jersey milk record for senior 4-year-old, 16,191 lbs. He is also a grandson of Holger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.
N. H. SMITH, Oregon City, Ore.

**Doerfler Farm Jerseys**

Awarded first, second and third in milking contest, open to all breeds at Oregon State fair, 1918. Also first for 4 best cows, judged 50 per cent type and 50 per cent production. These were the 4 best prizes awarded. They also received many other prizes in the show ring, but type follows production: A few cows and a dandy bull for sale, with great records back of them.
F. A. DOERFLER, Prop. Silverton, Ore.

**Raleigh's Jolly Nobleman**

Our senior herd bull traces twenty-one times to Golden Lad 1242 and fifty-four times to Sultan P. 7, progenitors of more champion Jerseys than any other family of the breed.
EDGEWATER FARM.
E. T. Smith, Myrtle Creek, Ore.

**Meridian Dairy and Fruit Farm**

Oldest Jersey herd in northwest Washington. Young stock for sale, both sexes, from good, producing dams. Herd headed by Kolander's Eminent 148256. A very fine bunch of young stock, both sexes, for sale.
B. C. CRABTREE, Lynden, Wash.

LUCKIAMUTE FARM JERSEYS WON.
At Oregon state fair, 1918, with only 15 head shown. Junior and grand champion bull, junior champion heifer, 1, breeder's young herd; 1, calf herd; 1 and 3, get of sire; 1, 2, 3 and 4, produce of cow; 1 and 2, senior bull calf; 1, junior bull calf; 1, 3-year-old cow; 1, 2-year-old cow; 1 and 2, senior heifer calf; 9 other prizes. Young bulls from R. of M. dams.
FRANK LAUGHARY & SON,
Monmouth, Ore.

**ROSE LAWN JERSEYS OFFERS**

First prize junior bull calf, Idaho State Fair, Minnidoka Co. and Twin Falls Co. fairs. Sire, Rosys Jolly Golden Fern 135028.
Grand champion bull, above fair circuit. Dam Gem Nehalim Lassie, a reg. of merit cow line bred in blood of Hood Farm Torona, Oonan 23 and Figgis.
S. H. KAYLER.
Twin Falls, Ida.

**ASHBURN FARM**
REGISTER OF MERIT JERSEYS.

A bred herd, tried out for several generations by every breeding test. Only the best blood lines. Three proven matings. Nothing for sale except from tried sires. Increase of both sexes for sale.
J. M. DICKSON & SON.
Shedd, Ore.

**Ashnook Farm Jerseys**

Young bulls by Silver Chimes of S. B., whose first 6 daughters average 710 lbs. 80 per cent butter. A few good cows and heifers for sale.
DEL PERKINS, Carlton, Ore.

**Champion Eastern and Western Blood**

Four young bulls sired by Maple Park Chief, a son of Hood Farm Pogis 9th, that has more register of merit daughters than any other bull of the breed, living or dead. His dam is a half sister of Hood Farm Torono, who has seventy-three daughters in the register of merit and nine proven sons.

MAPLE PARK CHIEF, in a herd of 41 cows maintained on ordinary pasture, raised the average production of the offspring above their dams by 49 lbs. of fat per year. Each of his daughters so far freshening in the college herd is producing more than her dam at the same age. His potency as a great producing sire is well proven.

Two dams of these bulls are in the register of merit with good records. The other two are now on test and will qualify with a large margin. One is the daughter and two are granddaughters of the great Golden Glow's Chief, one of the four gold medal bulls of the breed, sire of 37 register of merit daughters, including Vive La France, now making a new world's record. They are good individuals and are offered at from $125 to $200—less than half their real value.

**O. A. C. Dairy Department Corvallis, Ore.**

**HIGH CLASS JERSEY BULL CHEAP**

Last Chance of Rocky Run, by Docter of Fair Acres, a register of merit sire; 5 daughters in the list, others on test. Dam, Buttercup of Rocky Run, R. of M. record, 474.25 lbs. fat at 3 years 10 mo, two milkings a day. She is a daughter of Rosaire Olga Lad, out of a R. of M. daughter of the great St. Mawes. Other young bulls and a few cows and heifers at reasonable prices.

**E. L. LLOYD, Monroe, Wash.**

**Golden Glows Chief 61460**

One of two gold medal Jersey bulls west of New England states. Bred by us. Two of his sons in service in our herd. A few animals, all ages, both sexes, for sale.
IRON MINE FARM, Oswego, Ore.
W. M. LADD, Owner.
D. BROOKS HOGAN, Mgr.

**All High Record Blood**

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 833 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Peppy, 1120 lbs.
ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

**Anoka Farm Jerseys**

We have some choice young bulls up to six months old for sale, whose sire has a 714-lb. dam and 1120 lb. granddam. St. Mawes breeding. The Best in the West. Prices very reasonable. Address
R. B. SEELY,
R. 5, Sherwood, Ore.
Shipping Sta. Wilsonville, on Ore. Elec. Ry.

**LYNDEN JERSEY FARM**

Herd sire son of Fororio's Olindes Pogis, of Hood Farm and St. Mawes of Lynden, whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to
P. MEENDERINCH, Lynden, Wash.

**Ready for Service**

Young bulls of Golden Glow's Chief, and King Melia Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.
HENRY STEWART, Albany, Ore.

**Jersey Farm Dairy**

Peter Mouw's Poland China hogs, Cotswold sheep, White Leghorn and Buff Orpington poultry, carefully bred, great foundation stock.
E. S. PELOT, R. F. D. 5, Idaho Falls, Ida.

**Two Great Grandsires**

Young bull by a son of Foxhall's Fern Lad, sire of 6 register of merit daughters and out of a daughter of Golden Cicero, sire of 7 register of merit daughters. Young bull's dam has a private record of 476 lbs. fat as a 3-year-old and will be officially tested. Granddam a daughter of Upright's Chief, half-brother to Golden Glow's Chief. Also a few granddaughters of Golden Cicero.
WILLAMETTEDALE FARM,
TOM PETTIT, MGR. CORVALLIS, ORE.

**Register of Merit Cows**

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.
FOX BROS. Silverton, Ore.

**WAIKIKI FARM**

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.
IRA P. WHITNEY, Manager.
Route 7, Spokane, Wash.

**AT LAST**

We can again offer a bull ready for light service. His three nearest dams average 649 lbs. fat in one year. Solid color and a splendid individual. Write today as we have but the one ready to use.
JOHN B. STUMP & SON, Monmouth, Ore.

**Jersey Home Jerseys**

Young bull out of Olalla 2d, daughter of Olalla (806.25 lbs. butter as junior 3-year-old). Bull's sire, St. Mawes Prince, by Poppy's St. Mawes, and out of Gertie's Fern Princess (842.5 lbs. butter), both 80 per cent. Also other good young bulls.
THOMAS WILLIAMS, Forest Grove, Ore.

**St. Mawes—Rinda Lad**

The two most popular strains of Jerseys in the northwest. Young bulls from register of merit cows for sale.
G. G. HEWITT, Monmouth, Ore.

## SHEEP

**Portland, Oregon**
**Wednesday, Dec. 11, 1918**

Catalogue can be had from
L. R. McGee, North Portland, Ore.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Nov. 23.—Freezing weather that pointed to larger receipts did a good deal today to force the corn market to a lower level. Prices closed heavy, 2½ cents to 3⅛ cents net lower, with December $1.24½ and January $1.26 to $1.26⅛. Oats lost ⅝c to 1c. In provisions the result was an advance varying from 5c to $1.

Absence of fresh developments in regard to enlargement of food supplies for Europe tended also to shake the confidence of bulls.

Oats duplicated the action of corn. Most of the trade was of a like character.

Curtailment of hog receipts put strength into provisions. Moreover, shipments of lard and meats for the week were materially in excess of the total of a year ago.

### Cash Quotations.

CHICAGO, Nov. 23.—Corn, No. 2 yellow, nominal; No. 3 yellow, nominal; No. 4 yellow, $1.32. Oats, No. 3 white, 74@74¼c; standard, 74@74½c. Rye, No. 2, $1.64½@1.65. Barley, 95c@$1.05. Timothy, $7@10.25. Clover, nominal. Pork, nominal. Lard, $26.70. Ribs, nominal.

### Pacific Northwest Grain.

PORTLAND, Ore., Nov. 23.—Grain, future bids: Oats, No. 2 white feed, November, $54.50; December, $54.50; January, $54.50. Barley, standard feed, November, $50.25; December, $50; January, $50; standard "A," November, $51; December, $51; January, $51. Eastern oats and corn, in bulk: Oats, No. 3 white, November $50; December, $51; January, $51; 38 pounds clipped white, November $51; December, $53.50; January, $53.50. Corn, No. 3 yellow, November, $58; December, $56.50; January, $57; No. 3 mixed, November, $57.50; December, $55.50; January, $55.50.

### Minneapolis Grain.

MINNEAPOLIS, Nov. 23.—Flour—Unchanged; shipments, 52,668 barrels. Barley, 90@98c. Rye, No. 2, $1.63¼@1.64¼. Bran, $27.73. Wheat receipts 296 cars, compared with 339 cars a year ago. Cash, No. 1 northern, old, $2.23. Corn, No. 3 yellow, $1.43@1.48. Oats, No. 3 white, 70¾@71¼c. Flax, $3.63@3.65.

## Portland Market.

PORTLAND, Ore., Nov. 23.—Turkey receipts so far have been liberal, and the shipping demand has been strong enough to clean up everything at 40 cents. The bulk of the supply will come in the next day or two. Dealers expect the market to hold steady throughout. Live poultry is in fair demand at unchanged prices. Dressed meats are weak.

Cube butter is accumulating and the market is weaker, with 59 cents the best price available on extras. Prints are unchanged.

Eggs are holding steady, with Oregon candled moving at 65 cents and eastern at 59@64 cents.

There is a firmer feeling in the apple market, and with a growing export demand growers anticipate a substantial advance in the market. Potatoes and onions are ruling steady.

Butter—Cubes, extras, 59c; prints, 63c; butterfat, No. 1, 67c, delivered.

Eggs—Oregon ranch, candled, 65c; selects, 68c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 36c; young Americas, 37c per pound. Coos and Curry, f. o. b. Myrtle Point, triplets, 35¾c.

Poultry—Hens, 27@28c; broilers, 28@30c; ducks, 30c; geese, 18c; turkeys, live, 30@31c; dressed, 40c.

Pork—Fancy, 19½@20c.

Veal—Fancy, 19c.

Potatoes—Oregons, $1.75@2 per cwt.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30@33 per ton; valley timothy, $27; alfalfa, $28; valley grain hay, $26; clover, $27; straw, $9@10.

## Spokane Produce.

SPOKANE, Nov. 23.—The following are prices received by wholesalers from hotels, retailers, mining camps and the like:

Apples—Extra fancy Delicious, large, $3@3.25; medium, $3; choice medium, $2.50@2.75. Extra fancy Spitzenburg, medium to large, $3. Fancy, jumble pack, $2. Extra fancy Winter Banana, large, $2.50@2.75. Extra fancy Grimes, $1.75; orchard run, $1.50. Greenings, orchard run, wrapped, $1.50. Combination extra and fancy Wagners, $1.50@1.75. Winesaps, jumble pack, $1.75.

Cabbage—Crated, retrimmed Danish ballhead, 2@2 1-4c per lb.; red, 2 1-2c.

Carrots—Sacked, per cwt., $1.25@1.75; bunched stock, 20@35c per dozen bunches.

Celery—Large size, per doz. bunches, white, $1@1.25; smaller, 75c; hearts, 75c per doz.

Potatoes—Sacked white varieties, $1.75@2; California sacked Burbanks, from storage, quality and condition good, $2. Home-grown white varieties, $1.25@1.50.

Onions (Dry)—California Australian Brown, extra fancy, $2@2.25. Home-grown, $2@2.50. Green, 20@35c per dozen bunches.

Parsnips—Homegrown, $2.25@3 per cwt. Bunched stock, 35c per dozen bunches.

## Butter and Eggs.

PORTLAND, Ore., Nov. 23.—Butter—Firm. City creamery prints, extra, box lots, 63c; half boxes, ½c more; less than half boxes, 1c more. Buying price butterfat, Portland, 67c; cube extras, 59c.

SAN FRANCISCO, Nov. 23.—Eggs—extras, 80½c; fresh extra pullets, 63½c.

SAN FRANCISCO, Nov. 23.—Eggs—Fresh extras, 80½c; fresh extra pullets 63½c.

CHICAGO, Nov. 23.—Butter, firm creamery, 53@64c. Eggs, receipt, 2951 cases; unchanged.

## Live Stock Quotations.

### At Portland.

PORTLAND, Ore., Nov. 23.—Cattle—Market slow; receipts, 290. Steers, prime, $12.25@12.75; good to choice, $11@12; medium to good, $10@11; fair to medium, $8.50@9.50; common to fair, $6@8; cows and heifers, choice, $8@8.50; medium to good, $6.50@7.50; fair to medium, $5.50@6.50; canners, $3@4; bulls, $5@7; calves, $9@12; stockers and feeders, $6@8.

Hogs—Market dull; receipts, 780. Prime mixed, $17@17.50; medium mixed, $16.75@17; rough heavy, $15@16; pigs, $14@15; bulk, $17.

Sheep—Market steady; receipts, 50. Prime lambs, $11.50@12.75; fair to medium, $8.50@10.50; yearlings, $10@11; wethers, $9@10; ewes, $6.50@8.50.

### At Seattle.

SEATTLE, Nov. 23.—Hogs—Receipts, 48; steady. Prime light, $17.50@17.75; medium to choice, $17.25@17.50; medium heavy, $16.25@16.75; rough, $15.25@15.75; pigs, $15.25@16.25.

Cattle—Receipts, 71; steady. Best steers, $11@13; medium to choice, $10.50@11; medium to good, $8@8.50; medium, $7@7.50; bulls, $5@7.50; calves, $5@10.

### At Chicago.

CHICAGO, Nov. 23.—Hogs—Receipts, 7000; mostly 10c to 15c higher. Butchers, $17.70@18.10; light, $16.75@17.85; packing, $16.75@17.60; throwouts, $15.50@16.50; pigs, good to choice, $13.25@15.

| Two years ago.... | 79 | 2 | 181 | .... |

Saturday, with its usual light receipts closed a very busy sale week at the stock yards. With a few drive-ins of cattle appearing late in the day, at the close of sale hours, the cattle section was practically unoccupied. No extraordinary shipments are reported for the coming week, and we quote steadiness for Monday at the following quotations:

| | |
|---|---|
| Prime steers | $12.00@13.00 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Med. to good cows and heifers | 6.00@ 7.00 |
| Com. to med. cows and heifers | 4.75@ 5.75 |
| Canners | 3.00@ 4.25 |
| Bulls | 5.00@ 6.50 |
| Calves | 6.00@ 9.50 |
| Stockers and feeders | 6.00@ 8.00 |

A few light bunches of hogs constituted the swine offering, being mostly feeders. The stocker and feeder situation remains unchanged, with very little activity. The market is steady as follows:

| | |
|---|---|
| Prime mixed | $17.00@17.25 |
| Medium mixed | 16.75@17.00 |
| Rough heavies | 15.15@15.40 |
| Pigs | 14.75@16.25 |
| Stockers and feeders | 12.00@14.50 |
| Bulk of sales | 17.00 |

A carload of mostly breeding stock appeared in the sheep section, from which was sorted a few drafts of killers. The market is steady, as follows:

| | |
|---|---|
| Prime lambs | $10.00@11.00 |
| Fair to medium lambs | 8.50@ 9.50 |
| Prime yearlings | 8.00@ 9.00 |
| Prime wethers | 7.50@ 8.50 |
| Best mutton ewes | 6.50@ 7.50 |
| Breeding ewes, 1 to 3 years | 12.00@15.00 |
| Breeding rams | 25.00@50.00 |

### CORN CROP FIGURES GIVEN.

Corn production this year was 2,749,198,000 bushels, the department of agriculture announced in its November crop report giving the preliminary estimate of the crop.

Preliminary estimates of production of other crops follow:

Buckwheat, 18,370,000; potatoes, 39,101,000; sweet potatoes, 88,114,000; tobacco, 1,266,686,000 pounds; flaxseed, 14,646,000 bushels; pears, 10,342,000; apples, 197,360,000; sugar beets, 6,549,000 tons.

Kaffirs, 61,162,000 bushels; cranberries, 374,000 barrels; onions, 13,438,000 bushels; cabbage, 565,000 tons; sorghum syrup, 29,757,000 gallons; clover seed, 1,248,000 bushels; peanuts, 52,617,000 bushels.

### Would Can Potato Peelings.

One ardent Chicago disciple of Hoover was discovered recently canning potato peelings with the intention of feeding them to pigs next winter.

## Seattle Market.

SEATTLE, Nov. 23.—The tendency of the potato market is sharply lower today. There has been some inquiry for large commissary and hotel baking Gems, quoted at $35 f. o. b. The eastern markets will take a few cars of these on delivery within the next 30 days. Digging time is past and farmers have stored for stronger prices, just now a remote prospect. There can be no stiffening of potato quotations until a shipping demand is created.

About 75 carloads of potatoes are stored in Seattle.

Normal conditions are anticipated in the onion trade all season, with a current price of 3c per pound for fancy Oregons, which take the highest rating, due to their long keeping qualities. Yakima onions are moving at 2c per pound. There is a surplus of cheap stock that sells from 50c per sack upward.

A surplus of pullet eggs is backing up on standard fresh ranch eggs and is valuable only as indicating that the early winter lay is now on, probably two weeks earlier than usual. The market for standards was weak today, quotations of a cent off being made under pressure at 74c. There are predictions that prices will decline 2c to 3c early next week, as field reports indicate that there is an increase coming.

Western avenue jobbers are having difficulty in keeping their trade supplied with high standard butter, and it is stated that these standards to which consumers have been accustomed must be revised downward or the market advanced. The Seattle market is too low for practical service in bringing in California stock and Oregons, while plentiful, do not have the rating of Washington city creamery offerings. Country creamery butter is showing in limited quantities, but generally it can not be sold as a substitute for city creamery extras at the same price.

### Purchasing Prices.

Eggs—Select ranch, 60@70c per doz.; pullets, 56@60c.

Butter—Fresh dairy, 35c per lb; butterfat, 68c per lb.; bakers', 46c per lb.; raw milk, $3.50 per cwt.

Poultry—Broilers, live, 1918, 30c per lb.; hens, 2 lbs. and over, 28c lb.; under 2 1-2 lbs., 26c per lb.; old roosters, 20c per lb.; ducks, live, fat, 27@28c per lb.; squabs, large, $3.50 per doz.; geese, fat, live, 21@22c per lb.; Belgian hares, 14c per lb.; guineas, $6 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up, 28@40c per lb.

Hogs—Light, 20@21c per lb.; heavy, 18@19c per lb.

Beef—Steers, fat, 12c per lb.; heifers, fat, 12c per lb.; cows and bulls, 10c per lb.

Veal—Fancy, light, 14@17c per lb.; do heavy, 12@16c per lb.

Mutton—Fat, 17c per lb.; spring lamb, fat, dressed, 16@20c per lb.

### Hides, Tallow and Wool.

Bid prices to producers: Salted hides, cows and steers, No. 1, 15c per lb.; do No. 2, 14c lb.; green hides, cows and steers, No. 1, 12c lb.; do No. 2, 11c lb.; salted, bulls or stags, No. 1, 12c lb.; do No. 2, 11c lb.; green, bulls or stags, No. 1, 10c lb.; do No. 2, 9c lb.; salted or green calf skins, No. 1, 32c lb.; No. 2, 30 1-2c lb.; salted or green kip skins, No. 1, 16c lb.; do No. 2, 14 1-2c lb.; dry hides, No. 1, 30c lb.; do No. 2, 29c lb.; dry bulls or stags, 25c lb.; dry salt hides, 24c lb.; dry calf skins (five lbs. and under), No. 1, 35c lb.; do No. 2, 33c; tallow, No. 1, 13c lb.

Horsehides, greens or salted, each, $2@4; do dry, each, 50c@$2.

Clean ranch wool, full growth, lb., 30@55c.

Sheep pelts—Long wool, each, $2.50@4.50; medium wool, each, $1.50@2.50; short wool, each, $1@1.50; shearlings, each, 35@75c.

Beeswax, per lb, 25@27c.

### Jobbing Prices to Dealers—Fruits.

Apples—Kings, $1.25@1.40 per box; Delicious, $2.25@3.25 per box; local cooking, $1@1.75 per box; Jonathans, $2.25@2.50 per box; orchard run, in lugs, 4@5c per lb.; "C" grade, $1.65@1.75 per box.

Potatoes—Yakima No. 1 Gems, $40 ton; Puget sound, $35 ton.

Hay and feed quotations, city prices, truckload delivery, are as follows:

Feed—Mill run, $34@37 per ton; scratch feed, $79; feed wheat, $80; all-grain chop, $69; oats, $63; sprouting oats, $74; rolled oats, $66; whole corn, $74; cracked corn, $76; rolled barley, $60; clipped barley, $63; alfalfa meal, $42; egg mash, $69@71.

Hay—Eastern Washington timothy, $39 per ton; do double compressed, $42; alfalfa, $35; straw, $17.

### MAINTAIN NOVEMBER HOG PRICE.

The food administration has announced its agreement to maintain the basic price of hogs for December at the same figure as for November, which was $17.70 per 100 pounds. The food administration urges that lighter weight hogs be kept off the market until well into December, with a view to preventing a possible breaking down in the present price levels.

### FRUIT WORKERS ELECT HEAD.

The Yakima Fruit Growers' union has selected A. R. Garden as its business agent for the coming year, according to a Yakima report. The union claims a membership of about 900 workers. It is understood that the organization is going to undertake to secure a wage scale through conference with the fruit growers and shippers.

### ONE EGG PRICE WEEKLY.

With a view to stabilizing the egg market, the San Francisco Dairy Produce exchange has agreed to a recommendation of the food administration that it quote a price on eggs once weekly instead of every day, as has heretofore been the custom.

FOOD SAVER

Big money maker for vegetable and fruit growers, farmers, dealers and consumers. This is the best and cheapest saver in the world.

Write for further information. Representatives wanted.

New-Way Drier Company

Humboldt Bank Building, San Francisco, Cal.

ATTENTION!

For choice alfalfa hay, prompt service and satisfaction guaranteed. Phone Elliott 4360, Seattle office, 2229 First ave., South, or wire or write us at Yakima, Washington.

Our prices are right.

ROVIG LUMBER CO.

HIDES WOOL FUR

RUBBER METAL SACKS

We pay full market value, correct weight and assortment, prompt returns. Write for prices. We want your business.

Pacific Hide & Fur Depot

Joseph Thiebes and C. T. Symmes.
1101-09 Railroad Ave., Spokane, Wash.

SUNNYBROOK

The Feed

that's best indeed. It's the "short cut" to profit these days of high prices on all grains and shortage of mill feeds.

SUNNYBROOK is a concentrated, balanced feed that contains ingredients essential to results.

UNION MEAT CO.
Sole Distributors.
Portland, Ore.

# Cheap Labor

## What About It After the War?

To the Editor of The Washington Farmer: I read a little article in your paper called, "We Are Making It at Home Now." The trick will be to keep making it at home after the war. We often do things ourselves when we can not get anybody to do it for us, but as soon as a competent worker offers his service, and we can make more money ourselves and pocket the difference in the wages between the two kinds of labor, we do not hesitate very long to engage the cheaper worker. Will the nature of the American nation have been changed enough after the war to stop importing of cheap labor? You will see that this is virtually the same as importing workers willing to do the work for half wages; that it means refusing to give part of our own nation the living wages we claim for ourselves, in forcing them to compete with this lower outside wage scale. All other talk is bosh. Our scientists have always known what they know today. When the labor of picking up the nails costs more to the contractor than the new nails delivered on the job, he tells his men not to bother with picking them up when they drop them. All work done by hand will always be more expensive than work done by machinery, and we like to import that on account of the lower money standard of other nations. But hand farm labor we can not import. We can not scab on that. But we can make fixed prices for farm products and force farmers to look for better paying business and let the farming come in hands of imported workers willing to work for one-half of the pay—for a while until they have a hold in the country, and, like Egypt's slaves, crowd the population out. Back to the farm is an idle slogan as long as the farmer does not get part in the shorter labor hours of the nation and the pay of the workers.

First of all, the nation must understand that a farmer is just as well entitled to an eight-hour labor day as the man who clamors for cheap bread and butter. The silliness to want all to work at the same time would work nice when a farmer (dairy) would milk his cows according to it. Many will have to work two half days or four fourths. But the choosing of a job is optional for the trainman who has to lay off a few hours between, just as well as for a farmer. Every work has its pros and cons, but all want the good side of the job and turn the bad side over to a black servant.

If wheat was $8 a bushel and the cost of production $8.01, no farmer could remain in business. When people can not see that national labor is as a chain and one link can make the chain unfit for use it is part of your duty to open their eyes. Teach the American people that the freedom they dream of does not exist.

MRS. A. W. RADEMAKER.
R. F. D. 3, Box 67A, Tacoma, Wash.

### French Prisoners Released.

One result of the recent armistice agreement is the release of about 420,000 French prisoners that have been held by the Germans or interned in neutral countries.

## Farmer War Map Just as Valuable After War Ends

Here is a good point made in a letter to the editor, with regard to the Farmer war map:

To the Editor—The war map reached me in good shape. It seems to me the best thing of the kind I have seen, and I have one on my study wall for reference. I hope the readers will not make the mistake of dropping all thought of the big conflict as soon as the treaty of peace is signed. The real history of the thing will then just begin to come out, and in tracing it in the authoritative books which will eventually be written, this Farmer map is just what is needed.

PAUL E. TRIEM.
Seattle, Wash.

# Farmers' Want Ads

**AGENTS WANTED** 9

AUTO—ASBESTOS WOOD ALCOHOL STARTER. Ford car owners will have them, other makes with visible manifold will buy them. Bonanza for agents and car owners to sell them. 100 demonstrations, 99 sales. ## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |

Review Bldg., Spokane, Wash.

# My K Hand Stump Puller

## Gives Your Hand 96,000 Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER
**K Stump Puller**

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

### How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

### A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not* work

### Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

**Special Offer** I am making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write me today for full information and for free book on Land Clearing.

# Produce What Market Requires

## When Prices Make It Profitable to Produce Stock or Fruit or Grain These Things Will Be Produced in Abundance

PROSSER, Benton County, Wash., Nov. 24.—We are having nice weather, no snow or cold weather yet. Fall plowing is about all done. The live stock on farms in this community are looking good. Some of the farmers are on the lookout for stock hogs to feed their corn to, as corn buyers don't pay enough. Only $25 to $30 a ton is offered. At the close of the war hundreds of ships will be released for regular ocean traffic. These ships will have plenty to do if the farmer can get a profit on what he has to sell. But on the other hand, if the farmer has to grow his corn, wheat, hogs and so on at a loss, these ships will be idle. One-third of the land in the west is idle; give the farmer a profit on what he grows and every foot will be farmed.

G. W. WILGUS.

### WANT REASONABLE PROFITS.

OMAK, Okanogan County, Wash., Nov. 25.—In regard to what the farmer can produce for export trade, it is a problem which the ordinary farmer can not understand. In a locality like ours he only produces what he can sell at the best price. Considering the cost of production, if he raises vegetables, he only has the local markets and is at the mercy of the local stores. The only products which he can depend on are stock, grain and fruit, but as he is not familiar with the cost of shipment to foreign markets, he will not undertake to produce what he is not sure will return a reasonable profit. Thousands of dollars are wasted each year by inability to dispose of some farm products without a market. On account of drouth the last season, farmers have been obliged to sell their stock down to a minimum on account of feed shortage. Fall rains have put the soil in excellent condition to go into the winter and the present prospect for a good crop next season is good.

J. O. WOODS.

### MOVEMENT OF GRAIN SLOW.

CENTERVILLE, Klickitat County, Wash., Nov. 25.—The chief thing the farmers of this county are looking to with interest is how soon can the movement of grain now in the warehouses be made, as up till just lately it has been impossible to sell on account of the inability to move the grain. We look for a more favorable settlement soon. Our county being principally a wheat producing section, we will have to rely on outside demand for our crops. With regard to the wool product, it would look just now as though we would be able to use it for sometime ourselves. The lumber business here is not very extensive at present; mostly local work between a few counties of the state. Our hogs naturally drift to the Portland market. Our chief problem of the present day is the adjusting of crop prices and those things we have to buy on an equal basis, so that no one shall suffer by the change. As I see it it don't make much difference as it is hard to make both ends meet in these times of high prices. I can't see that conditions are any better. Farm and stock conditions are fine here, better than for several years, with a prospect for an extra good crop next year. The grass is good for pasture. We have had a little snow, but it is gone now. Farmers who think they will be crowded in spring work are doing fall plowing now.

CLARENCE A. LESTER.

### LABOR IS FARM PROBLEM.

RITZVILLE, Adams County, Wash., Nov. 17.—In my opinion all kinds of grain and live stock could be shipped to foreign countries profitably by us providing other nations don't keep us out with a wall of high tariff and our seamen are willing to compete with seafaring people of other nations. We have proven that all kinds of live stock can be raised here equal to any that are being shipped in from Europe. The biggest farm problem remains as ever; it is shortage of good labor, and we hope that with the coming of peace we will be greatly relieved. The bountiful rains we had in the first part of this month have turned the pastures green, and live stock will go into the winter in good condition. Early fall seeding is safe and plowing will go on until it freezes up.

JACOB HARDER.

### SEED MUCH FALL WHEAT.

LA CROSSE, Whitman County, Wash., Nov. 1.—While many farmers have had fair crops and are in comfortable shape, there are also several who have not been so successful. The principal cause was a large acreage of spring seeding, which, as is well known, was handicapped by extreme dry weather, causing some very poor stands and many disappointments in yield. The high cost of seed combined with high wages and feed costs made many fields practically unprofitable. Thus many have not only not broke even, but caused several to carry their financial burden over another year, which is also a handicap to the financial institutions. Two poor seasons for fall wheat in succession and fair prospects of another one in the drier districts have been a severe strain on the farming community. While October had more than usual amount of rainy days, still they were only locally heavy, leaving many sections dry and at the end of the month rain is needed practically everywhere. A large acreage has been seeded to fall wheat and there are some fine stands, but many fields are spotted. The feed supply is very critical and must get favorable weather to tide stock through the winter. Much stock is being sold; more than safely should be.

M. E. SCHRECK.

### TURN ATTENTION TO LIVE STOCK.

SPOKANE, Spokane County, Wash., Nov. 21.—As the war has drawn to a close the big problem confronting the farmers in this section is that of producing grain while the prices are high. These prices are guaranteed for next year, but most people who are conversant with the conditions in other sections believe that grain prices are bound to fall in the future after the war closes. This will be largely due to the fact that much of the land which has been devastated in Europe will be used for the growing of grain crops next season. These crops can be grown quickly and easily by the European farmer

(Continued on page twenty-seven.)

**Easy Starting in Cold Weather is a Good Test of a Magneto**

No matter how cold the weather or how slow the motor is turned over, there is a K-W Magneto that will start your engine EASILY and IMMEDIATELY. No Batteries, No Starting Coils, No Timers and No Self Starters necessary. The K-W Magneto permits you to run on the cheaper grades of fuel with perfect results.

The K-W Impulse Starter used in connection with Models TK, HK and HTK, K-W Magnetos has stood the test of time. It makes the starting of the largest size motors as easy as the smaller ones. It eliminates starting coils, timers, self starters and batteries, starting any sized engine without these accessories. This device holds back the shaft or Rotor of the magneto until the firing point of the engine is reached; when it is tripped and by means of a powerful spring is driven ahead at a rapid rate. This produces a starting spark of maximum heat in the cylinder regardless of cranking speed. When the engine is running, the starter is automatically released. The K-W insures an immediate start and positively will not allow the engine to kick back.

Write for a list of K-W Equipped Tractors
There are 83 models built by 40 of America's leading manufacturers. Look for the K-W Trade Mark.

There is a
TRADE K-W MARK **High Tension MAGNETO**
made for every size and type of tractor. Each type will fire any grade of fuel and develop more power out of every gallon used than any other system of ignition.
Don't let ignition trouble cause costly tractor layups. If you are *not* using a K-W Magneto now, write us for full information, telling us what ignition and tractor you are using.
When you buy your new tractor, be sure it is K-W equipped.

## Favors Irrigation Projects

### *Eastern Washington Holds Great Possibilities*

What of agricultural developments in Washington after the war? Governor Lister thinks prospects are better than ever before. In public utterances last week at Pullman and Spokane he urged the importance of enlarged irrigation in this state. In Yakima county last year the crops brought $30,000,000, "and there is plenty more land in this state just as good as the Yakima land, which can be irrigated."

Now that the United States government contemplates a gigantic program for the reclamation of arid, swamp and logged-off lands as a part of its reconstruction work after the war, interest is renewed in three large projects which have been very much in the public mind at different times in the last 10 or 12 years. The largest of these is what the government termed the Big Bend project. It was planned to cap the waters of the Pend Oreille river near the dividing line between Idaho and Washington and conduct them to a vast area of about 1,500,000 acres lying between Spokane and the Columbia river. Ten or 12 years ago the reclamation service maintained in the field for two or three years a large engineering force studying this project. At that time the government dropped the undertaking; not because of engineering obstacles nor lack of water, nor acre cost, nor the fertility of the soil, but for the sole reason that the project was considered too stupendous to be undertaken at that time.

Other communities were clamoring for recognition all over the west, and the reclamation fund was not sufficient to justify the irrigation of so vast a tract in any one state. The reclamation commissioner said at the time that it was the bigness of the project that drove the government away. The world clamor for food was not so insistent then. The government could not then see the need for reclamation on a large scale. But the nation has a broader view now. It is no longer terrified by the expenditure of millions of dollars. It only asks if the task is feasible and desirable.

A much smaller project, which was also carefully studied by United States government engineers, was known as the Palouse project. The problem under consideration was to divert the waters of the Palouse river, carry them through Washtucna coulee and spread them out upon 100,000 or 150,000 acres of rich, arid lands in the Pasco region. The third project taken up after the government had relinquished the Big Bend undertaking, aimed at the irrigation of some 500,000 or 600,000 acres of very fertile, but arid lands in the Quincy region. This is known as the Quincy project. Superficial surveys were made with a view to impounding the head waters of the Wenatchee river, carrying them down the mountains and under the Columbia river in a great siphon, and then out over the area mentioned.

These lands, however, were a part of the great domain that was included in the original Big Bend project, and if the latter improvement was made the more difficult plan of bringing water from the Cascade mountains would, of course, be eliminated.

Discussing these wonderful possibilities, Governor Lister said in an interview at Spokane: "The Pend Oreille river has water enough to irrigate 4,000,000 acres, and to the west and south of Spokane there are 2,500,000 acres of land, including the Palouse and Quincy projects. The government can well afford to spend $250,000,000 to put these lands under irrigation. The cost of putting them under water would only be the cost of 10 days of the war. In all the great development projects I have referred to the only way the problem could be well handled would be by governmental agencies, but we must do our part in this state."

The watering of these large areas of arid and semi-arid lands would alter the physical aspect of that region and make Washington a different state. A broad zone of desert and semi-desert land would vanish. Tourists crossing the state would look out upon another landscape. All through the growing season the country would be a continuous expanse of green from the Idaho line to the Columbia river. Agricultural productiveness would be immensely increased and the state's wealth enormously augmented. The subject is of such far-reaching importance and the reclamation would carry such enormous benefits through all the years of the future that Washington congressmen and senators will be fully justified in urging the matter upon the attention of the government at Washington.

## Apple Men Make Money

The apple crop of the four northwestern states is calculated to be worth about $21,000,000 this year. This is due not so much to the large crop as to the excellent price that is being received.

B. A. Perham of the Earle Fruit company estimates the production of the various apple growing districts as follows:

| | Cars. |
|---|---|
| Yakima | 6,000 |
| Wenatchee | 8,000 |
| Spokane | 900 |
| Southern Idaho | 100 |
| Lewiston | 300 |
| Walla Walla | 1,000 |
| Hood River | 1,500 |
| White Salmon | 200 |
| Western Oregon | 200 |
| Montana | 100 |
| Miscellaneous | 200 |
| Total | 18,500 |

This means a production of nearly 14,000,000 boxes.

P. R. Parks, general manager of the Spokane Fruit Growers' company, gives the following as the general trend of prices being received this year by northwestern growers for the three grades of apples recognized on the market:

| | Extra Fancy. | Fancy. | "C". |
|---|---|---|---|
| Rome Beauties | $1.85 | $1.60 | $1.40 |
| Baldwins | 1.65 | 1.40 | 1.25 |
| Winesaps | 2.00 | 1.75 | 1.50 |
| Spitzenburgs | 2.15 | 1.85 | 1.60 |
| Wageners | 1.60 | 1.35 | 1.15 |
| Jonathans | 1.90 to 2.25 | 1.60 to 2.00 | 1.40 to 1.75 |
| Delicious | 2.75 | 2.50 | 2.00 |
| Yel. Newtowns | 1.85 | 1.60 | 1.40 |
| Ben Davis | 1.50 | 1.30 | 1.15 |
| Black Ben Davis | 1.50 | 1.30 | 1.15 |
| Ganos | 1.50 | 1.30 | 1.15 |
| Staymans | 1.75 | 1.50 | 1.25 |

He says that these prices are 50 cents above 1917, 60 cents above 1916, 75 cents above 1915, and $1 above 1914.

### DAIRYMEN LOSE LEADER.

On November 22 W. D. Hoard, editor of Hoard's Dairyman, died at his home in Fort Atkinson, Wis. Mr. Hoard has been recognized throughout the United States as one of the dairy industry's best friends, not only as publisher of the dairy paper of which he was editor, but as governor of his state at one time and for several years a member of the board of regents of the University of Wisconsin.

> TO the Editor: Your Washington Farmer reaches us once a week, and I must say it is one of the best papers for a producer that we ever read. We would not be without it for twice the price.
>
> GEORGE M. M'DONALD.
> Coulee City, Wash.

## County Agents

### National Business Management

At the recent conference in Washington, D. C., of farm paper editors, called by Secretary Houston of the department of agriculture the work of county agents received most hearty support. It was my privilege to point out that in many instances the usefulness of the county agent system could be greatly enlarged by ignoring state lines.

For instance, take the Inland Empire of the Pacific northwest. This consists of a plateau between the Rocky mountains and the Cascade range, taking eastern Washington, northern Idaho, extending into northwestern Montana and down into a considerable section of eastern Oregon. The county agents in all the counties of the four states included in the Inland Empire should work together as a unit. Do they? No matter how much they may be inclined to do so, there are the four distinctly state departments of extension workers to be brought into conference; their petty differences of work to be ironed out, and even their unmentionable jealousies to be kept out of sight, and so on.

Now, good business management would see to it that these state differences should not be permitted. Occasionally county agents from different states do work together to the mutual benefit of their constituents, but that is in the nature of an exception that proves the rule.

Assisant Secretary Ousley was good enough to say that this matter would be looked into. Remedying instances like this, however, does not put an end to the system which so largely precludes initiative within lines of business efficiency.

C.A.S.

## Farmers' Rights Denied

The farmers of America have been denied the right to study the agricultural situation of Europe for themselves. This is astounding, but true. See Gifford Pinchot's story of it on page 6.

Guesswork will not do; success demands knowledge of the facts. This is true of any business, but especially true of dairying. The best judges of cows miss it once in a while unless they use the tester. "Tests Are the Proof," page 8.

Is the 1919 price of wheat guaranteed? On another page are extracts from President Wilson's price guarantee proclamation.

## Wheat Will Be Shipped Rapidly

All the wheat left in the interior of the northwestern states will be shipped out to market by early in January or at the latest by the first of February. This is the statement of M. H. Houser, northwestern representative of the federal grain buying corporation, in a letter to THE FARMER. The following is from Mr. Houser's communication:

"The Emergency Fleet corporation promised 100,000 tons of shipping for November, December and January. This was made good in November, but so far the full December tonnage has not yet been allotted. There was some needed for the quartermaster's department and the completion program did not quite come up to expectations. Anyway, with, say 250,000 tons for the three months, by taking flour which, with a deduction of the mill feed, would increase the placing of 25 per cent more wheat than if wheat were shipped, will take care of all the wheat remaining in the interior throughout the Pacific northwest, even to the extent of giving a movement, if necessary, from western Montana, and incidentally furnishing a liberal supply of mill feed.

**"We are not going to make any disposition whatsoever of the grain we have here at terminals until all wheat left in the interior is entirely taken care of. On account of the short crop and the rather early free movement, the amount of wheat left in farmers' hands in the Pacific northwest is a great deal less than last year, and from the data we have at hand on the available supplies unsold in the warehouses and the approximate amount yet to be delivered from the farms, I am quite sure that it should all be cared for sometime early in January, or at least there should be an entire clean-up under the most adverse circumstances by February 1.**

"At the present time we are endeavoring as much as possible to facilitate the movement from those sections that harvested later and could not obtain a free movement before the terminals were congested, so as to give them relief as early as possible.

**"Grain Bag Prices**—This matter is still under consideration. Plans have practically been formed for a stable basic price under governmental control, but the ending of the war will bring about changed working conditions. Nevertheless from the information I have at hand I think there is going to be a decided reduction under last year's prices."

## Big Dairy Meet

### To Be Held in Boise, Feb. 10-12, 1919

By RAY W. FELTON.

Representatives of dairy interests of 11 northwestern states will head toward Boise in February. The Western Dairy Products show will be held in Boise February 10, 11 and 12, in connection with the annual meetings of the Western Dairy Instructors' association and the Western Dairy conference and the Idaho State Dairymen's association, the Idaho State Butter and Cheese Makers' association and allied interests.

The meeting was brought to Boise this year through the efforts of the Boise Commercial club, which, as an organization, has given all practical and financial assistance possible to assure the success of the big meeting, realizing that a gathering of this character would serve as a great impetus to the dairy industry, now making rapid strides in Boise valley and southern Idaho.

It is the purpose of those in charge of preliminary arrangements to have representatives present from every dairy organization in the 11 western states included in the circuit. These include Montana, Wyoming, Colorado, New Mexico and all states west.

As this is written there are yet many things to be settled concerning the program, but the management of the show hopes to have present many dairy authorities of national reputation, including A. J. Glover, associate editor of Hoard's Dairyman; Helmer Rabild, in charge of dairy extension work, dairy division, United States department of agriculture; Roy C. Potts, in charge of dairy marketing work, bureau of markets, United States department of agriculture; Mr. Webster, manager of the Central Creameries of California, formerly dean of Kansas Agricultural college and also a former chief of the dairy division, United States department of agriculture. Besides these noted dairymen, all the instructors in the work in the 11 states are expected to be present. Some of these have national reputations as practical men, notably Professor Van Norman of the California Agricultural college, who is president of the National dairy show.

Professor Rabild's visit will prove highly interesting, because he is the father of the cow-testing association, having organized the first cow-testing association in Michigan about 20 years ago.

Large, light quarters have been secured for the show. There will be exhibits of dairy products, dairy equipment, besides butter and cheese scoring contests, milk testing and much other practical work, in addition to the lectures and discussions.

The Western Dairy Products show is fast assuming importance. The show at Yakima, Wash., last year was a great success, and this year's efforts bid fair to place it in a class with the national show, even though it is on a smaller scale.

The following people will have charge of the show: G. E. Frevert, manager, 318 Federal Bldg., Salt Lake City, Utah; G. D. Turnbow, assistant manager, Pullman, Wash.; C. F. Hoyt, superintendent milk and cream department, 318 Federal Bldg., Salt Lake City, Utah; V. D. Chappell, superintendent butter department, Corvallis, Ore.; F. R. Cammack, superintendent cheese department, Boise; H. L. Wilson, superintendent judging contests, 318 Federal Bldg., Salt Lake City, Utah; J. E. Dorman, president Western Dairy Instructors' association, 318 Federal Bldg., Salt Lake City, Utah; B. E. Hyatt, secretary Boise Commercial club, Boise, Idaho.

E. G. Woodward, professor dairy husbandry, Washington State college, Pullman, Wash., is secretary of the show.

### EUROPE IS AFTER SEED.

Reports from the seed markets of this country indicate that since the signing of the armistice a few weeks ago many orders and inquiries for field seeds of various kinds have been received from foreign countries, including Denmark, Norway, Argentina, England, Japan, Australia, Brazil and Sweden. It is apparent that many of these countries will attempt to secure their seed supplies in this country for next season's crops.

### CONSIDER NEW DIRECTOR.

A report from Pullman says that among the persons mentioned to succeed Ira D. Cardiff, who, more than a year ago, resigned his position as director of the state college experiment station, is Dean A. C. Johnson of the extension division of the Kansas Agricultural college. Mr. Johnson has recently paid a visit to the state college at Pullman.

It is intended to be a clearing house of government information. Address inquires (including 3c stamp) to The Washington Farmer INFORMATION BUREAU, Washington, D. C.

## Famine Can Not Be Avoided

National Food Administrator Hoover says frankly that there are hunger conditions in Europe that all the resources of the world can not alleviate in time to prevent famine and starvation on a gigantic scale. It is altogether possible that more men and women and children, principally the latter, will die for lack of food this winter than all the shells and shrapnel and gas of the four years' terrible war killed. Famine is the great destroyer. It not only destroys the physical life, but it destroys the mental vision, and fanaticism and anarchy run rampant where it exists. To feed the hungry is the greatest duty of America today. No effort should be spared to produce the utmost in foodstuffs, and no effort should be spared to provide and operate transportation facilities to carry them to the starving in the stricken lands of Europe.

There are not enough hogs in the world to supply the urgent need for pork and pork products.

## Grange Stands on Sound Platform

The national grange, in session at Syracuse, N. Y., adopted a reconstruction platform which calls for drastic government reforms and readjustments affecting agriculture. The grange recommends:

That the present system of marketing and distribution is clumsy, wasteful and inefficient and should be abolished and that unnecessary middlemen should be eliminated.

That the censorship on a free press and free speech should be removed and the zone system discontinued.

That the government should center its activities in the building of market and post roads instead of spending money on boulevards that are used by the few.

That agriculture shall be fully represented in all legislative bodies.

That secretaries of agriculture should be practical farmers.

That the farm land bank law shall be extended, discouraging land tenantry and abandoned farms.

That munition plants should be converted to the manufacture of fertilizers, freeing the nation from dependency on foreign supplies.

That urban standards of education should not become guides of the rural system.

Every one of these eight recommendations is sound and the national grange is rendering the country good service in pressing them upon the attention of the government. We do not believe that even the beneficiaries of the present system of marketing and distribution will deny that it is clumsy, wasteful and inefficient. That there are a great many unnecessary middlemen and that the system as now working lays unnecessary burdens upon producers and commissioners.

In the stress of war the American people loyally surrendered for the time being many of their liberties and privileges guaranteed to them under the constitution of the United States. Now that the war is ended there is no room for autocracy of any degree or description upon the free soil of this country. Free press and free speech should be restored to the people unimpaired and unshackled. In the past, as Gifford Pinchot pointed out in his letter to the readers of this journal last week, agriculture has not been fully represented in legislative bodies. That lack of representation, however, is the fault of the farmers themselves and is not inherent in our election laws. Just representation, therefore, must be sought in a greater spirit of loyalty among the farmers. No changes in the election machinery could possibly give them greater representation. They must of their own volition put forward able, upright candidates who are practical farmers, and then give these candidates their undivided support at the polls.

The plank bearing upon the farm land bank law expresses in essence what the farmer has been contending for ever since the law was enacted. We find ourselves in gross accord with the other planks in the foregoing platform and congratulate the national grange upon its formulation of a list of policies that are so sound and conservatively progressive.

Europe is already ordering live stock from America, which is a word to the wise farmer.

## Farmers Given a High-Handed Denial by the State Department

As our readers well know, THE FARMER is exceedingly reluctant to criticize any department of our national government. From the hour that war was declared until the armistice was signed, we strove constantly to support the government at every point. Such few criticisms as we made relating to the government's oversight of the great agricultural interests in the composition of its various war boards, its singling out of the farmers for restricted prices, and the niggardly policy of congress in providing credit for financially cramped farmers who were willing and eager to go forward with food production, were, as our readers will recall, temperate in tone.

Although the armistice is signed and the war seems practically over, we still hesitate to criticise the administration. President Wilson's record has been so wise and brilliant in many respects that it is a great pity it has been marred at some points.

Notwithstanding this reluctance to say anything but good of the administration, we feel that we would not be doing our duty if we failed to give space to the remarkable revelation made by Gifford Pinchot as given upon another page.

Mr. Pinchot is a man of high ideals, unchallenged integrity and sincere devotion to the public welfare. For years he worked to defend the people's resources from the rapacity of the great special interests. He now realizes, as few public men, the extent to which the farmer has been denied his rightful place in governmental affairs. He has won and held the confidence of the farmers of this country, and justly stands high in the councils of the National Board of Farm Organizations. He stood ready, without salary, to pay from his private purse the expense of going to Europe to study the plans and purposes of other nations for agricultural reconstruction after the war and the National Board of Farm Organizations was glad to delegate that duty to him.

Mr. Pinchot made all his preparations, but was astounded upon applying for the necessary passports by the flat refusal of the state department to permit him to go abroad.

The reader will note, upon reading the record, that the refusal was not based upon military grounds, but solely upon the amazing assertion that "the Council of National Defense is the only body which has been charged by the president with the problems of reconstruction and of discovering what direct efforts should be taken to this end. Furthermore, the department of agriculture has recently sent abroad a competent commission for the purpose of investigating the agricultural problems connected with reconstruction."

We do not believe that a higher-handed denial was ever made by the state department of the United States. In brief, the administration says that it will do all the investigating that it considers good for the American farmers, and will not permit the agricultural interests to study the problems of reconstruction for themselves.

That attitude is un-American, undemocratic and autocratic in highest degree. It is an indefensible position for any department of the government to take in this land of liberty and broad enlightenment.

It is one thing to produce a crop and another thing to market it profitably.

## Nature Is Kind to American People

Everybody is concerned over the high cost of shoes. As scarcity of tanning material contributes to that high cost, a writer in the Wall Street Journal says that, since the supply of hemlock bark is no longer sufficient, this country annually must send $30,000,000 to foreign countries for tanning material. We are importing, for example, Sicilian sumac worth from $2.50 to $4 per pound. Tons of that very material go to waste in the United States. After a frost, city people admire the sumac because of its flame-colored leaves. The country boy loves it because its hollow stems make fine pop and squirt guns, but the eastern farmer hates it because it grows everywhere. He is forever cutting it down, yet this "nuisance" contains 30 per cent tannin, the element required in tanning hides.

Just another item showing that in this land of almost boundless resources the American people are only beginning to understand how kind and methodical nature has been in its gifts to them. The wild products of yesterday run riot through the valleys and on the hillsides and make of themselves pests and nuisances maybe, but are a utilized resource of tomorrow.

We are learning to catch the truer and deeper meaning of the word science. Thirty or forty years ago the common acceptance of the term in the United States was very different from our present understanding. We rather thought that science was a bird that flew high, never touching the farm, the orchard or the stock range. Now we are beginning to glimpse the great truth that science is intensely democratic. It has become the friend, the partner and the servant of the farmer, the miner, the lumber man, the orchardist and all others who are engaged in useful callings of production.

When men and women now of middle age were boys and girls, they imagined that chemistry was locked up in drug stores and laboratories. Now they are seeing that it is in the soil, the rocks, the trees and every useful product of the land. It is as universal as the air, as all-permeating as the sunshine.

"One's habitual pursuits pass over into character."

## Fruit Conference Is Important

The fruit conference that is to be held in Spokane December 10-14, is one of the most important that the fruitgrowers and shippers of the northwest have had opportunity to attend. It should have an attendance of representatives of the industry from every fruit-growing district of all four northwestern states, and these delegates should attend with a full knowledge of the conditions of their sections and the needs of their fellow fruit men. The conference will take up big problems, problems the solution of which will mean much for the good or detriment of the industry during years to come.

## Stock Show Men Hard Hit

The live stock show schedule of the west has been destroyed by the influenza epidemic. Every winter show of importance from Los Angeles to Lewiston has been called off after months of preparation on the part of the association officials and the intended exhibitors. Many breeders had their animals carefully fitted at great expense. Many had advertised their proposed exhibits widely. It is unfortunate that the situation developed as it did, but it is encouraging to see the show men and the breeders of purebred stock already directing their efforts toward next winter's shows. Let the shows of 1919 mute the excellence of both years.

# Peace Party Goes to Europe

## *President Addresses Congress Before Leaving for France*

The winter session of congress convened at Washington, D. C., last Monday, and its first act was to listen to the address of President Wilson, who told its members officially of his trip to Europe at the head of this country's peace delegation. The president said that in view of the fact that it was his declaration of principles upon which the armistice had been signed and about which the discussions of the permanent peace conference would center, he felt it his duty to go to the conference and lay before it the full meaning of the "fourteen principles" which he had enunciated. He discussed in a general way some of the big problems that are to follow the war, emphasizing their importance and urging the cooperation of all departments of government and all citizens in their solution.

**PRESIDENT WILSON NAMES DELEGATES.**

Last Friday President Wilson announced his selection of delegates to represent this country at the peace conference in Europe. They will be himself, Secretary of State Robert Lansing, Colonel E. M. House, General Tasker H. Bliss and Henry White. Of these men, Secretary Lansing was appointed by the president to be secretary of state when W. J. Bryan resigned in 1915 because he was unwilling to sign a note to Germany that he thought might involve this country and Germany in war. Colonel House is a citizen of Texas, and has been recognized as the personal friend and adviser of President Wilson since the latter was elected. He has never held any prominent office. General Bliss is now in France, where he has been prominent in the councils of the allied military authorities, having been the representative of the American military authority at the conference at Versailles when the terms of the armistice were decided upon. Mr. White was one time United States ambassador to Italy, having been appointed by Roosevelt during the latter's term as president. He was later ambassador to France, and has held other less important appointive positions. It has been brought out since his selection by President Wilson as a peace delegate that his daughter is the wife of a Prussian count, and that in the early months of the war he expressed strong pro-German sentiments. He has been little in the eyes of the public of recent years, however, and little is known about his opinion on any of the big questions that will be involved in the discussion of peace conditions.

**SPECIAL REPRESENTATIVES MAY GO.**

Owing to the fact that the delegation contains no member as strictly a representative of business, it is being suggested that the business interests of the nation may send a commission to Europe to keep an eye on the work of the conference with a view to safeguarding the industrial life of America in whatever ways might become necessary or possible. Owing to the fact that no member of the United States senate, which body must ratify any peace treaty or treaties that this country makes with a foreign power, is included, there is talk at this writing that the senate may also send a committee across to keep in close touch with the developments so as to lay all the facts before that body when the ratification comes up later.

**TWO SHIPLOADS MAKE VOYAGE.**

Though there was a report current a few days ago that President Wilson planned to have strict censorship exercised over the deliberations of the peace conference, announcement has been made officially that no such censorship will be required, but that the American people will be kept constantly informed of the progres that is being made and the points upon which the discussions take place. In addition to the special vessel that is carrying the presidential party across the Atlantic, a special boat is being used by newspaper and press association representatives. Several hundred American newspaper correspondents were given passports to make the trip. The president and his party, which includes scores of persons, including secretaries and clerical workers, is making the trip on the steamer George Washington, one of the big vessels taken over from Germany early in the war.

**STUDENT ARMY TO BREAK UP.**

The war department has announced that all the student army training corps in the country are to be broken up as rapidly as practicable. This means that the students who are now attending such schools as the Oregon Agricultural college, the University of Idaho, the State College of Washington and the like as enlisted men will be given discharges and allowed to return to their homes if they desire. It also appears, though this is not positively stated, that, even though they decide to remain in school, they will do so as individual citizens, no longer a part of the military branches and no longer to receive the compensation that they have heretofore received. It is probable, however, that many will choose to remain in school and continue their regular college education.

It is announced that the marines will remain intact until the final signing of the peace terms. In only a few cases will discharges be given the enlisted men, and then only where it will not interfere with the present high standard of this branch of the service.

**BIG CASUALTY LISTS COME.**

The tabulation of casualties among the American expeditionary forces in Europe has progressed so well since the armistice began that names are being transmitted to this country sometimes as many as 3000 a day. They will continue to come in greater or smaller numbers for several weeks. Even though the fighting has ceased, there are still deaths occurring from wounds and diseases, but the bulk of the casualties that are being sent in now are those that occurred prior to November 11, the date of the armistice, but not tabulated at that time.

**DEMOBILIZATION IS BEGINNING.**

Though there is no plan under way that will interfere with the keeping of a million or more American soldiers in Europe until order is reestablished, actual demobilization of men is now getting a good start. General Pershing has announced the selection of army organizations totaling 83,114 men for early return to America. Four complete divisions, the 39th, 76th, 87th and 92d, will be sent home at once, with small units of several other divisions. The organizations included in this list are understood to number comparatively few northwest men, though men from this section are scattered throughout all the organizations of the army abroad and every division contains some.

Orders have also been issued for the return to civil life as rapidly as possible of more than 600,000 men now in the camps of the United States. Nearly 50,000 men and officers in the American camps have already been returned to their homes.

The war department predicts that there will have reached America at least 150,000 men from Europe by January 1.

**GERMANY WILL HOLD ELECTION.**

It is reported that an election will be held in Germany on February 16 for the purpose of electing some 500 members of "the constituent assembly." This date is fixed conditionally, the approval of the soldiers' and workmen's council, which meets to consider governmental matters on December 16, being awaited.

**PERU AND CHILE IN TROUBLE.**

Notwithstanding the powerful example set for them in Europe, Peru and Chile, South American republics, have been on the verge of war over a boundary dispute. The matter is not settled at this writing. The United States has offered its "good offices," with a view to assisting in settling the dispute.

## *The Kaiser Should Ponder This*

When fighting ceased on the signing of the armistice America had, in round numbers, 2,000,000 men in France. It had sent across the waters more than 2,000,000 men, but 58,000 of that gallant array lie dead upon the western battle front.

These numbers, staggering at first sight, lose much of their seriousness when it is remembered that only one man in 40 gave up his life. Our total casualties, including wounded, from the time we sent the first men across to the present time, were 260,000.

When we contrast our losses with the appalling death lists of the other countries, we may well return thanks to the Supreme Being that we have been saved from the frightful wastage of a long war. The mighty conflict, in fact, had only begun to touch our hearthstones. The British death roll is more than one million men—forty times that of the United States. France, with but little more than one-third of our population, has 1,500,000 dead. Germany, with a scant 70,000,000 population, has 3,000,000 dead.

The British have 1,000,000 crippled and more than another million wounded, convalescent and in German prison camps.

Exact figures are not at hand of the Russian death losses, but they are known to exceed those of any of the fighting countries.

These millions take no account of the Italian losses, the Austrian sufferers and the casualties in Belgium, Rumania, Bulgaria, Turkey, Serbia and other lands. When the totals shall be approximately known it is not improbable that the war killed, directly, more than ten million men; indirectly as many more. Countless civilians have perished from starvation, privation and disease.

In the light of these staggering figures, our losses, deeply as we mourn them, sink almost into insignificance.

One correspondent tells of looking out over a region that the eye could entirely reach where 10,000 men had fallen in death. Another says that when he stood on Vimy ridge, looking down into Lens, two and half miles away, with the Germans holding one half of that city and the allies the other half, he surveyed a field where nearly one million men had gone down.

When we reflect on these appalling figures, can we wonder that the afflicted nations cry out for vengeance on the kaiser?

## *France May Regain Alsace-Lorraine*

The shaded portion of this map shows the dual province of Alsace-Lorraine. This was formerly French territory, but following the Franco-Prussian war of 1870, which was won by Germany, the treaty of peace required that they be given to Germany. This has been considered a virtual theft ever since, and has rankled in the minds of the French people so much that the present war was no doubt fought on their part in the hope that these provinces would be returned to them at its close. It is probable that their desire will be granted by the peace terms.

## *Washington Gleanings.*

Gas has been discovered in the Ahtanum district, southwest of Yakima, according to a report made by I. S. Pue.

The Central Valley Grange hall at Dryad will be the meeting place of the Lewis County Pomona grange on December 7.

Potatoes from Skagit valley represent $625,000 in the pockets of the farmers this year. The yield is about 125 sacks to the acre.

Mayer brothers, who are threshing the bean crop in the vicinity of Uniontown, say the yield averages 300 pounds to the acre.

Kenneth McLeod of Milltown is exhibiting a four-pound potato in Mount Vernon. The average yield on his place this year is nearly 15 tons to the acre.

W. E. McDonald, who recently sold his place at Granger, has bought 60 acres of land one mile south of Toppenish from H. Christensen and George Parks.

Postmaster J. D. Medill of Yakima has received orders to transfer a considerable part of the Naches district from a rural route of the Yakima postoffice to a Selah rural route.

Harry W. Callihan has sold his farm two miles northeast of Espanola to Mose Ray of Bixby, Okla., who has taken possession. The place embraces 160 acres, and sold for $9000.

The Indian department is calling for bids for the sale of some 25,000,000 feet of standing yellow pine, red and white fir and larch timber situated on the Colville Indian reservation, about 15 miles east of Omak.

Two of the principal roads in Clarke county are to be put in good condition at once for winter travel. The road between Vancouver and Washougal and that between Vancouver and Battle Ground will be graded and rolled.

Secretary O. C. Whitney of the Washington State Educational association has announced the annual meeting of the association, which was originally scheduled for October 23, 24, 25 and 26, would be held in Seattle December 26, 27 and 28.

On account of the congestion of the hay crop at different points along branches of the Northern Pacific and a surplus of refrigerator cars, hay is now being shipped from here in reefers. There is a surplus of 200 reefers in this valley.

Contracts have been let, material purchased and arrangements completed for the sinking of a 300-foot double compartment shaft to develop the coal deposits known to exist on the property of the Wenatchee Orchard Land company in Moses coulee.

On account of the increasing flow of artesian water in the well of the Puget Sound and Columbia River Gas company, west of Hanford, drilling has stopped and a new hole will have to be started. The flow is estimated at over 2000 gallons per minute.

With the close of this year's salmon season cannery men of Grays Harbor estimate the pack at 60,000 cases, which is considered satisfactory for a normal season. Gillnet fishermen have been particularly successful, while the traps have not fared so well.

The Black Diamond Lumber company, of Winlock, has accepted an order from the United States shipping board calling for a complete ship bill of over 1,500,000 feet of lumber, with a guaranteed delivery in 60 days. The ship is being constructed in Portland.

The board of county commissioners of Klickitat county have approved the construction of a cement-concrete highway from White Salmon to Trout Lake. This will be a continuation of the hard-surfaced Hood View road, running for one and a half miles west of White Salmon.

Colonel George Sintz of Cashmere has sold his fine 28-acre tract and residence at Wenatchee to Elmer M. Harndon, an Alaska man, who, with his family, will take possession immediately. This property has two acres of bearing orchard and a house and other buildings, and was sold for $11,000.

Mud and not snow caused the closing of the Blewett pass route this season. As a result of the slippery condition of the road the Ellensburg stage line from Wenatchee has been discontinued for the winter. For the last few trips the Vantage route was used, but this did not prove satisfactory and the service has been stopped.

H. B. Russell of Ames, Iowa, representing the First National bank of Lake Mills, which owns 12,500 acres in the Barrel Springs section, between Yakima and the Columbia river, was in Yakima recently investigating the possibilities of establishing an irrigation system. An artesian well struck water at 650 feet.

F. F. Morris, J. M. Fleming and Thomas R. Robinson of Grandview, and Dr. T. R. Smythe of Mabton were elected delegates of the Grandview-Mabton-Byron district to the Spokane grade and pack conference in December. Growers in that district favor the adoption of the two grade pack and will make an effort to maintain the standard of extra fancy.

The installation of a 100-horsepower boiler in the Cascade creamery was begun last week. Manager S. J. Simonson says it will double the plant's capacity to make condensed milk. Mr. Simonson is considering the installation of a machine to make powdered milk as soon as he works up to the supply of 25,000 pounds of raw milk daily in the valley.

Water users of the Burbank project, 14,000 acres, are to take over the project in the near future, according to an announcement made by E. M. Chandler, consulting engineer. The project at Burbank is the only one of appreciable size remaining in this state under private ownership. There is $1,500,000 invested in this project, of which 5000 acres are cropped and handled by 300 water-users. Dwellers on the project, a part of which is highly developed, favor the formation of an irrigation district, Mr. Chandler says.

# After-War Farm Policies

## *Farmers Must Study Conditions First Hand*

**We know that the farmer has been refused reasonable representation in deciding and handling the great questions, even the farm questions, which have arisen out of the war.—Gifford Pinchot.**

The national board of farm organizations, August 29, 1918, passed a resolution declaring whereas the need of concerted action upon agricultural matters was never more imperative, therefore:

Be it resolved, that the chairman of this convention be authorized to appoint a committee, consisting of a chairman and 48 members, one from each of the several states, whose duty it shall be to determine the present status of organizations of farmers in the affairs of the nation and to examine and report what changes, in the widest sense, should be made in the reconstruction after the war, and how these changes can best be brought about.

Gifford Pinchot was appointed a member of this agricultural reconstruction committee, later was appointed chairman of a sub-committee "to collect all possible data about what is being done or planned by agricultural organizations throughout the world with reference to agricultural and economic reconstruction after the war."

Expressing his willingness to make the trip to Europe at his own personal expense he was "authorized and requested to represent the national board of farm organizations and its agricultural reconstruction committee in executing the purpose of the board to secure all available information as to plans and purposes of other nations for reconstruction after the war, which may interest or affect the farmers of America." Further, the object of his mission was declared "to obtain direct and authoritative information upon these subjects for the national board of farm organizations which, including as it does more than 3,000,000 organized farmers, desires this information for the benefit of its constituent bodies, their members and the people of the United States, more than half of whom live in the country."

He was also earnestly desired to convey personally to the farmers and farm organizations of our allies a resolution declaring: "We send our greetings to food producers of our allies and especially to the heroic women of France, England and Italy, who, while the younger men were holding the line, have rendered the most indispensable of all services to the cause of liberty."

It was moreover urged upon Mr. Pinchot to regard it as an especially important part of his mission to ascertain how best the farmers of America can assist the farmers of our allies in Europe in the great problems of agricultural reconstruction. These credentials of Mr. Pinchot were signed by William T. Creasy, chairman of the executive committee of the national board of farm organizations, as well as the chairman of its sub-committee on agricultural reconstruction.

Thereupon Mr. Pinchot made preparations for the trip and applied to the government for a passport. The passport was denied him in a letter dated October 10, 1918, and signed "for the secretary of state" by Alvey A. Adee, second assistant secretary, as follows:

The department has received the applications of yourself and Mr. P. Stephen Stahlnecker for passports to enable you to go to certain European countries for agricultural investigations on behalf of the federal board of farm organizations. In your letter of September 20 concerning the application of Mr. Stahlnecker you say that your object is to obtain "all available information as to the plans and purposes of the farmers of other nations for reconstruction after the war, which may interest or affect the farmers of America."

This department is informed by the secretary of agriculture that the council of national defense is the only body which has been charged by the president with the problems of reconstruction and of discovering what direction effort should take to this end. Furthermore, the department of agriculture has recently sent abroad a competent commission for the purpose of investigating the agricultural problems connected with reconstruction. This commission is now abroad and is in touch with the various governments and agricultural interests of the countries of Europe.

It would not appear, therefore, that your proposed trip is of such urgent necessity as to warrant the issuance of passports at this time: and I am obliged to inform you that this department does not deem it proper to issue the passports as requested.

October 15 Mr. Pinchot wrote to Secretary of State Lansing as follows:

I am in receipt of your letter of October 10, refusing the request of the national board of farm organizations, and my own request, that a passport be issued to me as its designated agent. The purpose of this request was to obtain "all available information as to the plans and purposes of the farmers of other nations for reconstruction after the war, which may interest or affect the farmers of America."

To speak plainly, but without offense, the substance of the letter is this: The secretary of agriculture deems it undesirable that the largest and most representative body of farmers in America be allowed to obtain information upon agricultural reconstruction abroad except through official channels, and the secretary of state accordingly declines to issue passports.

The organized farmers of the United States have the unquestionable right to seek, in their own way and through their own agents, first-hand information on any agricultural subject provided only that their doing so does not interfere with the military operations of the government. The denial of this right would be in line not with American democratic ideals, but rather with the policy and practice of autocratic governments. No free people could afford to accept it.

To refuse any but official information to the people of a democracy amounts to destroying their power to check up and control their official servants.

In numerous instances passports have been issued to enable commercial and other organizations to secure unofficial information of value to them. It does not appear why an organization of farmers should be treated differently.

For the reasons above indicated, I can not escape the conclusion that a mistake has been made. I have the honor, therefore, to ask that your decision may be reconsidered, and that the bar to the unofficial inquiry desired by the national board of farm organizations may be removed.

With reference to the above correspondence, The Farmer has received the following communication from Mr. Pinchot, dated November 23, 1918:

We know that the farmer has been deciding and handling the great questions, even the farm questions, which have arisen out of the war. Apparently it is intended to apply the same policy of repression and neglect to reconstruction after the war also.

Enclosed I hand you (for publication if you so desire) copies of recent unpublished letters between the state department and officers of the national board of farm organizations which tell their own story. I am sending you these letters after instead of before election in order to avoid any possible imputation of playing politics.

No reply to my letter to Secretary Lansing has been received, and I am now satisfied that it will not be answered.

# Nation May Become Dry

Indications are that within a comparatively short time the constitutional amendment establishing prohibition throughout the entire United States will become effective. This amendment was adopted by congress some time ago, but must, before becoming operative, be ratified by the legislatures of three-fourths of the states of the Union, or 36 states.

So far 14 states have ratified the amendment as follows: Mississippi, Virginia, Kentucky, South Carolina, Delaware, North Dakota, Massachusetts, Arizona, Georgia, Louisiana, Maryland, Montana and Texas.

Thirty-four state legislatures will convene this winter, and a majority of the states which they represent are under some form of prohibition at the present time. The following are the dry states whose legislatures meet this winter: Alabama, Arkansas, Colorado, Idaho, Indiana, Iowa, Kansas, Maine, Michigan, Nebraska, New Hampshire, New Mexico, North Carolina, Oklahoma, Oregon, Tennessee, Utah, Washington, West Virginia.

The following are the states not now under any form of prohibition, but whose legislatures will probably vote on the prohibition amendment this winter: California, Connecticut, Florida, Illinois, Minnesota, Missouri, Nevada, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont, Wisconsin and Wyoming.

It will be noted from these tables that all four of the northwestern states are dry and will in all probability be found voting in favor of the constitutional amendment at their legislative sessions soon to convene. Montana has already ratified the amendment at a special session last February when the senate approved the amendment by a vote of 34 to 2 and the house by a vote of 67 to 8. With the exception of Louisiana, all of the 14 states that have ratified the amendment did so by overwhelming majorities. In that state the legislature ratified the amendment by a bare majority. In South Dakota, on the other hand, the vote in both houses of legislature was unanimous for ratification.

# Poison Field Mice

Poisoning and general clean-up measures are recommendations for control of field mice made by Professor G. F. Sykes, zoologist at the Oregon Agricultural college. His formula for poison, together with methods of preparation and use follow:

| | |
|---|---|
| Strychnine sulphate | 1 ounce |
| Boiling water | 1 pint |
| Syrup | 1 pint |
| Oil of Anise | A few drops |
| Wheat, barley or corn | 16 quarts |

Dissolve the strychnine in the boiling water, add the syrup and flavor with the anise oil; pour into a bucket of grain and stir thoroughly. If the bait is wet and sticky add a little corn meal or middlings. The poison thus prepared may be placed out by the spoonful in infested areas or in large quantities provided it is protected from the native birds. A simple method is to place over the poisoned grain a board raised on low props.

General control measures are fall plowing or stubble, clearing up fence lines and corners, utilizing straw piles, burning weeds and removing dead weeds and grass from around the roots and base of trees.

# Stock Business Grows

Walter D. Roberts, president of the Spokane union stock yards, says that the business in those yards has averaged half a million dollars per month for the last several months, making a total since the yards were organized of $5,000,000. Cattle receipts at the yards during the first 10 months of 1918 were 41,418 as against 19,267 last year. Hogs receipts this year have totalled 32,791 against 28,808 for last year. Sheep increased from 32,129 last year to 102,282 this year. Horses and mules received at the yards decreased almost half, or from 6065 last year to 3540 the first 10 months of this year. Mr. Roberts says it is the plan of the stock yards company to increase its facilities for handling stock to practically double its present capacity.

### YAKIMA COUNTY CANNING CLUBS.

**Conserve More Than $5000 of Food During the Present Season.**

Yakima county's 18 canning clubs promise, by their work during the critical year of 1918, to do their share in maintaining the lead of Yakima valley among industrial clubs in this country. A year or two ago Professor T. J. Newbill of the department of agriculture stated that two out of three of the best clubs in the entire United States were located in this one valley. These clubs were the Broadway Pig club and the Kiona-Benton Girls' Canning club, the latter located in Benton county.

During the present season the recently completed report of Miss Mae Mark, county club leader, shows that the Yakima county youngsters have earned in food conservation something over $5000. Special credit is given Margaret Kirk, who canned 1051 quarts of products. Miss Kirk gave up many things to make her work a success, and has a record of never missing a club meeting. Katherine Raichle, who canned 800 quarts; Dorothy Sullivan, 739 quarts, and Ellen Hummel, nearly 700 quarts, are also given special mention for quantity and quality of work. Elizabeth Frisque and Jeanette Dash helped make the club encampment at the state fair a success. Jean McAuley, of whose Belgian fruit one jar was sent to Washington, D. C., and one to the state college, and Margaret McDonald, who assisted in getting reports from the Tieton club, are credited with doing much to make canning club work a success in Yakima county.

### EXHIBIT FROM U. OF I.

At the fruit growers' conference to be held in Spokane, December 10 to 13 inclusive, the horticultural department of the University of Idaho will have on exhibition a display of hybrid seedling apples. These seedlings are of known parentage, and are the first fruiting, representing 300 crosses made from the leading commercial varieties grown here in the northwest. This display should be of unusual interest to the fruit growers, since no similar exhibit has before been staged in the northwest.

The apple breeding work in progress at the University of Idaho represents the largest breeding project of any experiment station in the United States. To date there are 10,915 hybrid seedlings growing on the university farm. J. E. N.

### Wheat Versus Flour.

It is declared possible to load a vessel with wheat in three or four days less time than to load it with flour, and the saving represents 20 per cent of the ship's time.

# Records From Contest

The report of the all-northwest egg laying contest, conducted at the state college, Pullman, Wash., shows some remarkable egg records. A pen of White Leghorns, owned by Paul B. Towne, Tekoa, Wash., finished the year on October 31 in first place, with 1261 eggs, beating the pen of Barred Rocks entered by the Oregon Agricultural college by only three eggs. The average of the five hens of the Towne pen was 252.2 eggs a hen, and of the O. A. C. pen 251.6, a difference of sixtenths of an egg a hen. These two pens have made records, the report says, "higher than any pens entered in any contest ever held in America."

The average production of all the pens in the contest, 135 in number, was 171 eggs a hen, a very satisfactory egg yield.

One individual hen in the contest laid more than 300 eggs. This was a White Leghorn hen entered by C. F. Williams of Salem, Ore., and the actual record was 311 eggs. This record has been exceeded by but one other hen in a laying contest in the United States. The second best record was 282 eggs, made by a White Leghorn hen entered by J. R. McRae of Portland, Ore.

The following are the highest pens for the year:

| | |
|---|---|
| Paul B. Towne, Tekoa, Wash., W. Leghorns | 1261 eggs |
| Oregon Agricultural college, Barred Rocks | 1258 eggs |
| F. W. Frederick, Phoenix, B. C., R. I. Whites | 1190 eggs |
| D. Tancred, Kent, Wash., W. Leghorns | 1174 eggs |
| D. J. Kingsbury, Twin Falls, Idaho R. I. Whites | 1174 eggs |
| H. Otto, Everett, Wash., W. Leghorns | 1163 eggs |
| C. F. Williams, Salem, Ore., W. Leghorns | 1163 eggs |
| Oregon Agricultural College, W. Leghorns | 1120 eggs |
| C. C. Lamb, Seattle, Wash., W. Leghorns | 1113 eggs |
| S. C. W. Leghorn Club | 1101 eggs |
| C. H. Numsen, Centralia, Wash., W. Leghorns | 1101 eggs |
| Hollywood Farm, Hollywood, Wash., W. Leghorns | 1090 eggs |
| Bliss & Bliss, Southworth, Wash., R. I. Whites | 1083 eggs. |
| J. R. McRae, Portland, Ore., W. Leghorns | 1079 eggs |
| J. R. McRae, Portland, Ore., R. I. Reds | 1068 eggs |
| H. E. Caldwell, Canutillo, Texas, R. I. Whites | 1051 eggs |
| F. E. Kneedler, St. Louis, Ill., W. Rocks | 1034 eggs |
| La Vista Farm, Baker, Ore., W. Leghorns | 1030 eggs |
| L. E. Harris & Co., Missoula, Mont., W. Leghorns | 1014 eggs |

# He That Runs May Read

Now that the rainy season has set in all ditches should have an unobstructed outlet.

There is more farm machinery ruined on some farms by being exposed to the elements than by active use.

Now is the time to see that the tops of the bee hives are on solid so that a strong, cold wind will not blow them off during the winter.

The leaks of a barn are not always found in the roof. Liquid manure, which as a rule is lost through a leaky floor, is just as much a loss as feed which is destroyed or spoiled by rain coming through a faulty roof.

Many instances have been known where a strong, cold north wind has come up during the night and frozen the roots in the cellar, which has not been closed up for cold weather. It is always best to have doors and windows ready so that they can be shut at an instant's notice.

A hole in the back of a hen house which causes a draught on the hens on a cold winter day, will do more damage than the time lost in nailing a board over it.

A good supply of dry wood not only pleases the cook, but also makes the wood man feel mighty comfortable when winter comes and he wants to sit by a warm fire.

It takes years to overcome the results in the offspring of breeding a good milk producer to a small, immature, scrub bull. The same rule applies to all other farm stock.

Now that the crops are off the fields the manure can be hauled each day direct to the fields, which will lighten the work in the spring when farm work is rushing. On the fields where there is no solid subsoil and localities where there is a heavy rainfall, however, it is best not to haul it on the land until just before planting time, because if it is hauled on during the rainy season the strength will all leach out and be of no benefit to the crops.

C. J. M.

### WOULD PUNISH THE KAISER.

The Cleveland United Presbyterian church in Ohio adopted the other day, a resolution demanding that the kaiser be justly punished for his crimes before peace terms are finally signed. The resolution was sent to President Wilson.

# Power, Mechanics and Devices

On the small farm, where a small amount of roots are raised the farmer can not always afford to buy an expensive root cutter, especially if he is beginning with limited means. Cutting roots with a knife is slow. A better way is to make a square, shallow box just for cutting roots. The roots are put into the box, and a sharp spade is used to cut them.

Chairman Hurley of the United States shipping board is recommending a campaign for the transportation of more food products from the farms to large shipping points over the public highways instead of by rail. He believes that the wider use of the auto truck for this purpose would not only assist greatly in handling the traffic of the country, but would also be of much benefit to the producers themselves.

## Country Home Lighting

An electric country home-lighting system is, in its essentials, closely comparable with the electric system employed on the modern gasoline-driven automobile. In either are to be found an engine, a generator, a storage battery, switching devices, wiring and incandescent lamps with their equipment. In the motor car, however, the necessity for economizing on space and weight introduces complications which need not and do not exist in country home-lighting plants.

The majority of country home-lighting outfits are supplied complete with gasoline, kerosene, or gas engine; generator, storage battery and switchboard. The engine is usually an improved form of the type at present in extended use for driving pumps, operating washing machines, running churns, etc. Its operation is simple; it is rarely necessary to do more than supply fuel and oil as required. The speed of the engine is usually controlled by means of a simple governor which either reduces the supply of fuel reaching the cylinder of the engine or causes the engine to miss explosions when the speed exceeds a certain rate. The generator is, of course, nothing more than a direct-current electric machine, which, when driven by the engine, will supply electrical energy at a nearly constant voltage. The storage battery, as its name implies, is a reservoir for the storage of electricity supplied by the generator. When the engine is running, lamps or other appliances receive their current direct from the generator.

If more energy is generated than is required by the appliances the surplus is stored in the battery for future use. When the engine is not running the energy which has been stored in the battery is available, so there is no interruption of service. The switchboard usually carries an "ammeter," which indicates the current flowing to or from the battery; a "voltmeter," which shows at what electrical pressure the current is being distributed to the various appliances; such switches and controlling devices as are necessary to the proper operation of the plant; and sometimes an ampere-hour meter which gives some indication of the amount of energy stored in the battery for future needs.

The rules for the proper care of any type of battery are simple and may be easily observed. Briefly, the points which must be borne in mind are: The battery should not be undercharged or overcharged to an excessive degree, or charged at too high a rate; it should not be overdischarged or discharged at too high a rate; a discharged lead battery should not be allowed to stand idle for long periods; the liquids in the cells must be kept at the proper height and only pure water used to replace that evaporated; the sediment which gradually forms within lead cells should not be allowed to reach the plates. The instructions of the manufacturer explain in detail the methods of testing cells to insure proper operating conditions at all times.

In size country home outfits range from about 500 watts upward. For the usual country or suburban home, consisting of seven or eight rooms with bathroom, attic, and basement, a plant with a generator capacity of 750 watts will provide ample energy for lighting the house and outbuildings, and will permit the use of an electric iron, small motors, or a toaster, during the daytime when the lighting system is not in use, or when not more than a few lights are used. Although a plant of smaller capacity would, under usual conditions, provide capacity sufficient for lighting alone, a size at least no smaller than 750 watts should be selected, because with a smaller plant electric irons and similar devices can not be used to the best advantage. In general, the capacity of the plant should be equal to the total wattage of the lamps which are likely to be in use at any one time, provided the required capacity, as calculated in this way, exceeds 750 watts.

The electric farm lighting system of the present day is in most cases a thoroughly practical plant and if given proper care is good for a long period of efficient service. The price of systems that are dependable ranges from $500 up, depending, of course, on the size of plant selected. The cost of upkeep is small so that once the plant is installed the great convenience and many advantages of having the home and premises well lighted is had for a very nominal figure.

## Ever Hear It This Way?

My neighbor, Brown, bought him a tractor last year. He told me toward fall it was all out of gear. He couldn't get service, couldn't fix it himself, so when it went wrong it was "laid on the shelf." He said he was sorry he bought the blamed thing, and would sell it for less than he gave before spring.

"Now listen here, Brown, I am mebby a fool, but with that good a tractor I'd sort of keep cool, and I'd learn all about it from bottom to top, so I'd know what was wrong if she came to a stop. The trouble is not with the tractor," I said. "It's a piece of machinery, but you've got a head. If you knew every part of it, how it should work, I don't think you'd let the thing lay down and shirk. You'd locate the trouble, and know what to do to keep it a going the season right through."

"But," says he, "can I learn how to know every part, how to fix up its 'innards,' to give it a start when it balks and just simply refuses to budge—when such a thing happens how am I to judge whether dynamite ought to be used or a touch to adjust the ignition or alter the clutch?"

"Now look's here, Brown," I reminded him then, "there's good tractor schools all around wanting men, and they make it their business to teach you to know the whys and the wherefores that make the thing go. If you'll just go to one of these schools I am sure that they'll teach you each tractor disease and its cure, or at least you'll find out how the critter is made, and how you can go about giving first aid; if she quits on the job or develops a break, you'll know the repairs it's essential to make."

"Your suggestion is good," answered Brown, "and what's more, I'm surprised that I never have sensed it before. I'll look up a school and enroll for position of learning to be my own chief mechanician. I'll learn how to handle this tractor," said he, "till I'm able to make the old thing climb a tree. I'll teach it to purr in the roughest of weather, I'll take it apart and I'll put it together; I'll go to a tractor school same as to college, and fill my head full of mechanical knowledge; for just as you say, any owner who chooses can handle expertly the tractor he uses. Time, trouble and money a man loses by fooling seems to me will be saved by some technical schooling."

*Top Dress with Nitrate*

# Plenty of Nitrate in Chile

The total amount of Nitrate of Soda in the vast Chilean Deposits is

**720,000,000 Tons**

At the present rate of the world's consumption, these deposits will supply Nitrate for

**300 Years**

Shipping conditions are rapidly improving. American farmers should learn the FACTS about the Nitrate Supply. Write for information.

Chilean Nitrate Committee
P. O. Box 248 Berkeley, Cal.

*Moline-Universal Power Lift Gang*—Extra strong construction, simple power lift operated by foot lever, equipped with quick attachable shares and combined rolling coulters and jointers. In average soil conditions this outfit will plow 9 acres a day

*Moline-Universal Disc Harrow*—Strongly constructed with 18-inch blades. Each gang has 3 large dust-proof bearings equipped with wood bushings. Easily and quickly adjusted. Built in 6 and 7-ft. sizes double cut, or 8, 9 and 10-ft. single cut.

*Moline Grain Drill*—Operator sits behind the drill where he can see work being done. Furnished in a great variety of sizes either as plain or fertilizer drill. Deposits seed with unvarying accuracy. Equipped with either single or double disc furrow openers.

*Moline-Universal Tow-Row Cultivator*—With this outfit 10 to 20 acres a day can be cultivated. Entire outfit easily handled. Tractor speed easily regulated from ½ to 3½ M. P. H. Cultivator is extra strong and has pendulum foot gang shift.

**THE TRACTOR for ALL Your Work AND ALL THE IMPLEMENTS to Do It With**

Mr Nile Kinnick of Adel, Iowa, operates a 400-acre farm and all the work is done by two men, two Moline-Universal Tractors and one team of mules. This is what he says about the Moline-Universal:

*"I was agreeably surprised with the ease with which we could cultivate corn, and for harvesting it far surpasses horses or mules. It appeals to me as an ideal tractor. It will actually replace horses, something that most farmers must consider when they plan to buy a tractor. The ease with which it is handled and the advantage of operating the outfit from the seat of the implement are facts that cannot be appreciated until one has tried it."*

This expresses in a nutshell the advantages of the Moline-Universal. It does *all farm work* including cultivating; *one man* operates both tractor and implement from the seat of the implement; it has *ample power* for heavy field and belt work, yet can be operated economically on light work.

Another big feature that makes the Moline-Universal superior to all other tractors is the complete Moline Line of Implements to be operated in connection with it. This does not mean it is necessary to purchase all of these implements with the tractor, as many horse drawn implements can be used successfully. But it does mean that a Moline-Universal owner can operate his tractor to full capacity at all times and make the best use of the operator's time by using Moline tractor implements. They do better work with the Moline-Universal, are of larger capacity, stronger construction, are designed to run at higher speeds than horse drawn implements, and will pay for themselves in a short time.

For full information Address Dept. 50

**Moline Plow Co., Moline, Ill.**

*Manufacturers of Quality Farm Implements Since 1865*

MOLINE UNIVERSAL TRACTOR

*Moline Mower No. 4*—Built in 6, 7, 8 and 10-ft. cuts. The largest capacity mower in the world. Proportionately larger and stronger than ordinary mower. Equipped with spring draft rod. One man operates both tractor and mower.

*Moline Grain Binder No. 11*—Cuts a 10-ft. swath. Extra strongly constructed throughout. Cuts 35 acres a day. Equipped with power bundle carrier. One man handles the tractor and binder easier than he could a binder and horses.

*Moline Corn Binder*—A splendid outfit for cutting corn easily and quickly. Power bundle carrier deposits bundles away from the path of the tractor. Strong and durable. One man operates the entire outfit easier than with horses.

*Moline-Universal Tractor Attachor*—A great variety of equipment can be attached to rear crossbars, so that majority of operations in orchard and vineyard work and cane growing can be performed with this one outfit.

# Tests Are the Proof

By A. E. Gipson.

It seems that sometimes the judges of dairy animals have to reverse themselves. While this may be somewhat disconcerting to the experts, it is only another reminder of the accepted saying that there are exceptions to every rule. The "conformation" theory in animal husbandry appears to be pretty well established, and yet is not infallible of itself. When it comes to the determining of the milk and butterfat production of the dairy cow, or her possibilities in that direction, the only way to be certain is to use the milk scale and tester.

The incident to which reference is made occurred at the national dairy show this year, when the Barnsville Cow Testing association of Ohio, with a complete record of the cows that were on exhibition, asked visitors at the show to pick the best five cows of the 11 shown. The account goes on to say that "in every case one or more poor producers were placed well toward the top, while good producers were shoved to the bottom. In this case all of the cows were Jerseys, and so special interest was aroused, says Hoard's Dairyman, when two somewhat noted Jersey judges placed the awards.

One of the cows, the report continues, had every appearance of being a good producer—deep, long body, good milk veins and rather desirable type. Naturally they placed her among the best five, but imagine their chagrin when they found her yearly production to be 2523 pounds of milk, containing 149 pounds of fat.

In answer to the claim that the poor showing of this cow was due to improper feeding, investigation showed that she came from a herd having several cows with records of over 500 pounds of fat and others with excellent production. The poor production of this particular cow was largely explained by her not being a persistent milker. Two of the 11 cows, with records of 417 and 421 pounds of fat each, were among those discarded by several in passing upon the merits of the herd shown. Hence there was naturally considerable confusion among the supposed experts when the real performances of the animals were disclosed by authenticated records from the cow testing association.

The incident related by no means discredits the contention that the dairy cow can usually be judged with reasonable accuracy by her physical conformation. But while this is true, it should be remembered that the only reliable test, as already indicated, is the one disclosed by the milk scale and the testing devices. Herein lies the certain value to the owner of milk cows of the cow testing association. It will locate definitely the unprofitable boarder as well as the revenue producer, and that is the essential thing to the success of the dairy, whether large or small. In the absence of the cow testing association careful use of the Babcock test and the scales will do the same.

Guesswork, and poor at that, has been the cause of lagging returns, if not of failure, in many a dairy, and it's an unsafe thing to rely on in any business enterprise.

# Apple Pomace Good Feed

E. O. Erickson of the Jersey Home dairy, Yakima, Wash., reports excellent results with the use of apple pomace for silage. A 30-ton silo on the Erickson farm was used for storing pomace last season, and two more, one of 30 and one of 90 tons capacity, are soon to be erected. The pomace is put into the silos by means of a silage carrier, which has been fitted up to do the work.

"It may be a little harder to get pomace into the silo," says Mr. Erickson, "but once in, your trouble is ended. It doesn't have to be tramped down, as corn silage does. It settles air tight, and seals itself over in a hurry. I remember several years ago, before there was any talk of feeding the stuff, seeing a pile of it lying near the mill. It was spoiled on the surface, but when I took a stick and dug into it I found that it was just like silage inside."

Mr. Erickson says cows that will eat corn silage will eat pomace, and that even if they are not used to silage they will soon learn to look with eagerness for this by-product of the cider mills. All things considered—the ease with which it is stored, convenience in handling, etc.—he believes that present conditions under which much pomace is going to waste will soon be changed.

Two hundred or so head of registered Jerseys to which the pomace is being fed on the Erickson farm are housed under sanitary conditions. Jersey Home dairy is ideally situated, the buildings and exercise yards lying high, with just enough slope in the latter to insure good drainage. All of the buildings are modern. A 72-foot addition has recently been made to the milking barn, which makes the building 108 by 36 feet. The floors are concrete, and lots of sunlight is assured by the generous window surface. An Empire double unit milking machine has recently been installed, and Mr. Erickson states that he is well pleased with the way it is working.

"For the man who is willing to do his part, I believe a milking machine is a good investment," he comments. "They aren't fool-proof. You can't go away and leave the machine to run itself—but you can strip the cow next the one the machine is on while you keep track of it. The man who knows his cows best and who handles them as individuals will get the best results from his machine."

Mr. Erickson's brother, who is interested in the dairy business with him, is now in France with the American army. In a letter he told of sleeping in an old church whose walls and windows were pierced with shell holes. In the quiet French church-yard outside other American soldiers were sleeping—probably many of them farm boys.

### A MOVABLE MILK STAND.

In the newly settled districts of the country, where the roads are not made permanent and there is some work done on them each year, farmers find out that the road overseer who comes to supervise the road work takes their milk stands and breaks them when he takes them out of the road, especially if they are built on posts driven into the ground. To avoid this trouble of making new stands build them on runners, so that they can be removed at an instant's notice and later put in place again. C. J. M.

### Camel Hump Used as Food.

Camel hump is regarded as a great delicacy by the Arabians.

The Light
Allwork Tractor
Burns Kerosene

**Get Your Money's Worth In Work Every Season**

THE Light "Allwork" Tractor is built for all around work in any season of the year. Powerful for heavy plowing—light enough to get out on wet land in early spring or on a soft seed bed for harrowing and seeding—low enough for orchard cultivating—plenty of power for belt work. Here is the *practical* light-weight, high-power farm tractor. Free from freakish features—runs on four wheels; carries the largest 4-cylinder engine we know of on any 3-plow tractor. It sets crosswise on the frame, thus giving direct spur gear drive—no bevel gears. Belt pulley is on direct line with crank shaft.

*4 cylinders, 5 in. bore, 6 in. stroke, 750 R. P. M., develops 28 H.P. at belt and 14 P.P. at drawbar. Automobile type front axle, roller bearing rear axle—self-oiling steel gears thoroughly protected from dust. Weighs 5000 lbs. Develops 3000 lbs. drawbar pull and 4000 lbs. on low gear. Burns kerosene. Turns in 12-foot radius—pulls three plows (will pull four under favorable conditions)—will run 18-inch silage cutter, 28-inch separator—pull an 8-foot road grader. Gasoline or kerosene fuel. Two-speed transmission working in oil.*

**Write for Our Catalog** and learn how the "*Allwork*" can make tractor farming pay big dividends on your farm. It's built by a company with an established reputation—satisfied customers everywhere. Let us refer you to "Allwork" owners near you. Write today.

# Wool Will Sell High

Northwest sheepmen will receive nearly $1 per pound for wool this year—the highest price on record—according to W. E. Evans, representative of New York woolens.

Mr. Evans represents a firm which is said to be one of the largest American wool buyers and, as a result, he is in close contact with the wool market.

"During the last three years wool prices have soared to such levels that flockmasters have grown rich in a single season. This was due to the fact that the English government declared an embargo on Australian wool. This product could not be imported from other parts of the world because ships were not available. The demand was increased when America entered the war and let contracts for army uniforms, hats, overcoats, woolen socks, sweaters and other wearing apparel.

"Although the demand was increasing, production was decreasing because the vast open western ranges had been invaded by the settler and the dry-land farmer. As soon as a country is settled and devoted to agricultural purposes, the production of wool on a large scale ceases.

"As a result of this combination of conditions, prices soared and northwestern sheepmen, I am told, reaped a golden harvest.

"With the war ended, you are wondering if prices will continue to advance. I say, yes. In Germany, Austria and other European countries there is not a stitch of wool or an inch of woolen clothing. The end of the war has opened up a great market for wool. France, England, Italy, Spain and other countries will also demand wool.

"While the demand has been increasing, production has steadily decreased to such and extent that America only produces one-third of the amount needed for manufacturing purposes in this country.

"I believe that present prices will not decline for at least three years." A. B. K.

## Get Guernseys

If you want to increase your dairy profits, you need to know about the cows whose average production, under test supervised by state agricultural colleges, is three times as great as the average of all dairy cows in the United States. Ask for "The Story of the Guernsey."

THE AMERICAN GUERNSEY CATTLE CLUB.

## PEA FIELDS FEED HOGS.

Ostheller Bros. of Fairfield, Wash., report that they made a profit of $2300 by purchasing 267 head of stock hogs this fall and turning them in to glean their pea fields, the shattered peas being the principal feed by which this profit was made. The Fairfield district is one of the most prominent pea-growing districts in the United States, and those who have tried the hog business in connection with the pea growing consider that in any locality that will produce peas the fields provide an excellent source of hog feed.

# VETERINARY

By DR. S. B. NELSON.

**Mare bruises leg.**—I have a valuable 4-year-old mare that I was breaking and she got to kicking and bruised one of her hind legs. It is swollen and has broken and is running in several places. It is a kind of a yellow foam. What would you advise to do for her? C. P.

Des Moines, N. M.

I would suggest that you wash out the wound three times daily with a sufficient quantity of the following prescription: Sodium chloride, one ounce; sodium nitrate, one-half ounce; boiled water, three quarts. After mixing put in three quart bottles and use the quantity necessary with a syringe.

**Remedy for warts**—What is the best remedy for warts? I have a heifer that is to freshen in December and her teats are covered with warts. I also have a yearling heifer that has one ear covered with warts inside and out. It has one larger than a walnut inside the ear close to the head. It is a big black one. The others are all smaller. J. G. F.

Glenwood, Wash.

You will find the following sometimes to be of considerable value in the treatment of warts. Chloral hydrate, 1 1-2 drachms; acetic acid, absolute., drachs, 1 1-2; salicylic acid, drachm, 1; spirits of ether, drach, 1; collodion, 4 drachms. Apply to the warts twice daily.

### Methylene Blue for Abortion.

To the Editor of the Farmer: Several years ago we had a cow that had abortion. She was served four times and each time she would go about three months and then abort. We tried several remedies without success. At last we tried Methylene blue—a dyestuff that is perfectly harmless and is also used widely as an antiseptic. We obtained a small quantity of it and commenced to feed it early in pregnancy, giving one-half ounce mornings and evenings on the tongue, dry, for seven days, then letting up for four weeks, and then commencing over again. We kept this treatment up until she was well out in pregnancy. This treatment cured her. Since then she has had several healthy calves and there is no symptoms of her former trouble.

Methylene blue can be obtained at the drug stores. The medicinal grade, and not the commercial grade, should be used. At the present time it is very expensive, and hard to be had, as it comes from Europe and the supply is now cut off on account of the war. CARL J. MENZE.

Ferndale, Wash.

In commenting on the above, Dr. S. B. Nelson says: The above treatment is the treatment recommended and worked out by Dr. Richardson of the Vermont experiment station. Upon his findings and experiments it has been recommended throughout the state of Washington by veterinarians of the College of Veterinary Science and at many, many farmers' institutes, to be one of the valuable lines of treatment to be followed in an outbreak of abortion. There are two drawbacks to it. First is the expense of the treatment at the present time, which is practically prohibitive. The second is that when the treatment is used for a long period of time the intense blueness of the drug is transmitted to the surroundings and to many people that is quite objectionable. However, along with proper sanitation and sanitary conditions of the cow and her surroundings it is a splendid adjunct when it can be used without too great expense.

## -: AN INTERESTING SHORT STORY :-

We cannot prepare any better advertisement for

# GOMBAULT'S CAUSTIC BALSAM

than the following voluntary testimonial from a man who stands very high in all business and social circles where he is known:

No. 2131 Wyoming Avenue, Washington, D. C., November 26, 1917.

The Lawrence-Williams Co.,

Dear Sirs:—I have had GOMBAULT'S CAUSTIC BALSAM constantly in my home for thirty-three years and have used it for a large number of animal and human ailments. It is by far the most effective, reliable and economical medical preparation that I have ever known. Its persistent use for chronic rheumatism, lumbago, neuritis and kindred troubles bring sure relief. For sore throat, pains in chest and acute cramps it penetrates and relieves pain. For mosquito bites, bee stings and bites of all other vermin it instantly stops all irritation. For itching between the toes and on limbs, it is an instantaneous cure. For fresh cuts, wounds and old sores, it eliminates all danger from blood poisoning and hastens a cure. A few drops of CAUSTIC BALSAM is more effective than half a bottle of any other application that I know of.

Truly yours, M. J. LAWRENCE.

**GOMBAULT'S CAUSTIC BALSAM** has had a steady, reliable sale in France, where it is made, for forty-five years. In the United States and Canada, with only moderate advertising, it has had an increasing sale for thirty-five years. The demand is produced strictly by its merits. Price, $1.75 per bottle. Sold by druggists, or sent by Parcel Post on receipt of price. Guaranteed to give satisfaction. For further particulars and unlimited testimonials, address

## Poultry Is Preeminent

The work of improving egg production by scientific breeding received a great impetus from the investigations of Dr. Raymond Pearl, biologist of the Maine experiment station for a number of years. For the last year of more Dr. Pearl has been statistician of the food administration bureau at Washington. As a result of his work and studies there he has formed some rather decided views as to the place poultry will take in the future in the economy of production, and he has expressed his views along this line in a letter published by the Reliable Poultry Journal. Part of his letter follows:

"I have been gratified because my work in the food administration has put me in a position to realize how acute the food problem may become under certain circumstances and also the studies we have conducted here have made it increasingly clear that the day of the large unit such as the beef animal in the production of necessary foods of animal origin, is rapidly passing. The steer is too uneconomic a transformer of energy to last long as a chief source of food for mankind. The war has very much accentuated this development and has turned our attention to the relatively greater economy in production of smaller units, such as poultry.

"With the steady increase in population in proportion to the habitable area of the earth there is bound to be a turn more and more toward the smaller animal unit as a producer of food. Among all such animals poultry is preeminent, but in order to maintain this position we must have highly developed poultry."

Highly developed for what? For egg and meat production. J. D.

## Use Care in Marketing

Poultry producers may not only assist greatly in the solution of the food problems but may as well secure much greater compensation for their efforts if they will follow a few careful rules in marketing, says the United States food administration. Among the points emphasized by the administration are the following:

Withhold from market all immature birds, except during the season for spring fries; never place moulting hens on the market; never market fowls that are in poor flesh; never market laying hens unless it is absolutely necessary. The food administration warns producers at this particular time of year that they should endeavor to slow up the delivery of poultry to the markets as there is a tendency to oversupply and thereby reduce the price of the poultry.

### BREEDING BARRED ROCKS.

**Except for Show, Shape and Color Are Not of Great Importance.**

To the Editor: Would like a few suggestions as to the color and shape of Barred Rocks to be kept for breeding purposes. Should they be light or dark?

Chewelah, Wash. W. K.

If one is breeding Barred Rocks, or any other breed, for egg production or for utility only the shape is not very important. When it comes to laying, they are like trotting horses, as some one has said, they "go" in all shapes. It is difficult to give in words a real conception of shape. The best way is to study the fowls themselves. If one is breeding for show, as shows are usually judged, he should study other show birds and read the "Standard of Perfection," which is the guide of the judge. The Standard says the Plymouth Rock cock should weigh 9 1-2 pounds and hen 7 1-2. The cockerels and pullets are lighter. They may be Plymouth Rocks, however, and not have the Standard weights. But in the show room the nearer they come to the Standard weights the better chance they have of winning a prize. When it comes to egg production the heavy producers are usually smaller than the Standard calls for.

In regard to color, if one has a flock of breeding hens of good color, to raise pullets from them of the same color the sire must be of lighter color; but to get cockerels of the same color as the hens a darker male should be used. The males always come lighter in color than the females. The Standard demands the same shade of color in each, and that is why many resort to double mating—one yard mated for producing pullets of exhibition color and another mated to produce males of right color. That is not nature, but the shows demand it. It makes no difference in their production whether they are light or dark. J. D.

### HATCHING TURKEYS.

**Natural Method Brings Best Results, but Incubator Can Be Used.**

To the Editor: Can you tell me through the columns of the Farmer whether turkey eggs can be successfully hatched in an incubator or not. I always have so many eggs in the spring before hens want to set and it is the early turkeys I want.

M. C.

Leahy, Wash.

Turkey eggs may be hatched in incubators, but very few are hatched that way. In cases like this, where eggs are plentiful and no hens ready to set, it would be a good idea to use the incubator. One should understand the operation of an incubator, however, or there is likely to be a waste of valuable eggs. Would advise the use of turkey hens for brooding the poults. By the time the eggs hatched there would likely be brooding hens ready for the poults. Chicken hens could also be used for brooding. It will be better to hatch by the natural method where broody turkeys are available. It is well to start a year in advance to get brooding hen turkeys. Hatch them early enough so they will be mature and be ready to lay next year early in the season, and there will be more early setters.

An experiment in hatching turkeys artificially was made by H. L. Blanchard at the Puyallup (Wash.)-experiment station a few years ago. J. D.

### PROBABLY WRYNECK.

To the Editor: Our chickens have been dying off ever since spring. They droop around for a day and then they squat down and curl their feet under them. Their necks get bent and their heads droop down. What is this disease, and the cause, and is there any cure for it? G. A. E.

Lynden, Wash.

From the symptoms given the chickens probably have wryneck. This usually comes from an overfat condition and lack of exercise. Try a dose of epsom salts, quarter teaspoonful to the bird, dissolved in water and mixed in a mash. Feed this when they are hungry, making sure that they all get a share. Give all the green food they will eat, and make them exercise for their grain feed in a deep litter of straw. Keep them a little hungry for a week or two. Give buttermilk, all they will drink. J. D.

### MONEY FROM DAY-OLD CHICKS.

Carl Douglas, living 17 miles from Seattle, purchased 100 day-old chicks in the spring of 1917. They were Rhode Island Reds, and were bred and hatched by Mrs. Dubor of Kirkland, Wash. The Douglas family raised all but four of the chicks, and this fall sold them in the Seattle market at 50 cents a pound, and now they want to give Mrs. Dubor credit for good, healthy stock of strong vitality.

## SHIPPING APPLES TO ENGLAND.

One of the buying firms of Hood River, Ore., is Dan Wuille & Co., of England. A. E. and W. R. Woolpert are the Hood River representatives. These gentlemen have a large orchard across the river at White Salmon, Wash.

"The apple crop of the district is a very good one," said A. E. Woolpert. "The Newtowns are a good yield and of high quality. The Spitzenbergs are a medium yield. Ortleys are good. These are the principal varieties here. We are exporters to all parts of the world. The Newtown holds up better than any other commercial apple, and is very popular in England.

"They raise lots of apples in England, but they are all early and not of first-rate quality. Australia and Tusueania ship apples to England, reaching that market in April and May. Then the local product fills in till American apples come in.

"Before the war Germany was a good market, red apples being preferred. South America is a large and growing market."

This firm owns thousands of acres of land in the Canary islands, and raises and exports bananas, oranges, grapefruit, potatoes, onions and tomatoes, and by this variety of products is selling all the year, and so reduces the "overhead."

Mr. Woolpert says the idea that irrigated fruit, properly raised, differs from other fruit is not correct. Too much water will affect fruit and vegetables injuriously, and so will too much rain. After a tree is 15 years old lack of sufficient moisture will be fatal. Trees need water and must have enough to support them or they will not produce full crops, and will finally die.

## USE EYES INTELLIGENTLY.

It's not so difficult for an outsider to break into the fruit producing business, according to W. H. Curtis of Yakima, Wash. Mr. Curtis used to be a newspaper man in Iowa, but now he raises and sells apples.

"The main thing in getting used to orchard work," comments Mr. Curtis, "is to keep your eyes open and not take too much advice. Advice, you know, is the cheapest thing in the world, and much of it isn't worth any more than it costs. When I came out here I didn't know anything about pruning, so I began to watch really expert pruners as they worked. What I wanted to discover was their aim—the thing they were trying to accomplish by pruning. And I succeeded so well that I think I may claim to be one of the best pruners, at any rate as far as my theory goes, in the county. It's largely a matter of using your eyes intelligently."

P. E. T.

## AUTO TRUCK IN ORCHARD.

The influence of the auto-truck was strongly felt in the great Wenatchee (Wash.) fruit district this season. The apple crop is reported to have been picked and packed more quickly than ever before. The fruit colored up rather late and picking thereby started late. But in spite of general war conditions labor was fairly plentiful and the work was quickly done. Growers, packers and buyers agree that the number of auto-trucks, both local and those that come from the outside for the season, helped prevent congestion in many an orchard and packing plant. Those big trucks that hauled from 250 to 300 boxes of apples at a load, kept the apples from accumulating where storage space was scarce, and got them quickly to the packing houses or cars. There has been no actual car shortage, though available cars were used as fast as they were furnished, and could frequently have been used faster. Box cars were used to some extent for shipping in the early part of the season.

## WANT FRUIT SHIP LINES.

Joseph Bigiorgio, president of the Earl Fruit company, says that he would like to see the government establish a direct steamship fruit line to Europe and other foreign countries. He says that the government is the only one now in position to inaugurate such a movement, but that after it became well started it might be taken over by private capital. His idea is that ships should be fitted especially for carrying fruit and that they should be operated on a regular schedule from the fruit ports with fruit as their major cargo at all seasons possible.

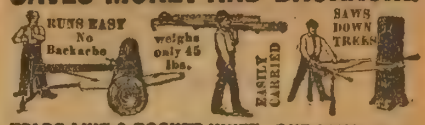
## MUST EXPORT APPLES.

"The principal question now interesting apple shippers and growers," says W. L. Wagner of the firm of Wagner & Sons of Chicago, "is the probability of being able to export a considerable quantity of this year's northwestern crop. Advices from the seaboard are to the effect that the steamship freight rate on apples will be about $4 a box. This, with other charges, would make the cost of laying a box of apples down in Liverpool more than $5."

## TWENTY-NINE-ACRE ORCHARD.

### Yields 4000 Boxes of Apples During the Second Year.

An agriculturist is distinguished from a farmer, it has been said, by the fact that the agriculturist makes his money in town and spends it on his farm, while the farmer makes his money on his farm and spends it in the city. Judged by this standard Arthur Lund, president and manager of the bank at Tonasket, Wash., is a farmer. Mr. Lund owns a 29-acre orchard near Omak, a little farther down the Okanogan valley. This is its second year of bearing, and he will have 4000 boxes. The varieties are Delicious, Spitzenberg and old style Winesaps, and I can personally say I was presented with about the finest specimens of all three varieties I ever saw, as to size, color and flavor. It is no wonder the fame of the Okanogan and Wenatchee Delicious is growing to be world-wide.

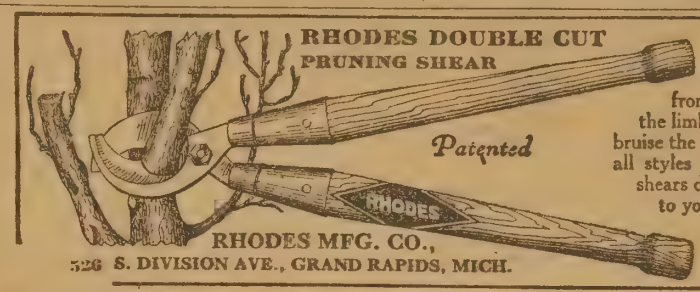


Mr. Lund gives credit for the success of his orchard to Soren Peterson, who has cared for it from the start and whose 29-acre older orchard yielded 12,000 boxes of apples this season, about 635 boxes per acre. Mr. Peterson has Delicious, Winesaps, Jonathans and a few Spitzenbergs. These orchards are under a government irrigation system, but are supplemented by a pumping plant from a lake on Peterson Brothers' land, which was operated before the government system was put in.

While Mr. Peterson modestly gives much credit to the climate, soil and sunshine of the valley he says raising apples here takes intelligent care, as it does anywhere. He first sprays in April with lime and sulphur. In May he sprays with arsenate of lead, while in blossom, and repeats twice through the summer. While there is no scale, the lime-sulphur is a preventive and is good for moss and many pests. The lead, of course, is for codling moth—the most troublesome pest in the Okanogan valley. The time of spraying varies according to need. Mr. Peterson also sprays for aphis when needed, which is as soon as they appear, sometimes as soon as the trees leave out. The spray for aphis is used all through the season. Most of the apples from both orchards are sold in Chicago, and bring fancy prices. H. A.

## MOTH IS COSTLY.

Conservative estimates indicate that the losses from the codling moth alone in the state of Washington this year, will total more than $4,000,000, says W. S. Thornber of the state college. This problem alone, if properly solved, will mean the difference between an absolute loss and a neat little profit on many a fruit farm.



SAVES MONEY AND BACKACHE

FOLDS LIKE A POCKET KNIFE. ONE MAN with the FOLDING SAWING MACHINE saws down trees—saws any kind of timber on any kind of ground. One man can saw more timber with it than two men in any other way, and do it easier. Send for free illustrated catalog No. D64, showing Low Price and latest improvements. In use 30 years. # AVERYS—The Tractors With The Perfected Opposed Motor and Patented Sliding Frame Transmission

*Top view of Avery Perfected Opposed Motor and Patented Sliding Frame Transmission. Note direct drive to belt wheel and drawbar—only 3 shafts—only 8 gears—all straight spur gears.*

**Let Us Teach You How To Run a Tractor—*Free***

Avery Tractor Service Schools will be conducted at all our Branch Houses, Distributors' and at many of our Dealers'. If you cannot attend, you can get the same instruction free in our Correspondence Course. It covers these subjects:

1. The Principles of a Tractor Motor
2. Carburetor Adjusting
3. Magneto Care and Repair
4. Adjustment and Lubrication of Bearings
5. Valve Grinding
6. Belt and Drawbar Transmission Systems
7. Operation of a Tractor

Write us for dates of Avery Tractor Service Schools or for Free Tractor Correspondence Course

THE **Perfected Opposed Motor** used in Avery Tractors has advantages for tractor work which no other tractor motor has.

An opposed motor distributes the weight correctly between the wheels, makes possible a narrow tractor—has a short crankshaft with only two bearings—is stronger in construction and runs at a low speed.

The **Avery Perfected Opposed Motor** has all these advantages—and then many more. We built it with the heaviest crankshaft in any motor, a round radiator with thermo-siphon cooling system, and valves in the head. Then we invented the wonderful Avery renewable inner cylinder walls, adjustable crankshaft boxes and gasifiers for burning kerosene and distillate. **No other motor used in any tractor has even half of these features.** The power of this motor is delivered to the belt wheel and drawbar by the simplest system built—the **Avery Patented Sliding Frame Transmission.**

This is the only transmission that makes possible a direct drive in either high, low, reverse or in the belt. It has only one clutch—only three shafts—only eight gears—all straight spur gears. The belt pulley is mounted on the crankshaft, and no crankshaft bearing on the frame or bevel gears are used. Without a question the **Avery Patented Sliding Frame Transmission** is the simplest and most efficient belt and drawbar transmission system built.

**Write For Catalog or See An Avery Dealer**

You will find this same type of Motor and Transmission in all five sizes of Avery Tractors, from 8-16 to 40-80 h. p. The Avery line is a complete line of power farming machines, including also a special 5-10 h.p. Avery Tractor, the Avery Motor Cultivator and Avery "Grain-Saver" Threshers and Tractor Plows. They are *successfully used by farmers in all 48 States and 61 Foreign Countries.* Ask for catalog or see an Avery Dealer.

***Special Avery Exclusive and Protected Features***

Take particular note of these exclusive and protected Avery Features:

1. Renewable Inner Cylinder Walls enable us to use a harder material which wears longer and, if it ever does wear, the walls can be replaced and the Motor made as efficient as in the beginning and with less expense.
2. Adjustable Crankshaft Boxes, which enable you to take up any wear in the main bearings instantly without tearing the Motor down.
3. Duplex Gasifiers, which turn kerosene, distillate or other low-grade fuel into gas and burn it all.
4. Double Carburetor, by which you can start on gasoline and instantly switch to kerosene or distillate without having to make a single adjustment.
5. Crankshaft one-half or more in diameter than the cylinder and so strong it is almost unbreakable.
6. Thermo-Siphon Cooling System, which does away with the pump, fan, belts, gears and chains and saves the power required to drive them.
7. Round Radiator, which catches the wind from any direction.
8. Internal Gear Pump Oiling System that protects every working part of the motor.
9. Sliding Frame Transmission, which transmits the power to the belt wheel and the drawbar with the least loss, and is the simplest and most durable transmission system built.
10. Universal Self-Cleaning, Non-Slipping Lugs that fit all conditions of field or road work.

# MILLIONS Waiting for Your FURS

NEVER has there been such urgent demand for furs. Demand is greater than supply; not only is it a year of fur styles, but the government also needs furs for uniforms. This alone makes **an enormous addition to your market.**

And **now—NOW**—is the time for you to trap and ship. But make certain your furs go **where grading is fair and right**—where you will get **all** you are entitled to out of **every** skin.

**Trap Now For**

**Taylor**
INTERNATIONAL FUR EXCHANGE

**Ship at Once**

F. C. Taylor Fur Co. has behind it a record nearly half a century old for honest grading and highest prices. Trappers everywhere have shipped to Taylor, have tried selling elsewhere **and gone back to Taylor.** For Taylor grades furs up!

Such methods have made Taylor **"America's Greatest Fur House."** It has also brought the **most fur buyers** to them. So Taylor assures you **highest prices,** provides you with **the surest market.**

**You Get Your Money at Once**

Taylor pays **promptly.** You do not have to wait for your money. It comes right back to you as fast as the mails can carry it.

With wool as scarce and high as it is this year, every hour you employ in getting furs is **not only doubly profitable, but patriotically employed as well.**

**Don't Wait to Write—Ship at Once**

Take advantage of the high prices. Don't write—ship! Bundle up your furs, tie a Taylor tag on them and get them on the road to profits immediately. And if you need any further information or supplies, check and send the coupon.

# Exterminating Coyotes

In view of the prevalence of rabies among wolves, the district United States forester at Portland, Ore., has announced the results of some very effective work that has been done by the forest service in destroying these animals. Supervisor C. J. Bingham of the Malheur national forest, in one month last winter, killed 32 coyotes in the vicinity of John Day, Ore., devoting only half his time to the work. An extract from Supervisor Bingham's report on his method of dealing with the coyotes is given herewith:

"A poison should be selected that will take effect immediately after being picked up by a wolf or coyote. I have used cyanide of potassium and strychnine and in former years have been very successful with traps, but have found none of them that will do the work as effectively as Sure Death capsules. The greatest objection to other poisons is that the animal strays off and is often lost, but with Sure Death capsules 20 yards is the greatest distance I ever found one from bait. The Northwestern Hide & Fur company, Minneapolis, Minn., sells a poison of this character in the shape of a small capsule, containing enough poison to immediately kill a coyote. In ordering these capsules it must be stated for what purpose they are intended, so that proper size will be given; different size capsules are required for different animals.

"To prepare capsules for use, take lard or butter, preferably a little rancid. Warm it until it is soft enough to handle well, but not enough to melt it. Care must be used not to touch the butter with the hands. Use a small wooden paddle that has no human scent to it. With this paddle cut off a piece of butter about the size of a marble; lay it on an unscented board and flatten it out; place the capsules on the strip of butter; roll the butter or lard around the capsule, leaving it as nearly round as possible. Take a small pair of wooden pincers and place the rolls in a jar that is free from scent. Never use metal to handle the butter or capsules—always wood. Then the bait thus prepared should be left to freeze or harden and kept in a cool place until used. The carcass of an old cow or horse should be used as bait—a fresh carcass preferred. Place the bait on top of knoll or hill. Avoid ground covered with brush. Do not kill the bait by shooting, but by severing the main arteries in the neck. All operations must be done from horseback, so that no odor will be left on the ground. Throw two or three dozen capsules around the carcass either in the snow or under natural debris."

# Joins Big Association

Word has been received that the Northwest Live Stock association, under whose auspices of the northwest live stock show has been developed into one of the greatest live stock features of the country, has been admitted to membership in the American Association of Fairs and Exhibitions. President Thomas Wren, Secretary O. P. Hendershot and R. C. Beach have been chosen by the board of directors of the northwest association as delegates to attend the meeting of the larger association in Chicago early this month.

Although it was necessary to call off this year's show at Lewiston, plans are already actively under way for next year's exposition, the board of directors having already selected November 6-12 as the dates. A building committee for the new live stock pavilion and cattle barns has been appointed, consisting of D. S. Wallace, R. C. Beach and Henry Thiessen. It is planned to allot $25,000 for the construction of the pavilion, which will be large enough to seat 35,000 people.

## MUSKRAT IS A PEST.

The muskrat is something of a pest, though he is not always recognized as such. He is a vegetarian, and lives off the grasses or the crops in the lowlands along the streams which he inhabits. He is especially fond of green corn, sometimes cutting down the stalks to get at the ears in roasting ear time. He also burrows through dams, sometimes doing damage in that way to irigating systems and the like. He is an enemy to some kinds of fish, though not as a rule to the game varieties. He generally gets the sluggish fish, which is not so great a crime. When the trappers capture the muskrat for his fur, they are not only securing this valuable product, but they are relieving the community of a pest.

## MAY REGULATE 1919 WOOL.

Wool growers as well as dealers and manufacturers are extremely interested in the possibility of government regulation of the 1919 crop and its prices. It is considered by many who are studying the question that it is probable the government may commandeer the next season's crop as a means of stabilizing the market. It is understood that England also probably will control its wool market for next season.

## TRAPPING SMALL GAME.

**Every Country Boy Should Get Busy.**

Perhaps the farm boys of the country—their elders, too—have not put two and two together enough to realize that there has never before been a time when trapping promised such big results as this coming season.

The reason is plain. Thousands of men who have trapped other years are now with Uncle Sam's fighting forces. That means a shortage of furs and a shortage means high prices.

Almost any farming section of the United States affords fine opportunities for profitable trapping. It isn't necessary to go off into the wilds to trap fur bearers whose skins bring good prices. Aren't there mink, muskrat, opossum, skunk, fox, weasel, badger, raccoon—or some of them—right at hand? Of course there are—and they sell as readily as skins from the interior of Alaska or the wilds of Canada. Here is safe, profitable sport.

This is a hint in time—to farm boys and others who either haven't trapped at all, or who have only gone at it with indifferent effort. A whole lot depends on being ready beforehand. The successful trapper begins looking over trapping grounds weeks before the first trap is set. He sees to it that his old traps are in good condition. He buys new traps early, in order that he may bury them in the ground or otherwise age them to destroy the scent of steel and iron before trapping begins.

One should write to the big fur houses and ask for their catalogues and booklets. Many of these contain valuable information obtained from "old-timers" about their methods and the habits of animals. Ask for the names of good, practical books on trapping. See what you can find out from those you know who have trapped. In other words, be energetic in looking up all the information you can.

The best part of it is that any intelligent boy can quickly learn trapping. It isn't mysterious. And it is both great sport and one of the best ways to make a considerable sum of money. Trapping isn't working hard for small pay in spare time and maybe doing work that is distasteful. The boy who traps is his own boss and doing something that stirs the blood with exercise and excitement, as well as with the financial reward.

## WANT TAXATION LAW CHANGED.

Petitions are being circulated in the fruit growing districts of central Washington recommending to the coming legislature that it amend the state taxation law so that fruit would be assessed on May 1 instead of March 1 as at present. Owing to the fact that there are always considerable quantities of apples held over the winter by the growers, due to lack of shipping facilities, the March 1 assessment nearly always is made against the producer, it is claimed. By changing the date to May 1 two months of the spring would be allowed in which fruit could be placed on the market and shipped without having to bear taxes.

## Must Reclaim Land

R. H. Hayden, secretary of the Washington Irrigation institute, reports that the meeting to be held in Yakima on December 17, 18, will feature land settlement work.

"With the return of our boys from Europe," comments Mr. Hayden, "it becomes more than ever imperative for us to get this matter upon a constructive basis. We have practically no more free land to give, but we have a tremendous acreage which can be reclaimed by drainage or irrigation, and so made available for such returned soldiers as want to get upon farms."

On December 19, the day following the closing of the institute, the Washington State Land Settlement association will hold a conference in Yakima. Secretary Thomas B. Hill states that in addition to addresses by E. F. Benson, president of the association, and by Dr. Elwood Mead, the conference will take up for consideration legislation which it is desired to bring before the next session of the legislature. The California statute is the basis for the proposed Washington law. A commission of probably five members to administer the state land settlement laws; a revolving fund of one million dollars of state money, to be available for the same purpose; and provision for the acquirement of lands by the commission, the improvement of these lands, and sale to settlers on favorable terms, are among the features to be considered.

### ORCHARD COVERS 550 ACRES.

**It Is the Largest in Okanogan County, and Is Just Coming Into Bearing.**

The largest apple orchard in Okanogan county, Washington, and one of the large orchards of the entire northwest, is that of the Boston-Okanogan company, five miles below the town of Okanogan. The company owns 907 acres and the orchard covers 550 acres. There are six principal owners, all Boston capitalists.

The project was promoted by W. N. Mears in 1910. He looked over or investigated other apple regions in the northwest and liked this best. So the 900 acres was purchased in what was then known as Tar Heel flat; now Boston Heights. The land lies on two benches, 300 and 500 feet above the Okanogan river. The Pleasant Valley Irrigation and Power company already had a satisfactory little irrigation project. Water from Loop-loop creek is stored, with a 45-foot dam. It has a storage capacity for 2000 acres and other parties use most of the water.

Under the supervision of J. R. Everett, who is still the superintendent, trees were planted in 1911, 1912 and 1913. The trees are planted 30x30, with apple fillers of fast growing varieties. Permanent trees are Jonathans, Delicions, Rome Beauty, Arkansas Black and a few Spitzenbergs. The first apples from the orchard were gathered in 1915. In 1916 about five cars of apples were picked and in 1917 about eight cars. This year 27 cars will be shipped.

For growing trees Mr. Everett uses a semicover crop; that is, every other row is planted to alfalfa. This is plowed under the third year and the alternate row seeded. When the trees are about 7 years old the plan is to seed solid to alfalfa and plow under every third or fourth year. There is no scale, but the trees are sprayed for other insects, especially the codling moth. This year the apples are practically free from worms.

While the orchard has not come into bearing quite as soon as the stockholders hoped, this dry year's crop has been very satisfactory. Mr. Everett says that, while he likes that bench land, the entire Okanogan valley can not be excelled as an apple country.

Walter I. Badger is president of the company; his son, Walter I. Badger Jr., is secretary, and George P. Bullard, treasurer and manager. The company's offices are in Boston.

H. A.

### HIGHWAY WORK PROGRESSES.

The substantial concrete highway which Yakima county is putting in between the city of Yakima and Moxee City is beginning to foreshadow what it will eventually be. The complete highway will be about seven and one-half miles in length, and at the present time approximately two-thirds of this distance has been covered by the construction crew.

### SCALE IS UNUSUALLY BAD.

Mrs. J. B. Creighton of Yakima reports the scale unusually bad this season. The Creighton orchard consists of five acres, and is set principally to Wageners. The fruit was sold direct, rather than through an association.

TO the Editor of The Washington Farmer: For some little time past I have had the pleasure of reading The Washington Farmer. I am not farming, but want to say that, whether farming or not, your paper is a valuable asset in any home.

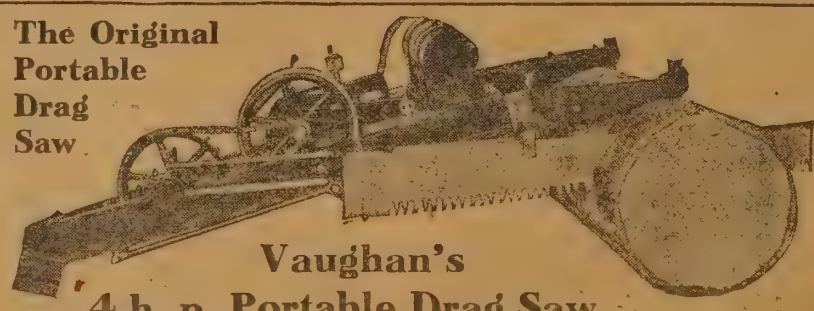
G. W. GANNON.
Tacoma, Wash.

# Your Christmas Shopping Problems

SUCH of these problems as can not be solved by inspecting the stocks of your home stores will receive sympathetic and prompt attention on the part of our Mail Order Department, upon receipt of a letter or postal card with particulars.

**The next best thing to being able to shop personally in this, the Northwest's finest store, is to have at one's disposal the efficient Frederick & Nelson Mail Order Service.**

Christmas stocks are completely ready—more delightfully diversified than ever before—with plenty of toys, of course, for the children's Christmas.



If you can conveniently come to Seattle for part of your holiday shopping, you will thoroughly enjoy a visit to this store, with its unusually complete provision for the convenience and comfort of its customers.

# Is 1919 Wheat Price Guaranteed?

## *Uncertainty Felt Concerning President's Proclamation*

What effect the coming of peace will have on the price of wheat next season is a question that has caused widespread discussion and difference of opinion throughout the United States. While President Wilson announced definitely in a proclamation issued in September that the present wheat price would be guaranteed throughout the country for next season, at the same time he issued a supplementary statement announcing that he would appoint a commission to investigate the cost of wheat production as a further basis for price regulation. This supplemental statement probably is the cause of the doubt that has been expressed as to next year's price. The best informed grain trade men appear to be somewhat in doubt on the general question.

President Wilson's September proclamation quoted the law which provides that whenever "an emergency exists requiring stimulation of the production of wheat," the president shall have authority to "determine and fix and to give public notice of what, under specified conditions, is a reasonable guaranteed price of wheat." The president then, in his proclamation, continues:

"Now, therefore, I, Woodrow Wilson, president of the United States, by virtue of the powers conferred upon me by said act of congress, and especially by section 14 thereof, do hereby find that an emergency exists requiring stimulation of the production of wheat, and that it is essential that the producers of wheat produced within the United States, shall have the benefit of the guarantee provided for in said section; and in order to make effective the guarantee by congress for the crop of 1919, and to assure such producer a reasonable profit, I do hereby determine and fix, and give public notice of reasonable guaranteed prices for No. 1 northern spring wheat and its equivalents at the respective principal primary markets as follows, to-wit:"

The prices to which he refers include New York, $2.39 1-2 per bushel; Chicago, $2.26 per bushel; Tacoma, Seattle, Portland, Astoria and San Francisco, $2.20 per bushel, and Salt Lake City, Utah; Great Falls, Mont.; Pocatello, Idaho, and Spokane, Wash., $2 per bushel.

The following is the note which the President issued in connection with his proclamation fixing the price as above stated:

"In issuing today the government's guarantee of the same price for the 1919 wheat crop that was guaranteed for the 1918 crop, I wish it to be understood that in the spring of 1919 I will appoint a disinterested commission who will secure for me the facts by that time disclosed as to the increased cost of farm labor and supplies, using the three-year pre-war average prices of wheat, of labor and of supply costs as a basis, and that from this information I shall determine whether there should be an increase in price above the present level, and, if so, what advance, in order to maintain for the farmer a good return. Should it then appear that an increase is deserved over the present guarantee, however, it will be applied only to those who have by next harvest already marketed their 1918 wheat.

"It is the desire and intention of all departments of the administration to give to the wheat grower a fair and stimulative return in order that the present acreage in wheat may be maintained.

"I find a great conflict of opinion among various sections of the country as to the price that should be named as a minimum guarantee. It must be obvious to all, however, that the factors which will make for increased or decreased cost of production of next year's harvest can not be determined until the near approach to the harvest.

"In giving a guaranteed price for wheat one year in advance (the only industry guaranteed by the government), there is involved a considerable national risk. If there should be peace or increased shipping available before the middle of 1920, Europe will naturally supply itself from the large stores of much cheaper wheat now in the southern hemisphere; and therefore the government is undertaking a risk which might in such an event result in a national loss of as much as $500,000,000 through an unsalable surplus; or in any event, in maintaining a high level of price to our own people for a long period subsequent to freedom in the world's markets.

"Despite this, the desirability of assuring a supply to the world of prime breadstuffs by insuring the farmer against the fluctuations in prices that would result from the uncertainties of the present situation and from the speculation those uncertainties entail seems to me to make the continuation of the guarantee for another year desirable. On the other hand, it is clear that before increasing this liability by large sums with the risks set forth above, and before increasing the burden of the consumer, the matter should be subjected to searching inquiry at the appropriate time—the time when the pertinent facts will be known.

"I feel confident that with this preliminary fixed guarantee and with the assurance that justice will in any event be done to the grower, he will continue the fine patriotic efforts by which he has served the country hitherto; that the government will have acted prudently; and that the consumer will be satisfied that his interests are not unduly sacrifieed, but just and exhaustive consideration given to every element of the matter at the proper time."

It is apparent from a close reading of this document that the president has definitely mixed a minimum price for No. 1 northern spring wheat and other grades in proportion at the various primary markets, and that any change that might be made next spring or summer as a result of the investigation of the commission which the president says he will appoint, would be changes upward rather than downward.

### BUYS 600-POUND SOW.

# Do *you* think there is no competition?

If anyone thinks there is no competition amongst the big packers he ought to go through a day's work with Swift & Company.

Let him begin at the pens when the live stock comes in; let him try to buy a nice bunch of fat steers quietly and at his own price, without somebody's bidding against him.

Let him realize the scrupulous care taken at the plant that not one thing is lost or wasted in order that costs may be held to a minimum.

Let him go up into the office where market reports are coming in — and reports of what other concerns are doing.

Let him watch the director of the Swift refrigerator fleet, maneuvering it over the face of the country like a fleet of battleships at sea.

Let him take a trip with a Swift & Company salesman and try to sell a few orders of meat.

Let him stay at a branch house for an hour or two and see the retail meat dealers drive their bargains to the last penny as they shop around among the packers' branch houses, the wholesale dealers, and the local packing plants.

And then, when the day is over, let him have half an hour in the accounting department, where he can see for himself on what small profits the business is done. (Less than 4 cents on each dollar of sales.)

If he still thinks there is no competition in the meat business it will be because he wants to think so.

**Swift & Company, U. S. A.**

A nation-wide organization owned by more than 23,000 stockholders

# Save Your Doctor's Time

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Recently George Creel, head of the committee on public information announced that the first United States soldiers to be killed in the war and the first to be wounded were both in the medical corps. This fact must have impressed you with the serious risks which are taken by the army doctors. Before we entered the war the bravery and sacrifice of our medical officers at the front had probably been too little appreciated.

The officers and enlisted men in the medical corps are the only soldiers who go into No. Man's Land with no defense whatever. The tireless work on the battlefield of the stretcher bearers, all of whom are in the medical corps, is full of danger. No profession has volunteered its services to the country more generously than the medical profession. About 24,000 physicians, or nearly a fourth of the eligible physicians of the country, have expressed their willingness to resign practice and go to war. Some have already received their training and gone to France; some are now waiting to be called, and about 2000 are in the camps receiving the special instruction that will fit them for a military life.

When a physician receives word that his offer to join the army has been accepted he is ordered to report for duty at once at one of the two training camps where army surgical schools are located. One is at Fort Riley, Kan., and the other is at Fort Oglethorpe, Ga. The doctors live in barracks at these camps just like any other soldier. The course of training lasts three months.

Dr. Hirshberg.

### War's Call for Doctors.

During the first month they drill and command companies of men, they study the organization of the army. The second month is occupied with the special duties of medical officers, and they are taught the new conditions and problems which confront an army on the battle fronts. The third month they concentrate upon some special branch of medical work. About 10 per cent go into head surgery, 10 per cent into X-ray work, 35 per cent into general surgery, and another 10 per cent into heart practice.

About 25,000 of our best physicians and surgeons are expected to volunteer, and will shortly be needed for our fourth and fifth million of men. Twenty-five thousand additional nurses are needed.

What you are expected to do is to learn and apply as much medical knowledge as you can to relieve the few doctors who must remain in civil life from the burdens of overwork, night calls and minor complaints.

At a medical meeting not long ago the doctors discussed night calls. It was discovered that 95 per cent of the summons from their much-needed slumbers were for fears, hysterias, cramps, colics, toothache, neuralgia and other pains, discomforts and anxieties which the silence of night usually exaggerates.

In other words, only five in every hundred medical calls and visits after midnight really and truly required that the doctor be roused from his much-needed sleep to dress and go out into the night.

### Meeting Simple Emergencies.

With nearly 50 per cent of the best doctors at war this means the unnecessary exhaustion of many of those who remain at home. Do you consider it just and fair to help destroy the very men you may urgently need? It is like the cry of "wolf" of the bad boy who guarded the sheep. At last, when you will really need the physician, he may not be able to answer your summons.

An earache can generally be relieved by applications of heat. Cramps, colic and stomachache can be alleviated with a hot soap suds enema, a glass of hot water and a mustard plaster over the seat of pain. If this does not suffice, one-half teaspoonful of aromatic spirits of ammonia in water will quiet the pains until the doctor is awake and comes in the course of the day's rounds. For the toothache, two or three drops of creosote on a pledget of cotton will suffice.

The fears, hysterias and emotional excitement of the wee sma' hours can be greatly abridged by the administration of 30 grains of bromide of potash in a glass of hot milk.

## WHAT THE CLOCKS SAVED.

One and a quarter million tons of coal have been saved during the seven months' operation of the "daylight saving" law, according to figures compiled by the United States fuel administration. When congress enacted the law to set the clocks of the nation ahead one hour, beginning Sunday, March 31, and ending October 27, the fuel administration made plans to gather facts from many sources in various sections in order to determine the saving in fuel that might be effected by the operation of the law. Figures from this data have been compiled and from these is made the estimate of the coal saved.

Among the many places which kept close watch on the operation of "daylight saving" very definite facts were obtained from one community of about 1,000,000 population. It was shown that in this one district the saving of coal was 17 1-2 tons per 1000 population over the period of seven months. These figures were checked against records obtained from other places in widely separated districts having the same relative conditions, and from the mass of facts thus gathered the estimate of 1,250,000 tons of coal saved is determined.

# Gigantic Task Ahead

A prominent French official estimates that it would require 100,000 men working six days a week for two years to reconstruct the devastated portions of northern France. He estimates that the losses to the territory by German occupation approximates $10,000,000,000. Among the losses he cites 1,510,000 head of cattle taken by the Germans into their own country.

A prominent Belgian authority estimates the loss of that country from German occupation at between $4,000,000,000 and $6,000,000,000. He says that the country has plenty of labor but that it must look to America for most of the raw materials and machinery necessary for reconstruction.

# SIDELIGHTS

### Speaking of Submarine.

"Father, what kind of beasts were the rams they used so much in the civil war?"

"They were probably the ancestors of the ewe boats of today, my boy."

### Houses Might Be Better.

Doctor—What you need is more exercise. What is your occupation?

Patient—I'm a piano lifter.

Doctor (recovering quickly)—Well—er—hereafter lift two at a time.—Boston Evening Transcript.

### He Might Try It.

"Flubdub has invited me to his golden wedding party."

"What of it?"

"What's the cheapest thing you can send on such an occasion?"

"You might try a gold fish. It might pass."—Louisville Courier-Journal.

### Dying by Inches.

Seth Woodbury was a tight-fisted old farmer. When his brother William died it was said that Seth had even grudged the money for proper medical care. Seth hitched up and drove to town to have a notice of his brother's death inserted in the local paper.

"There ain't no charges, be there?" he asked anxiously.

"Oh, yes, indeed," answered the editor, "our rate is a dollar an inch."

"Cracky!" muttered the old man; "an' Bill six foot two!"

### Pitied the Foe.

It was during the nerve-racking period of waiting for the signal to attack that a seasoned old sergeant noticed a young soldier fresh from home, visibly affected by the nearness of the coming fight. His face was pale, his teeth chattering and his knees tried to touch each other. It was sheer nervousness, but the sergeant thought it was sheer funk.

"Tompkins," he whispered, "is it trembling you are for your dirty skin?"

"No, sergeant," said he, making a brave attempt to still his limbs. "I'm trembling for the Germans; they don't know I'm here."

### Very Accommodating.

The wife of a successful young literary man had hired a buxom Dutch girl to do the housework. Several weeks passed, and from seeing her master constantly about the house the girl received an erroneous impression.

"Ogscuse me, Mrs. Blank," she said to her mistress one day, "but I like to say somedings."

"Well, Rena?"

The girl blushed fumbled with her apron, then replied, "Vell, you pay me four tollars a veek——"

"Yes, and I really can't pay you any more."

"It's not dot," responded the girl; "but I be villing to take tree tollars till—till your husband gets vork."—Boston Transcript.

## A Label That Defies Weather

The Raynster Label means the best in weather-proof clothing. It is the identifying mark on a complete line of raincoats for men, women, boys and girls—heavy rubber surfaced coats for outdoor workers, extremely dainty silk coats for women and girls, or fine imported cloth coats—suitable for overcoats or ulsters. These coats do double duty, they protect against rain or cold.

Be sure the Raynster Label is in the coat. That is the sign of full value for your money. In a garment showing the Raynster Label there is no question about materials or workmanship. It is the signature of quality. Look for the Raynster Label when you want a reliable raincoat.

Get a Raynster today. It is good insurance of health and clothing to provide a Raynster for each member of your family.

If you wish, we will send you the Style Book showing many Raynster models. Drop us a postal.

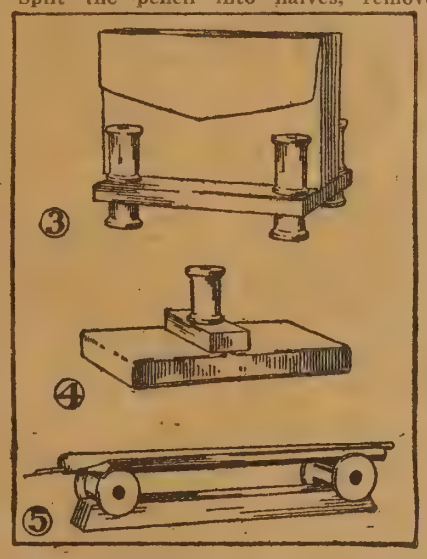
## SPOOLCRAFT CHRISTMAS GIFTS.

Every boy has right at hand all of the materials necessary for making Christmas gifts, in the empty spools from his mother's work basket, boards from grocery boxes, nails and one or two other things that are to be found in every household.

The spool toothpick holder (Fig. 1) is the simplest article to make. After finishing the wood of the spool, it is only necessary to glue a piece of felt or cardboard to one end to form a bottom to the holder. A brown Flemish or light-weathered oak stain, which can be purchased in a small

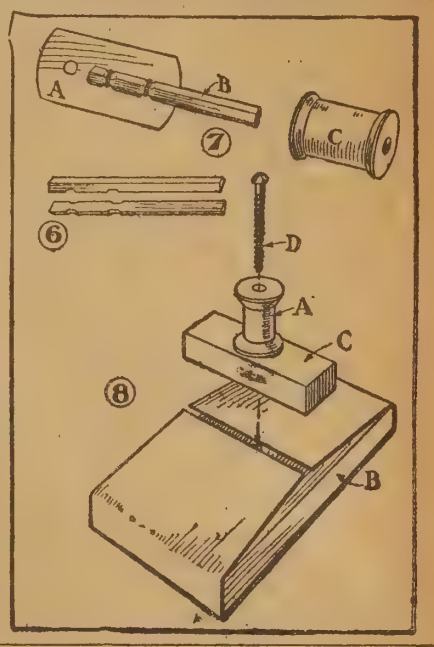


quantity at any paint store, makes the best finish. Directions come with the stains for applying them.

The paper-spindle (Fig. 2) is of a convenient size for a desk. A four-inch wire nail, a short silk spool, a base block two inches square, and a piece of felt for the under side of the base, are the materials you need to make it.

Enlarge the opening in one end of the spool so the head of the nail will set down into it. Then drop the nail through the hole, nail the base to the under side of the spool, and glue the felt to the base.

A handy ripping knife that will be appreciated by your mother is shown above the paper-spindle. A safety razor blade, a short length of a pencil, and a spool (A, B and C, Fig. 7) are required to make it. Split the pencil into halves, remove



the lead, and notch the edges in two places near one end, spacing the notches the same distance apart that the holes in the razor blade are spaced (Fig. 6). Slip the blade between the pencil halves, and bind in place with strong linen thread passed through the holes and around the notches in the pencil. Then glue the free end of the pencil into the hole in the spool handle, and the little knife will be ready for use.

Four common thread spools of equal size, and a piece of box board three inches wide by five inches long are necessary for the stationary rack shown in Fig. 3. First nail the piece of board to the ends of the four long spools. Then nail the four short spools to the other side of the board, directly below the long spools, for feet.

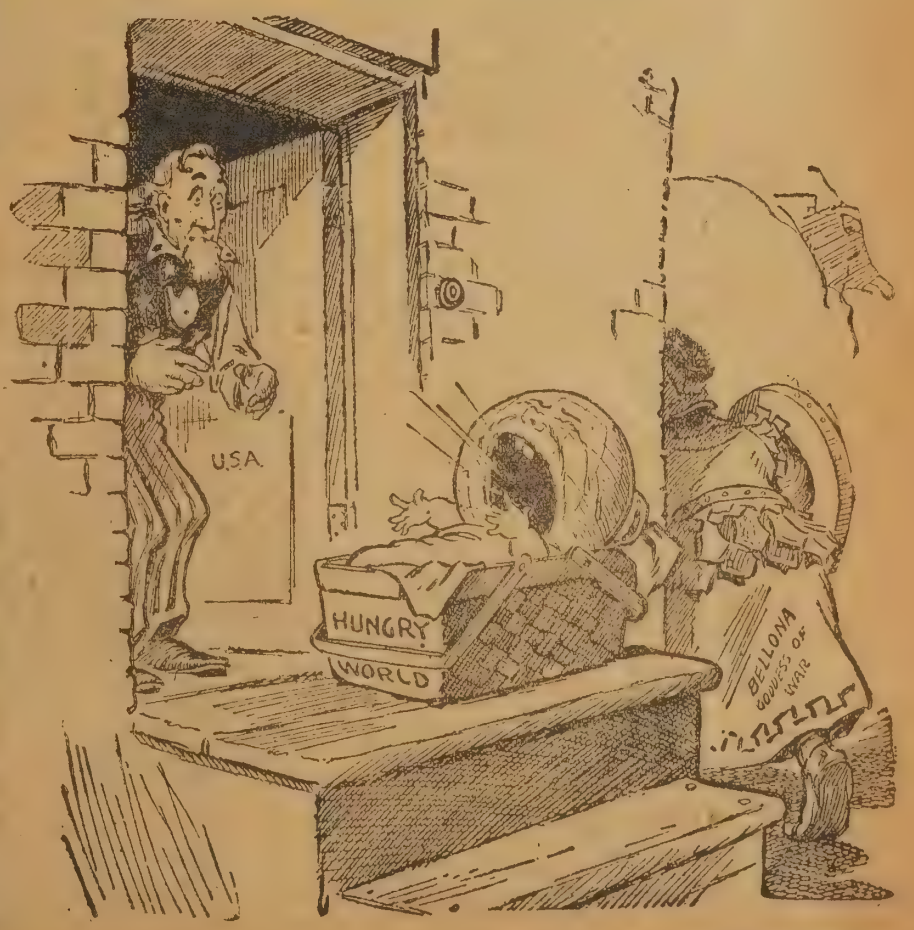
One spool is used for the desk blotter (Fig. 4), that one forming the handle (A, Fig. 8). The base block (B, Fig. 8) is a piece of a box board two and a half inches by five inches in size, and the block C is two and a half inches long and one inch wide. Get a screw long enough to extend through handle A, through block C, and part way into base block B (a screw with a round head similar to D will look neatest), and screw the three pieces together. If the screw head is smaller than the hole in the spool handle, support it by means of a small metal washer slipped over the screw.

Fig. 8 shows how the blotter is cut to fit the bottom of the base block, and folded up over the ends to the center of the top. The ends are held to the base by block C. To release the ends for changing the blotter, it is only necessary to give the block C a one-half turn, so it extends lengthwise of the base block. Pad the blotter with an extra piece of blotting paper slipped between it and the base block.

# Good Reading for Gallant Men

American Red Cross Photo.

Cases of books gathered by the American Red Cross, being opened and distributed to American soldiers at the St. Denis hospital in England.



# A Domestic Scene Near the Marne

Copyright Underwood & Underwood.

No important member of the family was left behind of this French family who fled on the approach of the German hordes, south of the Marne, before their advance was stopped by the heroic and gallant counter-offensive of the French and American troops. The family took refuge in the forest and erected a portable shelter for their protection.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

**SYNOPSIS.**

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected. Startling adventures were in store for them, among the first of which was a night in a "haunted" house, the principal haunts being wild animals. The next day they found the stray ox, but suddenly a wall of water from a furious storm rushed down the river between them and the animal. The boys arranged to have the steer held in pasture till they could cross the raging river. The meantime they spent working with a farmer grubbing out live oak thickets. Some interesting experiences were awaiting them, however, rafting on the flooded river. Unwittingly they aid some cattle thieves to escape from the sheriff, at the same time getting farther behind in their race with the runaway ox.

## CHAPTER XIII.

### Found and Lost Again.

NOW I turned to arouse my bed-fellow, but found him already wide awake. He had only just awakened, however, and had not caught sight of the visitors in the mill-room. But he, too, had half recognized the wounded man's voice; and he was not greatly surprised when I informed him who the man was, and whom I suspected his companion to be.

After listening a few minutes to the conversation in the other room, Frank slipped out of bed and stole to the door, where he peeped through a crevice. When he had come back and lain down, he whispered:

"Yes, that's our tricky fellow. I know his mark and brand. And the fellow with him must be bad Bill. Pretty impudent of them, trying to pass themselves on our friend for officers."

"What can we do, Frank?"

"Don't see that we can do anything. We couldn't arrest them, of course. It would take half a dozen men to do that, armed and desperate and on their guard as these fellows are."

"Well, it's a pity to let the rascals get away when they're wanted so badly. But it can't be helped, I suppose."

After the injured man had had his wound washed and bandaged, the other visitor inquired of the miller if he could furnish them something to eat. The miller offered to prepare them a warm supper if they cared to wait; but they had not time for that, they told him, and he went to the kitchen and brought in something already cooked. He also gave them corn to feed their horses. Not long afterwards they mounted and rode on.

Even before the hoof-beats of their horses had died away down the rocky road, Frank and I were up, informing the miller that he had entertained angels unawares—angels of darkness.

Our good friends could scarcely restrain his astonishment on learning how the wounded man must have received that bullet, and that one of the pair was probably the notorious, much-feared Bill Edsell.

"Well, they ought to be arrested, of course," the miller finally said. "And they will be sooner or later, I've no doubt—or killed. But, desperado or what not, when a man comes to me bleedin' and hungry, and asks me to bandage his wounds and give 'im a bite to eat, it's not in the heart of a mountaineer to say no."

We both indorsed this sentiment; and we certainly liked the miller all the better for uttering it.

A few hours still remained till daylight, and Frank and I went back to bed and to sleep. We had breakfast early next morning, and during the meal we discussed our visitors of the night before.

After reflection, the miller was disposed to doubt whether the man who had represented himself as a sheriff was really Edsell. One of McCracken's party had started to describe the desperado to us, but had stopped on learning that we had caught not so much as a glimpse of the fellow in the wagon. Our surmise as to the unknown man's identity was based solely on the fact that he was in company with the man who had been with Edsell. But the desperado had numerous friends, and, for reasons of prudence, would not be likely to stay with any one of them very long.

"He's been through this country once or twice, Edsell has," the miller told us. "That is, once or twice that we know of, and no tellin' how many times that most of us don't know of. I never set eyes on 'im myself, to recognize 'im, but I've talked with people that have; and while I don't recollect just what they said about 'im, I got the idy that he was a different-lookin' fellow from the man that was here last night. Of course I may be mistaken as to that, though."

"Come to think of it now, that man didn't look as much like a villain to me as the man he was with did—the wounded man," I remarked.

"That's just what I kept saying to myself all the time I was peeping through that crack at them," spoke up Frank.

"Well, the worst man don't always look the worst," observed the miller. "I've seen some mighty fierce-lookin' chaps that was just naturally scared at their own shadders. And I've knowed some quiet, harmless-lookin' fellows that would fight the very Old Scratch hisself if they once got started. I've not much doubt, though, that that fellow was a criminal. Birds of a feather flock together, and if he was all right he wouldn't be keepin' company with the friend of outlaws. But there's a good many hard characters hid away in these mountains, I guess, and he might have been any one of 'em."

The miller now told us something of Edsell that we had never heard before. Though a villain from head to heels, and richly deserving a rope, the desperado was a man of good education. Indeed, it was even reported that he was a graduate of some well-known eastern or southern college or university. That, however, was doubtless a surmise; for nobody really knew anything about his past—where he came from or anything else.

Both Frank and I were astonished at this news. Our acquaintance was mostly among people of little learning; and we had naturally supposed that educated persons, knowing better than others what is right, would be sure to do what is right. That may be true in the main, but there are numerous exceptions. As the miller expressed it:

"It takes somethin' besides book-learnin' to keep a man straight when he once makes up his mind to go crooked."

Immediately after breakfast we saddled our horses, and after vainly trying to induce the miller to accept something for our night's entertainment, we mounted and set out on our day's travel. The miller walked down to the road with us; and having wished us early success in our cattle-hunt, he urged us to stop and spend another night with him on our way back.

All day long we rode, keeping up our search through the mountainous country. It was much like the proverbial hunt for a needle in a haystack. The roads were dim and rough, and most of them ended utterly at some cabin of cedar logs hid away in some deep little cove. Half a dozen of these blind roads we followed out, and much of our time was spent in retracing our way.

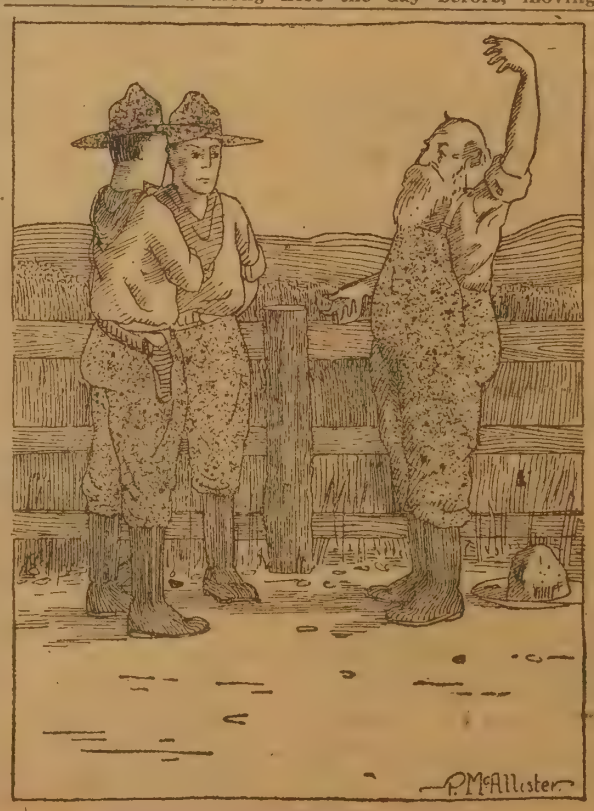
About the middle of the afternoon we happened upon a settler who told us that our three cattle had stopped in front of his cabin the day before, and had licked awhile at some stones on which he salted his stock. They were then traveling a little east of south, instead of southwest. Like ourselves, Lep was evidently confused by the mountain roads, which seldom led in the direction he wanted to go. He knew his course, doubtless, but dared not cut across the mountains. And it was fortunate for us that he dared not.

Night overtook us in a wild gorge, between cedar-covered heights. And there in a little green, grassy spot we camped. Vic treed a squirrel in a young cedar. Frank shook it out for her, and we had it, broiled, for supper. Cedar branches broken off and spread under our blankets made us a fairly comfortable, but very rank-smelling bed. Daylight found us on the road again. By noon we had left the cedar-brakes behind. The country we now found ourselves in was still somewhat broken, but more people lived here, and the roads were better and more traveled.

Twice today we got word of our cattle. They were now heading toward the southwest again. But early in the afternoon we lost the trail—lost it as utterly as if the three horned brutes had grown wings and flown away.

House after house we inquired at, but Lep and his followers had not been seen. On we hurried, till six or eight houses had been passed. Then, knowing that something must be wrong, we took the back track.

"I don't understand it," grumbled Frank. "This road leads in the very direction they've been traveling all the time since they got out of the mountains. They must have turned aside to graze, and strayed off into the brush."



That was my opinion, too. So, riding back the way we had come, we hunted out the country on both sides of the road till we arrived at a well-traveled cross-road leading northwest and southeast.

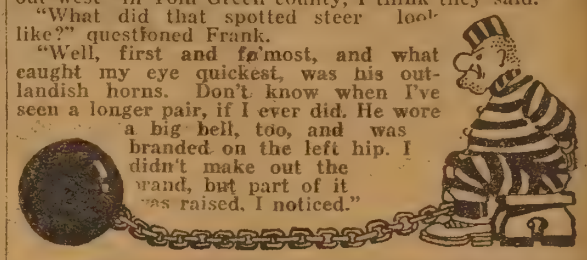
"Do you think they could have followed either end of this?" asked Frank, as we reined up at the point of intersection.

"I don't see why they should. But they's certainly branched off somewhere, and we can only find out by trying."

And try we did. First we followed the cross-road a mile or two to the northwest, inquiring at every house, till we had convinced ourselves that Lep's party had not traveled that way. Then we came back to the crossing and started off in the opposite direction—toward the southeast.

At the first place where we inquired they assured us that no such animals as ours had passed; and at the second and third places we received similar replies. All spoke of a drove of cattle, driven by some cattle-buyers, that had marched along here the day before, moving toward the southeast. This was no news to us. The trail of the drove was very plain.

The old man describes the ox he saw.



But at the fourth house, where we halted just at dusk, a different answer awaited us.

"I didn't see any three cattle go by by themselves," the farmer made reply. "But in that herd that passed along here yesterday, I noticed a good-sized spotted steer that answers the description of yours."

"That must have been some other spotted steer," I remarked. "What would the buyers be doing with our cattle among theirs?"

"Well, some of these cattle-buyers ain't any too partic'lar about what they pick up. They'd just as lieve hook onto a few strays as not. If the owner happens along and claims 'em, of course they turn 'em over to 'im. But if nobody comes they keep the cattle, and then they're just so much ahead. That outfit stopped here, and wanted to buy some young steers from me, but we split on prices. They're just makin' a big cattle-buyin' circuit, they told me. They expect to swing round a circle, and then drive back to their ranch some'r's away out west—in Tom Green county, I think they said."

"What did that spotted steer look like?" questioned Frank.

"Well, first and foremost, and what caught my eye quickest, was his outlandish horns. Don't know when I've seen a longer pair, if I ever did. He wore a big bell, too, and was branded on the left hip. I didn't make out the brand, but part of it was raised, I noticed."

The way the boys wanted to fix the thief.

A raised brand is one where the branding-iron has burnt two deep, and the hide puffs up above the surrounding hair, hard as horn.

"And his neck showed signs of the yoke," the farmer added.

Frank and I exchanged glances. "That's Lep all over," he remarked.

"Yes, that's either Lep or his twin brother," replied I. "And if he's with that drove, that will explain why our trail dropped out so suddenly. They must have met the drove at the cross-roads and got taken in. We'd better follow on and find out for sure."

"That's right; we'll follow on and find out," Frank agreed.

We proposed to ride on a few miles further, but the farmer insisted that we spend the night with him, and we did.

The rising sun saw us on the road again. The drove's trail was very distinct, and we lost no time in making inquiries. Occasionally, when we met somebody or passed people by the roadside, we asked how far ahead the cattle were. The drove was marching slowly, and by noon we were only a few miles behind.

We rode as fast as we dared, without tiring out our horses. Well on in the afternoon, coming to the top of a hill, we looked down into a valley and discovered the strung-out cattle, tramping steadily along the road.

"There's Lep! Don't you see him!" I cried, pointing to an animal, whose spotted back and great horns made him conspicuous among many others.

"And don't you hear his bell? I'd recognize that bell any time, anywhere."

"Well, if that isn't cool rascality for you!" said Frank. "One would suppose that every hoof in that drove belonged to those fellows. I can recognize one of mine from here, and I've no doubt—yes, there's the other one—the steer. They're all there all right."

"We've found them at last!" I said, exultantly, more elated over this fact than shocked or disappointed because we had found somebody driving them off.

The drove numbered a hundred and fifty head, if not more. There were four drivers in charge of the cattle, and a canvas-topped wagon rattled along in the wake of the drove.

We rode on at our accustomed gait, and soon passed the wagon and came up with the cattle. One driver kept in the rear, mostly, and him we engaged in conversation. If at all suspicious of us, he concealed the fact. After we had talked with him a few minutes, Frank remarked, carelessly:

"You've got three cattle in that drove that don't belong there."

"What three do you mean? P'int 'em out!" he roared.

Promptly I pointed to Lep. "That big, spotted fellow, with the bell on, belongs to me," I informed him.

"That spotted steer! Why, I've owned that brute ever since he was a suckin' calf, and his mammy before 'im. I'd just like to see the chap that can drive off old Spot without walkin' over my dead body!"

Both Frank and I were much taken aback. It had never occurred to us that the fellows would dare refuse to surrender our cattle.

"If you've owned him as long as you claim to have owned him, what's his brand?" I demanded, angrily.

"I'm not crammin' my skull with brands and sech like."

"Then which side is he branded on?" I demanded again. The ox was some distance ahead, and the brand could not be seen.

"On the outside!" the driver fairly shouted. And both he and the other drivers, who had dropped back near him, guffawed loudly at this joke.

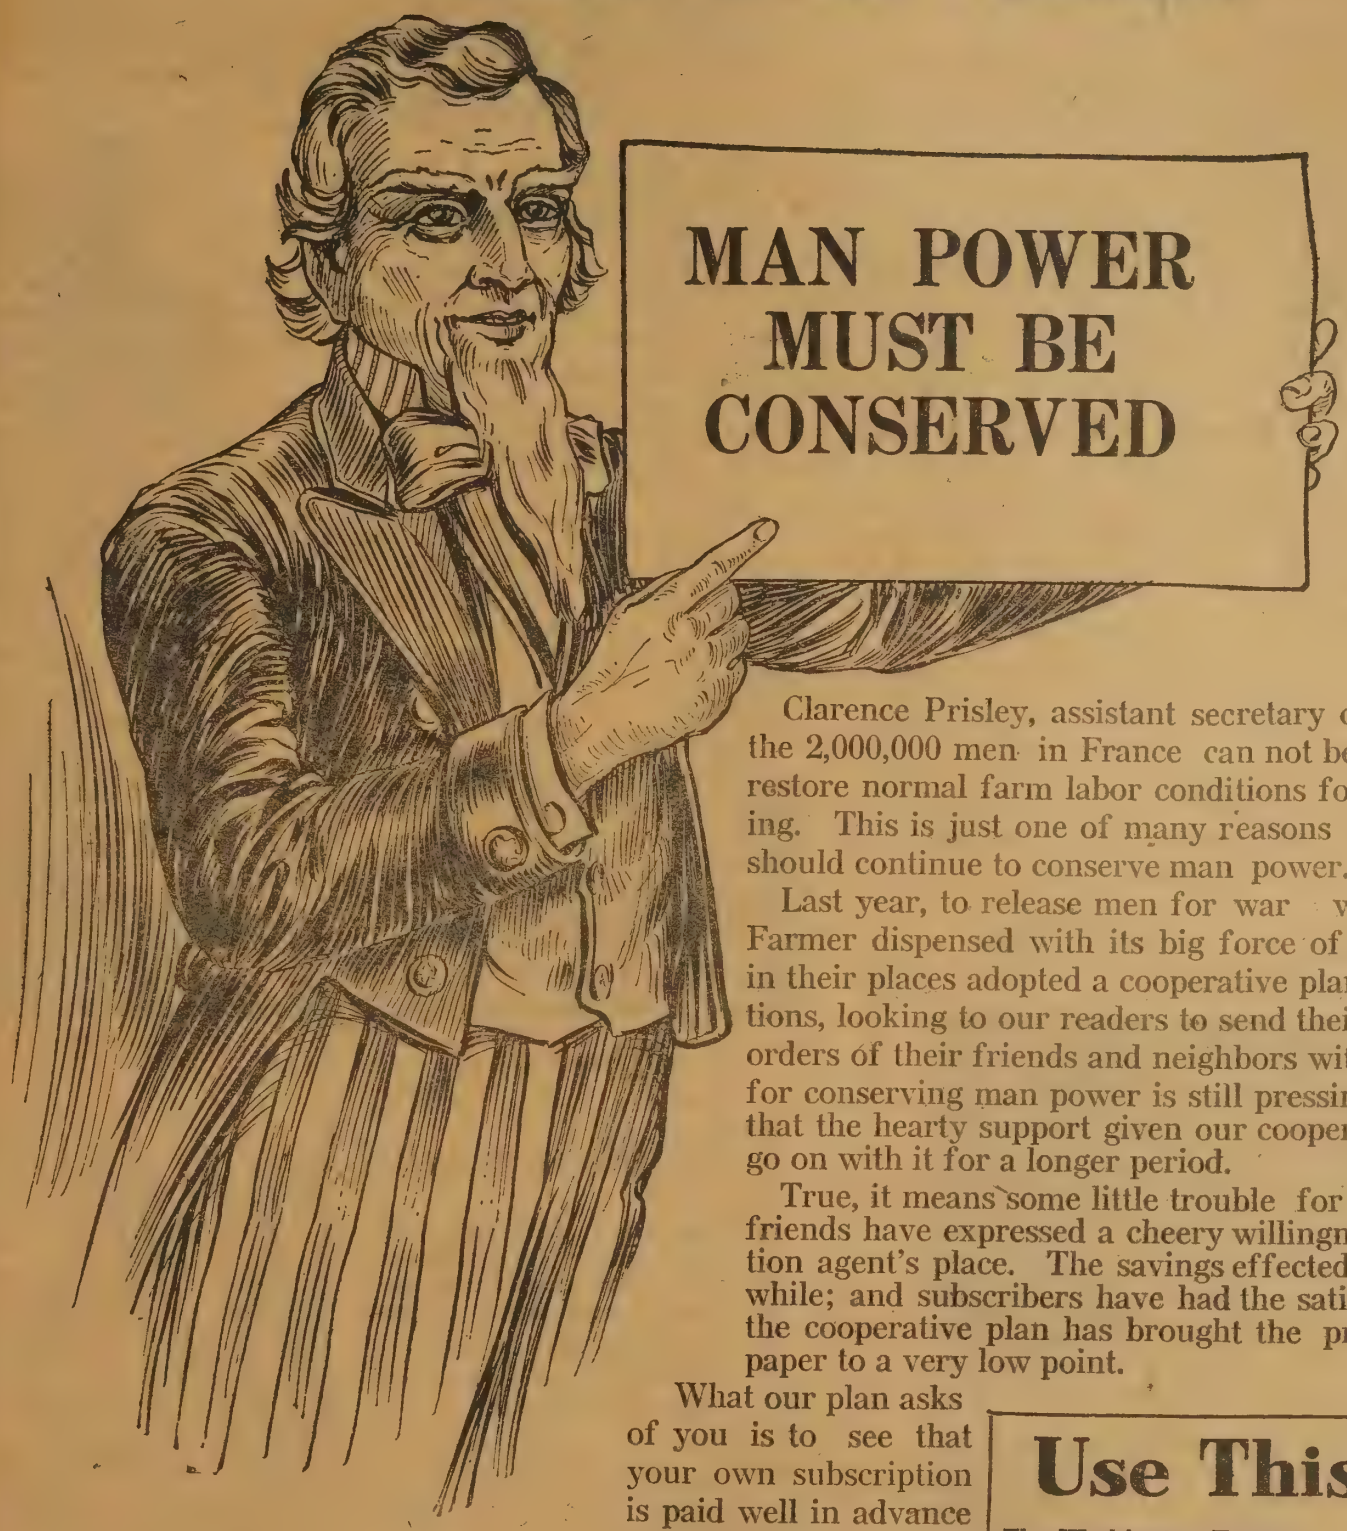
"That's exactly what I thought you knew about it," I answered, contemptuously. "The fact is, you never set eyes on that ox till yesterday, and you know it as well as I do."

"Nor on that red two-year-old heifer over there close to him; nor on that brown yearling steer right over yonder," put in Frank, pointing. "They're our cattle, all three, and we've come for them."

"I raised all three of them brutes from calves!" the fellow blustered. "And no livin' man can tech a hair of 'em without wadin' knee-deep through our blood! Ain't that so, boys?"

"Bet your life it is!" shouted one of the drivers. And the others uttered similar expressions, all thickly punctuated with oaths.

"We're not blood-waders," Frank answered. "But we know what belongs to us, and we're going to have what's ours. Those three cattle are our property."



"And we're going to take them, one way or another!" I burst out, hotly. I was boiling over with wrath at their rascally, lying impudence.

The driver laughed insolently. "If you want 'em, just sail in and cabbage on 'em," he invited.

# Save Money and Man Power

## By Sending Your Subscription Order Direct to the Publisher

Clarence Prisley, assistant secretary of agriculture, states that the 2,000,000 men in France can not be demobilized in time to restore normal farm labor conditions for the next year's planting. This is just one of many reasons why every employer should continue to conserve man power.

Last year, to release men for war work, The Washington Farmer dispensed with its big force of subscription agents, and in their places adopted a cooperative plan for handling subscriptions, looking to our readers to send their renewals direct and the orders of their friends and neighbors with their own. The need for conserving man power is still pressing; so we are glad to say that the hearty support given our cooperative plan enables us to go on with it for a longer period.

True, it means some little trouble for our readers; but our friends have expressed a cheery willingness to take the subscription agent's place. The savings effected have been well worth while; and subscribers have had the satisfaction of knowing that the cooperative plan has brought the price of their state farm paper to a very low point.

What our plan asks of you is to see that your own subscription is paid well in advance of the expiration date stamped on the address label on the wrapper of your paper; and to make an effort to send in the subscriptions of those in your neighborhood who will be interested in their state farm paper with its live information, helpful departments, and entertaining stories.

Remember, you receive The Washington Farmer every week brimful of helpful information and entertaining features. The price is only 50 cents for 3 years, which amounts to but 17 cents per year.

### LOW RATES

Made Possible by our Cooperative Plan.

For The Washington Farmer, 1 Year. **25c**

For The Washington Farmer, 3 Years. **50c**

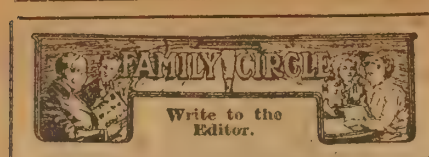
For The Washington Farmer, 5 Years. **$1**

## Use This Coupon

**The Washington Farmer.** Dec. 5.

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.



**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

## Methods of Saving

In these days, when we are continually trying to save along every line so as to be able to help our country that much more and to do as much Red Cross work as possible, one must not forget they can conserve on time and strength in various ways, which is important, too.

Take, for instance, syrup and molasses, which are used almost daily in the preparation of meals. It will save time and strength if one keeps a wide-mouth bottle filled with syrup and molasses. This will save getting out the syrup or molasses pail where only a small amount is wanted. I like to use molasses as much as possible when using the war flours as it covers any of the grain flavors many object to. This is especially true of barley flour and molasses always adds a pleasant flavor to any of the war breads, except where rice or corn is used. I also find adding a little soda will remove any acid flavor that is so often found in the war breads. This is just to improve the flavor and must not be considered as part of the leavening agent.

Make more cookies that can be dropped from a spoon. The time spent in rolling out cookies can be given to Red Cross work.

Keep an oil can with a curved spout filled with kerosene, so that when a few drops are needed it will save getting out the big oil can and in this way, one will prevent any unnecessary waste of kerosene.

In cooking rice, if the water is not used in making soup or bread, use it for starching waists, dresses, aprons, etc. It makes just the right degree of stiffness. I cook one cup of rice in a gallon of water. When the rice is cooked I strain it through a sieve. This makes enough starch in that amount of water.

I like to keep a dish especially for any butter scraps. These can then be used for seasoning and in various ways that butter is used. Brooms are very expensive now and it pays to save them. I use a dustless mop as much as possible. It not only saves the broom, but it saves getting a lot of dust scattered around. Between the dustless mop and a carpet sweeper I have made my best broom last two years. It is now ready for use in the kitchen, sweeping off the porches, cellar steps, etc. I also use my dustless mop in the kitchen as much as possible.

I like to use crushed egg shells to clean bottles, etc. The egg shell can be fed to the chickens.

Buttons have gone up in price too, so it pays to save them all. When removing a set of buttons from a garment put the buttons on a string before placing them in the button box. This will keep the buttons together and save the danger of one or more getting lost. M. P.

### RECIPE FOR ROCKS.

1½ cups syrup or honey
1½ cups sugar.
1 cup water.
1 teaspoon cloves.
2 teaspoons cinnamon.
1 teaspoon salt.
¼ lb fat.
1 teaspoon soda.
1 lemon.
3 cups flour.
1 lb. nuts.
1 lb. raisins.
3 eggs.

Boil together the syrup, sugar, water, spices and fat for five minutes. Take from the stove, add the grated rind and juice of the lemon, salt and soda. Stir well, add flour, and nuts, raisins, the eggs, slightly beaten and enough more flour to make a medium stiff batter. Let stand several hours or over night. Drop in spoonfuls on a greased pan, allowing plenty of space to spread. Bake in a moderate over.

Any kind of dried fruit, such as pears, cherries, figs, prunes, apricots or peaches, or a combination of two or more fruits may be used.

All fruits except raisins and cherries should be coarsely chopped, the nuts broken in coarse pieces and dredged with flour. By grinding fruit and nuts very fine and stirring into the syrup before adding flour a delicious fruit cookie is obtained. The amount of flour used varies slightly, depending on the kind of flour and syrup used.

Soft wheat flour absorbs less liquid than hard wheat flour. When using a thin syrup a little more flour is used than with a heavier syrup. MRS. W. F.

### Humpback Salmon in Rivers.

The humpback salmon is common in the west coast rivers of America, from California to Alaska, as well as on the Asiatic coast.

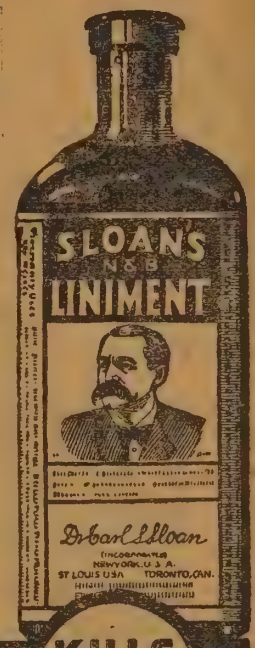
## Coverall Apron, Crochet Edge

By WINIFRED WORTH.

Every crochet and needleworker is interested in new apron designs. Try this one for your next one.

Details for crochet edge—Use No. 20 crochet cotton, ch. 10 t. back in 7th ch., ch. 2, t. in last st. of ch., ch. 5, tu., t. in t. then t. 3 times over ch., ch. 5, tu., t. in t., ch. 2, t. in 2nd st. of last b. ch. 5, tu., t. in t., then t. 3 times over next b. ch. 5, tu. back and catch in 1st b. made, tu., 3 dc. ch. 4, 3 dc. ch. 4, 3 dc. ch. 4, 3 dc. ch. 4, 3 dc. to make edge rp.

Requires 2 1-2 yards of a 27-inch cloth, a checked nainsook or any desirable cloth, and 4 1-2 yards of crocheted edging. See illustration for pattern of apron.



*The Aches and Pains of Muscular Strains*

AFTER this job come the after-effects—soreness and stiffness of muscles, exposure results—*rheumatic twinges, lumbago, sciatica.*

And then—Sloan's Liniment, with its prompt, soothing pain-and-ache-conquering relief, its known ability to put you in shipshape for the day's work ahead.

Sloan's Liniment is the ever-ready, ever-effective, standard remedy of its kind. It leaves no stained skin, no plaster or ointment mussiness. *Penetrates without rubbing.* It goes further, acts quicker, relieves better. For 37 years it has been the favorite liniment of families everywhere.

Three sizes—the largest lasts longer and costs proportionately less. More than your money's worth, whatever the size.

### EXTRA MEALS WASTEFUL.

The real work of farm life leaves little time or appetite for afternoon teas and late suppers. Nevertheless the request of the food administration that the fourth meal be discontinued until food conditions are less serious suggests to all people simple hospitality. Company for dinner or supper should mean to the earnest woman a real chance to teach conservation in an agreeable form. The church supper or community dinner too, presents an opportunity to demonstrate how good is a dinner of simple home products when well cooked, and should be a substitute for one of the three regular meals. The extra meal and lavishness in food ought to be considered an offense against humanity and good taste so long as war-torn Europe needs to be comforted and fed.

### Brown Betty.

Soft bread crumbs, one and one-half cups; syrup, one-half cup; chopped apples, one pint; chopped raisins, one cup; melted butter substitute, vegetable fat, four teaspoons; cinnamon, one teaspoon; cloves, one-fourth teaspoon. Pour the melted fat over the bread crumbs and stir until the crumbs are evenly buttered. Put a layer of the crumbs into a well-greased pudding dish, mix the sugar, apples, raisins, cinnamon and cloves. Put a layer of the apple mixture over the crumbs and alternate until all is used, finishing with crumbs. Cover closely and bake for three-quarters of an hour in a moderate oven, uncover and brown. Serve hot with hard sauce or cold with cream.

### A Fruit Salad.

A combination of fruit which seems especially desirable for a fruit salad is as follows: One pear, two peaches, one-half grapefruit. Cut the fruit into small pieces, mix with either mayonnaise or other dressing and serve on lettuce. The artistic effect of this salad is enhanced by the addition of mint leaves. A half an apple, cut into small pieces, may be added if a more hearty salad is desired.

What 15c will bring You from the Nation's Capital
Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.
The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 26th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.
The Pathfinder, Box 89, Washington, D.C.

You Can Do Better With Crescent
Of course, you have had good luck with your baking, all housewives do. But why not do better?
CRESCENT BAKING POWDER
will help you outdo your best previous efforts; it works in your behalf. There is more energy—applied until the dough is perfectly raised. And its cost is so small—only 25c a pound at grocers.
CRESCENT MFG. CO. SEATTLE, WASH.
(B431)

Mother was in Bellingham visiting father whon Lavina Hanford wrote. Lavina lives at Bridgeport and enjoys the cousins' letters. She will be 13 on November 10. Two of her brothers are in the army and Lavina has about $7 worth of thrift stamps and one war savings stamp.

Bessie Janney of Buckeye knows how to knit and she has six thrift stamps. Bessie was 8 years old May 3 and is in the third grade. She wishes her twin would write to her. Why is a school boy being flogged like your eye? Where would you prefer to have a boil?

Red and pink roses are the favorite flowers of Olive Cummins of Touchet. Olive is 15 years old and in the sophomore class in high school. Her birthday is June 6. She has a saddle pony named Charlie. Olive can crochet, embroider, sew and knit. She would like to correspond with some of the girls of the Corner.

Gladys Faulkner, route 6, box 22, Yakima, was surprised to read Clara Harrjson's letter in the Corner, because she used to know her when she lived in Snohomish. Clara was just a tiny tot then. Gladys has three sisters and one brother.

Tip, a dog, is what Opal Cavanaugh of Ephrata tells us about. Tip can do many tricks. He will stand on his hind feet and ask for something to eat. When you tell him to halt, he will do so. Opal was 12 years old June 16. Effie Luddington, who writes to the Corner, is a friend of hers. What relation is a child to its father if it isn't the father's own son? Opal will tell the answer the next time she writes.

Beatrice Smith of Chelan lives on a 300-acre farm and she thinks it is fun to belong to the poultry club. Beatrice likes to go to school. On the farm there are two mules, Pete and Mick, 14 cows and about 29 little chickens.

Mother and two brothers and Lois were in California all last winter, visiting grandmother. Lois Manchester lives at Lyle and tells about a picnic she went to this summer. They had cake, sandwiches, chicken, salads and ice cream to eat. Lois was 10 years old January 4, and she wants a twin.

During harvest time Gladys Cole worked outdoors most all the time. Gladys wishes some of the cousins to write to her. She lives on a 160-acre farm 11 miles north of Corfu. She has five horses of her own, Dolly, Pansy, Bud, Buckles and Nellie; three head of cattle, Ruth, Lightfoot and Silver Tip; and eight cats, Cloe, Irene, Chip, Cozy, Kit, Cyclone, Gerart and Wahoo. Two of Gladys' cousins are in the war. Gladys is going to write again.

This summer Alice Christensen went out camping. Alice lives on a 160-acre farm and her address is R. F. D. 3, box 143, Ellensburg. She is 12 years old and her birthday is June 5. For pets she has two dogs and three cats.

Mary Teegarden of Wapato has five brothers and one sister. Mary is 9 years old and in the fourth grade. June 7 is her birthday. She wants a twin.

Part of the time this summer, Lucile Turnley of Yakima drove a derrick and she helped to mow the hay. Lucile was 11 years old March 31, and she lives on a 40-acre farm. She walks two miles to school.

Reading and spelling are the studies that Zennie Stauffer likes best. Cousin Zennie lives at Wilbur and her papa overhauls and repairs cars. Zennie has knitted a washrag for the soldiers. She was 10 years old September 26. Her uncle is fighting in France.

High in the air, not on a tree, homeliest thing you ever did see. Florence Evans of Warden wants to know if the cousins can answer this riddle. Florence likes to read the other children's letters. She was 13 years old June 29. She has a little colt named Jack.

Lora Ensley, R. F. D. 1, Box 23, Almota, was 10 years old April 11. She wishes her twin would write to her. Thelma and Margaret are her sisters and Edwin is her brother. Brother has a pony named Beauty.

### Doris Rides Horseback.

Dear Aunt Nellie: I am 12 years old, and am in the sixth grade. We live one and one-half miles from Garfield, and we have three neighbors quite close to us. We have two horses and one cow. One of our horses is a fine saddle horse. I can ride pretty well. My birthday is November 4. Have I a twin? If I have tell them to write to me. I have a thrift stamp book. I have five stamps now and am going to buy $2 worth more. Doris Jenkins, R. F. D. 2, Garfield, Wash.

### Ida Likes to Draw.

Dear Aunt Nellie: I am 12 years old, and my birthday is February 25. I have four sisters and four brothers. I go to school, and am in the eighth grade. My favorite work is drawing. I had a little garden of my own this year and I had peas, beans, radishes, onions and pumpkins. I live out in the country. We have one dog, four cats, three cows, and four calves. We have about 100 chickens. We get from 20 to 30 eggs per day. Can you guess this riddle? Black within and red without, four corners round about. I have blue eyes and brown hair. Have I a twin? If I have I wish she would write to me. I would write to her.—Ida Schmidt, Mansfield, Wash.

### Reads Every Letter Every Week.

Dear Aunt Nellie: My father takes the Farmer and I read every letter every week and enjoy reading them. This is my second time I have written to you, and I hope it won't be the last. I was 13 years old October 5, 1918. I am in the seventh grade at school. I have found my twin and her name is Helen Cochan, and she is as old as I am. I have one brother, and he is 16 years old and his birthday is December 3. I will give you some riddles: A man lives in a house without doors, without windows, without a crack, how does he break out? We have 17 head of horses, three cows and one little calf. We have 15 little ducks. We have one dog and four little kittens.—Esther R. Oestrich, Box 575, Ritzville, Wash.

### Joyce Has Found Her Twin.

Dear Aunt Nellie: I have been reading the letters and looking for a twin for a long time, and now I have found one. Her name is Louise Hannah. My birthday is January 9. I will be 11 then. I now know several people that have birthdays on that day, but I have never found any one who will be 11 their next birthday. I am in the sixth grade. I go to the Edison school. I live on a small farm not far from the school. We have two horses, one cow and about five dozen chickens. We have an old cat and some kittens. We haven't any rabbits now, but I think we will get some. I have two brothers and no sisters. I can knit, crochet and tat.—Joyce Williams, Box 1800, Pullman, Wash.

### Lois Has War Stamp.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and in the fifth grade at school. I have one war savings stamp. My birthday is December 7. I live on a 448-acre farm, and I have one brother and three sisters. My sisters' names are Audry, La Reta and Freda, and brother's name is Lester. I am in the fifth grade at school. We have three horses. Their names are Prince, Nigger and Dolly. We have no dogs, but we have two cows and three calves. My sister Freda has a cat and its name is Blacky.—Lois Chace, R. F. D. No. 1, Box 76, Ellensburg, Wash.

### Edna Is a New Cousin.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I was 13 years old October 9. Have I a twin? I have dark hair and brown eyes. I have two brothers and one sister. My brother's name is Leslie and the other one's name is Willis, and sister's name is Violet. We have five horses, two cows and one calf. The horses' names are Beauty, Kate, Billy, Nelly and Jude. Billy is my pony, and I have lots of fund riding him around. May I be a cousin?—Edna Sheckler, Republic, Wash.

### Pet Is a Pony.

Dear Aunt Nellie: My father has been taking the Farmer for almost one year, and I have been reading the letters every week, and enjoy them very much. I was 11 years old January 26. I have light hair and blue eyes and I am in the sixth grade at school. We live on a farm of 160 acres, and I have for my pet a pony. Her name is Fly. We have two dogs and an old cat. I have three little chickens and two old hens. We have two cows and one calf. We have about one mile to go to school. I like to go to school very much. I am glad it will soon start again. I would like to have some of the cousins write to me.—Violet Sheckler, Republic, Wash.

### Gladys' Second Corner Letter.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 12 years old and in the fifth grade. My birthday is August 26. I have two sisters and two brothers. We have three canary birds, four pigs, five geese, and about 42 chickens. We have an eight-room house. We live on 20 acres of land. —Gladys Strong, Box 58, R. F. D. 1, Deer Park, Wash.

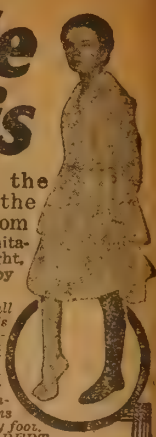
### Two Brothers and Two Sisters.

Dear Aunt Nellie: This is the first time I have written to your Corner. I hope you find my letter interesting and enjoy it very much. I like to read the letters the other cousins write. My birthday was October 26. I was 13 years old. I have brown hair, blue eyes and a medium complexion. I go to school, district No. 16. We have nearly 30 pupils. Mrs. Swan is my teacher. We have a Junior Red Cross established at our school. I have two brothers and two sisters. My oldest sister goes to high school in Vancouver. I belong to the canning, sewing and pig clubs. I live on a 480-acre ranch. If I have a twin I wish they would write to me.—Cecilia Colleary, R. F. D. No. 3, Goldendale, Wash.

### Who Is Grace's Twin?

Dear Aunt Nellie: I will write to the Children's Corner for my first time. Papa has taken the Farmer for a short time, and we like it very much. I enjoy reading the letters. I have two sisters and one brother. My sisters' names are Ruby and Jessie. My brother's name is Floyd. I live on a big farm and papa raises wheat. We have six horses. Their names are Tom, Barney, Dick, Dave, Major and Colonel. We have seven cows and heifers, Bossy, Flora, Roamy, Lady, Rose and Whiteface. We have two dogs, Bruce and Bobbie. We have one cat and his name is Dick. We have 50 turkeys and over 100 chickens. I was 11 years old September 28. Have I a twin? If I have, I wish he or she would write to me.—Grace Yowell, Riverside, Wash.

### Otis Orchard Cousin Writes.



Dear Aunt Nellie: I am 11 years old. My birthday is June 30. Have I a twin? I am four feet, four inches tall and have light brown hair and brown eyes. My sisters' names are Doris and Jessie. Jessie is five and Doris is 15. Doris goes to high school and is in the third year. My brothers' names are Winslow, age 17, and Donald, age 13. My oldest brother graduated from high school in three years when he was only 16. We used to live in Spokane, which is only 15 miles from here. We own a 160-acre farm and have cows, horses, chickens, rabbits, two dogs and a cat. I can cook, tat, crochet and knit.—Alice Clift, Otis Orchards, Wash.

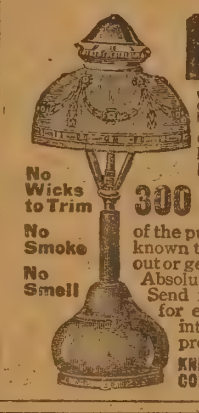
### Evalene's a Corner Cousin.

Dear Aunt Nellie: I was 12 September 1. Have I a twin? If so I wish he or she would write. I have three sisters and two brothers, Agnes, Vernice, Emily, Charlie and Maurice. I have one uncle in France. His name is Charlie. I raised a war garden this year. I like it on a farm. We have an old cat and a little cat. There were seven. Only one lived. Its name is Fluffy. It is blue. I have a doll. Its name is Nellie. named it after you. I have a $50 Liberty bond. I have to go one mile to go to school. I will close with lots of love to all the cousins and Aunt Nellie. May I be a cousin, Aunt Nellie?—Evalene Maurer, R. F. D. 1, Espanola, Wash.

(Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.)

**Infantile Paralysis**

These two letters and the photographs evidence the satisfactory results from treatment received at this Sanitarium by Miss Clara Gilbert, Delight, Ark., whose foot was deformed by Infantile Paralysis:



*I arrived home all right and my friends were greatly surprised to see me walk flat on my foot. When I came to your Sanitarium I walked on my toe. I will gladly answer all questions with regard to my foot.*
CLARA GILBERT,
Box 45, Delight, Arkansas.

*I cannot praise your Sanitarium too highly for your great work. Clara's friends were surprised to see her foot straight. She has been quite a show girl since. We will gladly answer any inquiries in regard to your work for Clara.*
MRS. CORDA GILBERT,
Box 45, Delight, Arkansas.

This private institution is devoted to the treatment of children and young adults afflicted with Club Feet, Infantile Paralysis, Spinal Diseases and Curvature, Hip Disease, Wry Neck, etc. Our valuable book "Deformities and Paralysis" with Book of References free.

**U. S. Government Positions**

have drained the country of the best gasoline engine mechanics everywhere. Thousands of positions are now open to qualified men. Learn the AUTOMOBILE and TRACTOR business in the largest and best equipped AUTOMOBILE and TRACTOR schools in the west. We teach this business in a thoroughly practical manner. You actually work on the engines or tractors and automobiles just as you will be required to do in a garage, repair shop, or as an operator. Do not waste your time in a poorly equipped motor school when you can go to a real school.

Our school is equipped with the latest types of AUTOMOBILE engines and stationary engines from one to twelve cylinders, TRACTORS of the heavy type and caterpillar or crawler systems. We have every type of electric starter, magneto, carburetor, generator and transmission made. We have brand new engines with which to test magnetos and carburetors. We teach the use of heavy fuels. Our instructors are the best informed men in the country, being originally superintendents of factories and service stations. Our school is well located, well ventilated, steam heated, is fireproof and is equipped with sanitary drinking fountains, etc. Do not delay, but learn this wonderful, fascinating and well paying business at once. Don't spend your money to go to a school a thousand miles farther away that is not as well equipped as this school. Call at main office or write at once for information and free catalogue. Special rate for a short time to those that are alive. Address

**MODERN AUTOMOBILE & TRACTOR SCHOOLS, A1803 3rd Ave., Spokane, Wash.**

The Valve-in-head-type engine illustrated here, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

**ZEROLENE**
*The Standard Oil for Motor Cars*

**It Keeps the Engine Young!**

Zerolene keeps the engine young—full-powered, smooth-running, and economical in fuel and oil consumption—because it is correctly refined from selected California asphalt-base crude. Gives better lubrication with less carbon. Made in several consistencies. Get our Correct Lubrication Chart covering your car.

*At dealers everywhere and Standard Oil Service Stations.*

# BOOT GROWS VERY, VERY AFFECTIONATE

## News for Breeders

The sale of a Jersey bull to Mr. Weister of Skamokawa, Wash., over three years ago by J. C. Brown & Sons, Shedd, Ore., resulted in the sale, this fall, of two more bulls and eight females, besides a number of grade Jerseys. Every one of the heifers by Mr. Weister's bull proved to be an extra good producer. John McAvoy, a neighbor, tried to purchase the bull. As Mr. Weister did not care to sell, he bought his half-brother from Mr. Brown. With the bull he purchased two Register of Merit cows and fresh heifers. Jerald E. Senner, the Wankiakum county cow tester, helped him make the selection. Later Mr. Senner got four heifers for Frank Durrer and one for Berger Olson.

**YEARLING BRINGS $24,000.**

At the recent American Royal Live Stock show at Kansas City, S. A. Farmer & Son of Pearl, Mo., sold to S. H. Velie of Kansas City, a purebred Hereford yearling bull for the remarkable price of $24,000. This is said to be the highest price ever paid for a yearling bull of any of the beef breeds. It is also said that the price had only once been exceeded for a Hereford at any age, that being when Walter L. Yost of Kansas City paid $31,000 for Ardmore, grand champion Hereford bull of last year's American Royal. The $24,000 animal, Repeater 7th's Model, was bred by O. Harris & Son of Harris, Mo., having been sold by them to Farmer & Son as a calf. Reports of the American Royal say that the Herefords on show this year had a total value of $1,500,000.

**STOCK SALE DATES.**

Shorthorns—At North Portland, Ore., Dec. 12; at Lewiston, Idaho, December 18.

Herefords—At North Portland, Dec. 11; at Lewiston, Dec. 19.

Holsteins—At North Portland, Dec. 13.

**SHOW ON AT CHICAGO.**

The great International Live Stock show is on this week at Chicago. Breeders are competing with each other for a total of $75,000 in prizes. Reports indicate an excellent show of animals from many parts of the United States.

**JEPPESEN BUYS JERSEY BULL.**

C. O. Jeppesen of Rexburg, Idaho, recently purchased one of the Jersey senior yearling bulls bred by Edward Long of Buhl, Idaho.

**Tobacco Crop Breaks Record.**

This year's tobacco crop is estimated at 70,000,000 pounds more than last year, which was the largest crop on record.

# Breeders' Department

## SHETLAND PONIES

### QUALITY SHETLANDS

## Annual Holstein Sale Portland Union Stock Yards

**North Portland, Oregon**

**FRIDAY, DECEMBER 13, 10:30 A. M.**

If you are interested in Holstein cattle you must not pass this great show and sale by. I believe the consignments are the finest lot of individuals, well bred and in calf to WORLD'S GREATEST SIRES, ever offered in a western sale. The consignors speak for this assertion. The cows are young, either heavy in calf or fresh. The heifers are heavy in calf. Young bulls of splendid breeding. All tuberculin tested and consigned by the greatest breeders in the west, viz.:

CARNATION STOCK FARMS
HOLLYWOOD CO., WM. BISHOP
E. B. MARKS, J. VON HERBERG
WM. TODD & SONS AND FRED PETERSON

Write for catalogue, **Geo. A. Gue, Mgr., Yakima Wash.**

**AUCTIONEERS:**

**Geo. A. Gue Harry C. Cranke J. W. Hughes**

## Champion Eastern and Western Blood

Four young bulls sired by Maple Park Chief, a son of Hood Farm Pogis 9th, that has more register of merit daughters than any other bull of the breed, living or dead. His dam is a half sister of Hood Farm Torono, who has seventy-three daughters in the register of merit and nine proven sons.

MAPLE PARK CHIEF, in a herd of 41 cows maintained on ordinary pasture, raised the average production of the offspring above their dams by 49 lbs. of fat per year. Each of his daughters so far freshening in the college herd is producing more than her dam at the same age. His potency as a great producing sire is well proven.

Two dams of these bulls are in the register of merit with good records. The other two are now on test and will qualify with a large margin. One is the daughter and two are granddaughters of the great Golden Glow's Chief, one of the four gold medal bulls of the breed, sire of 37 register of merit daughters, including Vive La France, now making a new world's record. They are good individuals and are offered at from $125 to $200—less than half their real value.

**O. A. C. Dairy Department Corvallis, Ore.**

## Don't Delay. Get Your Breeding Stock Now

We had hoped to meet you at the Lewiston show, where we had planned to offer the swine breeders the finest lot of big, husky Duroc boars and gilts that we have ever owned, but the show is off. So now we are offering them through this ad. If our Durocs don't please you, the expense is all ours. Remember we won first and junior championship last year in the strongest class of boars ever shown at the Spokane fair.

Our prices are in keeping with the quality of our stock. Write us your wants.

**GARFIELD STOCK FARM**

Registered Holstein Cattle, Duroc Jersey Swine.
Garfield, Wash.

Sale is under the auspices of the Northwest Hereford Cattle Breeders' Association and will be held at

**North Portland, Oregon**
**Wednesday, Dec. 11, 1918**

Catalogue can be had from
L. R. McGee, North Portland, Ore.

# Grain and Produce Markets

## Grain Market.

CHICAGO, Dec. 2.—Official estimates that 300,000,000 people in transatlantic countries were depending largely on food conservation in the United States to avert hunger, had a bullish effect here today on grain and provisions. Corn closed firm 1 1-4c to 2 1-2c net higher, with December and January both $1.28 1-2 to $1.28 5-8. Oats finished 1-4c off to 1 3-8c up, and provisions at an advance of 10 to 60c.

Throughout the day the dominating factor in the corn market was the food administration statement as to the needs of huge supplies to meet the food shortage in Europe. A bullish construction was also placed on a statement by the secretary of agriculture that he could see no good reason for a drop in prices. Predictions that the coming United States wheat crop would be a record-breaking one failed to exert any lasting contrary influence on the trade.

Oats averaged higher in sympathy with corn. Receipts were not heavy, and country offerings to arrive were light.

Firmness in the hog market together with the strength of corn lifted provisions. Packing interests appeared to lead the buying.

### Pacific Northwest Grain.

PORTLAND, Ore., Dec. 2.—Future grain [illegible] Oats—No. 2 white feed, December, $54.50; January, $54.50. Barley—[illegible] feed, December, $50.50; January, [illegible] standard A, December and January. ### Spokane Union Stock Yards.

| | Cattle. | Clvs. | Hgs. | Shp. |
|---|---|---|---|---|
| Saturday, Nov. 30 | ... | .. | ... | 34 |
| Friday, Nov. 29 | 132 | 4 | 352 | .. |
| Wednesday, Nov. 27 | 793 | 38 | 416 | 5 |
| Tuesday, Nov. 26 | 103 | .. | 336 | 87 |
| Monday, Nov. 25 | 289 | 23 | 156 | 9 |
| Week ago | 33 | .. | 14 | 170 |
| Year ago | 187 | 3 | 166 | .. |
| Two years ago | 16 | 14 | 23 | 4 |

Saturday's light receipts closed a very busy week at the stock yards and also closed a month of active trading that was equal to any of the other heavy months of the summer and early fall. A review of sales during November shows steady prices invariably had maintained. Saturday's trading was confined solely to Friday's late arrivals, which were made up mostly of stock cattle. The market closed firm, with prospects steady for the early month at the following quotations:

| | |
|---|---|
| Prime steers | $12.00@12.50 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.50@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Med. to good cows and heifers | 6.00@ 7.00 |
| Com. to med. cows and heifers | 4.75@ 5.75 |
| Canners | 3.00@ 4.25 |
| Bulls | 5.00@ 6.50 |
| Calves | 6.00@ 9.50 |
| Stockers and feeders | 6.00@ 8.00 |

The hog section was free from an offering of fat hogs, a few drafts of stocker pigs being weighed from holdovers. The prices paid for hogs during November fluctuated but very little and closed at prices identical with that of October, except on the rough heavy hogs, which are taking a cut of an additional dollar per cwt., making this class of hogs $2 per cwt. less than bulk of fat hog sales. This ruling, recently inaugurated, is recognized universally. The market is firm, with prospects steady at the following quotations:

| | |
|---|---|
| Prime mixed | $17.00@17.25 |
| Medium mixed | 16.75@17.00 |
| Rough heavies | 15.00@15.25 |
| Pigs | 14.75@16.25 |
| Stockers and feeders | 12.00@14.00 |

The sheep division displayed a light offering of lambs and yearlings, the sale of which from their apparent thin condition indicates a strong demand for mutton killers. Unlike cattle and hogs, the sheep market during November was for the most part uncertain, with a natural trend to lower figures, the most radical change being a slump early in the month of $1 per cwt. on all classes. This effect on the local market was brought on by influences of the eastern markets, which in caring for the heavy fall runs created a tendency to weaken the market. Current quotations follow:

| | |
|---|---|
| Prime lambs | $10.00@11.00 |
| Fair to medium lambs | 8.50@ 9.50 |
| Prime yearlings | 8.00@ 9.00 |
| Prime wethers | 7.50@ 8.50 |
| Best mutton ewes | 6.50@ 7.50 |
| Breeding ewes, 1 to 4 years | 12.00@15.00 |
| Breeding rams | 25.00@50.00 |

Saturday's drive ins—H. Rosenswig, sheep.

## Seattle Market.

SEATTLE, Nov. 30.—Several Western avenue jobbers have discovered this week that Winesaps, as well as all other winter varieties, are ripening too fast for long keeping, and as a result there has been considerable hedging on futures. This breaking down is not heavy, but jobbers who had occasion to pull out boxes from their storage stocks found first traces of decay in a grade of fruit that has invariably resisted all softening influences.

The fancy apple trade is quiet. Buyers generally do not care to pay more than $2.25 to $2.50, and are insisting upon fruit that will move at that level.

The spud market is without life or activity. There is no shipping inquiry either for baking Gems or other grades. Western avenue jobbers are being offered government graded Yakima gems at $23 to $25 f. o. b. White river valley growers are holding for $25 to $26, declaring that they can not sell for less and take a profit. Wholesalers are compelled to run considerable of the stock after government grading, as this permits too much secondary stock with particular buyers. Quotations are $40.

Little hope is felt for any improvement in the shipping demand, as good Minnesota potatoes are selling at $1.25 to $1.35 per 100 pounds in Chicago and St. Paul. There is no opportunity for shipping east at a profit as long as markets there continue in their present condition.

The demand for root vegetables is strong, including Yakima yellow turnips. Onions are firm, with Oregons leading, due to their superior keeping qualities.

The fresh ranch egg market, which has been sagging in spots for two days, struck a sustained drop to 70 cents today. Jobbers had been selling 2 cents under the market, while others followed the 72-cent level. The market depended upon the volume of eggs each dealer was receiving. Pressure was so heavy this morning, however, that a decline was forced.

The increase in the volume of pullet eggs that has been shown on the market this fall is taken by jobbers to signify a heavily accentuated production during the coming season. It is apparent that many small poulters that quit a year ago because of the high prices of feed are now returning to the trade.

The butter market is at the point of strength where an advance is regarded as essential if wholesalers are to compete for butterfat, and on Monday some of the jobbers expect to advance prices 3 cents. Should this advance occur, as now seems probable, butterfat will go to 70 cents and city creamery extras in cubes to 64 cents, and in bricks 65 cents.

### Bid Prices to Producers.

Eggs—Select ranch, 65c per doz; pullets, 55c per doz.

Butter—Fresh dairy, 80c per lb; butterfat, 68c per lb; bakers', 28c per lb; raw milk, $3.50 per cwt.

Poultry—Broilers, live, 1918, under 2 lbs., 30c per lb; 2 lbs and over, 27c per lb; hens, 4 lbs and up, 28c per lb; under 4 lbs, 26c per lb; old roosters, 18@20c per lb; ducks, live, fat, 27c per lb; squabs, large, $3.50 per doz; geese, fat, live, 22@23c per lb; Belgian hares, 14c per lb; guineas, $6 per doz; turkeys, young toms and hens, dry picked, 10 lbs and up, 38@39c per lb.

Hogs—Light, 20c per lb; heavy, 18@19c per lb.

Beef—Steers, fat, 11@12c per lb; heifers, fat 10@12c per lb; cows and bulls, 10c per lb.

Veal—Fancy light, 20c per lb; fancy heavy, 12@16c per lb.

Mutton—Fat, 17c per lb; spring lambs, fat, dressed, 18@20c per lb.

Salted hides, cows and steers, No. 1, 14c per lb; No. 2, 13c per lb; green hides, cows and steers, No. 1, 11c per lb; No. 2, 10c per lb; salted, bulls or stags, No. 1, 11c per lb; No. 2, 10c per lb; green bulls or stags, No. 1, 9c per lb; No. 2, 8c per lb; salted or green calfskins, No. 1, 30c per lb; No. 2, 28½c per lb; salted or green kip skins, No. 1, 16c per lb; No. 2, 14½c per lb; dry hides, No. 1, 29c per lb; No. 2, 28c per lb; dry bulls or stags, 24c per lb; dry salt hides, 23c per lb; dry calfskins (5 lbs and under), No. 1, 33c per lb; No. 2, 30c per lb.

Horse hides—Green or salted, each, $2@4; dry, each, 50c@$2.

Wool—Clean ranch, full growth, 50@55c per lb.

Sheep pelts—Long wool, each, $2@3.50; medium wool, each, $1.50@2; short wool, each, $1@1.50; shearlings, each, 35@75c.

## Spokane Market.

SPOKANE, Dec. 2.—The newly issued wholesale price lists of the Carstens and Armour packing houses show that beef prices are a shade easier while mutton has a somewhat upward tendency. In neither case is the change likely to materially affect the retail prices.

Bacon and ham have advanced from 2 to 5 cents a pound. Lard remains steady.

### WHOLESALE MEATS.

**Beef**—Beef steers, 15@20c lb.; T. C. steers, 19c lb; cow beef, 10@14c lb.; heifers, 14 1-2@15c lb.; best loin, 24@25c lb.; steer chucks, 11@12c lb.; square chucks, 13c lb.; prime ribs, 11@12c lb.; rump and round, 17@19c lb.

**Mutton**—Breakers, 19@20c lb.; wethers, 18@19c lb.; ewes, 15@18c.

**Lambs**—Diamond T. C. lambs, 22c lb.; lambs, 20@22c lb.

**Pork**—Packer dressed hogs, 24@30c lb.; pork loins, 30@34c lb.; legs, 32@34c lb.; shoulders, 28c lb.; leaf lard, 27c lb.; tenderloins, frozen, 45c lb.; spareribs, 17c lb.; country dressed hogs with heads on, 19@21c lb. to producer; country dressed veal, 13@15c lb to producer.

**Smoked Meats**—Washington hams, 39c lb.; T. C. hams, 42c lb.; T. C. bacon, 53 1-2c lb.; Washington bacon, 45@49c lb.; picnics, 27c lb.; lean backs, 37c lb.

**Star Brand**—Star hams, 41 1-2@42 1-2c lb.; Shield hams, 39@40c lb.; picnics, 29c lb.; bacon backs, 37@39c lb.; Star bacon, 54@56c lb.; Shield bacon, 50@52c lb.; Simon Pure lard, 35@36c lb.; Shield lard, tierces, 30c lb.; White Cloud compound, tierces, 24 1-4c lb.

**Dry Salt Meats**—Clear bellies, 30@31c lb.; loin back, clear, 31c lb.

**Bran and Shorts**—$30 ton; if soft wheat feed, $32 ton.

**Hay**—Timothy, $39 per ton delivered; $36 by carload; alfalfa, $32 per ton delivered; $28 by carload.

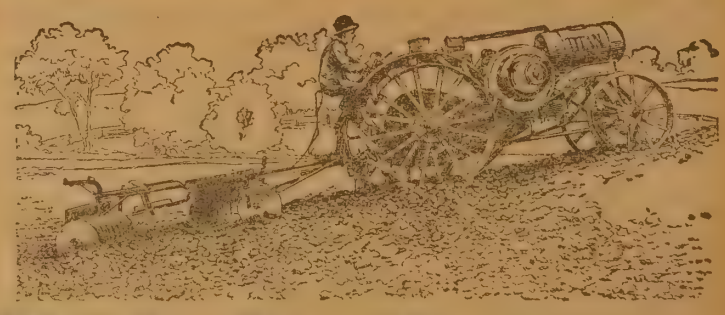
## Portland Market.

PORTLAND, Ore., Dec. 2.—The food administration has released 10,000,000 pounds of northwestern prunes for civilian use. Of the 60,000,000 pounds commandeered, about 9,000,000 pounds have already been shipped to the east. In the produce line the egg market is the only one to show a tendency to advance. Oregon eggs are very scarce, as the winter lay has not yet materialized. Storage stocks are practically exhausted, and fresh eastern are higher at 64 cents. Fresh Oregons are quoted at 66 cents for ordinary candle and 70 cents for selects. Cube butter is weak with 59 cents asked for extras and 58 cents bid. There is still some cutting of print prices. The turkey market ended in a bad way for all concerned. The price dropped to 35 cents the day before Thanksgiving, and of the surplus carried over some are sold at 32 cents at the close of the week. The remainder went into storage. Poultry has also declined. Dressed meats are steady. The apple market is ruling steady, with the demand chiefly for the cheaper grades. Potatoes are unchanged, with Yakima Netted Gems bringing $2@2.25 and Deschutes Gems $2.25. Local Burbanks hold at $1.75@2. Onions are also steady at $1.85@2 for Oregons.

Butter—Cubes, extras, 59c; prints, 63c; butterfat, No. 1, 67c, delivered.

Eggs—Oregon ranch, candled, 66c; selects, 70c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 36c; young Americas, 37c per pound. Coos and Curry, f. o. b. Myrtle Point, triplets, 35¾c.



Poultry—Hens, 23@25c; broilers, 28@30c; ducks, 28@30c; geese, 25c; turkeys, dressed, 41@43c.

Pork—Fancy, 20@20½c.

Veal—Fancy, 20@20½c.

Potatoes—Oregons, $1.75@2 per cwt.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30@33 per ton; valley timothy, $27; alfalfa, $28; valley grain hay, $26; clover, 27; straw, $9@10.

# When You Buy a Tractor—

REMEMBER, it's the plows, disks, drills, binders, ensilage cutters, feed grinders, threshers and the like that do your farm work. The tractor is useful only as it furnishes cheap, dependable power for **all** the other machines.

That's why we say, if you need a tractor, you can't make a mistake in buying an **International kerosene tractor.**

We have had over 75 years' experience with farm machines. We know the kind of power they require—all of them. For over twelve years we have sold tractors that supplied that kind of power. We know from experience that the sizes and styles of tractors we sell today will work with the machines you depend upon for your success and prosperity. And—our tractors all operate successfully on cheap kerosene.

When you buy an International kerosene tractor you buy with it the benefit of our long farm machine experience and all the advantages of dealing with a service organization which brings a well stocked branch house or a live, wide-awake retail dealer within telephone call of you. It may surprise you to know that an International tractor, plus these advantages, which no one else can give, costs you less per year of active service than any other tractor sold in anywhere near the same numbers.

# A Crooked Trail

(Continued from page eighteen.)

"That spotted steer is mine, and I'll take him wherever I find him!" I declared. "Come on, Frank, let's cut our cattle out!"

We both urged our horses toward the drove. But before we had advanced a dozen yards, the driver's sharp voice called out:

"I'd hold up there a minute, if I's you!"

I was angry enough to ignore him, but something sinister in the tones caused me to look back—into the muzzles of four cocked six-shooters!"

We both reined up suddenly. We were angry, but not reckless. And there's no denying that four pistols aimed straight at one's head, with four reckless dare-devils behind them, have a wonderfully chilling effect even on the hottest temper. And mine was so hot just now that it almost sizzled and sputtered, like a red-hot iron dropped into a snow-drift.

Frank and I exchanged looks. "They've got the drop on us," he remarked, quietly.

There was nothing else to do, and we stood still where we were and let the cattle-thieves ride on. When 30 or 40 yards away, one of them—one who had not spoken before—turned in his saddle and called out:

"Let me give you two boys a little free advice. Turn round in the road and ride home, as straight as you can and as fast as you can. And don't stop to gabble with anybody on the way. If you do, you may be overhauled, and then your friends will grieve themselves to death waiting for you."

We sat in our saddles, staring at the fellow. His looks and tones were far more threatening than his words; but it was the man himself that caught our attention, rather than his threats. He had been some distance ahead at first, and we had failed to notice him. But now we recognized him instantly.

He was the man who had stopped at the mill among the mountains, with his wounded companion that night—the man who represented himself as a sheriff, and whom we had at first suspected of being the desperado, Bill Edsell.

For some reason both Frank and I preferred to face the fellows till the last of them was beyond shooting distance. Then with one accord, and without a word, we turned and started slowly back the road.

"The impudent scoundrel!" Frank presently burst out, irritated by those last threats. "Wouldn't I like to see him jerked up to a limb!"

"A good limb and a good rope would be the very things for him!"

Though we little suspected it now, the day was soon to come when, far out in the wilds, we should see that very thing. And justice to both of us requires me to state here that, so far from taking part in it or exulting over it, we did whatever we could to prevent it. It is one thing to wish something in hot blood, and another and very different thing to stand by deliberately and see the wish come to pass.

Bitter disappointment sank into our very souls as we reflected on this failure of ours to regain possession of our cattle; and that, too, after we had trailed them so long and so far. And the last driver's implied threats, that we might be pursued and shot if we dared to inform on the thieves, only added insult to injury. We were not seriously worried by the threats, however.

After riding several hundred yards, I turned in my saddle and gazed toward the cattle. I could still make out Lep's spotted back and white horns among the horned throng, and the sight fired my blood.

"Wish I had a Winchester!" I burst out, in hot, helpless rage. "I'd like to drive a few bullets at those scoundrels!"

"That wouldn't do. They're too many for us," replied Frank. "Our wisest way is to set the sheriff on the robbers. That'll hit them harder than anything we can do to them ourselves. The penitentiary is gaping for every one of them."

"And I hope to see every scoundrel of them on the road there!" answered I. "They'll shed some of their insolence, I rather guess, when they're togged out in striped duds."

We followed back the road to the first house, and there halted to make inquiries. After learning what county we were in, and the road to the county-seat, we set off rapidly to find the sheriff.

(To be continued.)

# What Market Requires

(Continued from page two.)

during the first year of reconstruction. This condition, of course, points to the fact that the American farmer should turn his attention to the live stock production, and have in his possession when cheap grain prices prevail, enough live stock to consume most of his grain. Beyond what is needed for home markets we must export large numbers of beef cattle, dairy cattle, hogs and sheep. It is this class of live stock that the European countries will want to buy either as breeding stock or as meat for consumption. Our farmers look forward to a greater diversity in their farming operations in order to properly meet the above conditions.

We have a surplus number of horses in Spokane county and have an excellent lot of purebred sows for breeding stock of hogs. Spokane county, I think, has the reputation of having more than its normal number of hogs on hand, and this is due to the fact that much stress has been placed upon the keeping of hogs for gleaning the pea fields in this county. Spokane has a surplus of several carloads of good dairy cows and heifers which should be placed in the hands of farmers having plenty of alfalfa hay. These consist of high grade Holstein and Jersey cattle and are from the very best breeding obtainable. Southern Idaho farmers would do well to get these cattle for their herds.

Fall plowing is proceeding very rapidly these days and with a few more weeks of open weather all land for spring crops will be plowed this fall.

J. R. SHINN,
County Agent.

### LOAN TO CATTLE RAISERS.

J. L. Gault, manager of the Spokane Cattle Loan company, announces that the company has made loans of $1,900,000 to stockraisers in Washington, Oregon, Idaho and Montana. About 200 stockraisers have borrowed through the company. Mr. Gault says that the month of October saw the completion of $5000 in loans.

### CHANGE THANKSGIVING DATE?

A recent conference of stock producers in the Hig Hole basin of Montana adopted a resolution in favor of changing the date of Thanksgiving day from the last Thursday in the month to November 11, which will be the anniversary of the signing of the armistice terms.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

**EDUCATIONAL** 45

## Chickens Sick or Not Doing Well?

**An Extraordinary Offer:** Germozone is a standard remedy everywhere for chicken troubles, roup, colds, cholera, swelled head, bowel complaint, chicken pox, canker, not doing well, not-laying, etc. Now our proposition: if no dealer there handling Germozone and you will agree to use it and pay if satisfied, we will send you a 75c package without a cent in advance. No pay if not satisfied. Can we do more? And we will send free 5 poultry booklets. Write today.
Local dealers handling Germozone will do the same.
GEO. H. LEE CO., Dept. 421 OMAHA, NEB.

## Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |
| Castle Rock Independent, Castle Rock, Wash., and The Washington Farmer | $1.50 |
| The Cheney Free Press, Cheney, Wash., and The Washington Farmer | $1.50 |

| Daily and Sunday Spokesman-Review | 9.00 |

Take advantage of these special clubbing rates by sending your order today to your local home paper, or by mailing it direct to

**The Washington Farmer**
617 Central Bldg., Seattle, Wash.
or
Review Bldg., Spokane, Wash.

## A 350 to 900-Pound Separator

# For Only $2.00 DOWN

For this small payment down you can have a Brookfield cream separator. It is a close skimming, high-class machine, fully guaranteed, equal to the hardest service, tested by years of actual use. Our liberal offer makes it pay for itself as it goes along. You have a year to pay in small monthly payments. We back this offer with our 37 years of square dealing with hundreds of thousands of men and women everywhere in America. Write for free catalog and full details of our offer.

## The Brookfield

Thirty days' free trial on your own farm is your guarantee that the Brookfield Separator will meet any test. You run it yourself. You are the judge. We take all the risk. We could not make this exceptional offer if we did not know the Brookfield has come with flying colors through the severest trials. It is capable of standing up to the hardest work day in and day out. Now is your opportunity to get this separator for only $2.00 down. Don't miss writing for this offer. Cut off coupon and send it for free illustrated catalog and full details of our terms and low prices.

**1917 Prices If You Act Quick!**

**Beats Them All**

I am certainly satisfied with my separator. It runs very easy, is a close skimmer and is handy. In competition with 208 separators in our district, our separator outskimmed all others and left the least amount of cream in the skim milk.

(Signed) J. W. MEYERS,
West Salem, Ill.

**Special**

As long as our present supply of steel lasts you can buy at

**1917 Prices**

Act at once. Send the coupon today.

# Free Trial

There will be no expense whatever to you for your chance to prove the superiority of the Brookfield by giving it thirty days' free trial on your own farm. If you are not perfectly satisfied, you may return it and we will refund your $2.00 and all freight charges. No offer could possibly be fairer. We are confident enough in the Brookfield separator to send it to you and let you judge for yourself if it does all that we claim for it. So don't delay. Now, remember, should you ask for a free trial, you are to be the sole judge.

# Easy Payments

We have made the time payments especially low so that you have a full year in which to pay—while you are learning of the marvelous qualities of the Brookfield—how it gives you greater cream poundage and thus saves the money you pay for it. We charge you nothing for extending you credit. No interest is added. The Brookfield is sold in the exact way we carry on the other departments of our big business. There is no discount for cash. There is only one price for the Brookfield Separator—that is the *very* lowest.

## Mail Coupon for Free Catalog

**Straus & Schram (Inc.)**
Dept 4349 —W. 35th Street, Chicago, Ill.

Gentlemen:—Without any obligation on my part please send me your Free Catalog on the Brookfield Cream Separator, also full details on your 30 days' free trial offer, at the 1917 prices.

*Name*.....

*Address*.....

*P. O*..... *State*.....

Don't take a chance of missing this opportunity. Mail coupon and get the catalog describing the Brookfield Separator and what it will do. Remember, the Brookfield has to do its work in your dairy for thirty days and prove it is a perfectly made piece of dairy machinery and a money-maker for you.

You cannot afford not to send for the catalog and learn all about this separator and this offer. Our guarantee is back of this machine and back of every statement we make. Mail coupon today.

**Straus & Schram (Inc)**
Dept 4349 —W. 35th St., Chicago

## Superior Points of the Brookfield

**Skims all but $\frac{14}{1000}$ of 1% of Butter Fat**

This is the average work of the Brookfield as proved by certified test at Dairy Department of Purdue University, Lafayette, Indiana.

*BUILT LOW*—Top of milk tank only 35¾ inches from floor—easy to fill. Crank shaft 33 inches from floor and in right position for easiest turning, no back-breaking work.

*SPEED INDICATOR*—Brookfield Speedometer, patented, cannot be used by any other separator, insures correct speed at all times to get the maximum cream. Brookfield close skimming Sanitary Disc Bowl guaranteed to skim as close or closer than any other.

*LIGHT RUNNING*—Self oiling ball bearings and patented, self oiling, neck bearing, used exclusively by Brookfield Separators, make easiest possible running machine. Full guarantee covers this point.

*DURABLE*—All gears made of finest steel and in best workmanship, and enclosed and protected from dust. The Brookfield Separator will run for many years with no care except oiling.

*EASY TO CLEAN*—Every part of bowl and discs easy to see and clean. No corners or crevices. All bowl parts, tank and milk and cream covers heavily double tinned and smoothly polished.

DECEMBER 12, 1918.

# THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

## The GREATEST MOTHER in the WORLD

# Organization Has Three-fold Object

## To Gather Information, To Assist in Marketing, To Increase Production at Low Cost Must Be Its Purposes

COLVILLE, Stevens County, Wash, Nov. 29.—The ending of the great world war is undoubtedly going to mean greater opportunities for the American farmer because of the greater shipping facilities and wider markets that will be available. I believe that the only way by which the farmers will be able to take advantage of this opportunity is as Chairman Burley of the shipping board has said, through organization, and I believe it should be organization along three very definite lines.

In the first place the organization should serve as an authentic information bureau, to issue advance recommendations as to the lines of agricultural work which most need developing and in consequence should be the most remunerative. If foreign markets are to be developed it should be comparatively easy to determine in some measure what those markets will demand and consequently what we need to produce. It could not be expected that this could serve as an absolute check, but it should be of considerable assistance to the farmer.

The organization should serve as a medium through which the farmer may be able to market his produce and thereby market at a cheaper rate than is now possible. I do not mean that the farmer must necessarily handle all of the marketing problems, from the time the produce leaves the farm until it gets into the hands of the consumer, although I do think that it will come to this unless marketing is done on a more economical basis than it has often been done, but the getting together of produce for community shipments will often mean no more work for the farmer and far less work for the present marketing agencies.

The organization should serve as a means of assisting the farmer to a more efficient system of farming and thereby a cheaper cost of production. The farmer should have the opportunity of asking for special lines of educational work and should earnestly endeavor to use this privilege and the information which comes to them through this and other sources. It is my opinion that a large part of the farmers can materially increase production by well established principles which are often entirely neglected at the present time.

It seems to me that the problem of organization and of organization along these lines, is going to be the big problem that the farmer is going to have to face and the sooner he becomes aware of it and realizes that his criticism must be constructive the earlier he is going to be able to realize a just return from his labors. I believe it is going to be possible to accomplish a large part of this through the thorough organization of the farm bureau. It will mean, perhaps, that the organization be carried farther than has been contemplated at the present time.

Live stock, grain and the dairy products are the products which probably it will be found possible to export profitably. This is the time above all others when every farmer, as far as possible, should be making every attempt to improve his live stock by the introduction of better breeding animals. The farmer who does this and then plans to raise all of his own feed and feeds a large part of what he raises, is the farmer who will be certain of a steady income. For this county especially, diversified farming should be the rule.

While considerable live stock has been sold from this county this year, enough breeding stock has been kept to insure the maintenance of the industry on the same rate of increase as has been common for the last few years. Inquiries for better sires are coming in and this should make a very material increase in valuation in some sections of the county. The open fall has had a marked tendency toward keeping cattle in the county.

Fall plowing has been carried on as far as the labor situation would permit, and the seeding of fall wheat has exceeded the ordinary acreage perhaps as much as 50 per cent.

E. C. DURDLE,
County Agent.

### NEED COMMUNITY CENTERS.

NEPPEL, Grant County, Wash., Nov. 26.—It will take some time to get the live stock industry in Grant county up to a point where stock can be used for export purposes. Good, fine breeds of stock are the prime necessity for the near future in getting a sound basis to work on. There are large opportunities for farmers to make money out of alfalfa by the feeding of stock, and it is sure and the safest route to prosperity. A future market is assured with the coming of peace and the new export trade of meat, live stock and grain. Not much fall plowing has been done in Grant county on account of shortage of horse feed, and that is the big winter problem that faces the farmers here. Community centers are one of the needs of Washington farmers and also trade schools in rural districts. The street sidewalks in towns would not be congested with idle men if those men had been taught a special trade when young. That is the reason Germany was in a position to put up the fight that she did—every man was a tradesman. It is time that the educators get the practical working unit going throughout the country. It may save the country from future I. W. W. and bolshevism. It is for want of work that idle men gather in cities and political fanatics arrange their ideas against living as workers at small wages and they charge their distress to the government, when in truth the seat of the trouble is that the poor, unskilled laborer is but the servant of the next man that hires him for a few days. Compulsory trade schools in community centers will in future be the tie that binds the American democracy together.

MARTIN PENHALLICK.

### LABOR STILL A PROBLEM.

CHIMAKUM, Jefferson County, Wash., Nov. 30.—As we see them now the big farm problems are the wages and men. Men are hard to get even at the going wages, and the farmer will not be able to afford to pay them until everything gets down to normal conditions. Now the great war is over and it is a question how the time is going to adjust itself.

Farm and live stock conditions are not very good. Many of the farmers are going into the winter with very little hay and on account of the high prices of hay we expect to see many stock in poor condition by the opening of spring next year. Some fall plowing has been done, but not as much as should have been done.

JOHN VAN TROJEN JR.

### MIGHT EXPORT DAIRY PRODUCTS.

PORT ANGELES, Clallam County, Wash., Dec. 1.—Your timely suggestion for the farmers to think about reaching across the sea naturally suggests to me that our state is essentially adapted for the exports of dairy products, and for export we should endeavor for concentrate our efforts on articles and products such as butter cheese, preserved milk and cream, fruits, etc. Denmark imports a large proportion of her fodder and her farmers have grown wealthy though exports of these things. The big conditions are here and our efforts intelgently directed will by degrees give the desired results. The conditions in Clallam county in so far as fall plowing is concerned are satisfactory and the farmers look forward to an inerease in area and yield for 1919. J. P. CHRISTENSEN.

### TRANSPORTATION A PROBLEM.

COLVILLE, Stevens County, Wash., Dec. 2.—The one great agricultural problem that sticks up most obtrusively from the wreck of the war is the matter of transportation. Internally, the movement of food and other necessaries of life has been but little short of breaking down at different times in spite of the government's control and it illustrates how closely the country has trimmed between plenty and need. With home transportation steadily improving and ocean shipping gradually being released, the time is almost in sight when the problem will be one of markets instead of transportation. Undoubtedly, within a year, or better stated, by the end of the harvest season of 1919, the food situation in the war-torn regions will have been largely met through local effort.

While farm food products will probably be maintained on a relatively high range of prices the lesson of forced conservation in all countries is bound to react on the demands made on the farmers of the United States. If ever there was a time when the government should look into the future and seek for markets for our raw products, it is today, before the rest of the world catches its stride again. Under the present conditions of organization among farmers the government will have to take this in hand or nothing will be done. It would be to the advantage of the farmers if markets could be found for the more condensed farm products rather than those which are raw and bulky. With abnormal prices for feed, live stock production has steadily fallen in the northwest. It will take twice as long for the world at large to recover its shortage of meats and fats as it will its lack of breadstuffs and America could better count on meeting this continuing demand by retaining a greater part of her foodstuffs to meet this requirement.

E. E. ELLIOTT.

### GOVERNMENT SHOULD HELP.

TWISP, Okanogan County, Wash., Nov. 27.—We believe Chairman Hurley knew exactly what he was talking about when he said the farmers should begin at once to organize in order to take advantage of the opportunity of exporting their products. It is my opinion that the farmers should get their produce to some port or shipping station and that the government should take charge and do the exporting. Farmers should organize so as to assist the government by getting their live stock and farm products together at certain dates and places. Most farm produce if carefully handled could be exported profitably, provided the market value at the destination exceeded the local market plus the shrinkage and expense of shipping. One of the big farm problems is marketing products. That one could be solved by the government fixing the price. Live stock are in good condition. The late rains started the grass and made good late pasture. More plowing and seeding was done this fall than the two preceding years and the grain is up nicely. Alfalfa hay is selling at $20 per ton in the stack. Potatoes are $1.50 a hundred. GEORGE LA RUE.

### CHIEF OUTPUT IS TIMBER.

STEVENSON, Skamania County, Wash., Dec. 1.—There is very little farming done in this section. Timber interests are about all we have here, timber and cordwood being the principal output and most mills and wood hauling stops at this season, and things are quiet. No grain is raised here worthy the name of crop. Some hay is raised, but the country consumes about all we produce and there is nothing exported except a few apples in the eastern end of the county. This is an ideal fruit country when once developed, which is not the case now. W. T. JACKSON.

# Wheat Price of $2.26 Will Stand for 1919 Crop

**The National Food Administration announces that the guaranteed price for the 1919 wheat crop, fixed at $2.26 a bushel, Chicago basis, will stand even though the Lever act, under which the price was fixed, should become inoperative through the conclusion of peace.**

**Unless there should be additional legislation the wheat crop of 1919 will be restored to the open markets of the world, the price to be governed as before the war by the law of supply and demand.**

The food administration has issued a statement interpreting the Lever act and pointing out that the law provides that "all rights or liabilities under this act arising before its termination shall continue, and may be enforced in the same manner as if the act had not terminated."

The clause just quoted by the food administration is from section 24 of the Lever act, which we here give in full:

"That the provisions of this act shall cease to be in effect when the existing state of war between the United States and Germany shall have terminated, and the act and date of such termination shall be ascertained and proclaimed by the president; but the termination of this act shall not affect any act done, or any right or obligation accruing or accrued, * * * but all rights and liabilities under this act arising before its termination shall continue and may be enforced in the same manner as if the act had not terminated."

It is quite clear that the entire law (unless sooner repealed) will stand until the peace treaty has been signed, then ratified by the United States senate and then proclaimed by the president. Undoubtedly the proclamation can not be issued until well into the year 1919. Until that presidential proclamation shall be made our wheat growers will continue to sell their product at the guaranteed price, but when the peace proclamation is issued a new condition will arise. The general provisions of the act will then cease to exist—the power now vested in the government to fix the price at which the farmer is required to sell his product will no longer exist. We take it that unless there should be additional legislation, the wheat crop of 1919 will then be restored to the open markets of the world, the price to be governed as before the war by the law of supply and demand.

As this construction is sound, the government will continue to guarantee a price of $2.26, Chicago basis, but when peace is proclaimed the wheat grower will be free to sell his product for higher prices, if higher prices should rule in the open markets of the world.

In justice to our wheat growers congress should let the law expire and not enact additional legislation at this session to restrict the price of wheat. The American wheat-growers have borne their part, loyally and cheerfully, all through the war. In a proper desire to provide our allies with relatively cheap bread, the United States government fixed the price of wheat, and the government price undoubtedly was lower than the prices that would have ruled if our government had kept its hand off the law of supply and demand.

That was an act of sound generosity—but the American wheat-growers, not the American people as a nation, paid for that generosity to our allies and to the people of the non-wheat growing states of this country.

The wheat-growers of the Pacific northwest are particularly entitled now to a square and generous deal. Farmers of the east and the middle west, for the most part, saw no incentive in the wheat price guarantee. They preferred to grow corn and other crops that were left on the old status—that is of no guarantee and no restriction as to price. But here in the Pacific northwest large areas are suited only to the growing of wheat. Farmers owning wheat lands were compelled by nature to go on growing wheat.

They grew price-controlled wheat, not only for the benefit of our allies, but for the benefit of the southern cotton-growing states. Cotton was left free to rise to the level of wartime prices, but the rise of wheat was checked at a given point by the hand of the government. Thus while the price of cotton rose 300 per cent over the normal average of peace, the price of wheat rose only 100 per cent, and that 100 per cent was eaten up by the increased cost of production.

With normal crops the wheat-growers in the Pacific northwest would have fared fairly well with $1.90 wheat. They would have had nothing like the prosperity that struck the cotton belt, but they would have made a good profit as farmer's profits go. Unfortunately this region suffered two short crops in succession, amounting in many places to total failure. Wheat-growing, on the whole, has been unprofitable here for the last two seasons.

It looks now as though the continuing price guarantee on the 1919 crop will be sheer fiction the coming year, as it has been sheer fiction during the war, that the government will not have to put up a dollar to make good the guarantee. Congress and the administration should now give the wheat-grower a square deal. It was an injustice to restrict his prices while letting cotton soar. Now that the war is ended it would be an outrage to continue the discrimination.

## New Dean Is Named

President E. O. Holland of the State College of Washington, at Pullman, has announced the appointment of Edward C. Johnson of the division of extension of the Kansas Agricultural college to be dean of the college of agriculture at Pullman. The position also carries with it the directorship of the state college experiment station. The new dean will begin his work about the first of January.

Dean Johnson is a native of Minnesota, of Scandinavian parentage, and was graduated from the University of Minnesota in 1906, his specialty being biological science.

At Minnesota he was a student assistant in botany in 1906 and instructor in botany in 1907, in which year he also earned his M. A. degree. He was appointed assistant pathologist in the United States department of agriculture in 1907, and in 1908 was made pathologist, in charge of the cereal disease work of the United States department of agriculture, in which position he remained until 1912. During this time he did graduate work in bacteriology in George Washington university. His summers were spent largely in the central west and the far west in the study of field crops.

In 1912 Mr. Johnson was elected superintendent of institutes and demonstrations at the Kansas institution, which changed him from investigational to statewide teaching and administrative work. He developed this field and in 1915 was elected dean of the division of extension in the Kansas Agricultural college.

### FORGOT TO SIGN NAME.

The Washington Farmer pattern department has received two unsigned orders for patterns. One is from a reader at Hunters, Wash., who ordered patterns Nos. 2457, size 46; 2626, size 46, and 2206, size 2 y. Another reader, living at Gerome, Wash., ordered patterns Nos. 2613, size 5, and 2206, size 4. If these persons will write in, giving their names and postoffices, the orders will be filled; otherwise it will be impossible.

### The Dog at Her Doorstep.

It is only now and then that the trials endured by the pioneer women of the west are really brought to light. Heaven only knows how severe some of them were. Read "The Dog at Her Doorstep" in this issue, page 16. It sketches the experiences of one of these women during one terrible summer.

### WINTER SCHOOL AT PULLMAN.

The annual winter school for farmers and housekeepers at the State College of Washington, Pullman, will begin January 6 and close February 14, 1919. The subjects taught include live stock farming, dairy farming, milk and its products, poultry raising, soils, crop production, horticulture, agricultural engineering, general courses and home economics.

All the courses are open to any one above the age of 16 who can read and write intelligently. A student may select as many of the subjects outlined as his time and the schedule will permit. For particulars address the Registrar, State College of Washington, Pullman, Wash.

### FARMERS' MEETING IS DELAYED.

Owing to the spread of influenza in Spokane and other cities and sections, the Farmers' union convention for Washington and northern Idaho is not being held this week as originally planned. When the gathering will be held is not known, but some announcement concerning the possibility probably will be made shortly after the return of President A. A. Elmore, who has been in California recently. Secretary A. D. Cross sent out cancellation of the former dates the middle of last week.

### FRUIT CONFERENCE CALLED OFF.

On account of the influenza situation throughout the state of Washington the joint convention of the Washington State Horticultural association, the Inland Empire Fruit Growers' association and the Washington State Grade and Pack conference, which was scheduled to be held in Spokane, December 10-13, was postponed for the present. As soon as the influenza situation clears itself, plans will be made for the convention on the same big scale as originally outlined.

The advantage of growers cooperating with the federal government in establishing permanent grades for northwestern apples is pointed out by C. I. Lewis, chief of the division of horticulture at the Oregon Agricultural college.

### INTERNATIONAL STOCK SHOW HELD.

The International Live Stock show at Chicago last week was of a high class, with especially high prices prevailing when animals of excellent classes were offered.

The highest price, probably ever received for a beef animal was paid for Fyvie Knight, an Angus, grand champion yearling, when he sold for $2.50 a pound, bringing $3350. It is planned to have the choicest cuts of this animal served to President Wilson and others of the world's leading statesmen in Paris during the peace conference.

A carload of Texas-bred Herefords owned by J. W. Frazier of Rardin, Ill., won the grand championship for carload lots.

C. F. Curtiss of the Iowa state college was elected president of the International association.

### GRAIN MEETING NEXT MONTH.

The annual meeting of the Washington Grain Growers, Shippers and Millers' association will be held at Pullman, January 7-9. E. G. Schafer of Pullman is secretary and has charge of the arrangements. H. J. McCroskey of Garfield is president.

**The great Red Cross membership campaign is coming. Motto: Everyone a member!**

## Townley Is Reelected

At a convention of delegates in St. Paul last week A. C. Townley was reelected president of the nonpartizan league. Delegates were present from 13 states, as follows: North Dakota, South Dakota, Minnesota, Idaho, Washington, Montana, Colorado, Texas, Nebraska, Iowa, Kansas, Oklahoma and Wisconsin.

In addition to reelecting Townley president, the conference increased his salary from $3600 to $5000 a year. One of the official statements given out said:

"A committee consisting of one farmer delegate from each of the 13 states in which the league is organizing reported on its examination of the league books and accounts. The report found the books had been accurately and efficiently kept. The audit showed that Mr. Townley during the 43 months that the league has been in existence drew for salary and expenses a total of $26,081.65."

The conference indorsed the activity of the labor organizations of Chicago in a movement designed to give labor greater political power in that city.

A program of policies was adopted, one feature of which was the indorsement of government ownership of the railroads. Other features of the program were: Complete enfranchisement of women, a system of farm loans by states from money borrowed from the federal government on state bonds, immediate reduction of freight and passenger rates, the liquidation of the national debt through reforms in income and inheritance taxation and the prevention of gambling in the necessities of life.

### A. V. BRADRICK DIES.

A. V. Bradrick, one of the well-known prebred live stock men in the northwest, died of pneumonia following Spanish influenza at a Spokane hospital last week. He has been active in the dairy industry, having associated with him his son, A. W. Bradrick of Palouse, Wash.

### Get Them Together.

Some have hay; some have stock. Get them together.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

FREE INFORMATION BUREAU.
The Washington Farmer has established an INFORMATION BUREAU at the NATIONAL CAPITAL, which is at the service of its readers, and which they are asked to use freely. It is intended to be a clearing house of government information. Address inquires (including 3c stamp) to The Washington Farmer INFORMATION BUREAU, Washington, D. C.

## Labor, Capital and Enterprise

With the demobilization of our great armies and their return to civilian life, there will be an abundance of labor to carry forward the country's industries on a larger scale than ever before, for we have found new sources of labor in the country's womanhood.

Capital, too, will be abundant, for the war has made the United States the richest country on the globe.

But labor and capital are not in themselves sufficient. All can recall periods of profound industrial depression and commerical stagnation when both capital and labor were abundant. Labor was unemployed because frightened capital had gone into hiding.

There must then be a third factor that is essential to national prosperity. It is enterprise. When we have labor, capital and enterprise pulling together we have good times.

But enterprise can not exist where confidence is lacking.

Both labor and capital have the power to inspire confidence or to destroy it—labor by demanding the impossible, capital by imposing too heavy a burden on enterprise.

Nothing can be plainer than the ill consequences that will follow should labor demand impossible wages and capital impossible interest charges. The third support of the tripod, enterprise, will be taken away and the whole structure will suffer.

Of the three factors, labor and enterprise are the indispensables. Labor and enterprise can achieve something without capital. Capital can do nothing unless aided by enterprise and labor.

Idealism must have a groundwork in practicability, or the idealist will make himself laughing stock.

## Read Up This Winter

It used to be unpopular for a farmer to study scientific farming problems. But that is no longer true. The old methods are passing as producers discover that they can actually produce more and better stuff by improved methods of culture and fertilization. It is poor business to try to grow a certain crop on a certain piece of land whose soil does not contain the elements necessary for the growth of that particular crop when it does contain the elements necessary for some other crop. It is unwise to plant crops year after year on depleted soil when a crop of something to turn under or a treatment with a fertilizer of some kind would put the land in good condition. Neither is it wise to use the same crop season after season when a judicious rotation would keep the soil in a higher state of productivity. Winter days and evenings are excellent times to study these problems, and now, before the long evenings come on, is the time to write to the state college or the department of agriculture for bulletins and booklets on these vital subjects. If prejudice has prevented the use of this literature in the past, let no one be prejudiced longer against it. It is important; it means much to the producer who will study, as thousands who have can testify.

Ruin may mean ruin or it may mean reconstruction.

## Food Production in 1919

There will be many opinions of many men as to the food production problem of 1919. Some of these guesses will be more fortunate than others, but no one can foretell with certainty as to the coming year's crop of any specified food products.

In the meantime the great basic food and feed products—wheat, and corn, barley, oats, potatoes and hay, pork, beef, mutton and dairy productions—must be had. Which one of these will pay the best in the year 1919 and which one will give the least return to the producer? No man can now say. The farmer in general who depends exclusively on any one or two of them for his living, for his expenses and for his profit, assumes a risk which he can not afford to do.

One thing will be just as important in 1919 as it has been in 1918—safety first calls on every farmer to raise as much of food supplies for his own family as his farm will produce. No matter what is his specialty as a farmer, a good cow or two, a pig or two, a good beef animal, a few hens and ample supply from the farm garden and home orchard will help out immensely.

Cash never flows in abundantly on the ordinary farm, but much of the cash expenditure of the wage earner in town may be saved by the farmer. When the books are balanced at the end of the year the farmer who handles little money but farms wisely may have just as much as the wage earner who handles many times the amount.

Figure out destiny when you have nothing else to do.

## If the Hungry Compete for Food

The greatest problem in the world today is the food problem. There have been famines, but never a time when the peoples of so many great nations were threatened by dire hunger as they are today. How to solve the problem of feeding this hungry world demands the best thought of the best minds of the age. The legislative and executive powers of all the nations must exert themselves quickly and wisely. There must be provided not only the food and means with which to transport it, but there must be provided ways of safeguarding the interest of both producer and consumer.

There is no price a starving man will not pay for food if he can get it. Not only will he pay the last cent he has and pledge all he ever hopes to have, but he will trample over his fellows if necessary to obtain what his empty stomach craves. What if the food supply of the world (which today means to great extent the food supply of America) were thrown open to competitive bidding of the hungry nations? What if the ability to buy, for cash or on credit, were to be made the sole condition of sale to any nation of starving folk? The questions are too big to answer off-hand, but it is probable that some deserving peoples would go wholly without food or nearly so, while others no more deserving or no more worthy of preservation would have plenty. It is possible also that profiteering in the markets would be excessive; that unscrupulous manipulators would take advantage of the plight of the unfortunate in many lands and pile up unwarrantable profits, at the expense, not only of the foreign consumer, but of the consumer at home as well.

The people of this country must be on the alert. They must not allow their representatives at Washington to overlook the great problem or delay too long in facing it squarely, doing their share to place adequate safeguards about the world's food supply for the protection of the consumers of all nations.

## Let Your Criticisms Be Known

There are two kinds of criticism—one which destroys without building up anything, and one which has as its object the construction of something new and worth while for everything old and less worth while which it opposes. Every one who criticises should weigh his criticism carefully before giving it expression to assure himself that it is of the constructive and not destructive variety. Having once convinced himself of the justification of his position, it is his duty not only to himself, but to his fellows, to give his opinions effective expression.

A high official in one of the departments of government at Washington, D. C., referring to a contemplated action by that department vitally affecting the farming interests of the country, said recently: "We have received only one adverse expression of opinion on this matter." But one can not talk to farmers familiar with that particular situation in the northwest without hearing many criticisms of the proposal referred to. The trouble is they talk among themselves freely on the subject, but too often fail to put their criticism in effective form and present it where it will do good. That department at Washington no doubt actually believes, because it has received only one protest, that the farmers are practically unanimous in favor of this proposal, when, as a matter of fact, if they actually expressed their opinion, it would probably show a majority opposed to some of its features. Congressmen and senators are intended to be the servants of their constituents. Farmers should make known emphatically to their representatives in congress their opinions on great questions affecting their industry.

Every farmer should study the possibility of improving his soil by the use of lime.

## Le the Boys Stay in School

Throughout the country there are many hundreds of farm boys who have been taking the student army training corps work in the colleges and universities under the provisions of the war department. Now comes the word that these student army corps are to be demobilized. Question: Will these boys return to the farm immediately or will they remain in school?

There are, of course, many cases in which it will be necessary for them to return to the farms to assist in the very necessary and commendable work of food production. There are many other cases in which they could well be allowed to remain in school. In every instance where the conditions are such that the production on the farm could be successfully continued without their help, they should not only be permitted to remain in school, but induced to do so by their parents. It is possible that their enlistment in the student army corps a few months ago was a turning point in their lives. Only the most stringent circumstances should be permitted to interfere with the development of the new life which they have been permitted to begin.

Pride is pride, whether it is pride of ignorance or pride of knowledge, and before you are through with it, the one leaves you in about the same position as the other.

## Grain Problems Are Coming Up

The annual convention of the grain growers, millers, dealers and shippers is to be held again at Pullman in January. There never was a time when so many questions of vital interest to the grain producer were to come up. The producer must not make the mistake this year that he so often makes. He must not stay away from the convention and let the miller and warehouseman and dealer do the talking and voting. He must be there in force and present his own case and see to it that the actions taken embody features desirable from the standpoint of the one who plows and sows and sacks and hauls and pays harvest bills. The farmer can not expect his interests to be protected unless he protects them himself. What is needed at this convention, and all other conventions of an agricultural nature, is a large attendance of actual farmers—men who do the work with horny hands and overalls, not farmers who live in town on the income from thousand-acre farms that some one else operates.

# President Due in Paris Saturday

## *Is Keeping in Touch With the White House by Wireless*

President Wilson's special ship, the George Washington, has been delayed on her epoch-making voyage to Europe with the presidential peace party by rough weather. At this writing it is believed that the landing will be made at Brest, France, on Friday, December 13, making the president's arrival at Paris a day later than planned.

December 17 has been chosen as the tentative date for the convening of the preliminary peace conference. It is understood that the allied delegates will meet together until they have agreed upon the principal terms of the peace, and that the German delegates will not be taken into the conference until this has been done. It is expected that the latter will be called in to sign the peace agreements and not to take part in forming them. While there is nowhere any evidence that any of the allied nations desire to render anything but full justice to the German people, it is overwhelmingly evident that the peace is to be a dictated peace and not a negotiated peace, as was evident during the fighting of the last year. How long it will take to arrive at the agreements is wholly problematical, but it is hoped to have them in shape for the final conference by the latter part of January.

**WILL ALLIES AGREE PEACEABLY?**

This is one of the biggest questions of the present time. Victory over Prussianism has been won by unity of action among the allied nations. Will they be able to get together on a common ground for the conclusion of a peace that will determine to a large degree their national development during the coming generations?

That President Wilson foresees grave possibilities of failure on the part of France and England and this country to harmonize all their interests is the conclusion some have arrived at in view of his decision to attend the conference in person and of his failure to make any statement of his definite purposes prior to his departure.

**LEAGUE OF NATIONS PROBLEMATICAL.**

One of the questions that is scheduled to come up at the peace conference is that of the formation of a league of nations such as to create an international police power and limit the military or naval power of any individual nation. There is wide difference of opinion on this matter. Some great statesmen consider it absolutely essential to the future peace of the world. Others believe it highly impracticable. President Wilson is an ardent advocate of the proposed league. A. J. Balfour, secretary of foreign affairs for England, likewise favors it. Recently he said, concerning the proposal:

"I do not think the world can be made safe for democracy merely by multiplying the number of democratic states. I think a league of nations a vital necessity if this war is to produce all the good we expect to come out of it. The United States would have to bear a large share in the work it involves. It should be something more than a mere instrument to prevent war. The world is more complicated than we are inclined to think. It would be folly to imagine it possible to constitute a world with states endowed with equal powers and rights. But I wish to say emphatically, in my opinion, to devise in concert workable machinery for them is one of the highest functions the conference can deal with."

**ALLIES REACH THE RHINE.**

The date has arrived when, in accordance with the terms of the armistice signed on November 11, all that portion of Germany west of the Rhine river must be vacated by the Germans. While concise official reports are lacking, it is evident that these terms have been lived up to in the main. The allied forces are occupying a number of points on the Rhine river. Little difficulty has been experienced in making the advance following the withdrawal, and the great occupation that has taken place is one of the marvelous things of international history. On December 11 the 30 days of the armistice are ended. At this writing it is not stated how the provisions will be continued, but it is evident that the allies will permit the terms to continue indefinitely or until the Germans violate some of them in such way as to warrant the resort to arms by the allies to enforce them. Without such supplemental agreement the state of war would be resumed automatically at the end of 30 days.

**LIKELY TO TAKE CHARGE OF KAISER.**

It is growing more and more evident that the allied nations will sooner or later demand the surrender of the kaiser by Holland. What to do with him is one of the questions that will be taken up at the preliminary peace conference.

**INFLUENZA TAKES HEAVY TOLL.**

It is estimated that Spanish influenza and pneumonia had taken a toll of betwen 300,000 and 400,000 persons outside the army camps in the United States and that the deaths in the camps have reached at least 20,000. The meaning of these facts is better realized when it is remembered that the deaths from all causes among the American soldiers in Europe were only about 50,000 up to the signing of the armistice. Insurance companies have been hard hit by the epidemic, and it is said that the government has incurred liabilities on its army insurance of more than $170,000,000 in American camps alone.

**LOSS OF LIFE AT SEA IS SMALL.**

American loss of life at sea as a result of the war totals only about 775, according to government figures. There were 145 American vessels sunk by the enemy, with a total carrying capacity of a little more than 350,000 tons.

**ANOTHER LIBERTY LOAN IS COMING.**

The United States treasury department is definitely planning for a fifth Liberty loan campaign, which will probably come the latter part of April. It is probable that bonds to a total of about $5,000,000,000 will be placed on the market at that time under the same conditions as those of previous Liberty loan issues.

**GERMANY RELEASES PRISONERS.**

As a result of the armistice agreement, Germany and Austria have released approximately 1,500,000 allied prisoners of war.

**NEW TREASURY SECRETARY NAMED.**

President Wilson has appointed Representative Carter Glass of Virginia to succeed William G. McAdoo as secretary of the United States treasury. The senate has confirmed the appointment. Mr. Glass will resign from congress immediately and begin his duties as treasurer December 16. Treasurer McAdoo recently resigned.

**BUSINESS WILL SEND DELEGATES.**

Business interests of this country have decided to send a committee to Europe to be present during the peace conference, with a view to being of assistance to the present delegation in determining industrial questions that may arise.

**WAR COSTS UNITED STATES HEAVILY.**

Secretary McAdoo of the United States treasury, in the report which he recently prepared, says that for the 15 months of this country's participation in the war up to June 30, 1918, the actual war expenditures of the government had been over $13,000,000,000. About half of this amount, he said, represented permanent investment, such as ships, shipyards, war vessels, camps, buildings and loans to the allies.

**TURKS MASSACRE MILLIONS.**

A report from Constantinople says that since the outbreak of war four years ago there have been 3,000,000 persons massacred in territory under Turkish control and that another million are now on the verge of starvation.

# Farmers Pay Promptly

## Their Payments Insure Stability of Farm Bank

Farmers have borrowed $139,378,000 from the 12 federal farm loan banks since their organization in March, 1917. Against these loans the national farm loan board has issued bonds amounting to $140,122,000.

Contrary to the gloomy forebodings of the opponents of this system, the farmers are making their payments promptly. The official report shows that only $86,000 in loans was overdue and that trifling delinquency occurred almost entirely in sections where there had been crop failures. Eighty-six thousand dollars seems a large sum, and is a large sum in ordinary transactions, but when we consider the magnitude of the loans it is seen that this delinquency amounts to only about 60 cents, on the average, in each $1000 borrowed by farmers.

The report further shows that the Spokane, Wichita and Houston banks have an actual surplus and the Spokane and the St. Paul banks will begin shortly to repay the government for the stock originally subscribed. The government, it will be recalled, appropriated $9,000,000 in the beginning as a sort of revolving fund to set the banks going. Under the growth of the system this $9,000,000 will be returned to the federal treasury, and the process of returning, as the official report shows, has begun in the Spokane and St. Paul districts.

It is highly gratifying to the friends of the system everywhere, and particularly to those of us who worked for it in this region, that the Spokane bank beats all others in the monthly volume of business and in the total loans closed and paid to farmer borrowers. The November report of President D. G. O'Shea of the Spokane bank shows that while the influenza epidemic was sweeping the country and business generally was disorganized the Spokane district bank closed new loans totaling $1,246,800.

Loans closed up to the close of business November 30 give a grand total of $22,903,800, leading the other districts by a wide margin. This represents loans to 9610 farmers, averaging close to $2400 each. Mr. O'Shea states that the average of loans is gradually increasing, as big borrowers, who held off at first until they could see how the system would work, are now applying for loans.

Since it began business the bank has received 23,206 applications for loans aggregating $62,000,000. Of this number about 9000 have been rejected or withdrawn and the balance are in process of being closed. Bonds of the Spokane bank have been sold, mainly in the east, in the amount of $23,000,000.

"The business of the federal land bank continued to expand and grow, and there seems no appreciable diminution in the volume of business it has to consider," said President O'Shea. "Its services are apparently appreciated by the farmers generally throughout this district. There is every indication that its business will be continuous and roach an enormous volume. There has been almost no delinquency in meeting the amortization payments, with the exception of a few farmers in drouth-stricken areas, where conditions have made it hard for them to pay regularly."

## *Where Germany's Fleet Died*

This map shows the northwestern corner of Germany, its outlet to the ocean and the locality of the harbors that have made its world commerce possible. In these waters were bottled up the German vessels that had to sail forth and surrender to the allied fleets. See Helgoland, the natural fortress that Germany bought from England years ago for a song. Note the Kiel canal, Cuxhaven and Bremen. Follow down the coast to Ostend and Zeebrugge. It is easy to see why Germany wanted to add this coast line to her possessions.

## *Washington Gleanings.*

The Methow-Pateros unit finished packing about 40,000 boxes of apples at their warehouse last week.

C. B. Sprague, Kitsap county agent, with headquarters at Port Orchard, has resigned and intends to go into farming in Clackamas county, Oregon.

R. K. Tiffany, project manager of the reclamation service in the Yakima valley, has asked A. P. Davis, director of the service, for $3,000,000 to develop Yakima valley irrigation systems during the coming year.

According to the annual report of A. B. Nystrom, Lewis county agent, there are more than 10,000 dairy cows in Lewis county. These are owned by approximately 1300 farmers. Most of the county's crops are grown to feed this stock.

Three hundred thousand silver trout eggs have been assigned to Thurston county. The eggs will be hatched at the Chambers Creek hatchery and the county game commission will be notified when the fry will be ready for shipment.

The weather around Sprague continues mild and open, which permits stock to run in the fields and saves feed, which is scarce in that part of the country. Farmers report considerable moisture in the ground, but that more is needed, for the soil became very dry the last two years.

The farmers of Whitman county are overwhelmingly in favor of the formation of a league of nations as a means of promoting international harmony if the expressions of the farmers in attendance at the county convention of the farmers' union held at Pullman last week can be taken as a criterion.

Marvin Chase, state hydraulic engineer, after meeting managers and directors of canals diverting water from Yakima and Naches rivers, says that at their request the state will take over supervision of the Yakima river and watershed to conserve the water supply and equalize distribution for irrigation.

The William Turner place at Wenatchee has been purchased by Frank Schnell of Claresholm, Alberta. The price was approximately $601,000. The Turner holdings comprise 790 acres, 60 acres in the finest of commercial orchard, and a modern home. In five years Mr. Turner took off $125,000 worth of fruit.

H. E. Shultz, a farmer living near Raymond, has produced splendid crops of corn this year. He makes his farm an experiment farm, and this year grew 112 varieties of corn. His seed came from foreign countries as well as from different states of the Union. Of these 62 varieties proved of value in this climate.

The Walla Walla county commissioners have set December 16 as the date for hearing the petition of the people of Burbank asking for the organization of an irrigation district near the junction of the Snake and Columbia rivers. The petition was signed by 80 persons, including most of the land holders under the project.

E. T. Newbry, who purchased the Tarble ranch of 320 acres of bottom land three miles south of Chewelah several months ago, will plant 50 acres to red clover for seed. He planted 40 acres to oats last spring and harvested an excellent crop. Mr. Newbry believes that timothy is a crop of the past, and has plowed his under, sowing alfalfa in the clay bottoms.

Seed growing is to be added to the industries of the Yakima valley, according to a report on the returns of S. D. Woodruff & Son, seed growers, who operated a 200-acre experiment plant this season. The returns will show 50,000 pounds of pumpkin and skuash seeds and 30,000 pounds of beans. The results give a net profit of $100 to the acre in addition to possible byproducts.

G. E. Friesen has been awarded a contract to make a $30,000 diking improvement for the enlarged diking district which includes a big acre age between Union and selah gaps. The plan is to build eight dikes at various angles with the banks to confine the Yakima river in its main channel and do away with the annual danger of flooding the low lands. Last years flood did about $70,000 worth of damage in the diking district affected by the proposed improvement.

The warehouse and evaporator plant of the Selah Growers' association burned to the ground recently, causing a $50,000 loss, three-fourths of which is covered by insurance. S. M. McKee, president of the association, says the cause of the fire, which started in a kiln, is unknown and that the association will rebuild on a fireproof basis for the coming season. Ties of the Northern Pacific railroad track in front of the plant were burned out and 450 tons of apples stored beside it were totally destroyed. Stockholders have unanimously voted to rebuild the plant, which will cost about $15,000.

The thirteenth annual convention of the Washington Grain Growers, Shippers and Millers' association, known as the wheat convention, will be held at the state college at Pullman January 7, 8 and 9. Special emphasis will be given to reconstruction problems as destined to affect wheat growers, millers and shippers. Grain grading demonstrations will occupy a prominent place in the discussions and deliberations of the convention, at which it is also planned to organize a Washington Pure Seed Growers' association.

# Build Better Farm Highways

## *Road Association Plans Legislative Recommendations*

**"Now that the war is over an active campaign must immediately be inaugurated looking toward the building of highways into neglected agricultural districts so that farm products may be transported by gasoline-propelled trucks.**

**"Special attention must be given to development of roads in districts with large agricultural production so that the cost of transportation may be reduced to the minimum."**

These are two paragraphs taken from the resolutions adopted by the Washington State Good Roads association at its convention last week in Pasco. They will go with those resolutions as part of the recommendations to be made by the association to the state legislature which meets in January. The enactment of road legislation in accordance with that idea would mark a long step in the direction of securing utility roads rather than scenic roads. This does not mean, of course, that great arterial highways throughout the state are not greatly to be desired and essential in the same degree that the arterial irrigation canal is essential to an irrigation project. But it does mean that good roads into the farming communities are as essential to good agricultural transportation as lateral irrigation ditches are to a good irrigation system.

One of the big questions at the good roads convention was whether or not the state should issue bonds for road construction on a large scale or whether it should continue the "pay as you go" method of road construction. P. H. Carlyon of Olympia, state senator from Thurston county, and for many years one of the good roads leaders in the state, is a leader in the movement for the issuance of bonds. Governor Lister is among those who oppose this method of road construction. It is expected that the question will be a prominent one in the legislative session at Olympia this winter. The resolutions adopted by the convention included the following recommendation in addition to those quoted in the opening of this article:

"That the principle of using automobile license revenues as a basis for a bond issue for the state is worthy of serious and careful consideration by the senate and house roads and bridges committees.

"That in devising any new laws or changes in the present laws, either based upon motor license fees or otherwise, the permanent highway fund and permanent highway maintenance fund for counties must be maintained.

"The association reaffirms its belief that the permanent highway law is our most effective road law and that it should not be tampered with, except that a clause should be inserted therein which will permit counties to apply their portion of the fund to an interest and sinking fund account for taking care of a county bond issue for road construction if they so desire. Maintenance funds and methods must not be weakened, but rather strengthened. This should apply to not only permanent highways, but to state roads or other roads which may be provided for by supplemental legislation.

"We believe that argument of cities of the first and second class for small percentage of automobile license money with which to construct and maintain bona fide arterial connections is well founded.

"All hard surfacing shall begin at city limits of principal paved centers or be continuation of hard surfaced standard roads already constructed out from these trade centers.

"We recommend that the legislature continue the two recognized road divisions of this state, namely: Western division (all west of the Columbia river, excepting Okanogan and Ferry counties) and the eastern division (all that east of the Columbia river, plus Ferry and Okanogan) and that construction go forward simultaneously in these two divisions on the ratio of assessed valuation and that the same rule apply to federal aid.

"That provision be made for the immediate construction of at least one east and west cross-state road.

"That the only license fee required from the owner of any motor vehicle be that collected by the state.

"That the present law providing for maximum vehicle loads be amended to provide for the maximum loads that trucks shall carry, taking into consideration the speed of the truck."

The convention elected N. B. Coffman of Chehalis president of the association for the ensuing year, and selected Yakima as the place for the next annual meeting. The executive committee as elected at the convention is as follows:

John P. Hartman, King county, chairman; Frank W. Guilbert, Spokane; E. C. Burlingame, Walla Walla; J. H. Smith, Snohomish; Lee Monahan, King; Torgor Peterson, Pierce; J. J. Donovan, Whatcom; A. F. Eldredge, King; F. R. Haupt, Adams; J. L. Dumas, Columbia; F. Garrett Fisher, Pierce; A. B. Fosseen, Yakima; J. E. Calder, Grays Harbor; F. J. Wilmer, Whitman; Fred L. Wolf, Pend Oreille; J. C. Hubbell, Kittitas; J. G. Kulzer, Stevens; Edgar Dry, Grant; Arthur D. Jones, Spokane; W. R. Ammon, Benton.

Vice presidents, France Terrace, King; F. W. Schultz, Chelan; Oliver Hall, Whitman; E. M. Gillette, Chelan; J. A. Fontaine, Columbia.

Legislative committee; C. L. Morris, King; Eli Rockey, Pacific; W. A. Bollinger, Okanogan; L. H. Brown, Spokane; C. L. McKenzie, Whitman.

S. B. L. Penrose of Walla Walla advocated a trunk highway along the north bank of the Columbia river from Vancouver to Kennewick. Secretary of State I. M. Howell recommended that motor vehicles be required to pay a greater proportion of the construction and maintenance costs of the roads than in the past, especially as to the main arterial highways. He suggested that the license fees on these vehicles be utilized for the construction and maintenance of the trunk roads and taxes applied to the construction of branch roads into the rural districts.

# State Legislative Methods

## *Ben Johnson Attacks Autocracy in Washington Legislature*

State Senator E. Ben Johnson of Spokane county is rendering the public valuable service by attacking autocracy in the Washington legislature. Senator Johnson, who speaks with the weight of long legislative experience, analyzes with great force and clearness the legislative methods at Olympia. He shows how the rules committees of the house and senate have a stranglehold on the other members of the legislature. In a public statement Senator Johnson says:

"When a bill is introduced in either house, it is read and referred for consideration to the proper committee. Thus a bill relating to highways is referred to the committee on roads and bridges. This committee considers the bill carefully, perhaps holding public hearings, and makes a written report, favorable or unfavorable."

So far the procedure is correct and not in conflict with public rights and welfare. As Senator Johnson says, after all this we might expect that a bill reported favorably would be voted on. "But it will never appear again, never be debated or voted on, unless it is placed on the calendar by the rules committee. This gives the rules committee of each house the power to defeat bills by simply failing to put them on the calendar."

This power to defeat bills in secret, Senator Johnson points out, also permits the rules committee, to a large extent, to secure the passage or defeat of bills on the calendar, because by simply leaving their bills off the calendar they can unmercifully punish any legislator who votes against their wishes. Hence the decisions of the rules committees are never overturned, and important legislative actions are generally determined behind the veil of secrecy.

The rules committee of each house meets daily, in secret, to make up the calendar for the next day. No public record is made of the votes of the members of these rules committees; no person not a member of the committee is permitted to be present; there are no majority or minority reports; all is secret as the grave.

The evil, as the Spokane senator says, exists under house rule 2, which provides that "the committee on rules and order shall have charge of the daily calendar of the house and direct the clerk the order in which the business of the house shall be transacted."

Legislators who want this system continued claim that the rights of the legislature in general are safeguarded by rule 40, which provides that "A bill may be advanced or placed on the calendar by a vote of a majority of all members present voting in the affirmative." In point of fact, however, rule 40 is a dead letter and has not been successfully invoked for many years. The reason is well understood at Olympia. As the rules committee acts in secret other members can not, for the greater part of the session, know what is its attitude toward a bill or bills in which they are interested. They are kept on the anxious seat, with constant knowledge that an appeal to the open house would be futile and put them in bad with the all-powerful "organization." With its autocratic powers the rules committee holds a menacing club over all the other members.

This all-powerful and autocratic committee should be abolished. In a number of states where this evil has been overthrown the calendar is made up automatically as the various committees report out bills for action. In other states the whole house itself makes up its daily calendar. Senator Johnson, himself a republican, offers this pertinent inquiry:

"How can the republican party persuade the farmers and the laboring men that their requests have had fair consideration in the legislature if this system of secrecy is maintained? They have important matters for consideration, and they not only know that a square deal in the legislature needs no cloak of secrecy, but they can point to such stanch republican states as Oregon, California, Kansas, Wisconsin, Ohio, Michigan and Minnesota where no such secret power exists. In those states every favorably reported bill is disposed of in public with full responsibility."

This, however, is not a partizan question. The line of cleavage is not between the republican and democratic parties, but between powerful special interests on one hand, that will fight tenaciously to continue autocracy in the legislature, and the great mass of people, on the other hand, who are against autocracy and believe that it should be smashed wherever it rests its head. We have seen the big autocrats overthrown at Berlin. The time has now come for the people to march upon the little autocrats in their state capitols.

# Beet Pulp Shortage

Dairymen of eastern Washington and northern Idaho to considerable extent depend on beet pulp as a succulent winter feed. This is particularly true of those who have no ensilage. In these districts 800 tons of beet pulp is consumed annually in normal times.

This year, owing to the shortage of the sugar beet crop in the California and Washington districts beet pulp for general distribution has been very much curtailed. In the general allotment to various districts eastern Washington and northern Idaho will only be allowed 120 tons.

Spokane is the distributing point for beet pulp for the district comprising northern Idaho and eastern Washington and it is said that the supply will soon be gone; the tonnage allotted is now coming in. Beet pulp averages 20 tons to the car, and the total amount which Spokane will receive this season will be six cars or 120 tons. Usually speaking not less than 40 cars are allotted this season.

No beet pulp is shipped into Spokane from southern Idaho as the acreage there supplies the pulp eastward.

# Power, Mechanics and Devices

**The purpose of this department is to give helpful suggestions to its readers. The editor invites letters that give experiences or practical ideas along the lines of "power, mechanics and devices" on the farm. Inquiries from any one on any point in which he or she is interested, whether previously touched upon in the department or not, will receive personal reply by mail.**

## Drainage Problem

By A. O. MOW, Moscow, Idaho.

In several of the middle states much of the most fertile and productive land now was under water 20 years ago. Then it was not worth anything, and today it brings the most valuable crops. The change was brought about by drainage, mostly made by laying tiles from open courses through the lands where the water was wont to stand.

In this northern Idaho country farmers have been making "good" money (really more than they deserve) and have refused to notice that they were abusing their most valuable opportunity. Quite generally, among these smiling hills, where they communicate with the lower and richer flats and valleys, there are oozy places, bogs and springs which rarely can be properly seeded and even then fail to bring satisfactory returns.

Many of the most aspiring and progressive farmers are seriously aware that the inefficiency of those wet patches are too great a loss and would eagerly and quickly drain them were it not for the prohibitive price of drain tile in this country.

It is for this reason that the writer, who has met this problem here, is offering the farmer this solution. Make covered or underground drains by grading them with a spirit level to the depth they should be. Fix a plug three feet six inches long and three or four or six inches in diameter, according to the capacity of the drain you need. The plug should be slightly tapered for three feet and in the six-inch end have a 3-4-inch hole bored through in which to insert a strong cord or wire for a pull. It will also be better slightly flattened and fluted on the bottom side.

Provide two collars of some waste sheet-iron, 12 by 18 or more inches, at one end of which cut a half circular hole that will set over the plug. You need a pinch bar or iron rod.

Have sand and cement where you begin digging, and a box in which to mix the concrete. Beginning your ditch line, dig as deep as your outlet should be and eight or more feet back. Leave the bottom rounding, grade and clean. Lay in the plug, flute down; set a collar at end and at mark six inches from other end. Mix concrete (one to seven is good), and cover the plug between collars one-half inch to one inch deep. Then continue the digging. After about 20 minutes, shovel loose, fine dirt onto your concrete and procede to pull the plug by putting the bar through the loop, pushing the end firmly into the bottom of the ditch and pulling at the other end. Keep the pull low so as not to lift the plug. Continue repeating this process and you will succeed with a well-made, concrete-tiled and almost inexpensive drain, which will improve your farming land 100 per cent.

I have a drain in operation which cost me 21 cents a rod money outlay (cement costing $3.30 per bbl).

### FARM FIRE PROTECTION.

Now that modern machinery has found its place on the farm, gasoline, oils and other highly inflammable material used in connection with it call for additional safeguards against fire.

Some good fire extinguisher should be kept where it is handy to get at quickly. The pump type, holding about a quart of chemical, is handy and efficient on nearly all kinds of small fire. It puts out blazing gasoline, kerosene, acetylene gas and other highly inflammable substances where water often only spreads the flames. A woman or child can operate such an extinguisher as it is light and easy to handle. The liquid in any good fire extiguisher can be pumped over delicate machinery or a fine fabric, it is said, without injury. It is good until used, so there is no upkeep expense.

The fluid is practically freeze-proof, so the extinguisher can be safely left in the barn or unheated garage during the winter.

A good extinguisher of the type mentioned can be obtained for a few dollars. The farmer will find such an expenditure in the nature of an investment, as it reduces insurance rates on passenger cars, trucks or tractors, considerably, and thereby pays for itself, besides being available for instant use in any fire **emergency.**

# Hollywood Veeman Fayne

Hollywood Veeman Fayne, the handsome Holstein bull calf shown herewith, is owned by M. Horan and sons, Wenatchee, Wash. He was purchased from Hollywood farm for $1000, and Mr. Horan feels that he got him cheap, for he is not only richly bred, but a great individual. His sire, Hollywood Homestead Veeman, is out of Phoebe Veeman Pauline Beryl, that has an official record of 32.7 pounds of butter in seven days, and is the dam of a 31-pound daughter and a 30-pound daughter, and goes back to the most famous dams and sires. The calf's dam, Hollywood Artis, was sold by Hollywood farm at the Detroit sale to John Arfman of Fairmount farm for $1500. She has a 2-year-old record of 22.59 pounds of butter, and a 5-year record of 32.4 pounds from 577.3 pounds of milk. She is by King Palmyra Fayne, sire of three 30-pound daughters. Her dam, Petiertje Flora Artis, produced 36.14 pounds of butter in seven days, and 140.06 pounds in 30 days. Mr. Horan now has a herd of 29 purebred Holsteins. His first registered Holstein was purchased only three years ago. He had the first purebred herd of Shorthorns in Chelan county, and later had registered Jerseys. Now he has settled in Holsteins, purchasing his foundation stock at different northwest Holstein sales, as he found what suited him. Some of the best lines of the breed are in his herd. He will do official testing as soon as his boys get back from the war. Mr. Horan was once known as the "Apple King," and he still has quite an orchard. For the reason that his land is thus occupied, he does not pasture his cattle, but uses soiling crops of alfalfa and oats, as well as silage and alfalfa hay, and keeps the cows confined in small space. He grows his own alfalfa and has two big silos, both filled with corn, for this winter's feeding. One of them, a hoop silo, was built this year and used by the county agriculturist as a demonstration silo. H. A.

DU PONT AMERICAN INDUSTRIES

# The Modern Labor Saver

Why work for weeks when the job can be finished in hours? Why employ many men when few can do the work? Farm work is hard work—farm labor is scarce—man power is hard to get, yet you can easily solve the problem. Use Du Pont Red Cross Farm Powder—the quick, easy, inexpensive way.

Have you stumps and boulders to remove, ditches or post holes to be dug, trees to be planted, or swamp spots to drain? Do it with

DU PONT

## Red Cross Farm Powder

Don't break your back grubbing or digging—just bore a hole, light a fuse and watch the hard work do itself.

Stumps removed with Red Cross Farm Powder come out broken up, free and clean of soil and leave the ground in better condition.

Trees planted in blasted holes excel trees planted in spade-dug holts. They grow faster, keep healthier and bear earlier.

Speed up your work. Save yourself both hard work and money. Save coal. Burn stump wood for fuel and pay for the powder out of the money saved.

The whole world needs food. There's a big market and an eager one. It is every farmer's golden opportunity. There's a short cut to it.

### Get Our New Free Book "The Giant Laborer"

It's a remarkable volume that will open your eyes to the many uses for Farm Explosives. It explains new methods which have helped thousands of farmers everywhere to make more money. Check Farm Explosives in the coupon. Sign and send it in. Get your copy—now.

# Bitter Milk

## More Prevalent in Winter Months

By A. B. NYSTROM.

Inquiries concerning the cause and remedy for bitter milk and difficult churning are usually very prevalent every winter. In order to be able to meet these conditions the following information is given for the benefit of our readers:

There are two kinds of bitter fermentations; those that are present at the time of milking and those that appear after the milk has ben left standing for 12 hours or more. Bitter milk is usually more prevalent in the winter than during the summer months. There are two reasons for this. In the first place, at low temperatures, the bacteria that cause bitter milk develop faster than the bacteria which cause the milk to sour. The result of this fact is that when milk is contaminated with both kinds of organisms, gaining entrance through the dust in the barn air or from unclean utensils, the milk turns bitter before it sours. This very often happens with cream, and when such a condition exists the cream will not churn readily, due to the fact that the abnormal fermentation has hardened the fat globules so they will not stick together.

Bitter cream and the resulting difficult churning can be overcome by means of a starter. This starter is nothing but a pure culture of lactic acid bacteria (clean sour milk) which has developed a mild acid in the milk and caused it to clabber. Sometimes a little buttermilk saved from the previous churning may be used. The danger in using buttermilk is that the fermentation may not be what you want. There may be some of the abnormal fermentation in the buttermilk. For that reason clean skimmilk set away at 80 degrees farenheit and kept at that temperature until it clabbers makes the best starter. If pure culture starter is available it is better than the home-made skimmilk starter.

The kind of feed the cow eats has an effect on the flavor of the milk and churnability of the cream. Dry feed will cause hard fat globules. The lack of variety in the ration, and especially the absence of green or succulent feed, throws the cow's system out of order and she can not ward off an attack of garget or any other disease which may cause bitter milk in the udder. The lack of exercise has the same effect.

Prevention is the only method of controlling this difficulty. The proper ration, plenty of exercise, clean quarters, with fresh air and sunlight, will usually prevent the appearance of the bitter fermentation in the udder. A clean barn, clean cows, clean milkers and sterile utensils will prevent the development of the abnormal fermentation after the milk is produced. If the milk tastes bitter when it is first produced, look to the cow for the trouble. If it develops upon standing, clean up the barn and utensils. There is nothing that can be added to the bitter milk or cream to overcome the fermentation. A clean starter, however, will be helpful.

# Should Have a Cow

R. P. Bean, agriculturist with the Yakima, Wash., irrigation project, considers the development of the dairy industry one of the most important phases of development work in Yakima county.

"The fruit industry is well established, and is a fine thing—as far as it goes," comments Mr. Bean. "But many of our most conservative and level-headed fruit growers are now convinced that fruit with cows and possibly hogs is a much more stable source of income than fruit alone. The one-man herd or the one-family herd is the thing that interests me most. The man who goes into dairying on a big scale must have capital, and with this requisite he could just as easily go into any of a number of other occupations. But the small dairy herd is an absolute necessity for the small farmer. The cow is simply a machine for consuming hay, grain and roughage and turning out pay checks. The small farmer needs her."

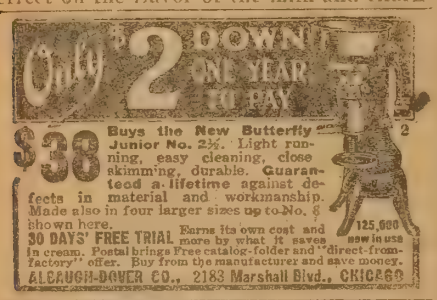
Hogs, as a side line to go with dairy farming, form an ideal combination, in the opinion of the project agriculturist. Hogs have done remarkably well wherever they have been tried in Yakima county. There have been three outbreaks of cholera on the various units of this project, but in each instance prompt use of vaccine checked the disease before it became epidemic. Mr. Bean reports fine cooperation from the farmers, at these critical times.

## DAIRY AND LIVE STOCK OUTLOOK.

### With Cheap Hay Already in Sight, Yakima Men Are Encouraged.

George A. Gue of Yakima, while deploring the way in which the flue epidemic has hit the fall circuit of live stock shows, thinks that the dairy and live stock outlook in general could hardly be better. With cheap hay already in sight and with the probability of cheaper mill feed in the not too distant future, the genial auctioneer who has been preaching the doctrine of year-in-and-year-out live stock farming is certainly in a position to say, "I told you so!" If history repeats itself, as it is pretty apt to do, Mr. Gue's prediction that feed prices will come down while the price of good beef and dairy cattle will go up is certain to be fulfilled.

Another straw—and one of considerable magnitude—which shows the direction the wind is getting into, is the return of H. C. Davis to the fold of Holstein breeders. During the spring of this year Mr. Davis declared that he could not afford to stay in the dairy business because it was costing him upwards of 70 cents a pound to produce butter fat, notwithstanding the quality of his cows and the high standard of his barn and farm equipment. Now rumor has it that he will soon be filling his old niche in the temple of famous northwestern breeders.



## COW ON SMALL FRUIT FARM.

S. O. Pool, who breeds and deals in Jerseys at Wenatchee, Wash., reports three carloads sold in the Wenatchee district in the last two years. About half of these were high grades, the balance registered stock. Mr. Pool considers the Jersey the cow best suited to the small fruit farm, where feed is an object. He believes the demand will grow and dairying will increase as soon as conditions become normal, following the war, and feed prices come down. All of Mr. Pool's herd, with one exception, are register of merit cows, and all his calves but one out of register of merit dams. Raleigh's Golden Mollie, one of his cows, produced 12,000 pounds of milk and 530 pounds of fat with her first calf. Mr. Pool is a strong believer in one family cow, or a few cows on every fruit ranch, especially in the irrigated country, where alfalfa grows so well.

H. A.

## FEEDS MANY CALVES.

In a communication to The Farmer, B. P. Turner of Boise says: "We have raised 26 calves from the milk of one Holstein cow and are now selling her milk to the cheese factory."

ABSORBINE STOPS LAMENESS

from a Bone Spavin, Ring Bone, Splint, Curb, Side Bone, or similar troubles and gets horse going sound. It acts mildly but quickly and good results are lasting. **Does not blister or remove the hair** and horse can be worked. Page 17 in pamphlet with each bottle tells how. $2.50 a bottle delivered. Horse Book 9 R free.

ABSORBINE, JR., the antiseptic liniment for mankind, reduces Painful Swellings, Enlarged Glands, Wens, Bruises, Varicose Veins; heals Sores. Allays Pain. Will tell you more if you write. $1.25 a bottle at dealers or delivered. Liberal trial bottle for 10c stamps.

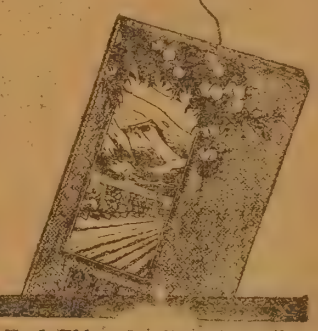
Made in the west for western conditions

GIANT FARM POWDERS
STUMPING — AGRICULTURAL



Western soils, stumps and climate need western explosives. That's why Giant Farm Powders cut the cost of clearing western land. Manufactured for more than half a century especially for the West, they naturally give better results on western farms and orchards.

Giant Farm Powders lead in economy because they go further than ordinary explosives. They break up the stumps thoroughly thereby cutting down labor cost. Money and trouble are saved because of their low freezing qualities.

*Warning:* If your work is done with any other powder or dynamites, the chances are it will not be done as well as with either of the two Giant brands: Eureka Stumping or Giant Stumping. Look for the Giant trademark on every case, and be sure of the genuine.

How to make the farm pay more money is explained in "Better Farming." This big free book, fully illustrated, will be sent you as soon as we receive this coupon.

Raising Calves

is a patriotic duty. It does not mean the feeding of expensive milk, nor does it mean unprofitable work. It means an increased revenue in your dairy business as well as adding strong, sturdy stock to your herd. You can raise your calves successfully for approximately one-quarter of the cost of whole milk by feeding ALBERS CALF MEAL as a milk substitute.

This Calf Meal is specially prepared for promoting health, rapid growth and a sturdy constitution; all the ingredients being thoroughly and easily digested. Directions for feeding in every sack.

Your dealer carries ALBERS CALF MEAL in 25 and 50 lb. sacks or he can get it for you.

Albers CALF MEAL

When you write to advertisers be sure to say that you saw their advertisement in this paper.

## Sunflowers for Silage

In recent reports from Yellowstone county, Mont., where they claim that corn does very well, it is said that the farmers are much interested in raising sunflowers for ensilage. It has been demonstrated this season that the tonnage per acre of sunflowers has been from two to three times that of corn. According to agricultural college of Montana tests, the feeding value is almost equal, pound for pound.

At a recent meeting of the farm bureau of Yellowstone county, it was reported that on one irrigated farm the sunflowers are averaging 34 tons per acre as compared to 11 tons of corn. But it is mostly in the dry land districts that the sunflowers are receiving the greatest welcome. It was just a year ago that the advocating of the sunflower to the farmers of the locality was begun.

One of the big disappointments the last season has been experienced by some of the farmers who planted sunflowers. They never cultivated them once, yet they expected to harvest a crop. Sunflowers must be cultivated just like any other crop to get the heaviest yield. It is important that the farmers next season who plant sunflowers make up their minds that they must receive attention while growing, otherwise it will be a case of time and money wasted. A. B. K.

### RUSSIA'S FUTURE SAFE.

**Past Resources Have Not Been Lost.**

Arthur Deaton, former representative in Russia of the George Broomhall's Corn Trade News is most hopeful regarding the immediate future of that country. He points out that Russia has not really lost much material wealth through the war, though she has suffered terrific losses in men. Her works and fields, mines, forests and oil wells remain, and her debt is not at all overwhelming, only about a billion dollars to outside creditors. Mr. Deaton believes that production can quickly surpass anything attained before, once there is a stable government in order in the country. Railway developments in Serbia will lead to rapid settlement of that great land in the future. Before the war one factory at Elizabethgrad turned out 18,000 fine radial seed drills annually, and Mr. Deaton believes this output can be easily doubled. Besides this they are capable of turning out some thousands of the popular peasant horse gear threshers as well as large ones to be driven by oil engines. The little horse gear threshers turn out about 800 bushels of clean grain per day.

### WOMEN COW TESTERS MAKE GOOD.

The dairy specialist of the United States department of agriculture reports that the women who have become cow testers in the cow testing associations in the United States have been thoroughly successful in their undertaking. Labor shortage, due to the war conditions, was the main reason for the women undertaking this work, and at the present time, says the department of agriculture, there is a field for many more women testers who properly fit themselves for their duty. It is believed that the number of cow testing associations could be doubled in the near future if enough testers were available. There are several women engaged in this line of work in the northwest and only recently the dairy department of the University of Idaho sent broadcast an appeal for other women to enter this work.

### PETER THE GREAT'S COLTS.

Score another big year for the Laurel Hall sire, Peter the Great, 2:07 1-4. As usual, the youngsters by the great son of Pilot Medium were prominent in the futurities and such an array of three-year-old trotters by one sire were never before seen out in a single season. Six three-year-old trotters that beat 2:06 in races. At the opening of the Grand circuit at North Randal, the Lexington-owned colt, Hollyrood Bob, started the harness horse world by trotting a mile in 2:04 3-4, and Chestnut Peter, another of the tribe, forced him out, being timed separately in 2:05. Selka, still another of the tribe, was a close third, and she was separately timed in 2:05 1-4.

### FOOD PRICES TO STAY UP.

Secretary D. F. Houston of the U. S. department of agriculture, predicts that there will be comparatively no reduction in the present prices of food for another year. He also expresses the belief that while this country has to feed at least nine European nations, there will be left sufficient food supplies for the American people. He says that America must feed England, France, Belgium, Poland, Holland, Norway, Switzerland, Germany and Austria.

### CANADA'S NEW FLOUR PRICES.

The new flour price for the 98-pound sack of government standard flour has been fixed at $5.43 1-2 instead of $5.17 1-2, the price which has prevailed for several months. This is an advance of 50 cents a barrel or $10.85 advance in flour prices as based on the higher grade of wheat produced this year and the recent advance of 3 1-2 cents a bushel on the price of wheat.

### DOUGLAS COUNTY SHIPS TURKEYS.

It is estimated that approximately 20,000 turkeys have been fitted for the outside markets in Douglas county. The market value of these birds is estimated at $75,000 to $80,000.

**NOTE: Skimmed milk is a dairy by-product. Vast quantities of it are either fed to live stock or wasted. The opening of a new market for skimmed milk is of real importance to the entire Dairy Industry of the United States. The facts set forth below deserve the thoughtful consideration of the farm people of America, and of all Agricultural Extension Workers.**

# HEBE

## —and the new market for a dairy by-product

The utilization of by-products is a matter of first importance to practically all lines of commercial enterprise.

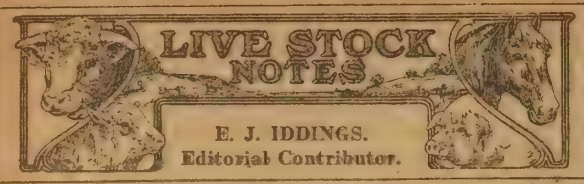
Until recent years by-products were generally wasted as useless. Cottonseed for instance was either dumped or burned—gluten was discarded by starch making industries—now both are valuable stock feeds and have many other uses—gasoline was a waste product of the kerosene refineries—coal tar, now the base of many valuable products, was a nuisance to the gas plants—and there are scores of other instances where waste has been turned into profit.

Economists tell us were it not for the utilization of by-products our whole economic structure would be seriously impaired.

Skimmed milk is a dairy by-product heretofore largely used as a feed for stock, or else wasted.

Thanks to scientific minds, processes have been developed for utilizing skimmed milk as a human food by perfectly combining with it refined, edible cocoanut fat, which restores in large measure the food value of the animal fat which has been extracted—the result is a palatable, nutritious food product, marketed under the trade name HEBE.

Hebe is properly and plainly labeled and sold for just what it is—"a compound of evaporated skimmed milk and vegetable fat." It is recommended principally for cooking, baking and for coffee and its use for these purposes fills an economic need. Hebe is a licensed product and its profits are subject to the regulations of the U. S. Government.



Through Hebe, skimmed milk is lifted from its status as a feed for stock and dignified by recognition as a food for human kind. Hebe thus opens to the dairying industry a new and more important market for its great by-product, skimmed milk—which is a matter of primary importance to all farm people.

A booklet telling the interesting story of Hebe and its value to the dairy industry will be sent free on request. Address The Hebe Company, 3210 Consumers Building, Chicago.

## Must Study Breeding

Recently a carload of beef steers, raised and fitted in Kansas, sold on the Kansas City market for $25 a hundred pounds, averaging over $403 each. H. J. Waters, commenting on this remarkable sale in an article in the Kansas City Star, said that it brought to light the two price essentials in beef production—breeding and feeding.

"The steers had been bred well and fed well," he said. "In almost any state of the cattle market there are many animals offered for slaughter which have been bred better than they have been fed, but one year with another the vast majority of cattle coming to market show evidences of better feeding than breeding. Feeding valuable grain to coarse boned and poorly bred stock is a waste which we ought no longer to commit.

"We are breeding our animals less scientifically now than we are feeding them. Indeed, feeding is almost an exact science. We know that combinations of certain grains and hays will produce satisfactory growth or will fatten animals with certainty.

"Feeding processes can be learned from books or in the school, provided the rules learned are applied with common sense and judgment. No so with breeding—it is yet largely a sealed book, something which no one can tell another how to do. While we know much more about breeding then we did even a few years ago, yet we haven't enough knowledge to mate animals with a great degree of certainty as to results.

"The thing in breeding of prime importance which we do not know, however, is that permanent success comes only from developing both the male and female lines of the herd. Great progress can be made by the use of good sires on plain dams, but soon the limit is reached beyond which further improvement is slow. By building up both lines there is scarcely any limit to progress.

"The $25-a-hundred steers furnished a striking example of the truth of the statement. The foundation stock from which these world-record steers came was a lot of very plain cows, on which good sires were used. But that was 20 years ago. Good sires have been used without interruption since, but only the best cows were saved from year to year as mother stock. It is only by following this plan persistently that permanent success in breeding any class of stock will be attained."

## Put Animals in Shape

Regardless of the kind of live stock on the farm, it is highly desirable that they be put in the most thrifty condition possible before entering the winter. This is true of sheep, horses, cattle, hogs and even poultry. If there are animals in the herd or flock that are for any reason lacking in vigor and strength, a little special attention should be given them before the winter sets in. A little feed in the form of hay or grain in addition to what they are securing in pasture will often make the difference between a rugged animal ready to stand the vicissitudes of winter and one incapable of combating the cold and conforming to the necessary change in feed methods. It is also much cheaper to put this additional thrift into the system of an animal during the warmer weather when there is feed in the pasture than after the colder weather comes in and higher priced feeds become necessary.

### SACRIFICE BREEDING STOCK.

Figures secured by the Montana live stock board on cattle shipments show a state of affairs threatening the development of the Montana cattle growing industry. Owing to the scarcity of feed in the state, as the authorities infer, breeding stock is being sacrificed on a large scale. The increase in the shipments of calves from 1915 to 1917 was 3821 per cent. Percentage increases in shipments of cows and bulls also was very great while the increase in beef stock shipments was not remarkable. The average per cent of increase on all classes to all markets is 778.

These figures were obtained to be sent to the railway authorities to induce them to grant a lower rate on importations of breeding cattle to Montana to check this tendency and help out the breeding industry. It is believed that the shipments this year over last will show an increase of 100 per cent, shipments for the eight months ending September 1, 1918, being 84,437 against 32,269 in the same period in 1917.

A. B. K.

### FEED COTTONSEED CAKE.

Several inquiries have been received of late from subscribers, asking concerning winter feeding of cattle. Professor E. L. Potter of O. A. C. states that he has suggested in many instances the use of cottonseed cake instead of grain.

As between oil meal, soy bean meal and cottonseed cake there is little difference in their value, the latter having as high as 43 per cent protein. The two former are off the market here. The best cake is not obtainable, but a fair quality from South America and from California is on the market. In a letter to one inquirer, Professor Potter writes:

"I would feed from one to two pounds a day of the cottonseed cake. Where the cattle are merely being wintered and no gain is expected you could winter them on two pounds of cottonseed cake and straw, and they should do fairly well."

### Must Be Reasonable.

Unreasonable regulations will not regulate long.

### Shorthorn Beef Records

An Illinois load of yearling Shorthorn steers made the world's market record at Chicago October 3, selling for $19.60 per cwt.

An Iowa load of Shorthorns sold for $19.50 September 16, averaging $303 per head, the previous record.

A Wisconsin Shorthorn load made the Wisconsin record at $18.35 and a Shorthorn load bred in Montana made the record for range steers at $18.

*Champion Spark Plug Company of Canada, Limited, Windsor, Ontario*

# VETERINARY

**Calf Has the Scours.**

I have a Jersey heifer calf, five months old, that has the scours. Four days ago it was almost fat enough for beef. First scours started, then later it passed blood and matter. Now it is down, unable to eat anything. It has been eating vetch and oat hay and running in fair pasture. It groans as if it has the cramps.

F. E. W.

Saginaw, Ore.

In regard to your Jersey calf I will say: Stop feeding her; give her plenty of water to drink; give her one drachm of creolin in six ounces of warm water. Give her from 10 to 15 drops of turpentine in one ounce of raw linseed oil three times daily, morning, noon and night. You have a very serious thing to deal with, but you may get results from this treatment.

---

**Sheep Catch Cold.**—I have 356 ewes, 56 lambs, five bucks, all registered Hampshires. Now I wish you could tell me what is the matter with my sheep. They run at the nose and have a bad cough. I lost one ewe. Please tell me what is the trouble or where I can get some literature about this breed of sheep and diseases. A. D. B.

New Meadows, Idaho.

Be sure to have good warm quarters for the sheep. With so many sheep affected I am of the opinion that it is a cold due to some kind of exposure. I do not know of a better remedy for as large a bunch of sheep as this is than that remedy which Dr. E. E. Baker recommends in his book on "Treatment of Diseases of Sheep," which is to fix troughs for them to eat out of and fix a top board through which small holes are made just so the sheep's nose will go through to the grain. Smear this hole with tar in order that the sheep may treat itself to a good smearing of tar about the nostrils. It will eat some of the tar also under these conditions, and that is a good stimulant to the mucous membrane of the nose and windpipe. This may help.

---

**Remedy for Piles**—I have a 6-months-old pig which has the piles very bad. He has had all the sour milk and green stuff that he wanted. I didn't feed any grain till just the last week or so. I have been giving some in the milk or dry. It has been this way for about a month. It seems to be worse this morning. Can you please tell me what would be a good cure? It doesn't seem to be constipated. W. H. P.

Rexford, Mont.

Stop feeding the sour milk for a few days and let the pig run on green stuff and feed him, if possible, about a quarter to half a pound of rolled grain daily, preferably oats. Apply the following remedy to the piles. Fluid extract of belladonna, 1-2 ounce; fluid extract of ergot, 1-2 ounce. Apply this morning and evening for some time.

---

**Affected With Ringworm**—I have some calves that are affected with scurvy. Can you tell me of a remedy? M. B.

Dupuyer, Mont.

You do not give a very good description of the trouble affecting your calves. I have an idea, however, that it is ringworm. I may recommend that you paint the ringworm with a 5 per cent solution of silver nitrate. Immediately afterwards treat the same spot with tincture of iodine. Make the treatment cover about half an inch large space around the outside of the scurf. Two or three treatments are generally sufficient to cause a recovery.

---

**May Be Swamp Fever**—I have a 3-year-old mare that weighs about 1300, that has been ailing since January 1918. There is no veterinary near here, so I will tell you her symptoms as nearly as I can, and would like your opinion. She doesn't seem to have control of her feet, and especially her hind feet, which she sometimes drags when she walks and doesn't seem able to set them down where they should go. This is more noticeable when going down hill. Throws hips and head from side to side when she walks. Seems in perfect health otherwise and has a good appetite. There seems to be the right quantity and quality of urine. Have treated for kidneys and she doesn't flinch when I press over her kidneys. M. B. W.

Neppel, Wash.

You do not give very definite descriptions of the symptoms which the 3-year-old mare has; but you do mention the fact that she does not have control of her hind legs. I wonder if you might not have animal affected with the disease known as swamp fever. This disease is chronic in character, and has as one of its characteristic symptoms the loss of control of the hind quarters, not so that she can not get up or down or go; but she reels from side to side, especially when she trots. In addition to these symptoms, the animal is dumpy by spells, can not work without being easily fatigued. This disease does not yield to treatment readily at all. There have been some reported favorable results from the administration of arsenic. It has been recommended that it be given in very large doses in order to get results. You might try giving 10 grains of arsenic in pill form or even on the grain, once daily for a few days to see if that will help her. This is a very large dose; but it has been recommended in this size dose for this trouble.

---

**Mare's Udder Infected.**—Could you tell us through your paper what ails our 5-year-old mare? One day last spring she had been worked on the drill until noon. Nothing seemed wrong when she was put in the barn. After noon, on bringing her from the barn, she was stiff and could hardly walk. On examination her bag was found to be badly swollen. She was turned out to pasture for several days. Finally her bag broke and ran. She has been used a little as a saddle horse and for light work since, but every few days she gets a little stiff and her bag breaks and runs. We would be very grateful if you could tell us through your valuable paper what is wrong. She raised a Shetland colt in the summer of 1917. Would that have anything to do with it? She has never been bred since. Would it be advisable to breed her? E. B. B.

Tonasket, Wash.

The mare has an infection of the udder. Some people liken it to lumpy jaw in cattle, but there is some difference of opinion whether it is due to a geotryomyces or to a streptococcic infection. If you can carry out the following treatment you may get favorable results without an operation removing the udder entirely. Give the mare one drachm of potassium iodide on her feed morning and evening until she begins to run at the eyes. Then stop and let her rest for a few days, and continue the treatment. The little abscesses in the udder should be thoroughly opened, and broken down and should be daily injected with a small quantity of Lugol's solution of iodine. This should be done daily.

# WALLIS

*America's Foremost Tractor*

THE perfection of the Wallis principle in tractor construction established a new standard of tractor quality.

Wallis was the first to use a rear axle gear drive—entirely enclosed. Wallis built a powerful four-cylinder engine of latest tractor type, and drop forged, cut and hardened steel gears. Wallis enclosed all gears and moving parts in a light but durable steel armor where they run in a bath of oil. Lowest plowing cost per acre is a Wallis accomplishment. This is economy which plays an important part in the final estimate of your farm profits.

Why the Wallis principle is the accepted standard of engineering excellence and operating economy is explained and illustrated in the new Wallis catalog. A copy will be mailed upon request.

# Utility Is the Word

The winter months are the poultry show months, and they are at hand. Nearly every city of importance holds its poultry and pet stock show, including rabbits. If these shows can stimulate the actual production of egg and meat producing animals, they are to be commended, and this they can do if properly managed.

There really is little room in the world today for the strictly show animal, be he horse, sheep, cow or chicken, but there is increasing room for the animal that helps do the world's work or helps with his own flesh or product to feed the hungry.

That Europe is going to call upon America for meat animals and meat in large quantities during the next year or two is unquestionable. What is going to be the effect on the poultry business? Are poultry products going to be exported in correspondingly increased amounts?

Poultry and poultry products are less suitable for exportation than beef or cured meats, but they will be exported in some quantities. What is more important, they will be more in demand at home. There is no prospect that beef and mutton and bacon will be cheap until Europe gets back into the full swing of production, and until these things do become cheap there is no danger that poultry and eggs will be low. They are most excellent foods, especially the eggs, and should therefore command a good market in the cities where meats of all kinds are high. They can also be made to take the place of much meat on the farm, and thereby release pork or beef for the market that will demand it.

These are reasons why the poultry shows can be of real service to a hungry world this winter. They can stimulate the production of these desirable food products both for home and outside consumption. But there should be little stress placed on the birds that are just show birds. Utility is the great word of today.

# Cleanliness Is First

It has been said that cleanliness is one of the first essentials in preventing or combating almost every known disease, and is as true in the poultry yard as in the home or the hospital. It is especially essential in the prevention of tuberculosis in poultry.

Clean feeding ground is the first in importance. Keep the feeding ground and feeding troughs clean and there will be small chance of the disease spreading. In cases where the flock affected is not extraordinarily valuable, one of the surest and perhaps the cheapest ways to get rid of tuberculosis is to kill the diseased birds and thoroughly cleanse the premises where they have been housed or yarded.

It is not always easy to identify the disease positively. Lameness is one symptom, the joints of the fowls sometimes being affected. There is sometimes a wasting away until the fowl becomes little more than feathers and bones, but in some instances bad cases have not produced this result. The only sure way to determine whether the trouble is tuberculosis is to dissect one of the affected fowls.

The liver and the intestines are usually the organs most affected. The spleen is also frequently affected. When the tubercle enters the liver it is shown by white, yellowish spots that are gritty when touched with a knife. The spots grow larger as the disease progresses. The spots on the liver are the first danger signal to look for. The spots are somewhat raised, and are thus distinguished from the spots caused by the parasitic disease coccidiosis. The latter is, however, a disease peculiarly affecting little chickens. The liver is usually enlarged, caused by the growth of the tubercles.

The tubercles on the intestines range in size from a pinhead to a pea, or even larger. In early stages it may require close examination to see them, but not so in advanced stages. As the disease progresses the walls of the intestines break down and living tubercle pass out of the fowls in the excreta. This is the source of infection for others of the flock.

In some cases the disease is accompanied by a dropsical condition. The abdomen becomes filled with water. Frequently it is accompanied by diarrhea, but not always. The birds do not lose their appetites.

### THINK EGG AND POULTRY PROSPECTS GOOD.

M. C. Wire and Son, proprietors of Walnut Crest Poultry farm, Newberg, Ore., report their 800 White Leghorn pullets laying 55 to 60 per cent of eggs per day. And with fresh eggs worth five cents each, wholesale, this makes quite a snug little income from the pullets. They have been in the laying house about a month. The eggs, when I saw several days' laying, Thanksgiving day, were of fair size and would hardly be taken for pullet eggs. Practically all the second-year hens will be saved for day old chick hatching. Large orders for day-old chicks have already been received. The cockerels in use this year are Hollywood stock and are a fine lot of birds. The Messrs. Wire believe egg and poultry prospects to be good. Feed prices are not quite so high as they were, egg prices are being maintained and there appears to be a real shortage of poultry.

H. A.

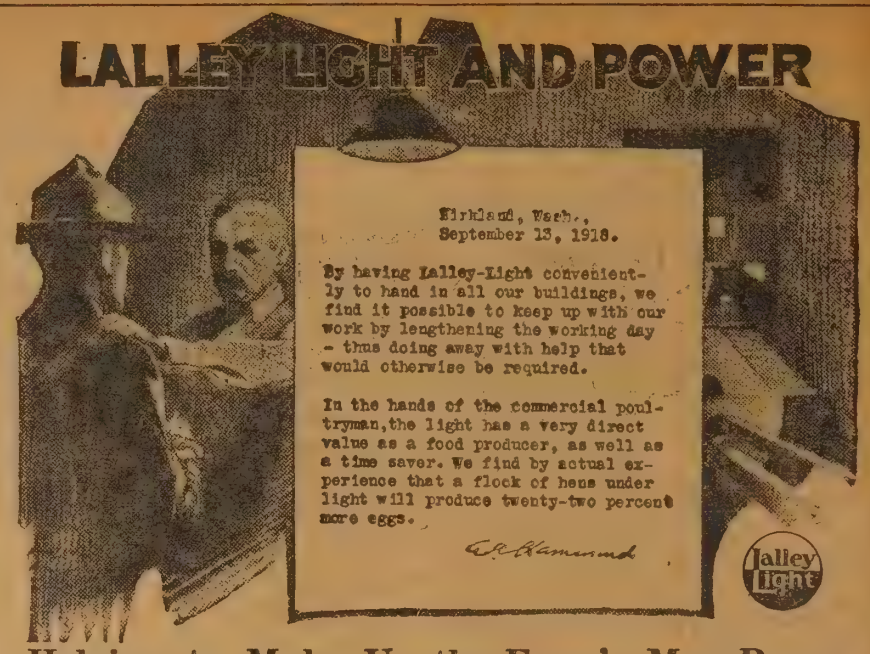
### GET AFTER THE LICE.

The free use of a lice powder is always in order, says the department of agriculture. Sodium fluorid makes an effective lice powder. In applying the powder hold the fowl by the feet, head down, and work the powder well down into the feathers.

Free use of kerosene or crude petroleum on the roosts and in the cracks will exterminate mites.

### Don't Lose the Fertilizer.

Do not let the manure value be washed off the soil by heavy rains or melting snows.



### Destroy His Winter Home.

Destroy the pests' hibernating place.

# 160 Hens — 1500 Eggs

Mrs. H. M. Patton, Waverly, Mo., writes: "I fed 2 boxes of 'More Eggs' to my hens and broke the egg record. I got 1500 eggs from 160 hens in exactly 21 days." You can do as well. Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs," and you will be amazed and delighted with results. "More Eggs" will double this year's production of eggs, so, if you wish to try this great profit maker, write E. J. Reefer, poultry expert, Desk 1559, Reefer Bldg., Kansas City, Mo., for a $1 package of "More Eggs" Tonic. Or send $2.25 today and get three regular $1 packages on special discount for a season's supply. A million-dollar bank guarantees if you are not absolutely satisfied your money will be returned on request and the "More Eggs" costs you nothing. You take no risk. Write today. Pin a dollar bill to your letter, or send $2.25 special discount for 3 packages. Or ask Mr. Reefer to send you free his poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

## Helping to Make Up the Farm's Man-Power

War is teaching thousands of farmers that Lalley-Light is a labor-saving necessity of utmost value; and that after the war the need for it will be even greater than now.

Men are leaving the farms to fight. Yet the world looks to American farmers to feed it while it battles; and must look to us for food long after peace has come again.

Inexhaustible Lalley electric light and power are taking the place of those who go—saving the work of farm hands—saving women's work — lengthening days that are all too short, and helping men do more.

Lalley-Light actually pays for itself in the first year or so—as shown by eight years of every-day farm experience.

Right now is the best time to see the nearest Lalley-Light dealer; or write us today for literature.

Lalley Electro-Lighting Corporation, 795 Bellevue Avenue, Detroit, Michigan.

# Beet Troubles

## Diseases and Pests in Northwest

The beet industry is destined to be one of the important money producing industries of the Pacific northwest. I have watched its development in Kansas, Oklahoma, Colorado, California and Utah and am satisfied that the soil, climate and relations to other industries, make this one of the favored spots for the growing of sugar beets. To nome one industry, that of fruit growing, there is more sugar used in the preparation of fruits for uses as human food than any other industry. This is perhaps the best fruit growing country in the world. I therefore think it proper to give some space to the diseases and pests to which sugar beets are subject.

The same general rules apply to beets as apply to fruits. The diseases are generally caused by bacteria or fungi. In either case the Bordeaux mixture is a remedy, provided the spray can be made to reach the seat of the disease. In cases of powdery mildew, no other forms of mildew on the leaf, this can generally be done. In case of bacteria on the root as beet scab, root rot or similar diseases, the sprays can not be applied to the root, and a change of crops is often necessary.

The pests can be controlled in much the same manner as fruit pests. The sucking insects, such as aphids, chinch bugs, can be controlled by the tobacco spray or the coal oil emulsion.

The chewing insects, such as blister beetles and army worm, can be controlled with the poison sprays.

The insects that feed upon the roots are difficult to reach and generally a change of crops is the best remedy. For a year or two, grow alfalfa, corn or something else and plant to beets after the pests have died. G. L.

### APPLES ROTTING EARLY.

I have a letter from M. H. Covert, Almira, Wash., saying that his apples that keep ordinarily until May, are now rotting. Mr. Covert wants to know the cause and what to do to prevent it. My answer is that I do not know. Our own apples are not keeping as well as usual, and that seems to be a general complaint. Our apples ripened before they had colored as they ordinarily color. If we left them on the trees until they got the proper color they dropped more than usual. If we picked them at the usual stage of ripeness, they had not the usual color. So we had to decide between lack of color and overripeness. We put away a few carloads thinking we would keep them until the early spring market; but found they would not hold up properly until spring, so we disposed of them for earlier consumption.

We think the causes were the sudden changes in weather conditions, with waves of extremes of temperature, considering that it was the growing season. But we do not know. G. L.

### MAKING ROOM FOR PRUNES.

Several rows of apple trees on the M. E. Taylor place, near Yakima, Wash., are being grubbed out to make room for prunes. The rest of the seven-acre orchard is made up of peaches and pears, neither of which require the extensive spraying given to apples. Pears are usually given two arsenical sprays annually, for instance, while apples may receive five or six.

Peaches and pears seem to have gained considerably in favor this year in this part of the state, the former making a particularly good record in the orchards adjacent to the North Gap. Superior air drainage, making for freedom from early and late frosts, perhaps has a bearing on this matter of local superiority.

### AT THE EDITOR'S DESK.

There has come to the editor's desk a new member of the series of farm manuals issued by Lippincott. This is "Productive Sheep Husbandry," by W. C. Coffey, professor of sheep husbandry at the University of Illinois. In common with the other manuals, this book takes up the subject at the beginning and carries it along to a logical conclusion. It is an entertaining, practical book. Nobody can read it without increasing his knowledge materially

### GET POTASH AT HOME.

The federal war industries board has turned over to the United States department of the interior the developing of the potash industry in this country, with a view to producing all this fertilizing element needed on American farms in America. Heretofore this country has been largely dependent on Germany for its supply of all kinds of commercial fertilizer.

### Hard Lines.

First English boy—Comin' fishin', Bill?
Second ditto—No, can't come fishin' today; I lost my worm ticket.

### IS SPRAYED HAY DANGEROUS?

Mrs. E. Wurl of Yakima is somewhat skeptical on the subject of orchard hay poisoning. All the hay raised on the Wurl orchard was sold, but the buyer reported excellent results from feeding it; and if sprayed hay will kill horses and cattle, as is sometimes declared, Mrs. Wurl wonders why her geese and chickens and rabbits, which had free access to the orchard grass, were not affected.

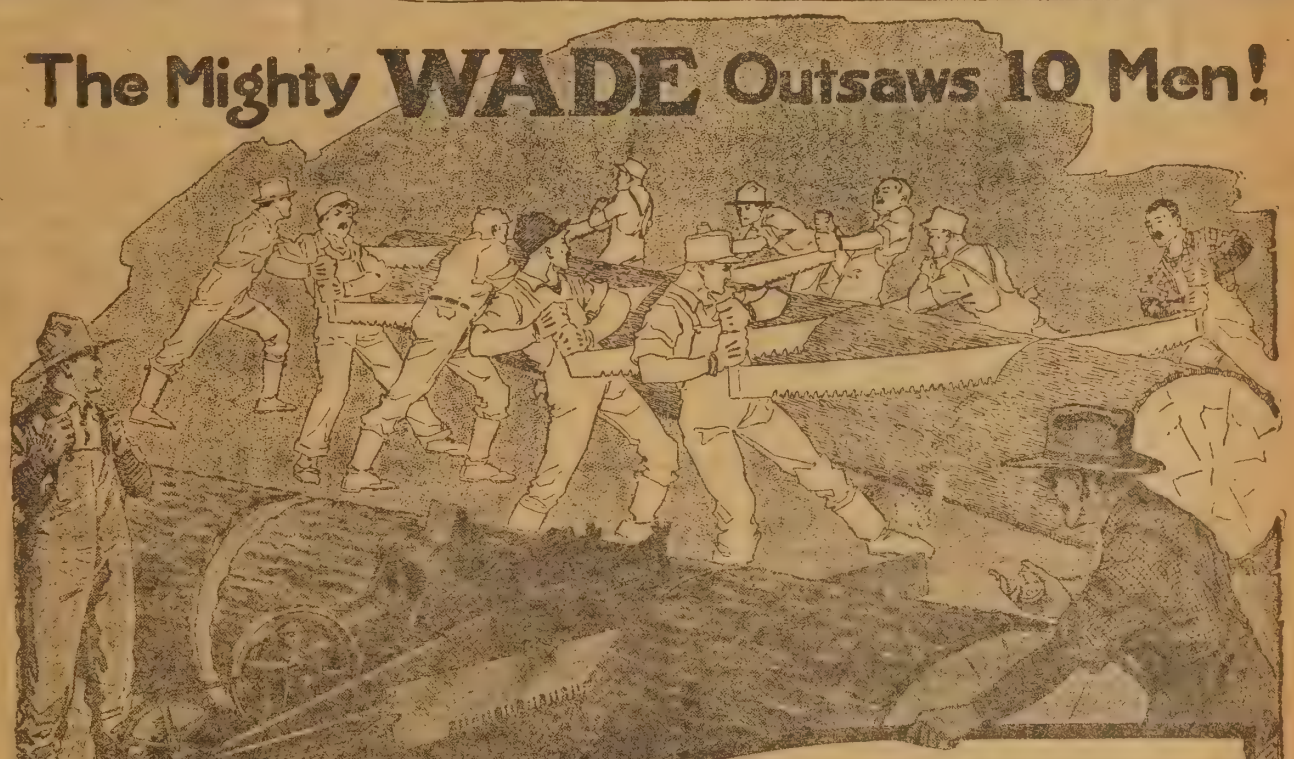
"Perhaps there was something else the matter with the way those animals that died were fed," she concludes. "There are different ways of feeding, you know—I believe in giving farm animals all they will eat. It cost a little more to feed as you go along, but things grow faster.

The Wurls are planting part of their place to prunes, and in justification of this, Mrs. Wurl points to a single prune tree in her front yard, from which she sold $7.50 worth of fruit.

### HAD FAITH IN FRUIT INDUSTRY.

F. M. Clossen five years ago came to Wenatchee, Wash., from Iowa. He had no experience with fruit. Nevertheless he purchased a 10-acre orchard, making a first payment and giving a mortgage for $12,000. With his wife and two sons, about grown, all of which had the same faith in the country and the fruit industry, as well as the same energy as himself, he went to work with his apples. This fall Mr. Clossen paid off the last of the mortgage from the profits on the farm. Winesaps, Spitzenbergs and Jonathans are the principal varieties on the place. Mr. Clossen found that an orchard takes constant care, pruning, spraying, and other work. But he has had it during the bad times of the early part of the war and has proved a good profit can be realized. H. A.

"A dip in time saved mine"



Harness rots because the natural oils of the leather fiber dry out, and dust, sweat and moisture get in and cause rot. Eureka Harness Oil takes the place of the natural oils and keeps rot out—keeps harness strong, flexible and jet black. The Mighty WADE Outsaws 10 Men!

A money-maker and hard work saver for land clearers and wood-cutting contractors. One man can move it from cut to cut. Simple and reliable. Hundreds in use all over the United States—in the woods of the Pacific Northwest, California, Minnesota, Arkansas, New York. When not in use for wood cutting the 4-H.-P. motor will run feed mills, feed choppers, pumps, etc.

Read What These Owners of Wade Drag Saws Say:

"One afternoon my brother-in-law and I took my WADE into the woods and sawed three hard maple trees into 16-inch blocks, the trees averaging about two and one-half feet at the stump. He expected it would take me from eight to ten hours to do the job, but it was all done in three hours.—F. W. Hiller, Vernon, N. Y.

I cut thirteen and one-half ricks of cottonwood in six hours.—J. W. Stratton, Atkins, Ark.

One gallon of gasoline will cut six to ten cords of wood; it depends on the kind of timber you cut. —W. D. Thomas, Bull Run, Ore.

Thirty-six inches in diameter, yellow birch, is the largest I have cut and I cut down to six inches.—P. L. Cole, West Duluth, Minn.

My WADE saw paid for itself six times over.—F. W. Taylor, Swisshome, Ore.

I am making $250 a month with my WADE.—F. A. Storts, Orville, Cal.

I cut down to eight inches in diameter.—F. T. Swank, Park Falls, Wis.

**America must burn more wood for fuel. One Wade will do 10 men's work at one-tenth the cost. Write for free book, "How Dan Ross Cuts 40 Cords a Day." Full details and special price.**

# The Dog at Her Doorstep

By JOE L. ASHLOCK

The dog was lean and bony. His coat was black, with a splash of white on his breast. He stood at the door with an appeal in his meek, brown eyes.

"Who lost you?" asked Jack.

The black fellow, whose bones stuck up against the loose folds of his skin like the propping of a circus tent, said nothing. Very slightly he wagged his tail. His humble glance went to Minnie, who had screamed a little at the huge black form which a moment before had loomed so suddenly at their door; and then to little Bob, who was won at once. He toddled up to the dog, saying, "Doggie, doggie, nice doggie!"

"We know a good dog, don't we, son?" remarked Jack. He stooped to pat the animal's huge head, and then, with sudden intentness, examined the strong leather collar about his neck.

"See that," said he, in a low voice.

What Minnie saw was a round disk of metal cunningly laid into the collar. Cut in the rich yellow metal was a small crown, surmounted by the engraved heads of a fox and a bear. Underneath the crown were two crossed swords. The engraving had been beautifully done, and unquestionably the plate was of gold.

"I wonder who you are, and how in the world you ever lost yourself in this bunchgrass country," mused Jack. "Is your master the king of England, the czar of Russia, the mikado of Japan—or who, anyway?"

The dog wagged his tail—this time quite vigorously.

"Talks United States, anyhow," said Jack. "Well, old man, you're welcome in our bunchgrass home. Have a drink?"

The animal lapped up a full basin of water without pausing, and then his sad brown eyes mutely appealed for more, which was given to him.

"Poor thing," said Minnie. "You must be nearly dead."

The note of sympathy in her voice did the big, black fellow worlds of good. He gave her a thankful look, circled about twice, and plumped down upon the doorstep. He rested his huge muzzle on his paws, also huge, and heaved a mighty sigh, the exhaust of which from his nostrils disturbed a fly that rested on the sunny doorsill. It buzzed away, returned, circled about and alighted on the offending nose, which instantly jerked upward in a prodigious snap that laid bare a glistening armament of teeth and a cave-like red throat.

"Jupiter!" exclaimed Jack. "Look at those teeth! And did you ever see a dog with such muscles?"

It was true. The black giant's legs, breast and neck were girded with pliant masses of muscle. Such jaws! Mighty they were, with the crushing power of a vise. He seemed an odd sort of vagabond.

"Minnie, that's no ordinary scrub dog," said Jack. "There's something to him—he's a regular nobleman; and along with that he's a gentleman."

The fly, or another one, returned. The dog snapped it in with the deadly quickness of a bear trap. Watching him, Jack laughed.

"Keep him while I'm away this summer, Minnie. You'll be safe here in the bunchgrass; but it's good to have a dog about sometimes. When he gets fed up and rested likely he'll drift along."

"He'll eat us out of house and home," demurred Minnie, whose year on a bunchgrass homestead with scarcely any money and the nearest grocery store fifty miles away had made her nervous on the food question.

"Keep him, anyway," decided Jack. "I'll earn an extra five or ten in the harvest fields to help pay for his feed. I sure do like a good dog."

On the morrow Jack Farley was to depart for the Walla Walla harvest fields a hundred and fifty miles south. All summer and until mid-autumn he would work in the hay harvest, then in the grain fields, threshing and hauling wheat to market, he and his team. He would earn five hundred dollars, maybe, if work was steady; and then, with his wagon loaded with flour, bacon, dried fruit, apples, pears, sugar, salt and other provisions needed by a bunchgrass homesteader and the precious cash in his pocket, he would pull back to the small cabin, alone in the big bunchgrass prairie, where Minnie and little Bob were holding down the claim. Ah, their claim! Some day it would be a real home, a home with green fields, trees about the house, an orchard, a well with a windmill and water piped into the house; near neighbors and markets! Such a home! And all their own!

The railroad was coming next year, people said, for the surveyors had already been through. Jack would begin digging his well as soon as he got back from the harvest fields south, and go down just as far as his money would let him.

Tears gathered in Minnie's eyes as she thought of the lonely four months in the big prairie with her husband away. No neighbors, only Kirkland coming once a week to fill their water barrel on the shady side of the house. But their home! She could stand anything if only they could win a home of their own out of this great, gray, silent bunchgrass prairie.

She knew they would win. Many times in the stillness of the prairie night, when only the stars were awake, with little Bob nestling at her side like a baby rabbit, she had prayed that they should win. She believed that prayers were answered.

The team was hitched. Little Bob clung to Jack's neck and cried softly, begging to be taken with his daddy. Minnie fought back her tears and smiled brightly.

"Be sure and keep the dog, Minnie," urged Jack, nervously. "He's a mighty good dog, all right. Nothing like him was ever seen in these parts. My guess is that he belonged to that foreign duke, or count, or something, that was brought here last spring looking up new land for colonization. They say he had a whale of a big black dog which he gave to somebody, and afterward the dog ran away. Somebody may come along and give you a young fortune for that dog—but don't let him go till I get back. You're a good dog—aren't you, Tramp?"

"You'll take good care of Minnie and Bob, won't you, old fellow," he whispered, so low that his wife and baby could not hear. It gnawed his soul to leave Minnie and Bob there all alone—but their home!

Tramp shot out his warm, red tongue and lightly touched the caressing hand. Deep and solemn and true in his humble brown eyes was a promise.

The canvas-covered wagon had vanished beneath the gray-grass skyline. Minnie sat on the lonely doorstep with little Bob in her arms and cried softly. She prayed, presently; prayed that Jack would be safe and well all summer; that she and little Bob would be well, that "no plague should come near their household," as was promised in the psalms.

While she prayed a warm breath fanned her tear-wet cheek, a huge, hairy muzzle was thrust between the hands that covered her face, and a warm, red tongue touched her cheek with the lightness of silk. Minnie sprang up, no longer afraid or sad, and sang blithely as she hurried through the simple tasks of her household. Tramp lay on the doorstep with head on his mighty paws and eyes partly closed. Very soon little Bob was curled against him fast asleep.

A fly lit on the baby's cheek. Tramp was no sanitarian. He did not know that flies may carry typhoid, diphtheria, yellow fever, and so on. All he knew was that flies tickled his nose and tickled the hair between his toes, arousing him from slumber with a quaking sneeze or a frantic backward kick. He hated flies. With dexterity he clicked his long, flashing teeth within half an inch of the sleeping face. For a moment he watched with lips slightly curled. The fly did not return. So he laid his ponderous head on his huge paws and dozed with an ear to the ground.

The summer weeks sped by. The grass dried up, the sky became brassy and cloudless, and for miles about the prairie was gray and silent. Late in August fires caught in the mountains northward and the smoke rolled down upon the prairie, obscuring the landscape and stinging the nostrils.

Kirkland said there was no danger of prairie fire, for the flames could not possibly jump the river.

"They say it's driving out the animals, though," he said. "Some bears have been seen over in Dry coulee, and the cougars are killing calves."

Minnie turned cold and shuddered. Kirkland noticed her alarm. "There's no danger," he assured her. "I shouldn't have told you, mayby. Don't be afraid."

Minnie tried to answer bravely, but she was sick with dread. For nights thereafter she slept in fear, bolting the door, and making fast the single window of their cabin. Little Bob slept badly, and awoke in the mornings pale and tired. He needed pure air. So did she. So, with fresh resolution, she slept at night with the door and window open.

She awoke one night with a start. Bolt upright she sat in bed, staring through the open door into the silent, moonlit night. She saw nothing but the bare yard, and beyond the knee-high bunchgrass, which stretched away and away like a gray-gold ocean.

Listening intently, she heard softly padding footsteps, and suddenly a huge black form loomed in the doorway. She screamed; then felt foolish, for it was only Tramp. He growled, barked softly, and continued to growl.

There was no whine of dismay, no looking about for some one to offer protection. Only the deep, resonant, rumbling growl that was so savage and menacing that Minnie trembled. She hugged little Bob to her side—and thanked God for the loyal, fearless dog on her doorstep.

She spoke to Tramp with a quake in her voice. His blazing eyes flashed briefly in her direction, but they were unseeing, intent on another thought or danger. It was a new Tramp that she beheld such a one as she had never seen before. He was strangely, fearfully unlike the meek animal that weeks before had humbly crept to that same doorway. In his singular transformation Minnie feared the great dog; yet she trusted him implicitly.

Suddenly he disappeared. His deep growling encircled the house. Getting up, Minnie peered out fearfully and saw Tramp, walking partly sidewise, with teeth bared to some invisible enemy which apparently had gone around the house. On the doorstep the dog growled savagely.

Minnie's glance followed that of her protector. Her heart grew cold and beat faintly. In the pale moonlight she saw a large, cat-like head rise stealthily out of the yellow bunchgrass not a hundred feet from her doorway. The head was tawny, the ears were short and erect, and the round, unwinking eyes blazed yellow and green in the moonlight.

Tramp's growl rumbled into a roar, full-throated and deep. Softly, every muscle taut as a bowstring, he left the doorstep. Two phosphorescent streaks marked the quick sinking of the head out in the grass. The dog shot forward with a roar. Minnie screamed, and Bob awoke, crying; but neither small voice was audible in the dreadful sounds that rang forth in the houseyard. Steady, resonant and fearless came Tramp's deep, menacing growls as he clamped and tore with powerful jaws at the writhing, tawny form that shot from under and all about, uttering fierce, cat-like screams.

Fascinated, Minnie watched the battle. Tramp ceased to rage and roar. He even quit growling. He went about his business calmly and with deliberation. Into the back of the shrinking neck he bit slowly, thoughtfully, giving occasional little sidewise shakes and twists. A powerful, crunching twist, and his work was done. The cougar lay still as a stone; and the dog, cautiously loosening his hold, sniffed the carcass to make sure that his enemy was dead.

Panting a little, he returned to the doorstep and sank down there in a satisfied way, throwing back his head now and then and opening his wide, red mouth to gulp in the clean, cool night air.

Lighting a lamp, Minnie examined his wounds, which he permitted good-naturedly, though she knew that now and then she hurt him. She washed them clean with warm water and a little carbolic acid; and made liberal use of her scant supply of arnica.

Once, while she labored, Tramp sprang up with a growl. With upraised head he sniffed the air and listened. Minnie listened too.

She heard a sound, faint, far away, a yawning wail which seemed nearly human. Tramp growled again, and bristled. The wail was not repeated.

The mountain fires died down, the smoke thinned away, and the brass in the sky faded to a thin, dusty blue with never a cloud to break the monotony of it all. The squirrels went into the ground for their long sleep. Coyotes, grown hungry and lean, gathered in packs and roamed through the bunchgrass in an all but vain quest for food.

Tramp did not pay much attention to the coyotes till one day when a fat hen that roamed too far out in the grass was caught by one of the stealthy creatures. Minnie ran helplessly after the fleeing animal, waving her broom. A black streak shot by her. The coyote saw its pursuer, dropped the hen, and darted away; but Tramp overhauled him. Thrice he lunged at the cleverly dodging animal, and missed.

The fourth time he overhauled the fleet, fox-like creature slowly, as if measuring his distance and thinking. He timed his fateful lunge carefully, surely, and caught the coyote by the back of the neck. Deeply he bit into the neck, and then shook the animal like a rat.

Coming up with her broom, Minnie noticed with surprise that he had killed the coyote by exactly the hold that he had used on the cougar.

After this the big, black dog kept a watchful eye on the chickens, and wary was the coyote that got within a hundred yards of the henyard. Often at night when the wild creatures howled and wailed in the big gulch south of the house, Tramp would rise from the doorstep and speed silently away. Sometimes there would be blood on his jaws when he returned.

His growls at the door awakened Minnie one night. She went to the doorway and listened. The moon was dark, and in the black night she could see nothing. Presently she heard a yawning, half-human wail adrift in the lonely wastes of the night. Back in bed, with little Bob curled warmly at her side, she again thanked God for the powerful, fearless dog at her doorway.

One cool afternoon in the first days of September a man came to the door. He was dirty, had bloodshot eyes, a snoutish nose and prominent yellow teeth. Unbidden, he entered the house and demanded something to eat.

Minnie had retreated to the farthest corner of the room. Little Bob clung to her skirts.

"Hurry up," snapped the man. "I want a 'square' with a lot of trimmin's!"

Trembling with fear, the woman set out the best she had; a loaf of bread, some cold boiled ham, some cold beans and some stewed dried peaches. With a shaking hand she threw tea into the pot. The man looked on with growing disapproval.

"Ditch the pig," he commanded. "I hear a noice like chickens. Git one of them hens—a big, fat one!"

Minnie faltered something about there not being time.

"That's all right. I got plenty of time," he said, with an ugly, sneering grin. "Needn't be in a hurry to git rid of me, little woman. We've got all the time there is."

His leering grin widened. "Where's your men folks?"

Minnie stammered something about expecting her husband home any moment.

The man laughed viciously.

"Git out!" he sneered. "Your man is south in the harvest; you're alone." He laughed again. Minnie shuddered.

Little Bob could stand it no longer. He broke into a loud wail.

"Shut up," snapped the man. "I don't want no kids howlin' around. Stuff the dishrag in his mouth—shut up, I tell you."

Stumbling with fear, Minnie snatched up the frightened child and darted past the man out of the house. He started to follow.

"Goin' after that chicken?" he called.

She falteringly replied that she was.

In the daytime Tramp had found the doorstep an inconvenient place to sleep; so he had repaired to a comfortable nest in the small stack of wild hay out near the henyard. As Minnie stumbled and ran into the poultry yard the dog rose to meet her, yawning sleepily. He had been busy the night before—the coyotes had howled. So he had chased them and broken their necks till dawn, returning home weary and hungry.

"Tramp!" sobbed Minnie. "O Tramp; help me!"

But Tramp did not at once understand. He caressed her white cheek lightly. She knelt beside the dog with one arm clasping his thick neck.

"See," she said, pointing to the house. Tramp saw nothing unusual there. Puzzlement was in his gentle, brown eyes.

Just then a sound came from the house, as if something had fallen. Maybe the man was hunting for money and hurling things about. Tramp pricked up his ears and sniffed. A dangerous fire kindled in his eyes.

"Sic 'im!" hissed Minnie, pointing to the house. There was another sound at the house.

Minnie felt the huge, bony frame of the dog turn to steel. His eyes blazed with a murderous light. Sniffing ominously, he padded swiftly and catlike toward the house. Near the corner his teeth flashed bare and he darted from view.

Suddenly, in a burning vision, Minnie saw the great dog as he had been in the battle with the cougar: a raging demon, with jaws that gripped and clamped and tore, eyes aflame, teeth bared to slay, every muscle in his great body as hard as iron. He would kill the man—no, not that! It would be terrible, horrible! With feet that scarcely touched the ground, Minnie darted after the dog.

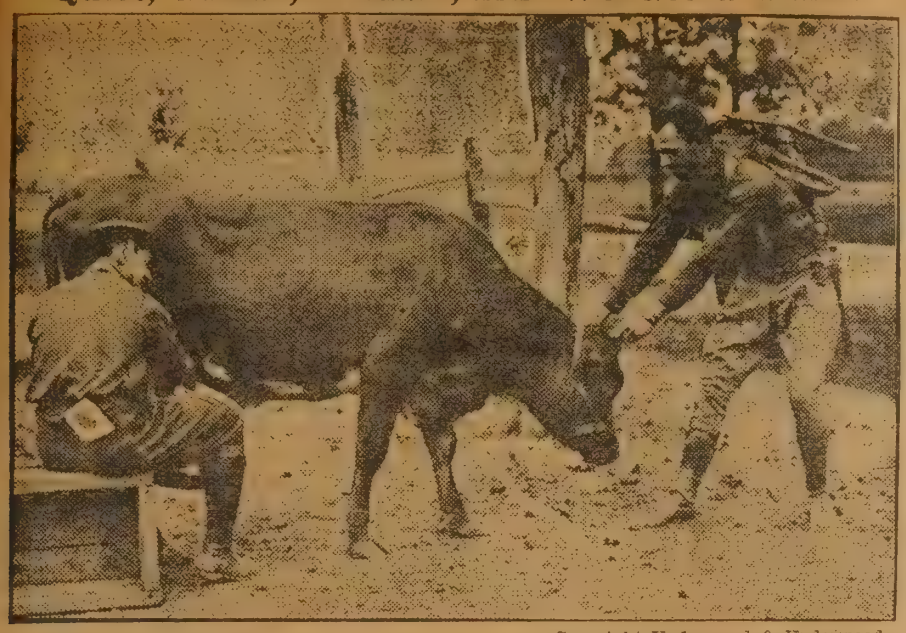
There came an uproar from the house before she had covered a third of the distance. The man shouted, defiantly at first, and then in terror. There was a crash and a roar of fury from the dog, more crashes, more yells. Minnie darted up to the doorway, frantic with terror.

She found the fight over. The man was prostrate on the floor. Tramp was trying to thrust his dangerous muzzle under his neck. The first wild fury of the dog had passed, and he was in that cool, deadly mood which made him terrible in battle.

"Take 'im off, lady," begged the man. "He's tryin' to kill me!"

"Tramp! Tramp!" shrieked Minnie. But the dog heeded her not at all. Again he tried to thrust his nose underneath the man's neck, and by using his arms and hugging the floor for dear life the terror-stricken man saved himself.

The man who had invaded Minnie's house, grossly insulting her, now dare not lift himself an inch from the floor. The dog paid no attention whatever to his victim's throat, which he could have slashed any instant. His whole attention was bent on trying to turn the man over so as to get at the back of his neck. As if puzzled, he drew back slightly, after several failures. The man started to rise; the black demon went for his neck with such a lightning lunge that Minnie, gripping him by the neck, was thrown to the floor. By the width of a hair he missed the hold, clamping the man's arm instead, which he immediately released and again tried to thrust his muzzle under for the neck hold. It was a strange, terrible battle. Sweat poured in streams from the ruffian's face, and he alternately cursed, prayed, howled and begged Minnie to take the dog away.



With a great cry Minnie rose from the floor, where she had been thrown and clasped the dog about the neck. He was as immovable as a tree. Again he tried to lunge under for his fatal, crunching neck hold.

"Tramp! Leave be!" commanded Minnie. Her first frantic terror had passed. She began to think and plan and to study the great dog who had been taught to kill in this way and was now doing simply as he had been taught. Pitting her will against the instinct of the dog, she no longer screamed at him, but sternly commanded him to obey her. At last he gave her an annoyed, puzzled look, and seemed to hesitate. Remembering his narrow escape of a moment before, the terror-stricken ruffian hugged the floor more closely than ever.

Taking instant advantage of the dog's

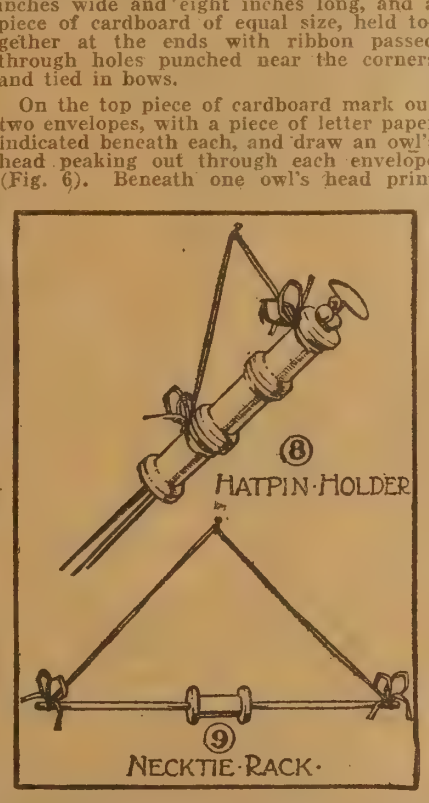
### HOMEMADE GIFTS FOR CHRISTMAS.

It's lots of fun making Christmas gifts, and the girl who will give up the time to the work will be surprised to find how inexpensively she can provide something useful and pretty for every one whom she wishes to remember. Likely some of the materials can be found at home, and a considerable saving in the cost of the rest can be made by getting your friends to buy with you, because often you have to pay

as much for a small quantity of material as for three or four times as much.

The football calendar in Fig 1 is a novel gift that brother will appreciate for his room. The football is made of cardboard. To make it symmetrical the edges must be curved alike, and the surest way of getting



them so is by means of a paper pattern (Fig. 5). To make this pattern, take a piece of paper 7 by 9 inches in size, fold it along its center as indicated in dotted lines in Fig. 2, bringing corner A over to corner B (Fig. 3), then fold it again, bringing corner A to corner C (Fig. 4). From the folded corner measure off a distance of three inches along the short folded edge, and four inches along the long folded edge. Then draw an arc of an ellipse between the points marked off (Fig. 4), cut along the arc, unfold, and you will have the pattern shown in Fig. 5. Place the pattern upon the cardboard, mark out around it, and cut out the piece.

Color the football with brown crayon or water-color, and shade the surface to make it look round.

Buy a small calendar pad at the stationery store and paste it to the center of the football. Then tie a bow in each end of a piece of baby ribbon long enough to form a loop for hanging up the calendar by, and sew these bows to the ends of the football.

Father or mother will be pleased with a blotter-pad like that shown in Fig. 6. It is made of four pieces of blotter four inches wide and eight inches long, and a piece of cardboard of equal size, held together at the ends with ribbon passed through holes punched near the corners and tied in bows.

On the top piece of cardboard mark out two envelopes, with a piece of letter paper indicated beneath each, and draw an owl's head peaking out through each envelope (Fig. 6). Beneath one owl's head print

the words "Where are you from?" and beside the other head "I'm from the owl'd country"; then address the envelopes and stick a cancelled postage stamp upon each.

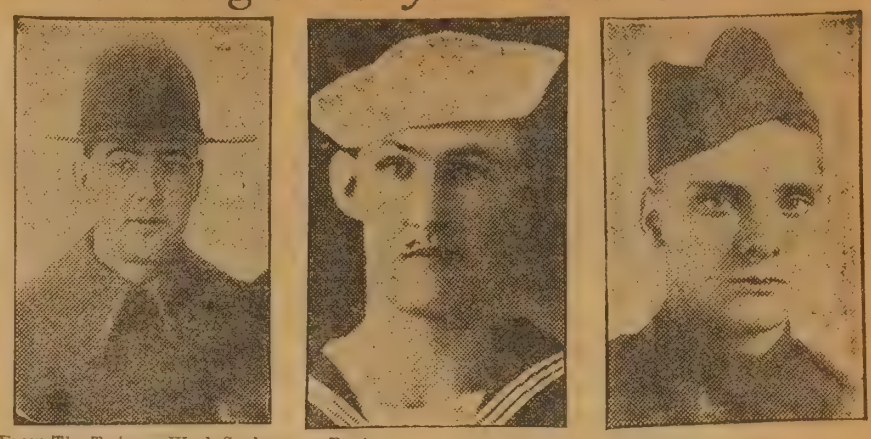
The Japanese pincushion in Fig. 7 consists of a little Japanese doll with a cushion tucked under each arm, seated upon a piece of heavy cardboard. Use a piece of cardbord four inches square for the base, and cover it with bright colored silk. Sew the doll upon this base. Make the pincushions out of silk stuffed with cotton.

Fig. 8 shows a unique hatpin holder for mother's or sister's dresser, made of three thread spools glued end to end, with a piece of narrow ribbon tied to the end spools to hang the holder by.

The necktie rack in Fig. 9 is made of a ribbon spool slipped over a stick 16 inches long, with a piece of ribbon tied to each end of the stick. The spool will hold the stick far enough away from the wall to permit slipping neckties over it.

### His Ignorance!

"Liza, what fo' you buy that udder box of shoe blackin'?"



"Go on, niggah, dat ain't shoe blackin'; dat's my massage cream."—Awgwan.

### Again, the Slackers.

"How's that pretty conductress making out? Can she make 'em step lively?"

"Rather. They begin to step lively the minute they spy her."—Kansas City Journal.

## Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

DELBERT C. GAFFNEY, Yakima, Wash. — Enlisted July 23, 1917, at Everett, Wash., as cook in the 12th He was sent to Fort Casey, Wash., but was later transferred to the supply company of the 63d artillery. His wife and parents live in Yakima.

GLENN GAFFNEY, Yakima, Wash.—Enlisted in the navy as a cook and was sound navy yard until assigned to the U. S. S. Bellingham. He is the youngest son of Mr. and Mrs. George Gaffney of Yakima, Wash., who have another son, Delbert, in the army.

FLOYD H. WOLFE, Deer Park, Wash.—In July, 1918, he enlisted in the motor truck service of the U. S. army and is now a member of Motor Truck Company No. 492, attached to motor supply train No 240. He is the son of Mrs. Hulette, who resides at Colville, Wash.

# Meat Exports

## Cattle Losses in Europe Serious

By RICHARD HAMILTON BYRD.

Larger importations of meat and pork products from the United States, thus lessening the slaughtering of native animals, will be the most effective means of restoring the depleted animal herds of the united kingdom, France and Italy. This is the information received from Dr. Vernon Kellogg of the food administration, now in France on official business. Dr. Kellogg declares that the losses of cattle in France and Italy are especially serious, not only on account of the meat and milk ordinarily obtained from this source, but also on account of the loss of the services of cattle, which are used as work animals on farms in both countries. He says in part:

"The most recent statistics on animal herds, indicating the number now existing in allied countries, show a loss of cattle in France of 17 per cent; in Italy, of 14 per cent, with the united kingdom showing no loss. Sheep and goats, France, 40 per cent; Italy, 1 per cent; united kingdom, 10 per cent. Pigs, France, 49 per cent; Italy, 12 1-2 per cent; united kingdom, 25 per cent. Horses and mules, France, 37 1-2 per cent; Italy, 25 per cent; united kingdom, not including animals not employed in agriculture, 4 1-2 per cent.

"The losses in cattle in France and Italy are not only serious on account of the meat involved, but are especially serious on account of milk and also of work, as cattle are used largely in both countries as work animals on the farms. It is highly important that the herds be restored as rapidly as possible, which can be done most effectively by larger importations of meat and pork products from America to lessen the slaughtering of native animals.

"The French and Belgian people now being released from formerly occupied territories are demanding, and needing, increased amounts of food over the former relief ration in order to restore health and strength so as to be able to work, thus making larger demands on imports from America."

Dr. Kellogg strikingly shows the shortage of butter and sugar in France through his personal experience. "I have now been in France three weeks," he says, "eating in restaurants and hotels of all grades, and I have had butter on the table once, and a total of six lumps of sugar. Saccharine is universally used in coffee and tea. The small sugar ration is mostly reserved for cooking."

### EVER EAT A MUSKRAT?

It is quite doubtful if many of the tables of the northwest have ever had a roast muskrat or a muskrat fry as the main dish upon it, but it is a fact that this animal is a choice article of food with many. It is declared to be sold readily on many markets. When on sale it is referred to as "marsh rabbit," probably because rabbit sounds more tempting than rat. The fact remains, however, that they are muskrats, but the additional fact is that their habits are such as to make it appear that they should be good for food. They feed on the choicest of vegetable foods and their habits of living are clean.

Farmers' Bulletin 869, of the department of agriculture, which deals with the muskrat as a pest, a food animal and as a valuable fur bearer, gives the following recipe for frying it:

> Wash thoroughly and cut in quarters. Let it lie in salt water an hour or more, then wash, dry with a cloth and season. Dip the pieces in a prepared egg batter and dust them with flour or meal. Place the lard in a frying pan and let it get hot. Then put in the muskrat and fry very slowly for an hour. Prepare a gravy of milk, butter, flour and parsley and season to taste. After it thickens, pour it over the cooked muskrat.

Warning is given to use care in skinning the animal, so that the fur does not come in contact with the flesh. The musk glands usually come off with the skin, but if some of the odor remains, it may be removed from the animals killed in the winter time by thorough washing. In summer the odor more or less pervades the entire body, so that success in cooking the muskrat in the summer is doubtful. To those who desire to take the animal for his fur, which is valuable these days, it is highly inadvisable to bother him until winter, anyway, when both the meat and the fur will be good.

### MUST SAFEGUARD LIVE STOCK.

William H. Hoskins, dean of the New York veterinary college, recently issued a warning to the live stock producers of America against those things which are detrimental to the livestock industry. He declared that the country should be divided into zones with an "animal engineer" in charge of every zone.

"In the last 15 years," he said, "the population of the country has increased 20 per cent, whereas in the same time there has been an actual decrease of 2 per cent in the number of beef cattle, which explains the high cost of beef, shoes and leather.

"The loss sustained by the United States from infectious and contagious diseases among animals in the last year has amounted to $250,000,000."

# Our War Time Plan

## Saves You Money in Days of Peace

As a war measure we adopted and developed a subscription plan which enabled us to dispense with our big force of subscription agents, thus conserving manpower for government activities. This plan meant a very considerable saving to our readers; and should prove just as popular in the days of peace as it did during the period of the war.

## How Our Plan Helps You

The plan which we have adopted gives the subscriber the benefit of every penny which would ordinarily go toward paying the salary and expenses of the subscription agent. It brings our friends their state farm paper at a fraction of what it used to cost and at a price far below that which other high-grade farm and family papers generally are obliged to ask.

In order that our readers may continue to save money on their subscriptions, we ask every subscriber to send in his or her renewal well in advance of the date of expiration stamped on the address label on the wrapper, and that you will also make an effort to send in the orders for your friends and neighbors with your own. Assistance of this kind, so cheerfully given by hundreds during the past year, will assure the success of our second year of cooperation.

**Remember—you receive The Washington Farmer every week—fifty-two great big issues in a year, chuck full of the best of all-around family reading at the remarkably low cost, under our cooperative plan, of only 50 cents for 3 years. Send your orders in today and get your share of the money saved.**

**Rates:-25c** For 1 Year **50c** For 3 Years **$1** For 5 Years

The Washington Farmer. Dec. 12.

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# A CROOKED TRAIL---By Lewis B. Miller

Copyright by The Page Company, 1911.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

SYNOPSIS.

Travis, a lad in his teens, lived on the Texas frontier in the days when Texas was a wild, unsettled region. One morning before daylight he started out to bring in the yoke of oxen for a day's plowing, but one of them was gone. He caught his pony and started to search for the stray. Going a little and a little further hour after hour, he continued until night caught him several miles from home with a tired pony, a borrowed saddle and lariat and little for himself or his dog to eat. A rabbit and wild turkey eggs served the purpose, and morning saw him again in pursuit of the ox after a night of disturbance by a mountain lion and marauding hounds. The next night he spent in the cabin of a crazy sheep herder who believed that cattle men were trying to kill him. He made the night hideous by his crazy ramblings and songs in the moonlight, and Travis was glad when the opportunity came to escape from him, and fall in with new friends, Frank and Stella Booth, at their farm home a little further on. The three young people became much interested in each other because of common plans for attending school the following year. It was here, also, that Travis got his first definite clue to the whereabouts of the stray steer. Together the two boys set out to hunt him, but he was farther away than they suspected. Startling adventures were in store for them, among the first of which was a night in a "haunted" house, the principal haunts being wild animals. The next day they found the stray ox, but suddenly a wall of water from a furious storm rushed down the river between them and the animal. The boys arranged to have the steer held in pasture till they could cross the raging river. The meantime they spent working with a farmer grubbing out live oak thickets. Some interesting experiences were awaiting them, however, rafting on the flooded river. Unwittingly they aid some cattle thieves to escape from the sheriff, at the same time getting farther behind in their race with the runaway ox. Later they find the ox and the cattle that Frank has lost in a big herd that are being driven away by cattle thieves. The thieves refuse to turn them over and trouble begins.

## CHAPTER XIV.

### Outwitted by the Cattle-Thieves.

We had started from near the county-line, and the county-seat was 12 miles away. Night came down upon us before we had covered half the distance. Now we stopped at a farm-house, and obtained some corn and oats for our horses and some supper for ourselves. After resting an hour or so, we saddled up again and rode on.

It must have been between 9 and 10 o'clock when we entered the square of the unlighted little town. First we made our way to the sheriff's office, in the courthouse, and pounded awhile on a locked, unresponsive door. Then we started out in quest of the sheriff's residence. It was on the outskirts of the town, we were told; but not till we had stopped at two or three wrong houses did we discover the right one.

The sheriff was in bed, and when we finally succeeded in drawing him out to the gate, he came grumbling, evidently in a bad temper over his interrupted slumbers. He listened to our story in surly silence, broken only by an occasional gruff, ill-natured question.

"Well, come round to the office in the morning, and I'll go with you after the fellows," he finally told us.

"Why not make the ride tonight?" asked Frank. It won't take half as long."

"No, I'm not going tonight," was the growling reply. "I've got something else to do besides gad about over the country in the dark."

"I thought sheriffs and doctors always went when they were needed, and not when it was convenient," I put in, as respectfully as I could. The mere suggestion of delay frightened me.

"Well, I won't stir a step till morning; so that's all there is to it," was the gruff reply.

Frank tried to argue the matter, but the longer the sheriff was talked to the grumpier he became. Soon he turned around and started back to the house.

"All right! We'll see you early tomorrow morning," I called after him. Then we rode away.

First we hunted up a livery-stable and bought some feed for our horses. Carrying that, we rode out to a prairie which came close up to the town, and there we camped under a big live-oak.

"All this slowness is enough to drive a fellow frantic," I grumbled to my friend. "No telling where that gang will be with our cattle by the time we get back over there tomorrow."

"That's right. Still, this is more convenient in some respects. Our horses are too tired for any more traveling just now. If there'd been another ride tonight, we'd have had to put them in the livery-stable and hire others. By morning, though, they'll be ready for the road again. Let's hope those fellows won't try to run away."

"Don't bank on that, Frank. They know we'll have the officers after them."

"They may believe they gave us such a scare that we'll never stop running till we get home."

"I'd like to think they're big enough gumps to believe that; but I'm afraid they're not."

We, as well as our horses, were very weary; and without doubt we should have slept soundly but for the hogs that swarmed around our camp all night long. A hundred times at least Vic chased them back from our immediate vicinity; and every time one of them felt her sharp teeth it squealed loudly enough to frighten away sleep. Indeed, as I recall that night, it seems little more than a long nightmare of grunts and squeals.

"No more camps around town for me, if you please," growled Frank, next morning. "This beats a hog-ranch out of sight. These long-legged long-noses that forage a town over are allways on the edge of starvation; and they're impudence itself."

In the dim dawn we ate a breakfast of cold scraps from Frank's saddle-bags; and by the time it was light we were mounted and riding round to the court-house, which stood in the center of the square and of the town. The sheriff's office was still locked fast, and we sought his residence again. To our disgust, he and all his family were still abed and asleep.

We "rousted" him out. But at least two hours had dragged by before he had swallowed his last bite of breakfast. Frank and I waited and waited and waited, till we were well-nigh beside ourselves with impatience. And to try us still further, every time Dugan saw us—Dugan was the sheriff's name—he grumbled and growled at us because we had twice broken into his sleep.

At last, however, he was ready to do something, and we all marched over to the courthouse. There the warrant for the cattle-thieves was made out. Then Dugan, after telling us to wait, announced that he was now going out for his horse and some deputies.

"We want a force strong enough to overawe the thieves," he informed us, as he passed out at the door, leaving us alone in the office.

"The sleepy-headed old poky-easy! Will he never get a move on him?" said Frank, almost through his teeth.

"It's not in him to hurry," I answered. "He's first cousin to a snail."

"Yes, and full brother to a terrapin," declared my friend.

But at last, after our patience had been worn to frazzles, the sheriff returned with three deputies. They were all mounted now, and all armed, with six-shooters and Winchester rifles. Frank and I sprang into our saddles, and away the six of us went. The sun had already traveled far on his day's journey. But, late or early, we two were delighted to see the road under us once more.

Instead of going to the place where we had left the cattle, Dugan decided that we should cut across the country and intercept the thieves further down the same road. Frank and I were willing enough; for we were afraid that the party might have traveled most of the night, and would be very hard to overhaul. However, there was also danger that they had changed their course; in which event we might be traveling away from them instead of toward them.

Even when under way we moved rather slowly; or at least it so seemed to my impatience. And it was high noon when we arrived at the road along which the thieves were supposed to be traveling. A glance showed us that a considerable drove of cattle had passed by here very recently, and we turned and rode after them. From a man in a wagon we learned that the drove was only a few miles ahead. Now we quickened our pace.

An hour or two later we rounded a bend in the road, and found ourselves close upon the cattle and their drivers. They were moving along at a very leisurely gait. Plainly not the slightest attempt had been made to run away.

There were but three drivers now, we noticed. The man whom we had once suspected of being Bill Edsell—and who, we had yet to learn, was in reality that much-dreaded desperado—was no longer among them. But the other three we easily recognized as the fellows who had thrust their pistols into our faces the day before.

The six of us rode along quietly till we had almost passed the drivers. Then, of a sudden, Sheriff Dugan and his deputies wheeled, each with a cocked six-shooter, covered the three men, and ordered them to throw up their hands.

Somewhat to my surprise, the fellows who had been so bold and defiant the day before now submitted meekly, without offering to draw a weapon, or making even a show of resistance. Up went their six hands as one hand.

"What—what does this mean?" inquired their leader, mildly, with just indignation enough in his tones to make his words sound sincere. It was the same fellow who had blustered to us about wading through blood knee-deep.

"It means that I'm the sheriff of this county," answered that officer pompously, "and that I have a warrant for your arrest."

He drew the paper from his pocket and proceeded to read it. All the time both he and his deputies held their cocked six-shooters in the faces of their three prisoners. Frank and I sat quietly in our saddles, interested spectators of the striking scene.

"What are you arrestin' us fur? I don't quite understand," said the driver, still very mildly, after the reading had ended.

"Why, didn't you hear? For stealing cattle. Or at least for having stolen cattle in your possession and refusing to surrender them to the owners."

One of the deputies now rode up close to the prisoners and searched them, each in turn, but failed to find a single weapon. Dugan was surprised, and so were Frank and I. But we needn't have been. The prisoners, foreseeing the sheriff's visit, had doubtless left their six-shooters in their wagon.

"You can put down your hands now," Dugan told them. And he and he deputies put up their weapons.

"Sheriff," said the drover, "there's my cattle. Ain't a single cow-brute in that herd but what I've bought and paid hard cash fur. Most of 'em I've got bill of sales fur. If any of 'em's stole, it wasn't me that stole 'em. Who is it accuses us of stealin' any of 'em?"

"These boys here." The sheriff made a motion toward Frank and me.

The drover looked at us mildly, and then at the officer. "What animals in this outfit do they claim, sheriff?"

"Point 'em out, boys," said Dugan to us.

We turned toward the drove. The cattle had stopped, but most of them were scattering over some open land to graze. So excited had we been over the arrest that we had failed to notice the drove. Now we ran our eyes over them, hastily at first, then again, more carefully. Soon we looked at each other; blank consternation in our faces.

"Well, why don't you point 'em out, without waiting all day?" demanded the sheriff, irritably.

"They're not here. They've all been cut out," Frank replied.

Dugan utter an angry exclimation. "Didn't you two make oath that these men had your cattle in their herd?" he demanded.

"Of course we did," answered Frank, with some spirit. "But we didn't make oath that they'd keep them there for all time. They've been cut out, I told you."

"We've been so eternally long getting here, they could have been cut out and run off a hundred times," growled I, bitterly disappointed and disgusted.

That was true enough. But there are many true things it were wiser to leave unsaid. And certainly my remark, and probably Frank's also, belonged to that class. The sheriff had a peevish, spiteful temper, and our thrusts at his slowness irritated him and turned him hopelessly against us.

"Are these the same men that you claim to have seen driving off your cattle yesterday?" he demanded of us.

"They're three of them," I replied. "One that was here yesterday is not here now."

Then the sheriff turned to the drover. "Did these chaps"—he jerked his thumb contemptuously toward us—"come to you yesterday evening and lay claim to some of your cattle?"

"Yes; they come tearin' onto us and claimed that black-and-white steer over there, and some half a dozen yearlin's and two-year-olds. And when I wouldn't let 'em ride right in and cut out what they wanted, they ripped and cussed around like all git-out. First they threatened to shoot us. And when they found we wouldn't bulldoze worth a cent, they rode off sweari' they'd sic' the sheriff on us. And they've been as good as their word about that, I see."

This was too much. Neither Frank nor I ever used profanity under any circumstances. But we could use pretty vigorous language sometimes, when our tempers blazed up; and this was one of the times.

"Well, you're the biggest liar!" I burst out, hotly.

But Dugan stopped me with a motion of his hand. "Wait till it's your put-in," he ordered, in tones that did not soothe my already sorely-tried temper.

"Are there any cattle out of this drove that were in it yesterday?" he inquired.

The drover hesitated, as if from the desire of a conscientious man to be very careful in his statements.

"Narry hoof," he declared. "We bought a few late yesterday evenin,' and fifteen or twenty head more this mornin,' but narry cow-brute did we let go. Ain't that so, boys?" he appealed to his fellow-prisoners.

Both declared unhesitatingly that he spoke the truth. Frank started to say something, and so did I; but Dugan, without looking at us, cut us off with a contemptuous gesture.

"I believe every word you say, men. And I owe all three of you an apology for stopping you as I did. But I've been imposed on. You can go on about your business now. And as for you chaps," he sneered, turning to Frank and me, "I've half a mind to arrest both of you and clap you in jail, and let you lay there a few weeks, just to learn you not to act so smart next time."

This was said in a malicous, spiteful way, which the words alone give little impression of.

I was astounded at the turn affairs had taken. And having no doubt that the sheriff's power in such matters was little short of absolute, I dared not open my mouth. But Frank, the son of a justice of the peace, had picked up numerous scraps of law in his father's court, and understood his rights better.

"Put us in jail if you dare!" he returned, angrily. "We haven't violated any law, and we've got plenty of friends that will stand by us till the last. Nice suit for damages you'll have on your hands—you and your bondsmen! And you'll pay us a hundred dollars in gold for every day we spend behind bars."

Dugan sneered, and his deputies and the cattle-men laughed loudly, derisively. The cattle-men could well afford to laugh. But the officers made no move to arrest us.

Frank turned his horse. "Let's be riding, Travis. When the officers of the law take sides with thieves to cheat honest people, it's high time for honest people to be hustling for themselves."

We started back the road, followed by the jeers of Dugan's party and the thieves. Once I turned to reply, sarcastically, but Frank stopped me.

"Don't waste breath on such fellows," he said aloud. Then he added, in a lower tone: "We'd better travel from here as fast as we can. The officers will soon go, and then that robber-gang will be none too good to follow us and shoot us down, for spite. I've heard of such things more than once."

Soon we noticed the sheriff's party following. Not caring to come in contact with them again, we rode fast enough to leave them far behind.

"Disgusting, isn't it?" I remarked, as we trotted along. "Excuse me from any further dealings with that kind of fellows. Sheriffs and deputy-sheriffs are sorry truck anyhow," I added, with the natural tendency of youth to jump at hasty and sweeping conclusions.

"That they are!" Frank agreed with me, in hearty disgust. "We could have done better by ourselves."

"We couldn't possibly have done worse," I declared.

"Now, Travis, the question is: What became of those cattle?"

Both of us studied long and hard before attempting to answer it.

"That gang may have sold them to somebody along the road," finally suggested Frank.

"Or that other man that was with the outfit yesterday may have driven them off some other way," was my surmise.

"Yes, either of those things might have happened, Travis. And then comes another question: If that man drove them off, where will he drive them to?"

"He's likely to follow some roundabout course till the danger blows over, and they circle back to the drove."

"If we knew he'd do that, we ought to be following on."

"Yes, if we knew, Frank. But we don't know—we can't know till we find out. We'd better ride on back till we run across the cattle themselves, or learn what's gone with them. Even if we don't find them, we ought to stumble onto their trail somewhere. Then we'll not be running around blindfolded."

"That's right, I guess. We'd better try to strike the scent again. Old Lep's an easy brute to track. He's so noticeable that wherever he passes in daylight you can get news of him. And we ought to be expert trailers by this time—hard to shake off."

So we followed back the road, seeking diligently, searching tirelessly, for the lost trail. House after house, house after house we inquired at. Though every farmer recalled the drove of cattle, nobody seemed to have caught even a glimpse of Lep. But our persevering search was not to go unrewarded.

(To be continued.)

### Unidentified.

Recently, during the operations of the British Egyptian expeditionary force in Palestine, a town to the south of Beersheba was captured and in it was discovered a splendid example of mosiac pavement.

The excavation of it was placed in charge of a chaplain, and while the work was proceeding some human bones were discovered.

Elated at the find, the padre immediately wired to great headquarters, saying:

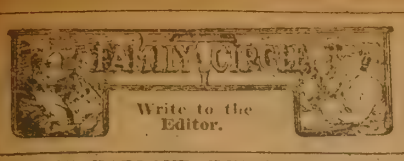
"Have found the bones of saint."

Shortly after the reply came back:

"Unable to trace Saint in casualty list. Obtain particulars of regimental number and regiment from his identity disc."—Detroit Free Press.

### Common Sense.

A lady litigant wished Lord Fisher to try her case himself. He told her that it would be tried by a certain learned judge without a jury, adding:



"He is a capital lawyer, you know, and will try it nicely."

"Oh, yes, my lord," she replied, "the justice is all very well as to law but my case really requires common sense."

### Control Needed.

"My kettle of preserves has exploded and is spouting all over the kitchen. What had I better do?"

"Send for one of these experts on food control."—Louisville Courier-Journal.

ALICE W. BARLAND, Editorial Contributor.

## For the Sweet Tooth

The following is a recipe for popcorn balls:

One cup syrup, one tablespoon vinegar, two to three quarts of popped corn.

Boil together the syrup and vinegar until syrup hardens when dropped in cold water. Pour over freshly popped corn and mould into balls or fancy shapes. Either honey, maple syrup, molasses, white cane syrup or corn syrup may be used.

**Syrup Nougatines.**

Boil one and one-half cups light colored syrup and one-half cup water to 246 degrees F. or until it forms a firm ball when tried in cold water. Pour slowly onto a well-beaten white of one egg, beating constantly with a wire whisk. Place bowl over water kept just below the boiling point and fold and turn three or four minutes. Remove from the fire, add one-half teaspoon vanilla or other flavoring, and continue folding until mixture is nearly cool. Add one cup of chopped salted peanuts or a mixture of any desired candied fruits and nuts. Spread half an inch thick on wax paper, cover with wax paper and cut in rectangular pieces.

**Peanut Brittle.**

One cup white corn syrup, one tablespoon vinegar, one-quarter teaspoon salt, one teaspoon vanilla, one cup freshly roasted peanuts, halved.

Cook the corn syrup, vinegar and salt in a saucepan until a little dropped in cold water forms a soft ball. Put the peanuts and this syrup into an iron skillet and stir until the syrup becomes a golden brown. Remove from the fire and stir in vanilla. Have ready a shallow buttered pan, pour candy in and spread out in a thin sheet. Allow to cool, then remove from pan and crack into pieces.

**Hunky Dory.**

Two cups popped corn, one cup pecan or walnut meats, three cakes sweet chocolate, two tablespoons rich cream.

Break the chocolate into small pieces and melt it over hot water. As soon as it is melted, add the cream, corn and nuts. Stir quickly with a silver fork and lift out in small lumps. Place on waxed paper to dry.

**REAL STUFF IN THIS GIRL.**

At one of the Wyoming boys' and girls' club conferences held recently in Star Valley was a leader of one of the local canning clubs who had ridden horseback 15 miles to a neighbor's, left her animal to rest, borrowed another horse, and continued to the conference, many miles further, arriving at Star Valley at 9:15 in the morning. About 5 o'clock in the afternoon this girl started on her return, exchanged animals at the neighbor's house, went on to her home, did the regular chores of the night, and reported on the happenings at the conference to the other members of her home. Traveling thus by relay, the girl attended all three days of the conference.

## How Correct Posture Increases Height

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D.

Dr. Hirshberg.

Until the gristle and soft, bony fabric of the body becomes rigid and calcified by the brittleness which invades the human structure with the onset of years, there is always a chance to acquire more height and growth.

Some of the elements which go to make up height are the real world around in which you live—sunlight and food, open air work, play and sleep; the height of your ancestors on both sides several generations back and the health or activity of your pituitary, thyroid and other glands.

Athletics, muscular work and exercises generally contribute to the growth and development of your bony structure. The mighty influence exerted by the emotions and the emotion-making glands such as the pituitary and the thyroid are easily illustrated. It is known that overactivity and enlargement of the pituitary gland changes a small or moderately short man into a giant. Huge backwoodsmen and circus giants are commonly found to have overgrown pituitary glands or absent thyroids.

**Take Daily Exercises.**

There are on record inoculation experiments with pituitary gland extract, which, in a few instances, produced the contradictory effect of thyroid glands—the appearance of giantism.

Play and exercise which extend the skeleton lengthwise and stretch the arms, legs, spine and trunk, help to increase the height. Reaching upward and pushing the legs vertically away from the hips for 15-minute intervals two or three times a day has made some persons taller.

The same effect can be better obtained by learning to swim with the easy, arm stretch forward strokes. The overhand, the crawl and the trudgeon strokes, as well as the long sweeping side stroke, acquired with astonishing ease, will help materially in the augmentation of your height.

It is inadvisable, if not dangerous, to take pituitary or other glands in order to become taller. Medicines, drugs and other internal ministrations to most people are more vicious than buzz-saws to babies.

The balance of a man's head on his spine is not perfect at best, but if the head is kept erect and well balanced, shoulders thrown well back and upward, and the weight of your skeleton balanced well forward on the ball of your feet, as much as an inch may eventually be added to your height.

## Child's Sweater in Crochet

By WINIFRED WORTH.

They're wearing sweaters all the year round these days, so the children want to get in the whirl of fashion as well as any one. Make this sweater for them.

Use No. 3 Perle cotton or Germantown yarn.

Ch. 50.

1st row—1 dc. in each st.

2d row—1dc. in each st. (use back st. for rib st.)

3d row—Same as 1st.

4th row—1 dc. in each st. ch. 5.

5th and 6th rows—Same as 1st.

7th row—Same as 4th.

8th row—Same as 1st.

9th row—1 dc. in each st. ch. 9.

10th to 15th rows—dc. in each st.

16th row—Dc in each st. leave off 7 dc. (to start neck) make 5 rib rows and rp. 9th row for left shoulder, when sweater is required size join. Sleeves are made the same. Finish off neck, sleeves and bottom with 10 rows of dc. Fasten with buttons on shoulder. To open down front start sweater in center of front and join at shoulder.

This sweater can be made to fit any child or young lady, opened down the front, by making a ch. the length of front of sweater.

# Applied Patriotism

Woman has made herself indispensable to the Nation's war activities. This is being demonstrated daily in many splendid ways. The telephone operator takes her place in the front ranks of our "national army" of women.

Back of the scenes, invisible, her war work is to make telephone communication possible. Through her the Chief of Staff in Washington speaks to the Cantonment Commandant in a far-off state. The touch of her fingers forges a chain of conversation from Shipping Board to shipyard, Quartermaster General to supply depot, merchant to manufacturer, city to country, office to home.

Without her this increasing complexity of military, business and civil life could not be kept smoothly working. Hers is patriotism applied. She is performing her part with enthusiasm and fidelity.

The increasing pressure of war work continually calls for more and more telephone operators, and young women in every community are answering the summons—cheerfully and thoughtfully shouldering the responsibilities of the telephone service upon which the Nation depends. Each one who answers the call helps speed up the winning of the war.

# PATTERNS

2691—Girls' dress. Cut in 3 sizes: 12, 14 and 16 years. Size 14 will require 4 3-4 yards of 36-inch material. Price 10 cents.

2705—Girls' dress. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 10 will require 3 5-8 yards of 36-inch material. Price, 10 cents.

2567—Girls' dress. Cut in 4 sizes: 10, 12, 14 and 16 years. Size 12 will require 3 yards of 36-inch material for the foundation. The overblouse will require 2 1-4 yards. Price, 10 cents.

2683—A youthful dress. Cut in 4 sizes: 14, 16, 18 and 20 years. Size 16 will require 5 1-8 yards of 36-inch material. Width of skirt at lower edge is about 1 3-4 yards. Price, 10 cents.

2688-2687—A smart costume. Waist 2688 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 2687 cut in six sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. To make the costume of 36-inch material for a 38-inch size will require 6 1-8 yards. Width of skirt at lower edge is about 1 7-8 yards. Two separate patterns. 10 cents for each pattern.

2686—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 yards of 36-inch material. Width at lower edge is 2 1-2 yards, with plaits drawn out. Price, 10 cents.

2692—Girls' dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 will require 5 1-4 yards of 27-inch material. Price, 10 cents.

2132—Lady's "cover all" apron. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. It requires 4 7-8 yards of 36-inch material for a medium size. Price, 10 cents.

2676—Lady's waist. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 2 3-4 yards of 36-inch material. Price, 10 cents.

2447—Girls' dress. Cut in 4 sizes: 2, 4, 6 and 8 years. Size 6 requires 2 3-4 yards of 36-inch material. Price, 10 cents.

2486—Boys' suit. Cut in 4 sizes: 3, 4, 5 and 6 years. Size 4 requires 2 1-8 yards of 40-inch material. Price, 10 cents.

2696—Lady's maternity skirt. Cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 4 yards of 44-inch material. Width of skirt is about 2 1-2 yards at the foot, with plaits drawn out. Price, 10 cents.

## FRESH RHUBARB IN WINTER.

Fresh rhubarb may be secured for winter use by following directions given below, says a writer in the Yellowstone County Farm Bureau Bulletin of Montana:

Dig up strong rhubarb roots and allow them to freeze solidly for a day or two. Then place the roots close together on the cellar floor. If the air in the cellar is very dry, the roots should be covered with soil, otherwise it will not be necessary. The cellar should be kept dark. In a few weeks long, tender pink stalks will form. As these are pulled more form until the strength of the roots is spent. Roots sufficient to cover a floor space six feet square will supply a large family with fresh rhubarb of the finest quality.

Roots which have been forced in this manner may be planted out of doors in the spring, but they will need at least two years in which to recuperate before being forced again.

### At That, He Was Right.

Caller—I sent you a poem about three weeks ago. What have you done with it?

Editor—I'm holding it. Every little while lately I get to thinking that we are not getting out as good a paper as we ought, and then I take that poem and see how much worse the sheet might be, and that makes me cheerful again. Say, how much'll you take for it?—Transcript.

### Child's "Sandwich Dress."

Plaid silks and velvets combine to make the dresses of children. One of the prettiest was called a "sandwich dress," two panels of velvet formed the back and front and an underslip of gay plaid was the filling for sides and sleeves.

What 15c will bring You from the Nation's Capital
*Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.*
The matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 26th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us; we are glad to invest in new friends.
The Pathfinder, Box 89, Washington, D.C.

At the touch of a match
Perfection Oil Heater instantly glows with cheerful, cozy warmth.
No smoke or odor.
Gives steady, comfortable warmth for many hours on one filling with Pearl Oil—the ever-obtainable fuel.
Easy to carry about.
Cuts fuel bills, too, for less furnace heat and fewer grate and coal-stove fires are required.
Oil consumed only when heat is needed—no waste.

STANDARD OIL COMPANY (California)

PERFECTION OIL HEATER

My Dear Corner Cousins: One of our regular Corner Cousins has very kindly sent us a recipe for oat meal cookies, which sounds good, and I am sure is good, so we will try it:

One-half a cup of shortening, one-half a cup sugar and one egg; four tablespoonfuls of water, five tablespoonfuls of sweet milk and nine tablespoonfuls of sweet cream and two cups of rolled oats. Two cups of flour and a little salt, one teaspoon of cinnamon and one-half teaspoon of nutmeg; one-half teaspoon of soda and one teaspoonful of baking powder.

I have some very good recipes especially suitable for the holidays, and some of these will follow. The first will be carrot pudding. Lovingly, AUNT NELLIE.

"I have never seen a letter in the Children's Corner from Spokane Bridge, so I will write one, as I live there," says Pearle Smith in her Corner letter. Pearle has one sister and four brothers, one of whom is in France.

Alice Graham of Rocklyn is in the fifth and sixth grades. She has one kitten named Tom. Alice was 13 years old August 15. This is her third letter.

"Sister is working in Spokane and I have been keeping house for almost a year because mama is dead," writes Anna Bell Gangewer of Tiger. Anna is going to take a long trip to Pennsylvania all by herself. We want her to write and tell us all about it. Anna sends love to Aunt Nellie and all the cousins.

An orchard ranch four miles from Chelan is the home of Elvin McQuarie of Beebe. Elvin has good times at school. Laddie, Ida, Blanche and Agnes are his brothers and sisters.

Donald McDonald of Tum Tum was 12 years old, February 25, and he hopes his twin will write to him. There are two rabbits, two cows and two pigs on his farm. Donald will write again.

This is our first letter from Esther Crider of Thornton. May 31 Esther was 8 years old. She is in the fourth grade.

Anna, Buttercup and Pansy are pet cows, Buster, Dick and King are pet horses on the farm, where Anne Raisio lives, near Northport. Anne loves the letters. She was 11 years old September 7.

Margaret Wilkinson of Thornton, lives with her uncle and aunt. She was 10 years old July 3, and is in the fourth grade.

A bantam, a kitten and an old mother rabbit are Ivy Ward's pets. Ivy lives on a farm near Wenatchee. She has one brother and one sister, Charlie and Ethel. They walk two miles to school.

Melvin Hadford of Spokane has fun riding down hills on his coaster, and the cat likes to ride with him. Melvin hauls in wood for mama on his coaster. This is his third letter.

If you are 13 years old and your birthday is January 18, Della Crumpacker of Pomeroy wants you to correspond with her, because you are her twin. Della rides three miles to school. She can sew, knit, tat and crochet.

It is lots of fun to try out all the new recipes for making bread, Inda Scott thinks. Inda lives on a 150-acre farm seven miles from Waterville. She baked bread the day she wrote. July 8 is her birthday and she is 14 years old. She has $15 worth of war stamps.

A little girl 9 years old, Mabel Main, of Goldendale, has a pony named Lolo, and her sister has a pony named Dandy. Elmer and Paul, two of Mabel's brothers, are in France. Mother is Mabel's teacher.

Our little 6-year-old cousin, Lester Collins of Goldendale, goes to school with his sister. He is in the first grade. Topsy is his little dog.

"Brother and I go to Spring Creek school," writes Phoebe Collins of Goldendale. Phoebe is 11 years old and her birthday was June 8. She has a little nephew nearly 2 years old.

During vacation, Dessie Jones of Prosser visits her grandma. Dessie was 10 years old July 16, and she is in the fifth grade.

"Tell all the cousins hello for me," writes Anna Brandt of Leahy, who has not written to us for a long, long time. Anna had a war garden this summer. She planted watermelons, muskmelons, popcorn, beets, lettuce and radishes. She has 20 war saving stamps. Anna liked our grown-up cousin's letter. If you had a birthday October 13 and were 10 years old, write to Anna, because she is your twin.

At last, Ida Smalley of White Salmon has found her twin. Her name is Margaret King. Ida's pets are a black pullet and a little black kitten, Kate. Ida loves to read the letters and will write again soon.

Tessie Duffy and her sister have the very best times imaginable. They have two dollies, Alice and Dorothy; they make mud cakes and go swimming in the ditch every summer day; they slide down the banks into the water and go up on the hill to get clay for making marbles. Doesn't it all sound jolly? Tessie lives at Midvale and her mamma sews for the Red Cross. Thank you for the little poem, Tessie, it is lovely and Aunt Nellie wishes she could put in the Corner.

All last term Thomas oJnes wsa neither tardy nor absent and so he got a big certificate. Thomas' address is Box 48, R. F. D. 1, Almira, Wash. He was 8 years old February 23. Catherine, Jane, Eleanor, John and Griffith are his sisters and brothers.

Farm life is the best of all, Ethel Short of Molson thinks. Ethel likes to read the Children's Corner. Her favorite flowers are roses and baby breath. Next March 7 Ethel will be 11 years old. She can sew and knit.

One of Matilda Hilger's brothers is in a camp in Virginia and mama has not seen him for 12 years. Matilda has never seen him. Matilda lives on a farm nine miles from Lamont. She will be 10 years old on December 8. Has she a twin?

A little white pup named Fuzzy and a yellow canary bird are Mary Jean Shelton's pets. Mary was 9 years old last December 23, and if you are her twin please write to her. Her address is R. F. D. 3, Box 129. Ellensburg, Wash. Mary has three-fourths of a mile to go to school.

Luda Yeager lives on a farm five miles from Wilson Creek and goes to a country school. July 21 was her birthday and she was 10 years old. If you are her twin she wants you to write to her. A dog named Watch, three cats, three little kittens, a mother rabbit and two little gray ones are pets.

Fred and Ernest, two of Barbara Jenkins' brothers, are in the service. Barbara lives on a farm one and one-half miles from Garfield. She is in the third grade and was 8 years old September 11.

There were over 100 tomatoes on Doris Jones' two tomato plants this summer. Doris lives in Ritzville. She has no sisters or brothers. She takes music lessons.

Barney is the name of Raymond Klotzbach's pony. Raymond lives on a farm near Fruitland. He rides three and one-half miles to school on his pony. His pets are two rabbits and one dog. Raymond was 9 years old May 26.

"I am glad that the boys won't have to fight any more," writes Lena Wiltz of Addy. Lena reads all the letters in the Corner. She was 13 years old March 27. Has she a twin?

Bessie Robinson of Lantz wants Edith Tarvis to write to her. Bessie is 12 years old and in the fifth grade. Clyde, Lantz, Alice, Maude, Alma and Florence are her sisters and brothers.

A little white pony that she can ride anywhere is Thelma Chapman's pet. Thelma is 12 years old and in the sixth grade. She lives at Granger and is working to earn money for war stamps.

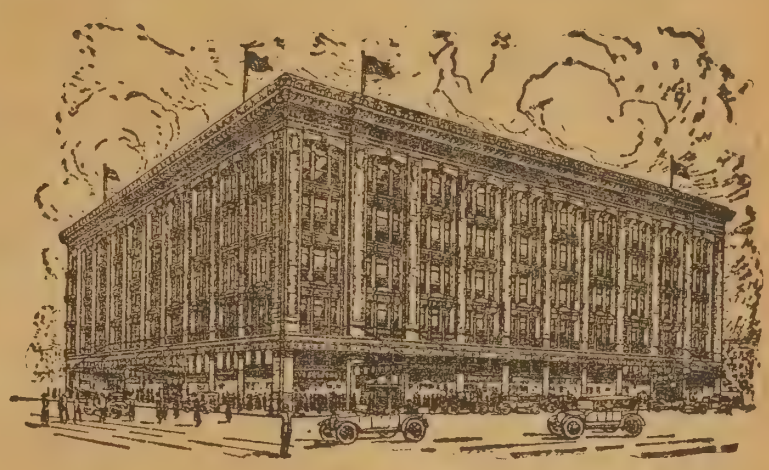
A farm half a mile from Garfield is the home of Mary Dalan. Mary was 12 years old May 31, and she is in the fourth grade. Josephine and Amy are her two sisters.

In the summer time Earl Joplin of Baird stays with his uncle and herds cows. He rides a gray pony named Daisy. One of Earl's uncles is in the service and has been to France three times. Earl is 9 years old.

**Enjoys Farm Life.**

Dear Aunt Nellie: May I join the Children's Corner? This is my first letter I have written to the Corner. I am 13 years old and in the seventh grade. My birthday is April 2. Have I a twin? If so I would like to correspond with him or her. I go to the Twelve Mile school. My teacher's name is Miss Olivia Ashbrow. There are only 25 pupils in our school. I live on a 200-acre farm. I enjoy the life of a farm far more than I would a city life. We have about 20 head of cows, eight horses, two pigs and four sheep. At night, when I come home from school I have to go down by the railroad and bring the cows home. We are shipping milk to the Broadview Dairy at Spokane. We ship one can a day. I hope the cousins are all well and Aune Nellie also. My father takes the Farmer, and I always read the letters. I think they are very interesting. There are two other girls from my school who are going to write to Aunt Nellie.—Helen Huguenir, Route 1, Addy, Wash.

**Likes the Corner.**



Dear Aunt Nellie: We have a 120-acre tract. We have four cows, two calves, one bull and five horses. We have 58 turkeys and 17 chickens. I am 14 years old. My birthday is January 22. I am in the seventh grade. My teacher is Mr. Lloyd. He had to go to Pennsylvania. I am a deaf girl. I go to school every year. I have four brothers and one sister. My brothers' names are Norman, Albert, Philip and George. My sister's name is Mary. Norman joined the army. He is 25 years old. I have a friend who lives in Spokane, whose name is Melba Brown.—Emma Layambe, Route 1, Wapato, Wash.

**Rides Her Pony to School.**

Dear Aunt Nellie: May I become a cousin? I was 14 years old August 14, 1918. Have I a twin? If so I wish they would write to me. I have a dark complexion, light brown hair, brown eyes and am five feet one inch tall. I know how to crochet and knit. I am in the eighth grade in school. I have two miles and a half to go school. I ride my pony to school. Her name is Bonney. I have a father, mother and two sisters, one 19 years old and the other 25 years old. We live near the banks of the Snake river. My father runs a railroad pump and owns about 200 acres of land. We have a small garden and a small orchard. I had a girl friend come and visit me today. She is going to stay for a couple of days. Her name is Alberta Raymond. When we were reading the cousins' letters this evening we decided to write. This afternoon we went down to the river and took some pictures. My mother and sisters are knitting for the Red Cross. I hope to be your niece.—Bertha J. Walker, Kahlotus, Wash. Box 59.

During the last two weeks Aunt Nellie has received letters from the following cousins: Esther Peterson, Henry Besel, Mabel Stevens, Rainier Wittika, Marjorie Hunt, Caroline Hunt, Mabel Crofoot, Bonnie Beck, Irma Polson, Myrtle Penley, Carrie Lattimer, Minnie Vaughn, Mildretta Vaughn, Cecil Barnett, Hanna Schafer, Mary Thompson, Mildred Thompson, Olive Thompson, Juanita Cornvall, May Barnett, Lloyd Smith, Helen Torgeson, Pauline Thompson, Opal Jones, Anna Carlson, Stella Kahl, Leonard Johnson, Stella Lambert, Alven Gaetz, Coral Chapman, Iva Chapman, Dick Engle, Frida Daubel, Ralph Kisler, Wilma Yarwood, Derla McManamon, Thelma Emert, Florence Burr, Mabel Sutton, Gladys Sandbrink, Irene Overdorff, Henry Dew, Nellie Kelly, Elsie Jensen, Rosemary Goodale.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

Your Christmas Shopping Problems

SUCH of these problems as can not be solved by inspecting the stocks of your home stores will receive sympathetic and prompt attention on the part of our Mail Order Department, upon receipt of a letter or postal card with particulars.

**The next best thing to being able to shop personally in this, the Northwest's finest store, is to have at one's disposal the efficient Frederick & Nelson Mail Order Service.**

Christmas stocks are completely ready—more delightfully diversified than ever before—with plenty of toys, of course, for the children's Christmas.

If you can conveniently come to Seattle for part of your holiday shopping, you will thoroughly enjoy a visit to this store, with its unusually complete provision for the convenience and comfort of its customers.

FREDERICK & NELSON

AT FIFTH AVENUE AND PINE STREET, SEATTLE.

# News for Breeders

Secretary T. W. Tomlinson of the American National Live Stock association has issued a call for the twenty-second annual convention of the association in Denver, January 21-23. Such matters are scheduled to be considered as the work of the bureau of markets, price regulation of hides and wool, disease prevention among live stock, range and feed problems and general post-war readjustments necessary to the industry.

Unwilling to be deprived of their show at Lewiston by the abandonment of the live stock show this year, the Shorthorn breeders of the northwest have announced that on the date of their sale, which is Wednesday, December 18, they will hold a strictly purebred Shornhorn show. The show will occur in the forenoon, to be followed in the afternoon by the sale. The $1000 contributed by the Northwest Shorthorn Breeders' association, the American Shorthorn Breeders' association and the Northwest Live Stock show originally intended for distribution as prizes for Shorthorn entries last month will be distributed as prizes for the Shorthorn show December 18. Joe Turner of Myers Falls, Wash., is in charge of the arrangements for the show and sale.

## POULTRY

### Rhode Island Red Cockerels
Both Combs

RHODE ISLAND WHITE COCKERELS—BOTH COMBS.

W. A. HARRINGTON, 4312 42d S. West, SEATTLE, WASH.
RAINBOW COLLIE KENNEL.

## MILK GOATS

MILK GOAT DOES.

A few young ones soon to freshen. Immune from tuberculosis. Best milk for invalids and children. $50 up.

D. J. GILBERT, Newburg, Ore.

# OK JERSEYS

JERSEYS are the "O. K." breed for the working farmer. They are bred to make money for the owners. Feed in the manger is gold in the milk pail if it goes through a Jersey. There is no other breed that produces so much for so little as the Jersey. Beautiful as a picture, hardy in all climates, a genuine satisfaction and continuous source of income. Ask breeders for pedigrees and prices and let us send you some revelation facts about the money making Jersey.

**The American Jersey Cattle Club, 314 West 23rd Street, New York City.**

### Raleigh's Jolly Nobleman

Our senior herd bull traces twenty-one times to Golden Lad 1242 and fifty-four times to Sultan P. 7, progenitors of more champion Jerseys than any other family of the breed. His dam is out of a daughter of Golden Lad 1242.

EDGEWATER FARM,
Myrtle Creek, Ore,

### Meridian Dairy and Fruit Farm

Oldest Jersey herd in northwest Washington. Young stock for sale, both sexes, from good, producing dams. Herd headed by Kolander's Eminent 148256. A very fine bunch of young stock, both sexes, for sale.

B. C. CRABTREE, Lynden, Wash.

LUCKIAMUTE FARM JERSEYS WON.

At Oregon state fair, 1918, with only 15 head shown. Junior and grand champion bull, junior champion heifer, 1, breeder's young herd; 1, calf herd; 1 and 3, get of sire; 1, 2, 3 and 4, produce of cow; 1 and 2, senior bull calf; 1, junior bull calf; 1, 3-year-old cow; 1, 2-year-old cow; 1 and 2, senior heifer calf; 9 other prizes. Young bulls from R. of M. dams.

FRANK LAUGHARY & SON,
Monmouth, Ore.

### ROSE LAWN JERSEYS OFFERS

First prize junior bull calf, Idaho State Fair, Minnidoka Co. and Twin Falls Co. fairs. Sire, Rosys Jolly Golden Fern 135928.

Grand champion bull, above fair circuit. Dam Gem Nehalim Lassie, a reg. of merit cow line bred in blood of Hood Farm Torona, Oonan 23 and Figgis.

S. H. KAYLER,
Twin Falls, Ida.

### ASHBURN FARM

REGISTER OF MERIT JERSEYS.

A bred herd, tried out for several generations by every breeding test. Only the best blood lines. Three proven matings. Nothing for sale except from tried sires. Increase of both sexes for sale.

J. M. DICKSON & SON.
Shedd, Ore.

### Goldie's Nehalem Beauty

won grand champion of the Jersey breed for production, 1917. Her record, 80 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.03) and 433 lbs. butter. Both have been grand champions in show ring. Also a few females.

CLIFFORD F. REID,
Wilson bldg. Portland, Ore.

### Who Wants This Bull?

A double grandson of Kadia F., world's Jersey milk record for senior 4-year-old, 16,191 lbs. He is also a grandson of Helger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.

N. H. SMITH, Oregon City, Ore.

### Doerfler Farm Jerseys

Awarded first, second and third in milking contest, open to all breeds at Oregon State fair, 1918. Also first for 4 best cows, judged 50 per cent type and 50 per cent production. These were the 4 best prizes awarded. They also received many other prizes in the show ring, but type follows production: A few cows and a dandy bull for sale, with great records back of them.

F. A. DOERFLER, Prop. Silverton, Ore.

### Ashnook Farm Jerseys

Young bulls by Silver Chimes of S. B., whose first 6 daughters average 710 lbs. 80 per cent butter. A few good cows and heifers for sale.

DEL PERKINS, Carlton, Ore.

### WHERE CAN YOU BEAT IT?

Young bull, ready for service. Sire's dam, St. Mawes Poppy, 1120 lbs. 85 per cent butter, or 1196 lbs. 80 per cent, in a year. Is 75 per cent same blood as Poppy's Grace, that has recently finished year's test as junior 2-year-old, with 601 lbs. 85 per cent butter. His dam and dam's dam both register of merit cows. Priced at $250 for quick sale.

F. E. FLYNN, Perrydale, Ore.

### HIGH CLASS JERSEY BULL CHEAP

Last Chance of Rocky Run, by Doctor of Fair Acres, a register of merit sire; 5 daughters in the list, others on test. Dam, Buttercup of Rocky Run, R. of M. record, 474.25 lbs. fat at 3 years 10 mo, two milkings a day. She is a daughter of Rosaire Olga Lad, out of a R. of M. daughter of the great St. Mawes. Other young bulls and a few cows and heifers at reasonable prices.

E. L. LLOYD, Monroe, Wash.

### Ashwood Farm Jerseys

Senior herd bull—HOLGER—with 13 daughters in register of merit and more on test. Junior herd bull—ST. MAWES OF ASHWOOD—a son of Poppy's St. Mawes. Young bulls for sale at reasonable prices.

McARTHUR & STAUFF, Rickreall, Ore.

### Five Gold Medal Bulls

in the Jersey Breed. Golden Glow's Chief (bred by us), only one west of Michigan. Only one other sire has more 800 lbs. fat record daughters. Two of his sons are our present herd sires. Bull calves by them to offer.

IRON MINE FARM, W. M. Ladd, Owner.
Oswego, Oregon. D. Brooks Hogan, Mgr.

### All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

ED CARY, Carlton, Ore.
Station, La Fayette, Ore.

### Anoka Farm Jerseys

We have some choice young bulls up to six months old for sale, whose sire has a 714-lb. dam and 1120 lb. granddam. St. Mawes breeding. The Best in the West. Prices very reasonable. Address

R. B. SEELY,
R. 5, Sherwood, Ore.
Shipping Sta. Wilsonville, on Ore. Elec. Ry.

### LYNDEN JERSEY FARM

Herd sire son of Fororio's Olindes Pogis, of Hood Farm and St. Mawes of Lynden; whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to

P. MEENDERINCH, Lynden, Wash.

### Ready for Service

Young bulls of Golden Glow's Chief, and King Melia Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.

HENRY STEWART, Albany, Ore.

### Jersey Farm Dairy

Peter Mouw's Poland China hogs, Cotswold sheep, White Leghorn and Buff Orpington poultry, carefully bred, great foundation stock.

E. S. PELOT, R. F. D. 5, Idaho Falls, Ida.

### Both Grandsires Great

Young bull by a son of Foxhall's Fern Lad, sire of 6 register of merit daughters and out of a daughter of Golden Cicero, sire of 7 register of merit daughters. Young bull's dam has a private record of 476 lbs. fat as a 3-year-old and will be officially tested. Granddam a daughter of Uuright's Chief, half-brother to Golden Glow's Chief. Also a few granddaughters of Golden Cicero.

WILLAMETTEDALE FARM,
TOM PETTIT, MGR., CORVALLIS, ORE.

### Register of Merit Cows

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.

FOX BROS. Silverton, Ore.

### WAIKIKI FARM

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.
Route 7, Spokane, Wash.

### AT LAST

We can again offer a bull ready for light service. His three nearest dams average 649 lbs. fat in one year. Solid color and a splendid individual. Write today as we have but the one ready to use.

JOHN B. STUMP & SON, Monmouth, Ore.

### Jersey Home Jerseys

Young bull out of Olalla 2d, daughter of Olalla (806.25 lbs. butter as junior 3-year-old). Bull's sire, St. Mawes Prince, by Poppy's St. Mawes, and out of Gertie's Fern Princess (842.5 lbs. butter), both 80 per cent. Also other good young bulls.

THOMAS WILLIAMS, Forest Grove, Ore.

### St. Mawes—Rinda Lad

The two most popular strains of Jerseys in the northwest. Young bulls from register of merit cows for sale.

G. G. HEWITT, Monmouth, Ore.

# Grain and Produce Markets

## Grain Market.

CHICAGO, Dec. 7.—Bears had things much their own way in the corn market today, owing chiefly to expected big receipts on Monday and to the loosening of some of the wartime curbs on trading. Prices although steady at the finish, were 1⅞c to 2½c net lower, with January $1.28½ to $1.28⅝ and February $1.28 to $1.28⅛. Oats closed ½c to 1c down, and provisions off 7c to $1.

Liquidations, stop-loss selling, bear pressure and apparent lack of buying power all contributed to the weakness shown in the corn market. Even the usual week-end adjustment of trades brought about no important rallies. There were predictions that receipts here Monday would total 500 cars.

Oats descended with corn. On the decline, however, there was fair buying, said to be against Omaha and Minneapolis shipping sales to the seaboard.

Scattered selling was sufficient to make prices reflect the down-turns of grain and hogs. May deliveries bore the brunt of the pressure.

**Cash Quotations.**

Chicago, Dec. 7.—Corn—No. 2 yellow, $1.50; No. 3, $1.45; No. 4 yellow, $1.37½@1.40½. Oats—No. 3 white, 73@74c; standard, 73¼@74¼c. Rye—No. 2, $1.62@1.63. Barley, $9@10.35. Timothy, $8@11; clover, nominal. Pork, nominal. Lard, $26.15. Ribs, nominal.

**Pacific Northwest Grain.**

PORTLAND, Dec. 7.—Grain future bids: Oats, No. 2 white feed, December, $54; January, $54.50; barley, standard feed, December, $49; January, $49; barley, standard "A," December, $49, January $49.50. Eastern oats and corn in bulk: Oats, No. 3 white, December and January, $51; 38-pounds, clipped, December $52; January, $52.75; corn, No. 3 yellow, December, $57.50; January, $57; No. 3 mixed, December, $57; January, $56. Sales, 100 tons December feed barley at $57, 300 tons January yellow corn at $57.50.

**Minneapolis Grain.**

MINNEAPOLIS, Minn., Dec. 7.—Wheat—Receipts, 610 cars, compared with 183 cars a year ago. Cash—No. 1 northern, $2.23. Corn—No. 3 yellow, $1.36@1.39. Oats—No. 3 white, $1.36@1.39. Oats—No. 3 white, 68½@69½c. Flax, $3.46@3.47⅛. Flour, 10c lower. In carload lots, standard flour at $10.30 a barrel, in 98-pound cotton sacks. Shipments, 81,569 barrels. Barley, 84@93c. Rye—No. 2, $1.58½@1.59. Bran, $27.73.

## Live Stock Quotations.

**At Omaha.**

OMAHA, Neb., Dec. 7.—Hogs—Receipts, 6700; market steady. Heavy, $16.75@17.40; mixed, $17.10@17.30; light, $17@17.45; pigs, $10@16.25. Bulk of sales at $17@17.40.

Cattle—Receipts, 400; market steady. Native steers, $10.50@18.50; cows and heifers, $6@12.50; western steers, $9.50@16.50; Texas steers, $8@12; cows and heifers, $6@11; canners, $4.50@6; stockers and feeders, $6@13; calves, $7.50@13.50.

Sheep—Receipts, 2400; market steady. Culls, $4.50@7.50; wethers, $9.50@10.50; ewes, $7.50@9; lambs, $13.50@15.15; feeder lambs, $10@14.15; yearlings, $10.50@11.50.

**At Chicago.**

CHICAGO, Dec. 7.—(United States Bureau of Markets.)—Hogs—Receipts 32,000; left over from yesterday, 37,168. Market slow; trading confined largely to good hogs, such selling steady to 10c lower; light and packing grades neglected; big supply of hogs going over in first hands, thousands without bids, killing facilities being overtaxed. Pigs and underweights unevenly lower; butchers, $17.40@17.75; light, $16.85@17.60; packing, $16.75@17.35; throwouts, $15.75@16.50; pigs, $14@15.25.

Cattle—Receipts, 5000; compared with a week ago, beef steers 25c to 50c higher; butcher stock up 50c to 75c; bulls, 25c to 50c higher; calves, steady; desirable feeders, strong to 25c higher; others steady.

Sheep—Receipts, 3000; compared with a week ago, fat lambs 15c to 25c higher; yearlings, mostly 25c higher; wethers, 25c to 50c up; ewes, strong to 25c higher; feeders, steady.

**At Seattle.**

SEATTLE, Dec. 7.—Hogs—Receipts 208; dull. Prime light, $17@17.25; medium to choice, $16.75@17; medium to heavy, $15.75@16.25; rough heavies, $14.75@15.25; pigs, $14.75@16.25.

Cattle—Receipts, 35; dull. Best steers, $11@13; medium to good, $8@8.50; medium, $7@7.50; bulls, $5@7.50; calves, $5@10.

**Spokane Union Stock Yards.**

| Week ago | .. | .. | .. | 34 |
| Year ago | 47 | .. | 129 | .. |
| Two years ago | 45 | .. | 21 | .. |

Saturday's receipts were light, as anticipated, with but one straight carload of cattle and one carload of hogs arriving. These, together with a few drive-ins, constituted the day's offering. The cattle receips, while very light, contained some very good cows, with the steer end amounting to practically nothing. At the close of trading everything in the yards had changed hands and the market closed steady at the following quotations:

| | |
|---|---|
| Prime steers | $12.00@12.50 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Med. to good cows and heifers | 6.00@ 7.00 |
| Com. to med. cows and heifers | 4.75@ 5.75 |
| Canners | 3.00@ 4.25 |
| Bulls | 5.00@ 6.50 |
| Calves | 6.00@ 9.50 |
| Stockers and feeders | 6.00@ 8.00 |

The hog run was made up mostly of stockers and feeders. What few fat hogs were offered carried but plain kill, and bulk of sales for this class of stuff at $16.50@16.65 denotes steadiness at the following quotations:

| | |
|---|---|
| Prime mixed | $16.60@16.75 |
| Medium mixed | 16.50@16.60 |
| Rough heavies | 14.60@14.75 |
| Pigs | 14.50@16.00 |
| Stockers and feeders | 12.00@14.50 |

Bulk of sales at $16.65.

No sheep were reported arriving up till a late hour, and nothing reported in transit. The absence of sheep in any quantity for some time past has strengthened the demand here considerably and an extremely strong market exists at the following quotations:

| | |
|---|---|
| Prime lambs | $10.00@11.00 |
| Fair to medium lambs | 8.50@ 9.50 |
| Prime yearlings | 8.00@ 9.00 |
| Prime wethers | 7.50@ 8.50 |
| Best mutton ewes | 6.50@ 7.50 |
| Breeding ewes, 1 to 4 years | 12.00@15.00 |

**At Portland.**

PORTLAND, Ore., Dec. 7.—Cattle—Steady; receipts, 77. Steers, prime, $11.50@12; good to choice, $10.50@11.50; medium to good, $9.50@10.50; fair to medium, $8@9; common to fair, $5.50@7.50; cows and heifers, $7.75@8; medium to good, $6@7; fair to medium, $5@6; canners, $3@4; bulls, $5@7; calves, $9@12; stockers and feeders, $6@9.

Hogs—Steady; receipts, 509. Prime mixed, $16.75@17; medium mixed, $16.50@16.75; rough heavies, $14.75@16; pigs, $14@15; bulk, $16.85.

Sheep—Steady; receipts, 46. Prime lambs, $12@13; fair to medium, $9@11; yearlings, $10@11; wethers, $9@10; ewes, $6@8; rough heavies, $14.60@14.75.

## Portland Market.

PORTLAND, Ore., Dec. 7.—The cube butter market is in better shape since a carload was shipped east. Extras are held at 61 cents. Prints are firm at the recent advance.

The scarcity of eggs has become acute, and selects are now bringing 75 cents. Supplies of storage and eastern fresh eggs have been cleaned off the market. There has been some increase in the home lay, but not enough yet to count.

Poultry and dressed meats drag, with moderate receipts.

The potato market is weak and tending lower. Yakima Netted Gems are selling locally at $1.85@2, and the best Oregon Burbanks at $1.50@1.75, with ungraded stock going at $1.35. Farmers are getting $1.25. The onion market is also slow, Oregons bringing $1.75@2 and Californias $1.50. Apples hold steady, with only a fair local demand.

Hops have climbed to 28 cents. London firms are doing all the buying, and have nearly cleaned out the northwest. They are also offering 20 cents for contracts for the next three years.

Butter—Cubes, extras, 59c; prints, 62c; butterfat, No. 1, 67c, delivered.

Eggs—Oregon ranch, candled, 71c; selects, 72c per dozen.

Cheese—Jobbers' buying prices, f. o. b dock, Portland: Tillamook triplets, 36c; young Americas, 37c per pound. Coos and Curry, f. o. b. Myrtle Point, triplets, 35¾c.

Poultry—Hens, 23@26c; ducks, 28@30c; geese, 18@20c; turkeys, dressed 34c.

Pork—Fancy, 20@20½c.

Veal—Fancy, 20c.

Potatoes—Oregon Burbanks, $1.50.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30@33 per ton; valley timothy, $27; alfalfa, $28; valley grain hay, $26; clover, $27; straw, $9@10.

## Seattle Market.

SEATTLE, Wash., Dec. 7.—The export demand will take care of all the extra fancy apples now held in eastern Washington, and coupled with a brisk demand in the east, will, it is believed, sustain the present f. o. b. prices of $2.15 to $2.25 to the end of the season. Growers and shippers are now more than ever inclined to hold.

**Bid Prices to Producers.**

Eggs—Select ranch, 68@69c per doz.; pullets, 58c per doz.

Butter—Fresh dairy, 30c per lb.; butterfat, 70c per lb.; bakers', 28c per lb.; raw milk, $3.60 per cwt.

# The Dog at Her Doorstep

(Continued from page sixteen.)

Indecision, Minnie renewed her commands, and, with strength born of despair, tugged at his thick, stubborn neck. At last she was heeded. Tramp permitted himself to be pulled away from his victim, but slowly. His teeth were still bared, and his eyes gleamed wickedly.

"Run! Run!" implored Minnie. "He'll kill you!"

Cautiously, his face mottled yellow and purple, horror in his eyes, the man edged toward the door. Then he ran, nor did he cease running as long as Minnie could see him.

Tramp stalked stiffly from the house. He was offended, apparently. He met little Bob rounding the corner of the house and weeping lustily. The dog relented sufficiently to caress the child lightly with his silky, red tongue. It would be interesting to know the thoughts that ran dog-wise in the animal's mind. To all appearances he felt humiliated and discouraged; and with sadness in his gentle brown eyes he paddled silently back to his nest in the hay and curled up to sleep.

Autumn at last! The haze of summer cleared from the sky and the sun shone a little farther away, but warm and comforting in the day. At night it was chilly. Jack Farley should be home almost any day. The coyotes had quit howling about the cabin at night, for it wasn't a safe thing to do. For many nights Tramp had slept undisturbed on the doorstep, and Minnie felt strong and brave. She thought lightly of the battles with the cougar and the man, and had all but forgotten the thin, eerie wails which twice she had heard in the night.

"They say there's a cougar denned up somewhere over in Dry coulee," said Kirkland one day when he came with the water. "Richardson's cowboys have been hunting it all summer. They think maybe it's the mate to the one Tramp killed. If you're afraid, we'll send one of our girls over to stay with you."

The same sickening fear clutched Minnie's heart; but she choked it down. Jack should be home soon; and there was Tramp, the hero, at her doorstep. She said she wasn't a bit afraid.

"You're a brave little woman, all right," said Kirkland, with admiration in his eyes. "But—well, I wouldn't be a cougar for a million dollars with that dog around. You're safe, I think."

Several days passed with no cause for alarm, and Minnie again felt safe. Hourly she scanned the distant point in the prairie where first the white-covered wagon should appear.

She was surprised in midafternoon one day by hearing Bob call to her from where he was playing in the grass not far from the house:

"Mama, mama, see kitty! See kitty!"

Several months before he had had a kitty, but it had disappeared. A coyote had caught it, perhaps. Minnie absently thought it might be another kitten, or the same one returned. Afterward the absurdity of such a notion occurred to her.

"Yes, dear, play with the kitty," she called.

As she turned back into the house she caught a glimpse of the child stooping as if to pick up the kitty. Instantly he cried out in pain. Holding up a hand for his mama to see, he backed away from the "kitty," calling.

"See han'! See han'!"

She ran toward him, alarmed; perhaps it was a wild animal, or even a snake. She had covered scarcely half the distance when a roundish, yellow head with upright ears and yellow, unwinking eyes rose from the grass not thirty feet from little Bob.

"Tramp! Tramp!" she screamed, and frantically rushed to her child.

With strange distinctness she heard Tramp's startled bark, which instantly changed to a roar of wrath. He, too, had seen the cougar's head. Asleep in the haystack, with the wind blowing wrong, he had neither scented nor heard the stealthy approach of the beast.

From the rear came the pounding of the dog's feet as he swept after her. She saw the fierce, tawny head sink, then rise partly with curling black lips and glistening fangs. Something stirred in the grass near Bob. Tramp, sweeping up like a cyclone, snatched up the moving thing, crunched it once and tossed it kicking in the air. It was a cougar kitten. He lunged at another tawny little form, which evaded him. Then the cougar mother took a hand. With a piercing snarl she flashed through the air, ripping the sod with her claws where she struck. She took two jerky leaps to get her distance, crouched an instant with snapping jaws and lashing tail; and in a mighty bound hurled herself at the dog with force that would have staggered an ox. The two went down in a whirling heap, with the cougar uppermost.

Minnie had reached Bob and snatched him to her. She was dazed a little, terrified, but strangely attracted. Afterward she wondered why she had not sought safety in flight. But she did not flee. She stood rooted to the spot, arms tightly clasping little Bob, eyes tensely drawn to the furious battle that raged at her very feet.

Tramp fought calmly, shrewdly, dangerously. In a slight pause Minnie saw his wide, powerful jaws and fearless, blazing eyes; in the next instant a roundish, tawny head with sneering black lips and teeth like daggers whirled uppermost. The battle raged toward her. She ran backward to avoid the uprearing, whirling beasts, and nearly fell. When they receded she followed, hovering near, watchful and praying.

Suddenly astonishment held her still. In the furious rolling and rearing of the beasts one movement had seemed a little steadier, a little surer than the others—then a pause. Tramp had his hold—the vise-like grip in which he had slain the first cougar, the one he had tried to secure on the man, and which had been instantly fatal to the coyote. More than ever before, Minnie realized that Tramp was no ordinary dog, and that by some very skilful master he had been trained to kill.

With cunning leverage shrewdly retained the dog worked his enemy lower and lower to the ground. With senses reeling, Minnie realized that the cougar was dying. As if through a mist, she saw the beasts slightly uprearing, and caught the gleam of round, yellow eyes which became glazed and lifeless. Then it was dark.

Little Bob's arms were around her neck, and his crying voice seemed to awaken her. She started up numbly. Tramp was licking her hand. The mists fell away, suddenly, and she sprang to her feet with little Bob in her arms.

There was no need for alarm. The cougar was dead. With drawn breath Minnie stepped near the gaunt, lifeless beast and marveled at its powerful, sinewy limbs and wicked jaws. She could see that it was thin, weakened, perhaps, from hunger; but yet it was a wonderful thing that such a beast could be slain in fair combat by the gentle-eyed, humble dog at her feet.

Something stirred near the gaunt, tawny form, and Minnie drew back with a little cry. She looked long and with pity. It was the cougar kitten, as large as an average-sized cat, that had crept back to its dead mother. A strange sorrow for the savage little orphan saddened the heart of the human mother, and she stooped toward the little creature. It turned upon her with needle claws and eyes glowing green. Bob wiggled with alarm and cried:

"See han'! See han'!" He showed mama his scratched little fist. Mama must leave the bad kitty alone.

With a lump in her throat, Minnie turned away, leaving the kitten cowering beside its dead mother. Tramp made no move to harm it, but followed his mistress with humility and love in his gentle brown eyes. Minnie saw that he was suffering from deep wounds. With loving words and many a tender pat on his huge, bleeding head, she urged him to the house. He limped wearily, but uttered no sound.

First she gave him water, and he drank thirstily, plunging his huge, blood-stained muzzle deeply into the cool liquid. Slowly, painfully, with a foreleg nearly dragging, he went to the doorstep and sank down.

He laid his wet muzzle on his paws; but that wasn't comfortable. Something was wrong. He stared reflectively at the widening pool of blood on the doorstep. Minnie noticed it, too, and hastened for her remedies.

One paw was good, anyhow; so the dog laid his muzzle on the uninjured paw. There was a message in the ground. He lifted his head quickly and looked in the direction of the sound. A wagon was coming. The man in the seat waved his hat.

Perhaps Tramp recognized the man as he who, a long time ago, had given him water at this same doorstep. He did not bark.

Hastening to the dog with warm, sterilized water and clean cloths, Minnie saw the approaching wagon, and the man in it who waved his hat. She responded briefly; then sank beside Tramp and strove swiftly and tenderly to check the flow of blood from his wounds. Comforted, the dog sighed and closed his eyes.

A fly buzzed near, and then drank from the crimson pool which had ceased to spread over the doorstep and was blackening at the edges. Satiated presently, the insect circled around and lit on the dog's nose, which snapped upward with quickness that sent the small disturber somersaulting through the air.

Another buzz! Tramp snapped viciously and missed! Wrathfully he flailed at the winged marauder with his well paw, and missed. Alarmed, the fly buzzed dolorously away, then back and around the dog's head. With teeth wickedly agleam and an evil light in his brown eyes, Tramp moved his head in a circle with his enemy till it buzzed away. Sighing a little, he hunched into a more comfortable position and dozed.

## CORN IN THE OKANOGAN.

Messrs. McGlaughlin and McGinty, two farmers of the Okanogan valley, not far from the town of Okanogan, each produced over 100 bushels of corn per acre from local seed. A few years since Mr. McGinty took to the Spokane corn show two varieties of corn, grown from seed he had developed. The managers of the show were so impressed with the corn it was decided to give each variety recognition and a name. They were called Mackie's Gold Mine and Mackie's Silver Mine. County Agriculturist Holt is proud of his county's record on corn growing. He urges and predicts still more and better corn. H. A.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

### SITUATIONS WANTED—Female 18

WANTED—CHARGE OF A COMFORTABLE country home of well-to-do bachelor or widower, stockman or farmer; capable housekeeper and cook; 45 years, with bright, ambitious boy, wanting to learn from experience; best of references. Write Mrs. M. Hensman, 8220 Washington street, Spokane, Wash.

### SITUATIONS WANTED—Male 21

THOROUGHLY EXPERIENCED AND CAPable creamery man and butter maker seeks job calling for a broad knowledge of the creamery business, where he can make his services very valuable. Address P. O. Box 499, Ritzville, Wash.

### EDUCATIONAL 45

IN BUSINESS OR ACTUAL LIFE THE BEST is none too good for you. Write Gooding college, Gooding, Idaho, Charles Wesley Tenny, president, today.

TELEGRAPHY—YOUNG WOMAN'S POPULAR vocation; good paying positions available. Write for booklet. Pacific Telegraph Institute, Spokane.

SEND NEWS NOTES TELLING OF THE work of your school today. Address the Educator, Gooding, Idaho.

### HONEY, BEESWAX—Wanted 58

SEND SAMPLES OF YOUR HONEY AND beeswax. State quantity, price. Oregon Farm Products Co., 380 Halsey st., Portland.

### EGGS AND BUTTER WANTED. 59

WE ARE ALWAYS IN THE MARKET FOR good eggs and dairy butter. Send us your next shipment. Oregon Farm Products Co., 386 Halsey st., Portland, Ore.

### MISCELLANEOUS—FOR SALE 60

TRAP COYOTES—FULL INSTRUCTIONS ON a sure catch method and reliable scent recipes sent on receipt of $5. C. L. Willis, Dillard, Ore.

FOR SALE—175 TONS HAY, 50 HEAD OF grade Holstein cattle, 5 horses and machinery, with good lease. Walter Allison, Belfair, Wash.

### MISCELLANEOUS WANTED 63

POULTRY WANTED.
We are cash buyers of poultry and dressed meats, also cream. Write us for prices, shipping tags and premium catalogue for cream shippers.
COMMERCIAL CREAMERY CO.
SPOKANE, WASH.

HIGHEST PRICES FOR POULTRY AND EGGS. Washington Meat & Poultry, 469 Second avenue, Spokane.

### LIGHTING EQUIPMENT 74

THE SAFETY LAMP CO., 1208 HOWARD ST., Spokane, Wash. Gasoline lighting and supplies.

### MACHINERY—For Sale 93

FOR FARM LUMBERING USE
"AMERICAN" PORTABLE SAWMILLS
Carried in stock by
HIGGINS MACHINERY COMPANY.
312 1st Ave., So., Seattle. Write for Catalog.

FOR SALE—CLEVELAND TRACTOR; USED 25 days; perfect shape, except track, which will need repairing; also tractor plow; bargain. Byrd J. Clark, Lyle, Wash.

### AUTOMOBILES 114

FORDS START EASY IN COLD WEATHER with our new 1919 carburetors; 34 miles per gallon; use cheapest gasoline or half kerosene; increased power; style for any motor; very slow on high; attach it yourself; big profits to agents; money back guarantee; 30 days' trial. Air-Friction Carburetor Co., 321 Madison, Dayton, Ohio.

HEADQUARTERS FOR USED CARS.
Trucks and tractors; printed list. Spokane Auto Market, W315 Sprague ave., Spokane, Wn.

AUTO RADIATORS, FENDERS AND LAMPS repaired. Lester Allen, 607 Second avenue, Spokane.

### STOVE AND FURNACE REPAIRS. 126

WRITE M. S. RUBENS, SPOKANE, FOR ANY parts needed to repair stove, furnace.

### PETS—Dogs, Birds, Etc. 171

WANTED—YOUNG, TRAINED AND GUARANteed wolf dogs; state kind and price. Chas. Kemsley, Sublett, Idaho.

### RABBITS and HARES 173

FOR SALE—WHITE ENGLISH RABBITS, breeders, $1.50; 4 months, 60c. Austin Rull, Deep River, Wash.

### POULTRY 174

BUY YOUR INCUBATOR NOW.
Incubators will be scarce and high next spring. Send for our list of new and used incubators and save money. Agents: Famous Queen incubators and brooder stoves. Queen Hatchery, 89 Pike st., Seattle.

DANIEL'S WHITE PLYMOUTH ROCKS. THE greatest egg laying big bird known; send for our special offer on hatching eggs. Catalog free. Ideal Poultry Yards, Box 174, Hoquiam, Wash.

EXCELLENT S. C. BUFF ORPINGTONS AND S. C. White Plymouth Rock cockerels, $2 and $2.50 each. Mrs. James Camp, Route No. 3, Rosalia, Wash.

WHITE WYANDOTTE COCKERELS; HEAVY laying strain; Just-a-Mere, Croft. 4137 Sunnyside ave., Seattle, Wash.

FOR SOMETHING GOOD IN SILVER WYANdottes and Golden Campines, write G. G. Wherry, Payette, Idaho.

50 USED INCUBATORS FOR SALE, FROM 70 to 700 egg capacity. A. R. Badger, Centralia, Wash.

SHIP US YOUR POULTRY. TOP PRICES. Home Poultry House, 8173 Washington, Spokane.

WILD AND BRONZE TURKEYS; BREEDERS, for sale. E. Y. Sanders, Roy, Wash.

### LIVE STOCK 177

REGISTERED CHESTER WHITE BOARS, ready for service; weighing 200 lbs.; sired by Palouse-Wonder, by King Senator, No. 35809, and by Wonders Daughter, No. 77910, and blue ribbon sows. H. S. Curtis, Palouse, Wash.

C. I. C. HOGS, BOTH SEX; BEST OF BREEDing. Dr. S. T. Miller, Twisp, Wash.

### LIVE STOCK. Continued. 177

YOUNG JERSEY BULL AND SEVERAL young Jersey cows—St. Mawes breeding—all splendid animals. Also complete Empire milking machine, very reasonable. A. Adolphsen, R. 2, Chehalis, Wash.

FOR SALE CHEAP—TWO REGISTERED Shire stud colts, coming one and two years old next spring, at farmer's prices. Cut out the middleman. Write for particulars. J. A. Brewster, Lebanon, Ore.

DUROC BARGAIN—REGISTERED YEARLING boar; a great breeder, $55; worth double. Shadeland Farms, Amity, Ore.

TWO REGISTERED GUERNSEY BULLS, ONE 5, one junior 2; will sell either. Fir Grove Farm, Clarks Fork, Idaho.

THREE REGISTERED SHORTHORN BULLS, 18 months old, for sale. Ernest W. Haag, Sandpoint, Idaho.

### HORSES and VEHICLES 183

3400-LB. TEAM; ONE GRAY AND ONE black; well trained on logging work; about 7 years old; pronounced by veterinary surgeons to be worth $700; to move at once, will be sold for $500. Inquire Copeland, 802 E. Pike st., Seattle.

3000-LB. PAIR OF 7-YEAR-OLD BAYS, HARness and wagon for $975. Inquire Copeland, 802 E. Pike st., Seattle.

### HOTELS 306

WHITE'S HOTEL AND RESTAURANT—Rooms, hot and cold water, 75c up. Breakfast 20c to 40c; dinner, 25c to 50c. Sprague and Stevens, Spokane.

GALAX HOTEL; NEW AND MODERN; 75C and $1. Main and Bernard, Spokane.

NEW MADISON HOTEL, 75C AND UP. 1ST and Madison, Spokane, Wash.

### RUBBER STAMPS AND SEALS 384

FOR RUBBER STAMPS, STENCILS, BADGES, numbering machines, checks, seals, etc., write Pacific Coast Stamp Works, Seattle and Spokane.

### TAXIDERMISTS 426

FUR RUG MOUNTING A SPECIALTY, HEADS, animals and birds mounted. Withers Bros., 822 Sprague, Spokane.

FIRST-CLASS WORK, ALL BRANCHES TAXIdermy and furs. Mohr, Bernard st., Spokane.

### SEEDS. 620

RYE GRASS SEED, LOCAL GROWN; GOOD quality, $12 per cwt. Rhoten Farms, Salem, Ore.

### FARM LANDS FOR SALE 651

SNOHOMISH COUNTY, WASH., FARM LANDS. The greatest proposition on the market for the man who wants a farm. 12,000 acres to select from; 3½ miles salt water front; 20 miles of beautiful lake shore; good towns, railways, steamboats, factories, mills, schools, churches, paved roads; where the largest profits are made, where the great variety of crops and wonderful productive climate makes it the most productive farm section of America. Good lands in good localities, as low as $25 to $35 per acre. 10 yearly payments. Send for maps and literature to the Brownell Land Co., 904 Third ave., Seattle, Wash.

YOUR CHANCE IS IN CANADA—RICH LANDS and business opportunities offer you independence; farm lands $11 to $30 acre; irrigated lands, $35 to $50; twenty years to pay; $2000 loan in improvements; loan of live stock; taxes average under twenty cents an acre; no taxes on improvements, personal property or live stock; good markets, churches, schools, roads, telephones; excellent climate—crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklet. Allan Cameron, general superintendent land branch Canadian Pacific Ry., 30 Ninth ave., Calgary, Alberta.

NO CROP FAILURES.
800-acre stock and wheat farm (Vermilion, Alberta); partly cultivated; fair set buildings; watered by two lakes; good soft water. Price, including 50 tons hay, $15,000; small payment down, balance easy terms, at 6 per cent.
UNION INVESTMENT COMPANY,
406 ZIEGLER BLK., SPOKANE, WASH.

160 ACRES TIMBER; MILLION FT. WHITE pine, 2 millions cedar, 1½ millions mixed and 3000 mixed cedar poles; clear price $4000, sell on terms or trade for residence. 160 acres Alberta, partly improved, clear; trade for Washington property. Union Investment Co., 406 Ziegler block, Spokane, Wash.

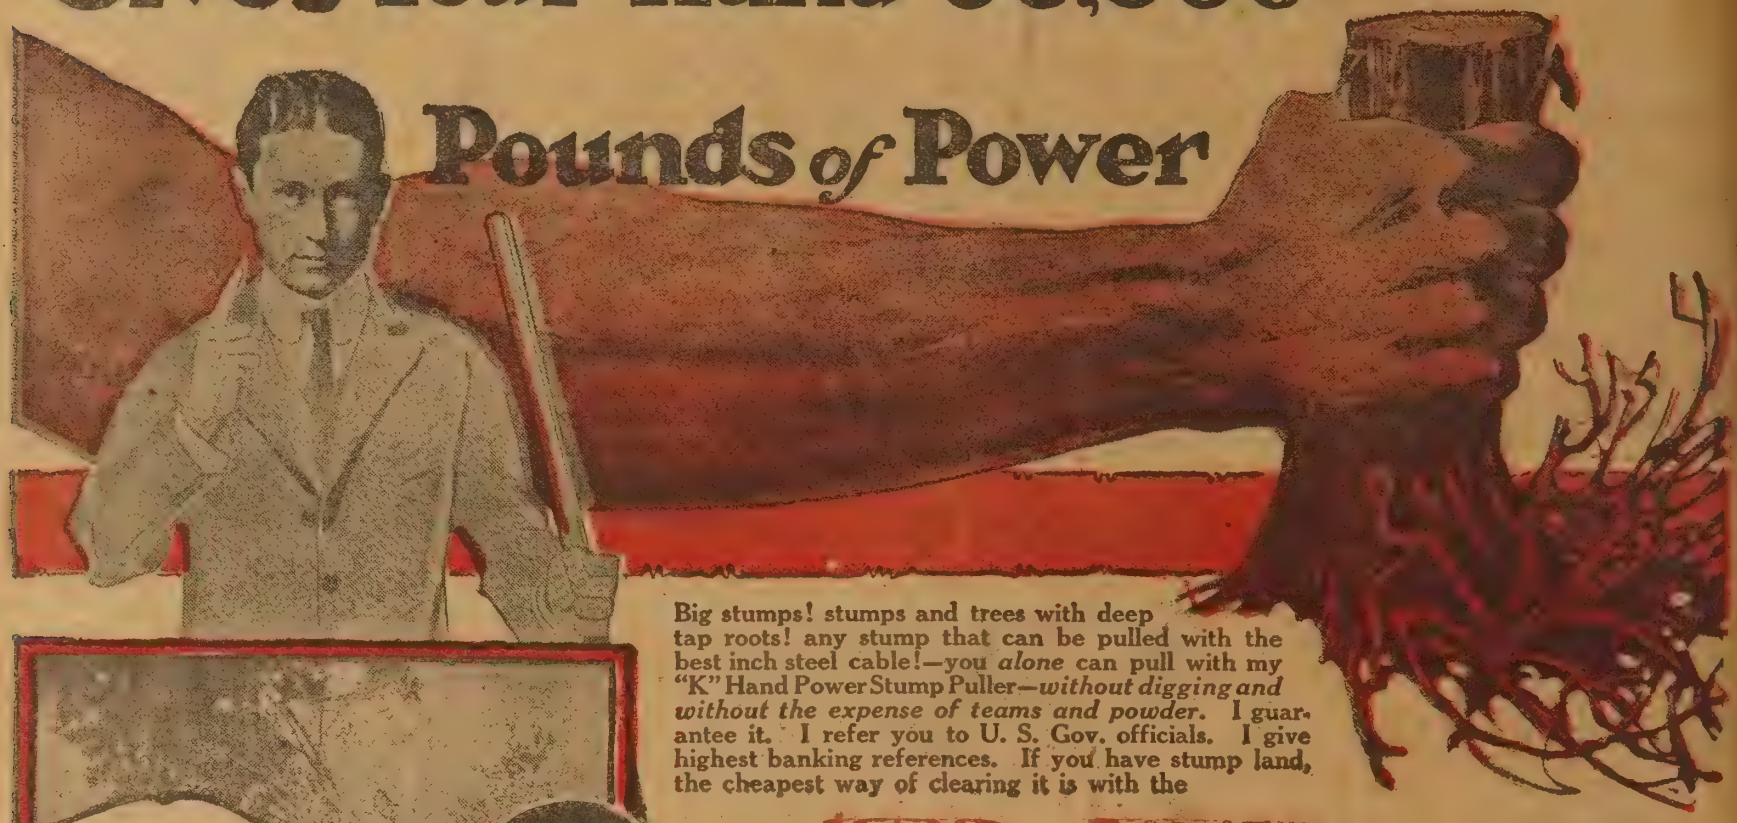
FOR SALE—ALFALFA STOCK AND WHEAT farms, at a price that the land will pay for itself in two crops. Well improved land for $75 to $100 per acre, the cheapest water in the world. John Hardwick Realty Co., Vale, Ore.

FOR SALE—ONE OF THE BEST 80S IN THE Payette valley; well improved; high state of cultivation; crop this year $6000. For particulars, address owner, Box 68, Route 1, New Plymouth, Idaho.

### FARM LANDS—WANTED 654

WANTED—TO HEAR FROM OWNERS OF land in Idaho, Washington or Oregon for sale or trade for western Montana land. Scott & Rummel, R. D. 1, Eureka, Mont.

IF YOU WANT TO SELL OR EXCHANGE your property, write me. John J. Black, 80 st., Chippewa Falls, Wis.



WANTED—TO HEAR FROM OWNER OF farm or unimproved land for sale. O. K. Hawley, Baldwin, Wis.

**Just What You Want**
may be offered in this weeks' Want Ads at a bargain. It's a good idea to look them over every week.

When answering advertisements don't fail to mention this paper.

# My K Hand Stump Puller

## Gives Your Hand 96,000 Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

HAND POWER

# K Stump Puller

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 3 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

### How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

### A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not work*

### Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

**Special Offer** I am making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write me today for full information and for free book on Land Clearing.

**Walter J. Fitzpatrick**

Box 32 182 Fifth St. San Francisco, Cal.

H. G. Hunzicker of Foster, Wash., pulling a 24-inch fir stump with deep tap roots out of hard ground, without using powder or cutting any roots.

**Tear Out and Mail Today**

Walter J. Fitzpatrick
Box 32 182 Fifth St., San Francisco, Cal.
Send me full particulars on your special offer and your free booklet on Land Clearing.

THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

Answer the
Red Cross
Christmas Roll Call
All you need is a heart and a dollar

**THIS year America harvested a mighty crop of corn.** It will run well over two-and-a-half billion bushels, which, huge as it is, is still about one-fourth billion bushels less than the yearly average.

Most of us can remember some twenty-five years ago when corn sold for 15c a bushel, or less. Yet today it brings many times that much. What gives it its value?

Corn is worth money ***principally because it can profitably be fed to cattle and hogs.*** More than eighty per cent of the country's corn crop is consumed upon the farms for feed. And the reason it can be consumed where it is produced is that the farmer or stockman has convenient, nearby markets where he can sell his livestock any day in the year and receive spot cash for his shipments.

## The Prop of the Feeding Industry

If there were no quick markets, if the killing of cattle, hogs and sheep were in the undeveloped stage in which it was when the evolution of the packing industry began, could farmers today afford to plant millions of acres to corn and feed it to their animals?

Livestock makes the value of corn—not corn the value of livestock. Rough grains would be worth little if there were no demand for grain-fed animals, and lands devoted to corn-growing would never have attained their present high value without the development of marketing outlets for stock, created by the packing industry.

## Making a 12 Months' Selling Season

In the opening up and maintenance of these markets Armour and Company have played an important part. Armour plants are located as near to centers of production as economical operation will permit. Modern refrigerator cars carry the meats and the meat products to every part of the country. There are over four hundred Armour branch houses in heavy consuming centers each with its corps of trained salesmen still further extending the markets.

And for many years it has been the Armour policy to reinvest over ninety per cent of the entire earnings of the business in new plants and equipment, instead of taking them out in dividends. Thus have markets been expanded and developed to insure safety for American livestock growers.

Whether you grow corn to sell to others to feed, or feed it to livestock yourself, it is well to bear in mind the part that Armour and Company have played in giving it the value that it has today.

## *Replenishing Europe's Depleted Herds*

**Since the war began, there has been a decrease in European meat-animals by some 114,000,000 head. Potatoes, wheat and like food-stuffs can be produced in quantities in a few months after peace is declared. But it will take years to build up a sufficient supply of cattle, hogs and sheep in devastated Belgium and France. The world will continue to look to American producers for meat for a long time to come.**

# Need One Big Boss, Sure Enough

## *Peace Conditions, No Less Than War Conditions, Demand Farm Production Administrator*

The crisis demands the immediate appointment of the ablest available man in the country as national war-time food production administrator, who will fire the imagination of all the people, consumer as well as producer, to the supreme necessity of increased food production, and who will establish far-reaching cooperation with the agricultural department, agricultural colleges and farmers in all sections of the country in meeting their war-time food production difficulties, just as Hoover has brought home to every family the need of food conservation, and just as the Red Cross campaign has swept the entire nation under the leadership of Davison.

The above is the closing paragraph of a telegram sent to President Wilson from Spokane, December 28, 1917, launching the movement for the immediate appointment of a national food production administrator. Representative interests of the Pacific northwest were included in the signatures for this telegram, the first to sign being The Pacific Northwest Farm Trio, by its managing editor.

"Crisis Demands Food Production Administrator," was the heading under which this movement was first chronicled in THE FARMER of January 31, 1918. Reprints of the telegram were also sent broadcast throughout the country and here are some of the replies received:

**Senator Miles Poindexter of Washington: Am immediately recommending to the president favorable action upon the suggestions contained in your joint telegram, which I think is highly meritorious.**

**Senator William E. Borah of Idaho: I have your letter of the 31st. I think your idea a good one and I shall be glad to cooperate in any way I can.**

**Hon. Champ Clark, speaker of the house of representatives: I have your note with the enclosures. Your general idea is one I have been preaching for a good while. I have tried to persuade the powers that be to that effect, apparently, without success.**

**Governor Arthur Capper, Kansas: I am in full accord with the movement, and for several months I have been doing everything in my power to arouse our people to the necessity of raising every possible pound of foodstuffs.**

**Governor Lynn J. Frazier of North Dakota: Your message sent to the president provides the means which I believe would be a great assistance in the increase of food production for next year.**

**Governor Sidney J. Catts of Florida: I have your letter of recent date, in which you tell me that the biggest war problem of today is war supplies, and asking me if your telegram to the president does not help. I am sure it does.**

**Wesley Webb, secretary of the Delaware state board of agriculture: Your telegram to President Wilson on food production strikes the matter squarely and solidly, and it has the hearty and unqualified support of the department of agriculture of Delaware.**

**C. P. Norgord, Wisconsin state commissioner of agriculture: Your appeal to President Wilson I believe is seconded by all of those who know the food situation, and the present prospects for the coming crop.**

**P. G. Holden, director of agricultural extension department of the International Harvester company: I am in hearty sympathy with the suggestion which you make, but I also want to add that I think it should be done with the least possible delay.**

Many other letters were received, some heartily indorsing, others seeing the need, but doubting as to the method to be pursued, and so on.

As has been stated elsewhere, THE FARMER has continued to insist upon the crying need for a national food production administrator. Moreover, while in Washington, D. C., last month, taking part in a conference with farm editors and the secretary of agriculture, the managing editor of THE FARMER received and presented to that conference the following telegram from Ben C. Holt of Spokane, of the Holt Manufacturing company:

I am in full accord with proposed appointment of national food production administrator. The problem is now one of increased food production rather than food conservation. The latter can not be further enlarged by American people, but the field of increased production offers immense possibilities. Secretary Houston has rendered service of incalculable benefit, and I am convinced that his work would be tremendously benefited by a food production administrator of the caliber of Hoover, Schwab or Ryan.

THE FARMER has continued this campaign even down to its issue of November 28, 1918, when it published Gifford Pinchot's strong appeal in behalf of the farmer, and said editorially:

Mr. Pinchot declares that three great blunders were made in dealing with food production while we were at war. They are precisely the three blunders so often pointed out by THE FARMER.

1. Giving our principal attention to the conservation of what food we had, instead of to the production of more food.

2. Failure to make it possible for the farmer to get enough labor, farm supplies and credit to give him a reasonable chance to raise the crops the nation and the world require.

3. The third blunder was in excluding the farmers from partnership in the conduct of the war, and especially that part of it which had to do with food supply.

These three blunders grew out of the government's failure to create a national food production administrator. If the country had had such an official, a man of preeminent ability, he would have formulated a clear-cut, helpful program of increased food production. He would have called on congress to drop its niggardly policy of providing ridiculously inadequate labor, farm supplies and credit and he would have insisted that the farmers of the nation have proportionate representation with organized labor on all of the war boards and commissions.

Mr. Pinchot makes a strong case and his appeal should make an impression upon official Washington.

It is becoming more and more evident every day that peace conditions no less than war conditions demand the ablest available man in the country as a farm production administrator.

The following is reproduced from the editorial page of The Country Gentleman of December 7, 1918. The growing recognition of the outstanding need for a national food production administrator is extremely gratifying to THE FARMER We have been insisting in season and out of season that the agricultural crisis throughout the world demanded that food production in the United States should be put upon a thorough business basis, with a man of national caliber at its head:

### One Big Boss

Are we to have one big boss for food for peace?

Are we to have unified command of the new and greater production that the American farmer must shoulder?

Hoover has been a master of conservation.

There has been no master of production.

There has been no sympathetic understanding leadership for the farmer in our government during the war.

We barely squeezed through and fed ourselves and our allies.

Now we face the enormously greater burden of feeding the half-starved peoples of all Europe as well as our allies and ourselves.

The American farmer demands leadership that he can trust; that he can follow with enthusiasm; that he can sweat for to the limit.

Give us less namby-pamby complacency in the department of agriculture and vastly more big slashing all-American "git up and git." Give us a commander in the field and save us from a continuation on the job of an indoor laboratory chieftain who can see the farmer only as a molecule to be applied by formula to the great warm-blooded human task of saving the world from famine.

# Increased Fire Insurance Is Opposed

H. O. Fishback, state insurance commissioner of Washington, is making a commendable stand against the general increase in fire insurance rates, amounting to 10 per cent, which became effective on November 1. This increase was ordered in by the insurance companies.

"Our laws," Commissioner Fishback explains, "are such that the insurance commissioner is without authority to prevent what he considers to be the arbitrary and unjust action of those in control of stock fire insurance in this state."

Mr. Fishback announces that his department will prepare drafts of such measures as are thought necessary to place under the control of the commissioner the regulation of all rate increases, giving him such supervisory authority over the making of rates as will best protect the citizens from unreasonable and arbitrary action by the managers of rating bureaus or combinations of companies or their managers. Legislation will also be proposed for the enactment ow laws controlling applications for insurance and better inspection of properties.

Commissioner Fishback is convinced that the proposed 10 per cent increase is unwarranted and has the records to sustain his contention. In a statement to the public he shows that the insurance business has been very profitable in this state, particularly in the last two years.

The commissioner says:

The premiums and losses of stock fire insurance companies for the last five years covering Washington risks, as shown by the reports on file in this department, are as follows:

| Year. | Premiums. | Losses. |
|---|---|---|
| 1913 | $5,050,170 | $2,865,247 |
| 1914 | 5,373,492 | 3,287,314 |
| 1915 | 5,053,368 | 3,316,855 |
| 1916 | 5,415,284 | 2,668,096 |
| 1917 | 6,772,368 | 2,185,416 |
| Total five years.. | $27,664,682 | $14,322,928 |

It will thus be seen that $27,664,682 was paid to stock companies and $14,322,928 was received by property owners in return for payment of losses. This is at the rate of a return to policyholders in losses of approximately 53 cents out of each dollar paid during a five-year period. The above result alone would not justify a general increase.

Conditions during the last two years, however, have been considerably changed for the better. The department has been doing a good deal of fire prevention work and through the very hearty cooperation and assistance of local organizations in the various municipalities and outlying districts a better feeling has been created and much cooperative assistance has been secured for the protection of property against loss by fire. The work has resulted in cleaning up and safeguarding properties of all kinds so that the possibility of loss by fire from carelessness or through malicious actions has been greatly reduced.

The department claims that through the result of this work and also the fact that more attention is being given to better construction of buildings and their equipment a better loss record has been obtained and that the ratio is showing a decrease over past years, which is more clearly illustrated by taking the figures of premiums and losses for the last two years, which cover the period of the more active work in fire prevention:

| Year. | Premiums. | Losses. |
|---|---|---|
| 1916 | $5,415,284 | $2,668,096 |
| 1917 | 6,772,368 | 2,185,416 |
| Totals | $12,187,652 | $4,853,512 |

**Heavier Premium Income.**

This shows a loss ratio or return to policyholders in the last two years of approximately 40 cents on each dollar paid, while the loss ratio for the last year (1917) for which we have complete figures is much lower than any year of the group, being a little over 32 per cent. Our best information covering the current year shows that the companies are receiving a much heavier premium income and are still experiencing a very favorable loss record.

The reform sought by Commissioner Fishback should have the earnest and aggressive support of the farmers of Washington. It is preposterous longer to let the companies have a completely free hand in the making of rates that should be put under government control and regulation.

But this reform will not be easily won. It will be fought at Olympia by the insurance interests, and unless the farmers and the public in general are vigilant in demanding their rights Commissioner Fishback's bill to put the powerful insurance companies under state regulation will be pigeon-holed in committee or suppressed by the powerful rules committees of the senate and the house.

# Join Red Cross

## Great Christmas Drive Is Now On

There is no other single organization but the Red Cross that could go before the American people and in one week secure a membership of many millions. Last year just before Christmas, it did it. This year it is making its appeal once again, and as more than 20,000,000 persons willingly and gladly paid their membership fee then—a freewill offering for the relief of suffering humanity—so now will these and other millions refill this wonderful society's purse that it may continue its work of humanity during these desperate days of starvation in so many stricken lands of Europe. Its great Christmas membership drive is on this week. The motto must be, "Every one a member."

The following is a proclamation issued by President Wilson, calling the campaign to the attention of the American people:

To the American people:

One year ago 22,000,000 Americans, by enrolling as members of the Red Cross at Christmas time, sent to the men who were fighting our battles overseas a stimulating message of cheer and good will. They made it clear that our people were of their own free choice united with their government in the determination not only to wage war with the instruments of destruction, but also by every means in their power to repair the ravages of the invader and sustain and renew the spirit of the army and of the homes which they represented. The friends of the American Red Cross in Italy, Belgium and France have told and will tell again the story of how the Red Cross workers restored morale in the hospitals, in the camps and at the cantonments, and we ought to be very proud that we have been permitted to be of service to those whose sufferings and whose glory are the heritage of humanity.

Now, by God's grace, the Red Cross Christmas message of 1918 is to be a message of peace as well as a message of good will. But peace does not mean that we can fold our hands. It means further sacrifice. We must prove conclusively to an attentive world that America is permanently aroused to the needs of the new era, our old indifference gone forever.

The exact nature of the future service of the Red Cross will depend upon the program of the associated governments, but there is immediate need today for every heartening word and for every helpful service. We must not forget that our soldiers and our sailors are still under orders and still have duties of the highest consequence, and that the Red Cross Christian membership means a great deal to them. The people of the saddened lands, moreover, returning home today where there are no homes, must have the assurance that the hearts of our people are with them in the dark and doubtful days ahead. Let us, so far as we can, help them back to faith in mercy and in future happiness.

As president of the Red Cross, conscious in this great hour of the value of such a message from the American people, I should be glad if every American would join the Red Cross for 1919, and thus send forth to the whole human family the Christmas greeting for which it waits and for which it stands in greatest need.

WOODROW WILSON.

THE WASHINGTON FARMER

VOL. XLI. NO. 51.

Trade Mark Registered U. S. Patent Office.
PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
444 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.
To either of which communications can be sent, but to avoid delay address office nearest you.

ABC Member Audit Bureau of Circulation. Associated Farm Papers. Agricultural Publishers' Association.

Eastern Representatives:
S. E. Leith, Fifth Avenue building ..... New York
Tom D. Costello, Steger building ..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

FREE INFORMATION BUREAU.
The Washington Farmer has established an INFORMATION BUREAU at the NATIONAL CAPITAL, which is at the service of its readers, and which they are asked to use freely. It is intended to be a clearing house of government information. Address inquires (including 3c stamp) to The Washington Farmer INFORMATION BUREAU, Washington, D. C.

## Heaven Reaches Down to Earth

Four years of horror have just passed; four years of unprecedented inhumanity have stained the world's calendar with blood. Sin, wickedness and fiendishness beyond understanding have been amuck, and agony and misery of mind and body have been the fruits. Even at this Christmastide the world is sick with sorrow, hunger and want. Millions are without food. Thousands and thousands are maimed and diseased. Numberless mounds rise over the dead; countless human bones bleach where there was no one to hide them from the elements; unnumbered homes are bereft. And today, at this happy Christmas season in our fortunate land, little children in the stricken lands of Europe are dying by the hundreds and thousands for want of food and shelter. It is the most terrible scene upon which the world ever looked. It is hell itself brought to earth.

But heaven is reaching down with a healing touch. All is not sin; all is not want; all is not misery and sickness and suffering. The world is not lost; inhumanity is not its master. Over all God rules. The great heart of mankind is stirred to deeds of love as never before in the history of earth. The hand of brotherliness is stretching forth, reaching into the uttermost corners of the weary land, seeking and saving that which has been all but lost. Not even the machine of war itself was so organized for its work of destruction as is the machine of mercy for its work of redemption. With no more zeal did civilization rally for its holy war against frightfulness than it now rallies for its war against suffering under the leadership of the great, Christlike organization, the American Red Cross.

The Red Cross is everywhere. It reaches to where Armenian thousands have perished or are perishing at the hand of the heartless Turk. It ventures unafraid into the disease-stricken areas where the god of war spread his desolation. It enters the home that was robbed of its bread winner and visited with unspeakable horror during those terrible days of Hun invasion. It ministers even to him who was an enemy. It succors the needy at home.

Today this organization appeals to the people of this happy nation, this land that escaped the terrors that visited Belgium and France. It asks that the American people share a little of their surplus with the sick and the hungry and the shelterless. It asks one dollar. One dollar! Simply a membership fee, not a gift, not a contribution, not absence from home for a year or for years in the fields across the sea. But it asks that membership of all the American people. Last Christmas more than 20,000,000 men, women and children responded to the appeal. This year—is there a person in all this land who, if he possess more than the bare necessities of life, will refuse? Is there one who will neglect to do his share to save a life? Is there one who will clutch his purse and let a child die? Heaven forbid! "Answer the Red Cross Christmas roll call. A heart and a dollar are all that is required."

Some one has said that sin is the choice of the lesser good.

## Banking Accommodations for Farmers

Secretary Houston of the department of agriculture says in his annual report that investigations by the department have shown there are many farmers prevented by circumstances from securing banking accommodations they need.

It strikes us that the secretary's recommendation falls considerably short of the true solution of this need. He advises the provision of a system of personal credit unions for the benefit of the individuals whose financial circumstances and scale of operations make it difficult for them to obtain accommodations through ordinary channels. He seems, however, to have only hazy views upon this method, as he says it is difficult to outline what further can be done by the federal government directly to stimulate personal credit unions.

The secretary then passes the buck to the individual states. The conclusion up to the present time, he says, seems to be that the field is one primarily for the states to occupy through sound legislation and points out that in the last five years state laws more or less adapted to the purpose have been enacted in Massachusetts, New York, Rhode Island, Wisconsin, Texas, North Carolina, South Carolina, Utah and Oregon.

The problem is not nearly so difficult as Secretary Houston regards it. It needs only an enlargement of the machinery of the present farm loan bank system. The organization is perfected, the officials and their employes chosen and office quarters provided, and there is only needed the addition of a personal credit bureau to fill the needs which Secretary Houston admits exist and should be met.

The advantages of this plan are self-evident. It would reduce the overhead expenses to the minimum and would put personal credit under the control of a going organization of public officials who are best qualified of all others to pass upon the individual farmer's personal credit. Broad, comprehensive action by the federal government is much to be preferred to the plan of single state action advocated by the secretary. It would have the merit of uniformity and simplicity, where state plans, framed by different legislatures, would be confusing and conflicting. It is a mystery to us that Secretary Houston can not grasp a fact so outstanding and act upon it.

Uncertainties make life interesting; sometimes more so to others than to one's self.

## Should Prevent Double Freight

The stock yards have done a great thing for the live stock industry of the northwest by turning poorly finished stock or stuff that was well fitted to be breeding stock back to farmers who were in a position to finish them or use them for breeding purposes. They have done much to create a sentiment against marketing stock that should not be marketed. Thousands of head have been shipped to the yards in unfit condition and have been reshipped to farmers who could handle them. Many of them have gone back to the same communities from which they came.

There is a point to consider. It is good business to send them back, but it would be better business if the communities would see to it that they were not sent in in the first place. Instead of shipping them 200 miles and back, it would be better to drive them or haul them, as the case might be, 10 miles across country to the farm or ranch that could keep them till the proper time to market. Here is one of the great things that community organizations can do, and that, in many instances, they are doing.

## One Farmer's Habit

I know a farmer who, while driving through the country districts, is always comparing crops, soils and whatever progress is made on various farms, with much interest to himself. He has a remarkably clear memory of the past history of different farms and the methods followed in farming operations. On some farms he will notice where a ditch has been made in a field with a certain type of soil, and in the future he will notice the resultant change in the texture of the soil and the change in the size and appearance of the crop harvested. If a farmer is raising a new crop he notices all the details concerning it. If a farmer is feeding a new feed to his stock he inquires for the personal experiences of the farmer. If he notices a farmer who has a hand device which will save time and lighten labor he is ready to profit by the experiences of the other farmer.

Individually we must not close our eyes and shut our ears to the world. Whatever we can use to our own advantage we must be willing to use and improve on, no matter by whom it is practiced, as long as it will be of constructive benefit to us. Nationally we must observe what other countries are doing and adopt whatever fits our needs. If we practice ancestor worship or custom worship like the Chinese, closing our eyes and ears and not observing others, we will be the victims of a psychological illusion. C. J. M.

## Farmers Cooperate Successfully

There has been a general feeling that cooperation was something complex and baffling. Some forms of it may be, but there is a practical sort of cooperation that is simple. It requires unity of purpose and a little honest, business-like direction. It doesn't require a big organization with lots of red tape to ship a carload of stock gathered from a half dozen farms, but it often pays. It doesn't take a big organization to carry on a rabbit killing campaign, a squirrel poisoning campaign, a grasshopper eradication campaign. It doesn't require a big organization with a lot of capital stock and incorporators and lawyers' fees to ship out a carload of potatoes or ship in a carload of feed. Just a little business direction and a spirit of community helpfulness will do it as well as a big corporation. Such things as these are being done all over the country. There is hardly an issue of this paper that doesn't contain a narrative of some such experience to prove it. Farmers are cooperating in matters of this kind successfully. And this does not mean that the big, inclusive cooperative organization is not practical. It is. That' too, has been proved. But it is safe to use the smaller beginnings as stepping stones to the larger, rather than jump too hastily into great organizations.

## Northwest Poultry Are Winners

At the national egg laying contest conducted at Storrs, Conn., during the past year, a pen of northwestern hens won first place against competition from all over America, and they led by a margin so great that there was no occasion for a "recount of the eggs." Not only that, but a pen of northwestern hens won third place in the contest. The winners of first place were the pen of ten hens from the Oregon Agricultural college, which has an enviable record in poultry development. They laid 2352 eggs in the twelve months, or an average of over 235 each, which is almost two eggs for every three days of the year, Sundays included. The winner of third place was the Hollywood pen from Hollywood, Wash., which laid 2043 eggs in the year, or over 204 each. It is probable that the record made by the Oregon hens is a world record, though this is not positively established. These winnings are a great credit to the poultry industry of the northwest, and to the men and women who have developed it.

## Consider the Winter Schools

The season of the winter schools at the colleges is approaching. There are numerous courses offered—farm management, dairying, live stock, gas engines, home economics, soils and many others. They afford a great opportunity.

# Wilson Will See Devastations

## *Preliminary Peace Conference Convenes Early Next Month*

The announcement from France that the preliminary peace conference will not convene formally until early in January and that in the meantime President Wilson will be conducted over the devastated areas of France and Belgium bears deep significance. The president will see for the first time with his own eyes the nature and extent of the depredations of the German military organization. For the first time he will hear personally General Pershing's story of the nature of German methods of warfare. For the first time he will see prisoners of war returning from German prison camps; for the first time see Belgian and French girls and women returning from their enforced employment in Germany.

Is it not more than a possibility that the conference has been delayed by the European allies, in part, at least, to permit America's president to see these things from the European point of view and to see Germany and Germans "close up"? The president's expressed determination to see brought about a just peace is no better known than his remarkable patience with German wrongs prior to this country's entrance into the war, and there is reason to believe that the European allies are somewhat fearful that his influence in the peace conference will result in a peace too liberal to Germany in view of the latter's crimes. To illustrate, here is an extract from the address of welcome by President Poincare of France at the reception to President Wilson in Paris last week:

"You, Mr. President, will be able to measure with your own eyes the extent of the disasters, and the French government will make known to you the authentic documents in which the German general staff developed with astounding cynicism its progress of pillage and industrial annihilation. Your noble conscience will pronounce a verdict on these facts.

"Should this guilt remain unpunished, could it be renewed, the most splendid victories would be in vain.

"Mr. President, France has struggled, has endured and has suffered during four long years; she has bled at every vein; she has lost the best of her children; she mourns for her youths. She yearns now, even as you do, for a peace of justice and security.

"It was not that she might be exposed once again to aggressions that she submitted to such sacrifice. Nor was it in order that criminals should go unpunished, that they might lift their heads again to make ready for new crimes, that under your strong leadership America armed herself and crossed the ocean."

### FRANCE WANTS THOROUGH SAFEGUARDS.

"Peace must make amends for the misery and sadness of yesterday, and it must be a guarantee against the dangers of tomorrow," continued the French president. "The association which has been formed for the purpose of war between the United States and the allies and which contains the seed of the permanent institutions of which you have spoken so eloquently, will find from this day forward a clear and profitable employment in the concerted search for equitable decisions and in the mutual support which we need if we are to make our rights prevail.

"Whatever safeguards we may erect for the future no one, alas, can assert that we shall forever spare to mankind the horrors of new wars. Five years ago the processes of science and the state of civilization might have permitted the hope that no government, however autocratic, would have succeeded in hurling armed nations upon Belgium and Serbia.

**Without lending ourselves to the illusion that posterity will be forever more safe from these collective follies, we must introduce into the peace we are going to build up all the conditions of justice and all the safeguards of civilization that we can."**

### ETERNAL PRINCIPLES OF RIGHT.

That the underlying purposes of both France and America were the same in fighting the battles of the war was declared by President Wilson in his reply to President Poincare's address of welcome.

"From the first the thought of the people of the United States turned toward something more than the mere winning of this war," he said. "It turned to the establishment of eternal principles of right and justice.

"It realized that merely to win the war was not enough; that it must be won in such a way and the questions raised by it settled in such a way as to insure the future peace of the world and lay the foundations for the freedom and happiness of its many peoples and nations.

"Never before has war worn so terrible a visage or exhibited more grossly the debasing influence of illicit ambitions. I am sure that I shall look upon the ruin wrought by the armies of the central empires with the same repulsion and deep indignation that they stir in the hearts of men of France and Belgium."

### GREAT RECEPTION TO THE PRESIDENT.

President Wilson reached Paris Saturday. Upon his landing at Brest he was accorded a tremendous ovation, which continued until he reached the French capital, where 2,000,000 people joined in a joyous welcome. It is stated that even the day of the signing of the armistice did not see Paris so boisterously enthusiastic. Thirty-six thousand French soldiers lined the ways for the president's entrance into the city. Praises for America were heard on every hand. A spirit of the greatest friendship was manifest.

It is interesting to note that in neither President Poincare's nor President Wilson's addresses at the formal reception was any reference made to the cooperation of England in the war just closed. While this bears little or no significance, it does call to mind that England's relationship to the settlement of the peace issues is unlike that of either France or America.

### ENGLAND'S POWER RESTS ON THE SEA.

There was a keener commercial rivalry between England and Germany than between Germany and any of the other allies. Not only England's national life, but her commercial life, her maritime power, which ranked first in all the world, were at stake when Germany ran amuck. "Brittania rules the waves" has been England's motto. What if the peace conference agrees to the formation of a league of nations that will prevent any nation ruling the waves? What if the motto becomes "The league of nations rules the waves"? Will England whose sea supremacy played a great part in winning the war, agree to be shorn of that individual power? This is one of the big problems that the peace conference will have to deal with, and there has been expression of fear that a break in the allied harmony might result from this problem.

### GERMANY IS BIDDING TO AMERICA.

Undoubtedly Germany is depending upon America for whatever of liberality the peace conference may grant her. Her spokesmen indicate it in their words and her leaders by their deeds. Since the war closed, and before, all messages relative to peace or assistance have been directed to America. Instead of receiving the soldiers of America with a show of resentment as they occupy German territory, the people of Germany are reported to be fawning upon them in an attempt to win their friendship. This attitude is natural, in view of the fact that America so long showed patience with German ruthlessness, and is known to be a nation of liberal sentiments toward all peoples.

### ALLIED ARMIES ARE EAST OF PHINE.

The allied forces of occupation have now occupied all the German territory west of the Rhine and have crossed to the east bank to hold the semi-circular areas commanding the bridges of most strategic importance. This practically completes the occupation of German territory designated in the armistice terms. The terms of the armistice have been extended to apply until January 17, the original 30 days having expired a few days ago. It is probable that, from time to time, the armistice will be further extended until the final peace is agreed upon, unless the Germans fail to live up to some of its agreements, when it might be terminated upon 48 hours' notice and a state of war automatically be resumed.

### WANT VOLUNTEER SYSTEM ABANDONED.

That the volunteer system of raising an army is unsatisfactory and should never again be resorted to in America is the opinion expressed by Provost Marshal General Crowder, who has controlled the machinery of the selective draft during the recent war. He declares that the selective service law has enabled the government in this war to register 23,740,000 Americans, put into the field nearly 3,000,000 fighters and to have in readiness to entrain on November 11, when the armistice was signed, 2,000,000 more soldiers, all within a period of 18 months. It would be a "calamity," he said, for the United States to revert to the volunteer system in view of such a successful test of selective service, adding that the American conscripts had shown the valor, aggressiveness and initiative of the most seasoned troops.

### CONTROL RAILROADS FOR FIVE YEARS.

One of the biggest questions before congress received a new interest last week when Director General McAdoo, in charge of the railroads for the government, recommended to congress that government control of the roads be extended for a period of five years, or until January 1, 1924. While Mr. McAdoo said that he had permission from President Wilson to say that the president's view of the problem accorded with that recommendation, it came closely following the statement by the president to congress that he had no specific recommendation to make.

Mr. McAdoo argued, in presenting the matter to congress, that for the railroads to remain under government control for 21 months after the concluding of a final peace, as provided by the present law, would mean that neither the government nor the railroad owners could go ahead with needed improvement and development, but that the 21 months would be practically a stand-still period for the railroad industry. He said that there were two alternatives: To extend the period of government control or to return the lines to their private ownership at the earliest possible date following the concluding of peace. He urged that the time be extended, saying that now was the appropriate time for the experiment of government control to be given a thorough trial under peace conditions.

The proposal met with both approval and disapproval in congress. Opponents of government ownership said that it was intended as another step toward permanent ownership and control by the government. Mr. McAdoo said that he had no such idea in mind, but was wholly disinterested in the question except that it should be tried out and decided upon a sound basis.

A large group of railroad executives gave out a statement that to extend the period of government control would "lead to delay and confusion and demoralization of the organization of the roads."

# More Food on Hand This Year

## Food Survey Compares Stocks of Past Two Years

A food survey of the commercial stocks of grain, flour and miscellaneous products in the United States on November 1, 1918, was made by the United States bureau of markets. According to the figures given, there was a total of 275,000,000 bushels of wheat reported by 12,538 firms on hand November 1, 1918, as against 80,000,000 bushels November 1, 1917, reported by 10,630 firms. In other words, there were more than two and a half times as much wheat on hand this year as there was a year ago, comparing the number of firms reporting as well as the number of bushels reported.

Stocks of corn reported on hand November 1, 1918, total 17,000,000 bushels, as against about 5,000,000 bushels last year; of oats, 80,000,000 bushels as against 67,000,000 bushels last year; of barley, 34,000,000 bushels as against 23,000,000 bushels last year; of rye, 15,000,000 bushels as against 8,000,000 bushels last year; of wheat-flour, 5,385,000 barrels as against 3,344,000 barrels last year.

Cold storage stock of apples reported November 1, 1918, gives a total of 3,607,000 barrels as against 3,296,000 barrels last year; of eggs, 3,659,000 cases as against 4,411,000 cases last year; of frozen eggs, 13,242,000 pounds as against 16,000,000 pounds last year; of butter, 83,906,000 pounds as against 99,764,000 pounds last year; of American cheese 33,656,000 pounds as against 77,433,000 pounds last year.

## *Washington Gleanings*

A branch containing ripe raspberries, many blooms and fruit in formation was picked December 5 by C. W. J. Reckers of White Salmon.

M. Brinkerhoff has been named Okanogan county superintendent of schools to succeed Miss Georgian Donals, who resigned to become principal at Tonasket.

The annual report of the Wenaha forest reserve shows 26 fires last year, of which five were set by careless campers. Twenty were caused by lightning and one was incendiary.

William Bishop of Chimacum says that the demand for purebred dairy cattle all over the country is just beginning, and he foresees the greatest call for breeding stock in the history of the United States.

Under the leadership of M. J. Newhouse, Clarke county agent, the agricultural council was reorganized and a county branch of the farm bureau was organized. Nine community county districts were laid off, with committees in charge.

Three hundred thousand silver trout eggs have been assigned to the Skagit game commission from the state headquarters, to be hatched at the Samiah hatchery. This is the greatest allotment of trout ever made that county at a single time.

A stockmen's brand book, the first published in the vicinity of Okanogan, has been issued by the Independent. It contains the brands and earmarks used by 750 stockmen who are members of the different stock associations using the ranges of the Colville and Okanogan national forests.

Yakima poultry fanciers have decided to make no attempt to hold the annual poultry show on account of the difficulties of doing so under influenza conditions. Money is available to finance the exhibition, but it is believed impossible to get together a creditable display.

Many Seattle school war gardens produced more than enough to pay for this winter's fuel, declared Robert P. Chapman, who had charge of the war garden work last winter. Mr. Chapman has been made regional director of the United States school garden army in Washington and Oregon. He is now urging everybody to get things ready for next year's planting.

The Getchell grange met recently and the following officers were elected: Master, J. W. Hawes; overseer, I. K. Hope; stewart, C. E. Westlund; chaplain, N. A. Knowlton; secretary, P. J. Gehl; treasurer, J. H. Miller; lecturer, Mrs. Emma Jones; assistant stewart, Albert Griffith; lady assistant stewart, Mrs. P. J. Gehl; doorkeeper, J. T. Jackson; ceres, Mrs. O. K. Anderson; pomona, Mrs. N. A. Knowlton; Flora, Mrs. J. H. Miller.

Well-signed petitions for the construction of 19 miles of hard-surfaced road, under the Donohue road law, were filed with the Yakima county commissioners. The commissioners favor granting the petition and will have surveys made in 1919, construction to be done in 1920. The petitions call for a 10-mile extension of bitulithic road from Piland bridge to Zillah, and for a nine-mile road connecting Sunnyside and Grandview.

Yakima valley fruit shipments to date in 1918 represent a value of $8,353,400, of which over $5,000,000 is the value fixed for 4000 cars of winter apples. Fruit experts estimate 300 cars of apples remain to be moved, thus bringing the value of the year's crop to about $8,000,000. This will equal the value of the 1917 bumper crop, though less 2000 cars. Since July 1 about 7500 cars of fruit have been shipped, of which but 650 cars were peaches, though normal peach shipments are 2000 acres.

Lester Holt, supervising engineer of the Indian reclamation service, with headquarters in Yakima, has received word that $718,000 has been recommended for work on the reservation for the coming year. This is the last of six such payments to be made. For maintenance of laterals and canals in the Wapato project $15,000, and for salaries at the Indian agency $3000 are allowed. The remainder of the appropriation is to be spent in big construction work, of which $500,000 will be spent on the Yakima diversion dam, below Union Gap.

Cull apples used in byproducts plants along produce row alone in Yakima this year, according to a count made last week, total 15,100 tons. The average price paid was $8 a ton. The total return to the farmers was $120,000. Culls are now almost as much in demand as fancy-grade fruit. The byproducts made from this mass of apples includes 400,000 gallons of apple cider or vinegar, 400 tons dried or dehydrated apples, 500,000 cases canned apples, 15,000 cases of apple butter. The byproducts plants now have 3800 tons of culls in storage for future use.

At the annual meeting of the Tieton Water Users' association at Yakima recently, R. K. Tiffany, project manager, recommended that ranchers take over the management and operation of the canal, thus leaving the reclamation service workers free to devote their attention to the large construction work planned for the after-the-war program. At present the work is handled through the Denver office. Indications are that the ranchers, who this year have a $2,000,000 crop, will adopt the plan. H. M. Gilbert, president, was reelected, as was R. H. Hayden, for six years secretary. F. J. Wilcox, Yakima, was elected trustee to succeed J. D. Griffith, Tieton, and Fingel A. Gothberg, Tieton, elected to succeed W. L. Lemon of Yakima, now a captain in the army.

W. P. Conser of White Salmon believes he has proven that a small flock of well-bred poultry can be profitably kept, notwithstanding the high cost during the last year of grain. His record of 20 White Leghorn pullets follows: Began their pullet year on October 21, 1917, at 6 months old; first egg was laid at age of 5 months and 5 days. Production for full 12 months, beginning on above date, has been: Balance of October, 129; November, 344; December, 286; January, 282; February, 248; March, 455; April, 562; May, 455; June, 377; July, 311; August, 188; September, 212; October, to 21, 78, making a total of 3927 eggs. The total value of same has been $157.08; cost of feed, $73, leaving a net profit of $84.08. Average cost of feed, per hen, $3.65; of eggs, per hen, 196 7-20; profit, per hen, $4.20 2-5.

# Yakima Farm Problems

## *Trying to Find the Truth About "Orchard Hay?"*

By PAUL E. TRIEM.

Although the Yakima valley as a whole has had a prosperous year and the total of its farm production has grown wonderfully, yet there are problems which remain to be solved.

Many of these problems are hold-overs from previous seasons; some of them are new, or at any rate have during the present summer attained a distinctness which for the first time raises them into public attention. For instance, what will be the solution of the labor tension of recent years, a tension drawn somewhat tighter this season by the formation of a fruit-workers' union? What is the future of organized selling and of other association work? Is scale gradually increasing throughout the valley, or was the increase noted this summer due to unusual climatic conditions? What is the truth about "orchard hay"? As a contribution of evidence toward the solution of these and similar practical questions affecting the Yakima country, the following interviews with practical growers are submitted:

W. H. Curtis, an old newspaper man formerly connected with the Des Moines (Iowa) "Register and Leader," probably has given these community problems as much earnest attention as any citizen of the county. Mr. Curtis does not question the seriousness of the orchard hay problem—It is impossible to doubt that the arsenical spray in particular must have a deleterious effect on farm animals, when conveyed to the latter through the medium of recently sprayed orchard hay, but he calls attention to one weak spot in a frequently advocated remedy:

"The menace of sprayed forage is serious enough," explains Mr. Curtis, "but the plan which some orchardists have tried of delaying spraying until the hay has been cut is apt to prove an expensive one. One of my neighbors followed this method, and the result was that his crop contained 25 per cent of wormy apples; my crop, just adjoining his, contained less than 1 per cent. I think it is a serious mistake to sacrifice the apple crop for the sake of what little hay can be harvested from between the rows."

Mr. Curtis calls attention to the importance of the farm storage house for fruit. "This matter of the individual farmer providing storage for his crop directly affects the stability of the apple market, and also this big labor problem," he says. "If there is suitable provision on the farm for storing the crop of fruit raised, it is not necessary for the orchardist to rush his apples or pears to market and take whatever price may be offered at the time. Moreover, the crop once stored can be packed by the producer and his family during the winter—it is never too cold here to haul fruit to the station, and this lengthening out of the packing season puts the key to much of the labor problem into the hands of the man who raises the fruit. He can pack it himself, and so be independent of professional packers."

In regard to the matter of selling individually or collectively, Mr. Curtis probably may be called a "liberal." Although one of the early members of associated selling bodies in the valley, he sold his crop direct this year. Two of the changes which selling organizations will have to effect before they will inspire enthusiasm in the minds of producers, Mr. Curtis thinks, are simplification of machinery at the office end, cutting out needless refinement and excrescences in the way of officers and staff, and the speeding up of returns to the growers, many of whom are working on a none too abundant capital.

G. E. Thomas, who farms the W. E. Coumbes orchard just west of Yakima, says that he has had no trouble in feeding orchard hay, but that he is careful not to spray too close to cutting time. Mr. Thomas sold his crop direct, and thinks he saved money by so doing. He is particularly pleased with the returns from his 1700-box peach crop, which brought him 85 cents a box as compared with about 45 cents last season. He reports considerable trouble with scale this year, a fresh outbreak of infection occurring after the pest had apparently been subdued early in the season. He is selling his cull apples to the cider mill for $8 a ton.

T. H. Toll of Dow & Toll has had no trouble from feeding orchard hay, but has had considerable trouble with scale. Mr. Toll thinks there should be more rigid enforcement of the inspection laws, as applied to the production end. He calls attention to the fact that neighbors do not like to report neighbors, even where a bad case of orchard infection is evident.

# Power, Mechanics and Devices

**The purpose of this department is to give helpful suggestions to its readers. The editor invites letters that give experiences or practical ideas along the lines of "power, mechanics and devices" on the farm. Inquiries from any one on any point in which he or she is interested, whether previously touched upon in the department or not, will receive personal reply by mail.**

## Farm Dairies

### To Furnish Supply of Hot Water

By N. D. SHOWALTER, President State Normal School, Cheney, Wash.

Most of the farm dairies are provided with running water in the milk houses, but very few of them have installed systems which furnish an adequate supply of hot water. Each dairyman knows, however, that this is very essential to general sanitation and to the proper care of dairy products in accordance with modern methods. Many farmers have thought a hot water system would prove entirely too expensive and because of this have gone forward year after year materially handicapped in caring for dairy products in the best way. But a hot water plant is neither expensive nor difficult to install.

An independent plant has proved to be most satisfactory, so this article will be confined to the single plan. It is more satisfactory because plenty of hot water is needed constantly and such a plant must be operated throughout the entire year. When the heating system is connected with any other auxiliary plant which only furnishes heating part of the time, the supply of hot water must necessarily be irregular. The independent plant can, of course, be fired as needed, but it is generally best to keep continuous fire through the day. Such will only require a small amount of coal put in occasionally with dampers properly adjusted.

The first requisite for such a hot water plant is water pressure. The running water now used should be collected into a tank of considerable size placed on an elevation above the milk house. The water can then be piped to and connected with the heater, which will give best service when installed near to or in a separate compartment of the milk building.

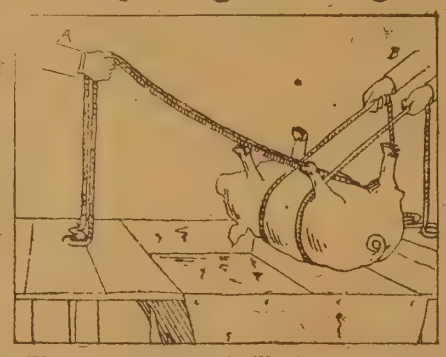
The apparatus consists of a hot water tank of sufficient size for the needs and the small water jacket heater especially manufactured for this purpose. The size of the tank and the size of the heater will depend entirely upon the amount of water needed—an estimate of the cost will be furnished you by any good plumber. A 50-gallon tank will take care of the needs of 15 to 20 cows, and the complete apparatus, including the price of the heater with special installation by a competent plumber should not cost over $150. Installation should be carefully made and a test made with cold water pressure for leakage before the heater is used. If such a plant is properly installed, it will be found entirely reliable and will give entire satisfaction.

Two kinds of water jacket heaters are generally used. In each case the fire box is surrounded by a water jacket. The heating apparatus is small and will not weigh more than 100 pounds. A small pipe or flue is necessary to care for the smoke, though the amount of fuel consumed is very small indeed. The best service is secured by firing the heater slowly for a time and gradually building up a bed of hot coals which fill the entire fire box to the level of the bottom of the fuel door. This is best done by dampening the coal and causing it to coke rapidly. When the bowl of the heater is well filled with coking coals, the heater may be shut up and will furnish heat for hours without any attention.

Any good hardware company or first-class plumber will furnish you with any additional information or will furnish you with circulars giving details of such a heating plant.

### SCHOOLS FOR TRACTOR OWNERS.

Many tractor and farm machinery houses follow the practice nowadays of holding free service schools for the benefit of those who wish to learn the proper care, adjustment and operation of the machine they may be using. These service schools do not, of course, pretend to give a complete course of technical training, such as is offered by the large motor and tractor schools where expert instructors teach every detail and scientific principle of tractor and motor car operation.



The free service school affords excellent opportunity to become familiar with many of the essential things that every tractor owner should know. In an article on the subject of the service school, L. R. Van Volkenburg, service engineer for the Avery company, says, among other good things:

"In following service work, as the writer has for a great many years, he has noted one very marked feature regarding the handling of machinery, i. e., the trouble that is experienced is due very largely to ignorance on the part of the operator as to the proper care and adjustment of the machine being used. There is a popular conception among users of tractors and other machinery that the so-called expert (this term, however, should never be used, he should be called a service man) is a man with a superior intelligence to the common operator. This, however, is a mistake. The only reason that the service man can go out and make a machine perform correctly where the operator can not, is that this service man has made a study of this particular machine and has familiarized himself with its adjustment and the function of its different parts. In a great many cases, the service man is mentally inferior to the man who is operating the machine. This means that if the operator would just take a little pains to educate himself along the same line as the service man has done, he could become a better operator and even more expert in the care and adjustment of the machine than the service man whom he employs.

"A very large per cent of trouble encountered in operating tractors and other machinery is due to the neglect of little things, which, if attended to at the proper time, would entirely eliminate the cause of the trouble as well as the trouble itself. Many times one minute spent making an adjustment or tightening a bolt will prevent the necessity of the machine being laid up for several days waiting for a service man to come to make the proper repairs or adjustments, and in such cases the actual cost involved would have educated the operator to a point where the trouble could have been avoided entirely.

Those who own tractors can ascertain whether the company whose make of tractor they are using holds service schools, by taking the matter up by letter or through the dealer from whom they bought the machine.

## Easy Hog Scalding

The sketch herewith illustrates an easy and convenient method of handling a hog in the process of scalding. Two ropes are placed around the animal so that one passes just in front of the hind legs and one just behind the front legs. One man takes the position shown by the letter A in the sketch and another the position shown by the letter B. The hog is lowered into the scalding vat by being allowed to roll with the ropes. After being lowered he may easily be rolled over in the water by the same method, each man holding his ends of the ropes sufficiently tight to keep them from slipping about the body.

When the animal is sufficiently scalded one of the men crosses to the other side of the vat and lays his ropes down so that one man stands on each rope, probably over the edge of the platform to prevent slipping. Each man then takes a hold of one of the other ends and together they roll the hog up out of the vat and onto the platform.

# The Milch Cows Win

## Dairyman-Orchardist Tells Story

By PAUL E. TRIEM.

R. B. Stewart, whose trimly-kept fruit and dairy farm adjoins the paved road between Selah and Yakima, has been weighing his orchard in one pan of the scales of justice and his Holsteins in the other. And, according to Mr. Stewart, the trees have been found wanting.

"I make more from the four acres I devote to cows," he comments, "than from the six acres I have in trees; and in addition to this, I have the manure from the cow stable to put back into the land. At the present price of dairy products," adds Mr. Stewart, "even allowing for the high price of feed, there is no reason why the dairyman should not make money."

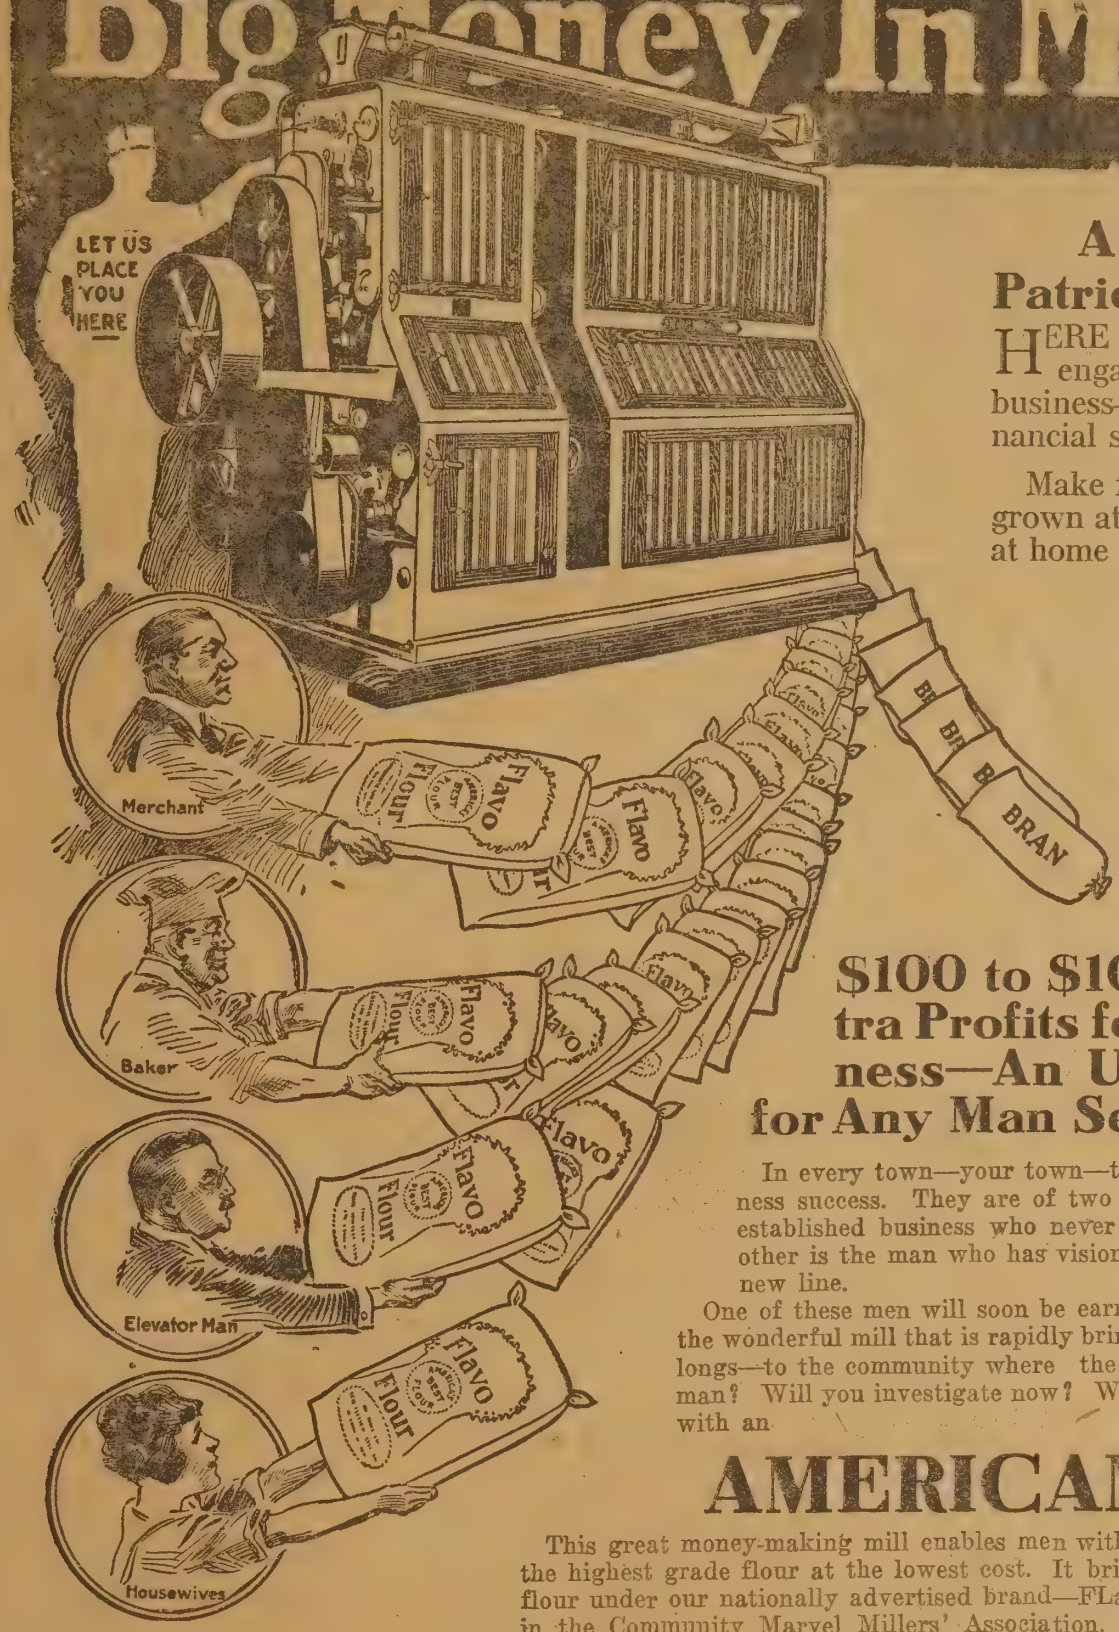
It is inevitable that a man with so decided an opinion on the disputed point of possible dairy profits should have decided opinions on other branches of the business, and this Yakima farmer certainly has them. "Have I had any trouble with poisoning from orchard hay?" he repeats. "No—not a bit, for the simple reason that I don't feed it. I have never yet found a satisfactory way of raising two crops on the same ground. I tried it with soy beans and corn, but couldn't get the beans to mature; there was too much shade from the growing corn crop. Yes, I feed pomace, and find it very satisfactory. It has its disadvantages, however, the principle one of which I should say is the fact that it is cheap. Because of this cheapness, the dairyman is tempted to over-feed. He starts his cows out on pomace, finds that they begin to gain on it, and then he simply throws it to them. The results of this too liberal feeding are not satisfactory—pomace is not a balanced ration in itself. Fed with mill-run and alfalfa, it is fine. I feed in addition to this about two pounds daily of oil meal or soy bean meal, and also some corn silage. This combination has worked fine."

Mr. Stewart has a 50-ton silo which he built himself. It is constructed of tongued and grooved two-by-fours, lined on the inside with water-proof paper and finished on the outside with regular siding. The Stewart corn crop runs about 12 tons of silage to the acre.

Reverting to the hay question, Mr. Stewart commented on the influx of western Washington buyers earlier in the season. "I don't want to be critical," he says, "and of course it's always easier to see mistakes after they've been made, but really, now is the time to buy hay. I have it on the best of authority that Yakima county hay can be bought, in some localities at any rate, for $17 a ton in the tack. Why is it so cheap? Well, you would be surprised if you knew the number of dairy cattle that have been sold off here during this time of high priced feed. All the robber cows went, of course, and there were some mighty good cattle sold over the block. If a good cow got temporarily off her feed and it looked as if she might have to be fed for some time before she would be back in shape, the only thing to do was to sell her to the butcher. And the result is that today this part of the state finds itself with lots of hay, and not much to feed it to. The cows have been sold for beef, and the sheep have been moved to cheaper feeding grounds."

All the milk from the Stewart Holsteins is sold to retailers. Mr. Stewart has the milk tested at frequent intervals, and he himself weighs the output from the individual cows. In this way he secures many of the benefits of belonging to a testing association.

# Cows Make High Records in Production of Milk

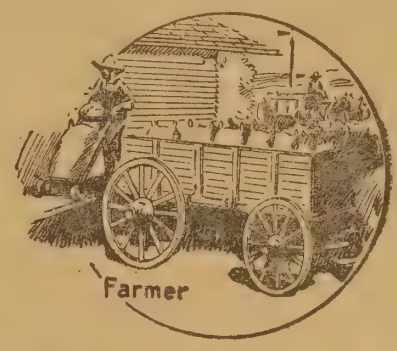


The cow producing the greatest number of pounds of butterfat during October in the Whitman Cow Testing association was Pilot's Model, Jersey, owned by Jay P. Graves of Spokane. This young cow has produced 1752.7 pounds of 4.57 per cent milk, which contains 80.1 pounds of butterfat. Her high record extends over her entire milking periods. As a senior two-year-old she gave 12,653 pounds of milk, 618 pounds of butterfat. As a senior three-year-old she gave 16,076 pounds of milk, 744 pounds of butterfat. She is to be bred to Count's Foxy Lad, whose dam, Eminent's Foxy Belle, was the second senior three-year-old Jersey cow in America. Her record is 14,907 pounds of milk, 815 pounds of butterfat. She won two special A. J. C. C. prizes, one for Jersey cow having best progeny and the other for a cow having the best register of merit record. Pilot's Model won grand champion prize at the Spokane Interstate fair, 1918.

The cow giving the greatest number of pounds of milk for October was Pauline Tiffany Annie Dekol No. 194172, Holstein. She is owned by A. V. Bradrick & Son of Palouse. During October she gave 2058 pounds of 3.1 per cent milk, which produces 63.8 pounds of butterfat. She will be bred to Mr. Braderick's bull, King Pontiac Segis of Brookside, No. 195818. This bull is the son of King of the Pontiacs by a 26.7-pound daughter of Prince Segis Korndyke. This young bull has the best Holstein blood in America back of him and when mated with a cow of such milk production as Pauline Tiffany Annie DeKol, the offspring should be dairy cattle of the highest merit.

The following records are from the official reports of P. C. Johnson, tester:

| Owner. Name of Cow. | Breed | Age. | When Fresh. | Pounds Milk. | Test. | Pounds Butter Fat. |
|---|---|---|---|---|---|---|
| Jay P. Graves, Pilot's Model | Jersey | 5 | 8-25-18 | 1752.7 | 4.57 | 80.1 |
| Jay P. Graves, Fancy Iron Duchess | Jersey | 6 | 8- 9-18 | 1567.5 | 4.63 | 72.6 |
| T. S. Griffith, King Milan's M. | Jersey | 10 | 5-20-18 | 1332.0 | 5.18 | 69.0 |
| Jay P. Graves, Bessie of S. Lane | Jersey | 6 | 9- 9-18 | 1283.9 | 5.32 | 68.3 |
| A. H. Reilly, Bess | G. Hol. | 8 | 9-22-18 | 1941.0 | 3.37 | 65.4 |
| T. S. Griffiths, E. Jimps Owl | Jersey | 5 | 7- 6-18 | 1627.0 | 4.01 | 65.2 |
| A. V. Bradrick, Pauline | Holstein | 6 | 9-22-18 | 2058.0 | 3.10 | 63.8 |
| A. H. Reilly, No. 41 | G. Hol. | 6 | 7-27-18 | 1603.0 | 3.97 | 63.6 |
| Jay P. Graves, Nelly's Tilda | Jersey | 5 | 9-25-18 | 1061.4 | 5.94 | 63.1 |
| B. W. Powers, Landseer | Jersey | 4 | 9- 2-18 | 1070.0 | 5.80 | 62.1 |
| Jay P. Graves, Waikiki's Frances | Jersey | 2 | 3-23-18 | 872.4 | 6.97 | 60.8 |
| Jay P. Graves, Waikiki's Landseer Fern | Jersey | 4 | 9- 7-18 | 1069.6 | 5.27 | 56.4 |
| A. H. Poston, Maggie | G. Hol. | 8 | 8- 4-18 | 1104.0 | 5.10 | 56.3 |
| T. S. Griffith, B. Lads Ella | Jersey | 8 | 8- 9-18 | 1103.0 | 4.99 | 55.0 |
| Jay P. Graves, M. Princely Legacy | Jersey | 9 | 6- 2-18 | 1037.3 | 5.27 | 54.7 |
| A. H. Reilly, No. 34 | G. Hol. | 8 | 7-11-18 | 1448.0 | 3.57 | 51.7 |
| A. H. Reilly, No. 47 | G. Hol. | 8 | 7- 4-18 | 1451.0 | 3.47 | 50.3 |



# Big Money In Milling

## A Business Both Patriotic and Profitable

HERE is a wonderful opportunity to engage in the nation's most needed business—an unrivaled chance for financial success.

Make flour of wheat and other grains grown at home, milled at home and sold at home to home people.

## $100 to $1000 Per Month Extra Profits for Men in Any Business—An Unequaled Opening for Any Man Seeking Opportunity

In every town—your town—there are men who are leaders in business success. They are of two classes. The first is the man with an established business who never misses an opportunity to expand. The other is the man who has vision to see when opportunity is ripe in a new line.

One of these men will soon be earning big rewards in your town with the wonderful mill that is rapidly bringing flour making back where it belongs—to the community where the grain is grown. Will you be the man? Will you investigate now? Will you learn what others are making with an

## AMERICAN MIDGET MARVEL MILL

This great money-making mill enables men without previous milling experience to mill the highest grade flour at the lowest cost. It brings them the right to market their flour under our nationally advertised brand—FLavo FLour. It gives them membership in the Community Marvel Millers' Association.

### Note These Remarkable Features

The American (Midget) Marvel Mill can be installed in small space, requires but one man to operate and takes but little power. It is automatic, simple and will last a lifetime. It will produce more pure white, nutritious flour per bushel of clean wheat than any other milling process.

From grain to flour in 45 seconds as against a half hour with other processes is the record of the American (Midget) Marvel Mill. This new, quick process retains the rich, nut-like flavor of the wheat berry and produces flour that is in constant demand.

### Our Service Plan Assures Success

To make success assured, we virtually enter into partnership with you and work right along with you in the operation of the mill and the building up of a profitable business. Over 1300 owners are enthusiastic in their praise of the mill and the cooperation they receive.

This is **your** opportunity. Investigate it now. The winners are men of action! Send coupon today for full details of our 30-day trial offer, easy terms and copy of new book—"The Story of a Wonderful Flour Mill." You risk nothing. And no three-cent investment ever offered you more.

**Anglo-American Mill Co., 2-40 Trust Bldg., Owensboro, Ky.**

ANGLO-AMERICAN MILL CO.,
2-40 Trust Bldg., Owensboro, Ky.

Send at once, full information about your wonderful flour mill, free trial offer, easy terms and cooperative plans. Include evidence of what owners are doing with your mill.

# Will a Silo Pay?

## Its Wide Spread Use Answers Yes

There are still many farmers, some of them dairy farmers or men with a few cows, who are uncertain as to whether the silo is a practical, economical feed storer. There are many today who are debating with themselves whether or not they should build a silo or continue the old-fashioned methods of feeding.

To him who will look around there is an answer to the question. Practically all the really successful dairymen are using silos. After years of experiments and widespread study of the dairy feeding problems, the great mass of the dairymen of America have adopted the silo as one of the greatest steps toward the solution of these problems.

One writer says on this subject:

"The silo is the best and cheapest form of providing succulent winter feed. It is the cheapest farm building we can erect. It will house feed nutrients at a lower cost per ton than the hay mow in the barn will protect a like feeding value in the form of hay or other roughage from the weather. It increases the producing capacity of the farm at least 10 per cent, and will often increase its stock carrying capacity 25 per cent. It is the cheapest place to store the corn crop, for an acre of corn can be placed in the silo at a cost not exceeding that of shocking, husking, grinding and shredding, and it will preserve more feed acre than any other system of handling. It saves a third of the value of the corn crop that is otherwise largely wasted. It requires less labor to feed silage and there is less waste of fodder by the cows. It is the cheapest and most convenient method of soiling."

# Don't Let Her Shiver

It has been said often, several times in these columns, but it can not be said too often: Don't let the cow use up her energy trying to keep warm. It is folly to allow her to stand out in the cold or to fill her up with ice-cold water when a little care would enable her to be housed or shedded and furnished with water at a medium temperature. The dairy cow is a sensitive animal. The loss from cold is not the only loss from exposure. There is an actual loss through the subconscious effect of suffering. Just as men work better or fight better when their morale is kept at a high standard, so does a cow do her best producing when she is in a state of comfort and content in both mind and body. Care to prevent chilling will go far toward producing this state of morale.

### MUST FEED SCIENTIFICALLY.

One of the objects of cow testing associations, in addition to the weeding out of unprofitable animals, is the development of systematic and scientific feeding. That this is a field well worthy of consideration is indicated by the report of one association which showed that during a two-year period cows that received 1200 pounds of concentrates produced an average income above feed cost of $33 per cow; that cows which received from 1200 to 1800 pounds of concentrates during the same period yielded an income above feed cost of $43 per animal and that those which were fed over 1800 pounds of concentrate yielded a net profit of $55 a head.

### PACK BUTTER IN BRINE.

While storage butter under whatever conditions of preservation are followed is not as good as the fresh article, it is frequently desirable that it be stored away for later use. This is true on the farm as well as in the large commercial storage plants. A practical method of preserving butter in reasonable condition is to cover it in an earthen jar with a solution of salt water strong enough to float an egg. The jar used should be thoroughly cleansed by scalding in order to remove every possibility of undesirable odor or taste. Butter so preserved need not be packed into the jar in one mass as is so often done, but will keep even better, it is claimed, if put down in pound rolls or prints. This allows the solution to cover all parts of the butter and avoids to a considerable degree the difficulty resulting from air which is inevitably present in small amounts in a large pack of butter.

### WHICH SHOULD BE SOLD?

Whether it is more profitable to sell butter-fat or to make it into butter on the farm is a question that many farm homes consider. Every producer can figure this up for himself on the basis of local conditions, as a rule, but it is apparent that in most cases where there is a reasonably accessible market for butter-fat it is at least as profitable to sell the butter-fat as the butter and requires much less labor. One student of this problem says that ordinarily one pound of butter-fat will make about 1.16 pounds of butter. Ordinarily it would appear that this does not give sufficient margin to warrant the making of butter at home unless a special market is developed for it or unless there is no immediate market for the butter-fat. This is undoubtedly more true now than ever with the prices of butter-fat ranging so high.

# Farm Labor

## Increase Needed in Next Decade

By RICHARD HAMILTON BYRD.

"Food prices will never reach the level they occupied five years ago, and, of course, there is no possibility that the prices of 20 years ago will ever return, but I do believe that a reasonable drop will take place inside of the next year," remarked Theodore Henderson, an Iowa stockman, farmer and banker, who has been in Washington, D. C. "The movement brought about by the war to increase production has had a very great effect upon the farmers all over the country, and more so than elsewhere in the western states. It is particularly gratifying that the boys on the farms are now taking a keen interest in production. Iowa is a grain-feeding state, as you may know. Very little corn is sent out of the state, because practically all of it is fed. The Iowa boys have shown what is possible for the younger members of a farmer's family to do. Recently at the state fair more than 100 baby beeves were exhibited by the members of the boys' and girls' clubs. These beeves averaged 967 pounds in weight and sold for an average of $187.

"All of this, to my mind, is highly encouraging. Any one who thinks knows that the constantly increasing population means greater production. With the signing of the peace treaty the United States will become the greatest nation on earth, and we may expect a greater tide of immigration than ever before. These immigrants will be welcome if we can send them into the proper channels of endeavor upon their arrival. What we shall need more than anything else in the next decade is an increase in farm labor. Europeans are particularly well quilified for farm work, and we can use many thousands of them on the farms. Indeed, we shall have to provide for additional labor on the farms. I believe, however, that tihngs are going to work out in good shape. There is a strong tendency toward a back-to-the-farm movement, and if this occurs we can hope for reasonable food prices in the future."

### Rush Back Farmer Boys.

Every effort will be made by the war and navy departments to return from France with the utmost speed men who have knowledge of agriculture and who are willing to work on the farms, it was said in official circles. The need for farm laborers was never more urgent than at the present time. The food supply of the world is dependent upon the number of men who can be recruited for agriculture.

Among the plans suggested to the farm service division of the United States employment service is one to send a number of representatives to France to confer with commanding officers with a view to obtaining a census of the men who are ready and willing to go on farms. It is not proposed, however, to ask the war and navy departments to give exclusive privileges of return to men who will be available for farm work.

It is proposed to suggest that as many of this class as practicable shall be included in the early return of men to their homes. It is contended in the report by the United States employment service that there is a shortage of 2,000,000 men on the farms. At any rate they say this number could be profitably used in developing the farms of the country and increasing production of fruits, cereals, vegetables, live stock and other kinds of food.

In the far west and southwest there is great demand for cowboys. The training the American soldiers have received abroad especially fits them for this kind of outdoor work. Stock production must increase with the production of cereals and vegetables. The number of available cattle, sheep and hogs has greatly diminished since the beginning of hostilities.

# What Is Milk Worth?

Milk could be bought at several cents a quart more than the present price in any of the markets of the northwest and still be a cheaper food than most of the other foods that are consumed, according to a set of figures presented by R. W. Washburn of the University of Minnesota at a recent meeting of the Oregon Dairymen's league. Here are his figures:

| | Retail Price | Cost per lb. Edible Solids | In Comparison Milk is Worth |
|---|---|---|---|
| Fat Porterhouse | 30c lb. | $ .80 | 20.00c qt. |
| Round steak | 25c lb. | .81 | 20.00c qt. |
| Hamburger | 25c lb. | .75 | 19.00c qt. |
| Eggs | 30c doz. | .85 | 21.00c qt. |
| Eggs | 45c doz. | 1.27 | 32.00c qt. |
| Broiler chicken | 25c lb. | 1.70 | 38.25c qt. |
| Fat fowl | 20c lb. | .80 | 20.00c qt. |
| Turkey, fat | 25c lb. | .75 | 18.75c qt. |
| White fish | 20c lb. | 1.44 | 35.00c qt. |
| Oysters, solids | 40c qt. | 2.00 | 50.00c qt. |
| Ham | 40c lb. | 1.04 | 27.00c qt. |
| Ham | 30c lb. | .78 | 19.00c qt. |
| Cheese | 30c lb. | .48 | 19.00c qt. |

Mr. Washburn said that corn and oat meal, wheat flour and rice are the cheapest sources of energy for adults, that milk is a less expensive food than most meats and vegetables; that growing children need low fat or skim milk daily. He said the total annual consumption per capita in the United States for milk is less than $6, while for liquor it is $32.

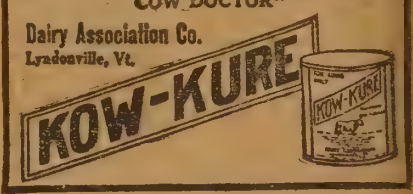
### PLAN SPOKANE POULTRY SHOW.

The Spokane Poultry Breeders' association has announced the selection of January 20-25 as the dates for its annual poultry show. The show has been omitted a number of times in recent years, but it is the association's plan to put on an exceptionally good exhibit this year. William Purdy has been selected as judge for this year's show. J. R. Walker of Spokane is secretary of the association.

The object of this association is to develop and improve the markets for poultry products and encourage the breeder of all varieties of poultry, whether fancy or utility, in the Inland Empire and to improve the quality. The association aims to promote the greatest and keenest competition in all varieties and the breeding of more and better poultry for increased egg production, and to show the public the particular merits of standard bred poultry.

CREAMERY RESULTS

Decide right now to put your dairy on a profit basis. Go after 100% health in your milk cows.



You do not need a veterinary for most of the ailments common among dairy cows. Barrenness, Retained Afterbirth, Lost Appetite, Scouring, Bunches, Abortion, etc., are nearly always a direct result of impaired organs of digestion and reproduction.

You can successfully treat and eliminate these diseases yourself with the aid of Kow-Kure. This well-known cow medicine acts directly on the affected organs and promptly restores a normal condition. Take one of your backward cows and put it to the test.

*Buy Kow-Kure from your feed dealer or druggist; 60c. and $1.20 packages.*

Correct Lubrication for the Ford Engine
The Ford automobile engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its full lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE LIGHT fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

"Zerolene is the Best"
—Say leading motor car distributors, because the records of their service departments show that ZEROLENE, correctly refined from selected California asphalt-base crude, gives perfect lubrication with less wear and less carbon deposit.
Most cars are now lubricated with ZEROLENE because their owners have learned through experience that there is no better oil.
ZEROLENE is the correct oil for all types of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.
*At dealers everywhere and Standard Oil Service Stations.*

# Put on Finish

## Pays Best to Market Choice Meat

Thomas Conway of the Carstens Packing company of Spokane is a strong believer in the practice of properly fitting meat animals for market.

"Take a steer just off the grass in poor flesh, really not fit for marketing," he says by way of illustration. "He weighs, say, 1000 pounds and ought to be put in the feed lots for three months to add 200 pounds in weight and to gain the finish that will make him a prime steer in any market. Every stockman and every packer knows that it is an economic crime to dress him in his underfed condition when a little alfalfa would add 50 per cent to his value to the grower and would give the consumer a perfect article of food. However, there is a misguided demand for cheap meat, and so the steer goes to the block. He sells for 9c a pound or $90, and owing to his underfed condition he dresses only 50 per cent, or 500 pounds to the carcass. That meat sells wholesale at 17c a pound, or $85. The apparent loss to the packer is made up by the hide, the tongue, the liver, the kidneys and some tallow, which realize enough to cover the handling cost and some profit. When the retailer gets this meat he sells a part of the forequarters at a loss, the loins at a profit and the hind quarter at a little more than the average cost of the entire carcass. The beef retails say at an average of 21c a pound, or $105. This carcass with its 500 pounds of beef contains, however, about 160 pounds of bones and inedible trimmings, so the consumer gets only 340 pounds of net meat which cost him an average of practically 31c a pound.

"Now suppose that same steer has been fininshed in the feed lot to weigh 1200 pounds. Instead of selling at 9c, the animal brings 13c a pound, or $156. That is an advance of 866 in the price realized by the grower. The carcass now dresses 58 per cent, or 696 pounds, and it sells wholesale at 22c a pound, or $153.12. The meat is retailed straight through at an average price of say 26c a pound, or $181. This carcass, however, contains hardly more bone and inedible trimmings than did the same steer in poor flesh. Let us deduct say 180 pounds for bones and waste, leaving 516 pounds of net food, which cost the consumer at retail $181, or an average of only 35c a pound net as against 31c for the meat from a lean and unpalatable steer."

# VETERINARY

By DR. S. B. NELSON.

**Heifer Is Ailing**—I have a 2-year old heifer coming in fresh with her first calf next April that has been looking sick now for 10 days. Her fore legs are considerably swollen up. She also is swollen up above her eyes, and is often shivering. She was out several nights when it was cold and raining, so we thought she had a cold and gave her several doses of black pepper and ginger in warm water, but she did not improve. She is eating, but not as she ought to. She is a very nice animal, and tuberculin tested. Can you tell me what is the matter and if there is anything we can apply? F. W.

Seattle, Wash.

I am not able to make a diagnosis of the trouble affecting your heifer. If she is as nice a heifer as you say I would suggest that you have one of the local Seattle veterinarians see her. You have good men practicing in Seattle.

**Milk Runs Out of Teats**—I have a cow whose milk runs out of the two teats on left side. Is there any remedy for it, and could you tell me the cause? Any pressure whatever on the udder causes the milk to run out. A SUBSCRIBER.

Walla Walla, Wash.

Try wrapping the lower end of the teat with electric paint. Do not wrap it too tightly so as to stop the circulation; but just so there is a slight pressure to close the opening. Try that for some time and see if it will cause the irritation to close the opening normally.

**Sow Refuses to Eat**—I have a sow that farrowed May 6. She has never to my knowledge been in heat since. About a month ago she refused to eat, vomiting frequently, seemed badly constipated, lies around listlessly a good deal, sometimes wanders off aimlessly, seeming not to know what she is doing. After about a week she improved a little, ate fairly well for a few days, then all the former symptoms returned and this has been repeated over and over again. Her abdomen seems full and hard, and she seems to hate to lie down or get up. I have fed her shorts or millfeed in milk most of the time. She drinks water and milk pretty freely. Please tell me what is the matter and what to do for her. J. W. G.

Prosser, Wash.

I am not able to make a diagnosis of the trouble affecting your sow. I think that either one of two things is the trouble with her. Either she has inflammation of the womb, which would show itself by a slight discharge; or she has inflammation of the cericoneum—probably the latter. I think it is going to be a very difficult trouble to treat; but I am simply going to suggest that if you possible can get her to eat it that you give her 10 grains of potassium iodine in her milk morning and evening. That may possibly cause a change so that the poisoning material will be overcome and absorbed and excreted.

**Impaction of Colon**—I have lost several horses lately through their feed becoming packed in the colon. Have used liberal quantities of oil, but have never been able to move the clog. Can you suggest anything to use which would have more effect than oil? H. S. T.

Pasco, Wash.

The trouble that you mention is one of the most severe troubles that comes to the attention of the veterinarian. The treatment depends upon the individual animal and treatments vary according to the conditions found in the individual animal. Therefore, I can not give you a specific treatment that will cover all the cases. I am going to give you in addition to what you are doing a general treatment, which may help. Give one quart of raw linseed oil once daily, morning or evening. The opposite morning or evening give one pound of Epsom salts in one pint of heavy syrup diluted with one quart to two quarts of water. You may continue that safely generally for two, three or even four days. Do not feed the animal anything for three, four or five days when it is affected with impaction of the colon, but give the animal plenty of water even if you have to give it to him by artificial means. Enemas given frequently in large quantities are also of value.

**Heifer Off Feed**—I have a half-blood Holstein heifer that has not done well all summer. She has given a very good quantity of milk—two and one-half or three gallons per day—until just lately, but her hair has been rough all summer. Lately, on splendid feed of green oats and clover and timothy, she has nearly dried up. I haven't paid very much attention to her until a few days ago, and I notice that she breathes rather hard all the time and especially so after walking in from the pasture. She is never feeding when I go after them, and I never see her chew her cud. Last night I put her in the barn for the first time and her bowels only moved a little and the dung was not nearly as soft as it ought to be on the kind of feed she is on. It was more like she was on dry hay or straw. I shall give her a dose of salts and would be glad if you can let me know of a course of treatment for her. One teat was nearly covered with warts when she first began milking in the spring, but these have all dropped off, so the teat is clean now, but she has a few near and on her udder of the flat kind. W. C. A.

Cusick, Wash.

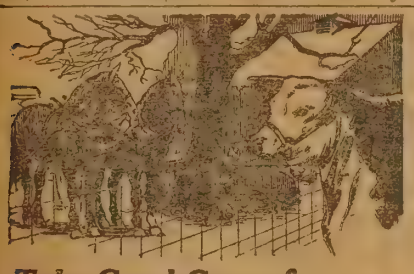
Give your cow one drachm of potassium iodide in a pint of water morning and evening for four days. Give her also from six to eight ounces of raw linseed oil morning and evening for three, four or five days.

# Facts About Rye

About 96 per cent of the world's crop of rye is produced and consumed in Europe. As a crop it is of greatest relative importance in the German empire, the Netherlands, Russia, Belgium and Austria-Hungary.

In Russia the wheat and rye crops are nearly equal in importance.

The European rye belt is somewhat farther north than the wheat belt.



The ability of rye to produce satisfactory yields in regions of sever winter temperatures, poor soils or rough topography is well known. Although rye may be either autumn or spring sown fully 99 per cent of the crop is fall sown.

Rye forms less than one per cent of the total value of all crops in the United States and is grown mostly in regions having cool climates and sandy soils. The rye belt extends across the lake states about 300 miles north of the winter wheat belt.

Although rye has been called "the grain of poverty" because it will grow on soil too poor for successful production of wheat, corn or barley, it thrives best on fertile soils. In two of the principal centers of rye production, eastern Pennsylvania and southeastern Michigan, it competes successfully with other crops for the occupancy of the best soils.

In eastern New York, New Jersey and Pennsylvania, rye straw is often as valuable as the grain. Rye straw being longer and tougher than the wheat or oat straws, is in demand as bedding for horses and is also used in packing fruit trees, pottery and many other products, for the production of straw articles, and in the manufacture of paper.

About two-thirds of the rye grain produced in the United States is used as feed for domestic animals. In Europe rye is used mostly for bread.

*Take Good Care of Your Live Stock*

DO NOT let them suffer from neglect. Keep up their efficiency and value now, when so much is dependent on them.

Keep them free from the pain of strained tendons, the aches and tortures of *swellings, lameness, bruises*—with Sloan's Liniment. Its use for 37 years recommends it to you.

Apply Sloan's Liniment to the throbbing part and let it *penetrate without rubbing.* Prompt relief will follow, the pains and aches will subside, better work and better worth will be your reward.

Three sizes—the bigger the bottle the greater the thrift. Get *yours* today.

Sloan's Liniment Kills Pain

# Packers' Combine Still Operates

## *So Says Federal Trade Commission in Its Latest Report*

Supplementing its report on the packing industry of the United States, in which, a few months ago, it declared that a gigantic combine existed between the five big packing concerns in America, the federal trade commission declares that the combination still exists in such a degree as to restrain trade and control the sale of live stock, fresh meats and by-products. The five big packers named are Swift & Co., Armour & Co., Morris & Co., Wilson & Co., and the Cudahy Packing company. This latest report was submitted to congress a few days ago, and congressional action is likely to be considered at an early date.

Drawing conclusions from what it terms voluminous and detailed evidence, the trade commission says that these five companies are in agreement for the division of the live stock purchases throughout the United States according to certain fixed percentages. The following are other conclusions reached by the commission as set forth in the report filed with congress:

"That this national live stock division is reenforced by local agreements among the members of the general combination operating at each of the principal markets, as at Denver, where Armour and Swift divide their live stock fifty-fifty.

"That these national and local live stock purchase agreements constitute a restraint of interstate commerce in live animals and in the sale of meat and other animal products, stifling competition among the five companies, substantially controlling the prices to be paid live stock producers and the prices to be charged consumers of meat and other animal products and giving the members of the combination unfair and illegal advantages over actual and potential competitors.

"That the five companies exchange confidential information which is not made available to their competitors and employ jointly paid agents to secure information which is used to control and manipulate live stock markets.

"That Swift & Co., Armour & Co., Morris & Co., and Wilson company, Inc., through their subsidiary and controlled companies in South America combined with certain other companies to restrict and control shipments of beef and other meats from South America to the United States and other countries.

"That the five companies act collusively through their buyers in the purchase of live stock.

"That the five companies act collusively in the sale of fresh meat.

"That there is a joint contribution to funds expended under their secret control to influence public opinion and governmental action and thus to maintain the power of their combination.

"That the agreements, understandings and pools hereinbefore recited are reenforced by the community of interest among the five companies above named through joint ownership, either corporate or individual, of various enterprises. Two or more of the interests thus have joint ownership or representation in 108 concerns as far as ascertained to July, 1918."

# Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

| | |
|---|---|
| The Blaine Journal, Blaine, Wash., and The Washington Farmer | $1.50 |
| The Buckley Banner, Buckley, Wash., and The Washington Farmer | $1.50 |
| Castle Rock Independent, Castle Rock, Wash., and The Washington Farmer | $1.50 |
| The Cheney Free Press, Cheney, Wash., and The Washington Farmer | $1.50 |
| Chehalis Bee-Nugget, Chehalis, Wash., and The Washington Farmer | $1.50 |
| Cashmere Valley Record, Cashmere, Wash., and The Washington Farmer | $1.50 |
| The Everett Tribune, Everett, Wash., and The Washington Farmer | $3.00 |
| The Colville Examiner, Colville, Wash., and The Washington Farmer. | $1.50 |

# Profit in Poultry

## Let the Rooster Make It for You

The writer knows a poultryman who is making several thousand dollars profit a year just because he has been securing males each year of high producing pedigree to mate with his breeding flock. The roosters have made a difference between no profit and a good profit.

The poultryman who makes a success works hard, of course. He must give good care; must feed good rations and feed regularly, and he must pay special attention to the hatching of the chicks and the raising of them. He makes a success by doing all that, and also by paying special attention to the breeding of his flock.

The man who doesn't make a profit, the man whose eggs cost him a dollar a dozen to produce when he can sell them for only 65 cents a dozen, may and often does work just as hard as the other man whose eggs cost to produce 30 cents a dozen. He gets up as early in the morning, perhaps, and works as late at night; probably later, because when he gathers only 25 eggs per hundred hens when he should be getting 50, he works a little more and blames himself for not working harder. He makes trips around the houses and stops up cracks in the walls, and tacks down curtains on the windows to make the hens more comfortable, and does a hundred other things which may be all right, but not necessary. When the pullets don't begin to lay in the fall, he buys some more expensive feed, and feeds them oftener, until the feed cost is high. He does everything he can to make them lay so as to reduce the cost per dozen. But he has forgotten one thing; he has not delegated some of the work to the rooster.

If the rooster is from a heavy laying family; if he is one of those trapnested pedigreed kind whose dam and grandams have records around 200 eggs a year, he will produce pullets that will be heavy layers. J. D.

# Preventing Diseases

A large portion of the letters of inquiry in regard to poultry have to do with diseases. A majority of those letters would be necessary if more attention was given to the matter of preventing diseases. Letters should be written, of course, when trouble comes and the poultryman does not know what to do, but prevention is better than cure.

In nine cases out of 10 the diseases complained of come from mistakes in care and management, and the disease often indicates where the misfakes occur.

If the chicken suffers from colds or so-called roup, the trouble is in the housing conditions. Enough attention or study was not given to the housing. When the influenza or roup sweeps through his flock and kills off half the hens, the poultryman is then in a receptive mood to consider changing his housing plans and get rid of some set notions of his own.

There are too many "notions" in the poultry business. As a rule the poultrykeeper is subject to suggestion or reason like other humans, but the majority of humans do not think that any particular reasoning or thinking is necessary when dealing with chickens. But when the hens don't lay and eggs are 70 cents a dozen, and when the hens are sneezing and dying when they should be laying and making the owner rich, he begins to do a little thinking, and it is a good thing to think even then. But instead of this violent mental exercise when trouble comes it would have been better, before the trouble came, to ward it off by a mild mental diversion. Prevention is better than cure.

J. D.

# Afraid of Words

## That Is Why Some Poultrymen Fail

There are a few words in the modern dictionary which, though becoming quite common, seems to baffle a lot of people. They are given credit for possessing a mystic nature that the common mortal is not supposed to fathom. One of these words is "balanced" when applied to the problem of the feeding ration. But there is no occasion to be afraid of the word, for it is perfectly simple.

The balanced-ration idea of feeding is that the maintenance of the body of the animal in question, together with the production of milk or eggs or labor, as the case may be, requires certain very definite elements of nutriment. There are three of them; Protein, carbohydrates and fats.

In the case of the hen, the protein element in the food goes to produce muscle (lean meat) and a certain well defined part of the egg. The carbohydrates and the fats, which perform in a general way the same functions, furnish heat and fat for the body and for the making of the egg. The yolk of the egg contains a high percentage of fat.

It is a simple problem on the part of the poultry scientist to determine almost exactly how much of each of these elements is required to produce a certain number of eggs in a given time and keep the body of the hen properly nourished and strengthened. It is found that for good egg production these elements should be given the hen in the ratio of about one part of the protein element to four parts of the carbohydrates and fats elements.

To illustrate the need of a mixed ration: Wheat contains about seven times as much of the carbohydrates and fats as it does of the protein. If wheat were fed alone, the heat and fat producing elements would be given, therefore, nearly twice as much per unit of the muscle building element as required. This would amount not only to a weakness through lack of muscle builder and rebuilder, but to an actual waste of the heat and fat making elements. On the other hand, take a meat scrap diet: This ordinarily would contain more protein than carbohydrates and fats together, which would throw the ration out of balance in the opposite direction.

But take the two together, for a rough example of balancing the ration. It would be possible to so combine the wheat and the meat scraps that the protein in the wheat plus the protein in the scraps would about equal one-fourth of the carbohydrates and fats in the wheat plus the carbohydrates and fats in the meat scraps. This would be approximately a properly balanced ration. This does not mean, however, that this is necessarily an ideal ration, for there are many other things that may well be considered in the feeding problem. But it does illustrate the point: That the word "balanced" is not a word of mystery, but a simple word that may be simply applied to the feeding problems of the poultry yard.

### MATING GEESE.

To the Editor: Will you be good enough to tell us if one can successfully run one gander with two or three geese, instead of letting the geese mate; that is, run a gander with each goose? F. E. S.
Juliaetta, Idaho.

Two or three geese may be mated to one gander. Four would be a maximum.

J. D.

### RUNS HOGS IN ORCHARD.

S. E. Cox of Fruitvale, Yakima county, has a thrifty bunch of Berkshires running in his orchard, cleaning up after the pickers. Mr. Cox considers the present season a very satisfactory one, and states that he has had no trouble in getting plenty of good orchard help. Scale has been somewhat worse than average years, he admits, but this in his opinion is due to seasonal causes and not to any permanent increase in the pest itself.

### Have You Had Experience?

Tell others through the columns of this paper what you have learned that might help them.

"What Can I Reasonably Expect of a Tractor?"

SO MANY farmers ask us this question that it deserves a public answer. When you buy an International kerosene tractor you can expect—

**Plowing,** as deep as you need, as fast as good plowing can be done, at low cost because your tractor operates on kerosene.

**Good work on plowed ground.** This is important. You can use your tractor for all the seed bed work, giving your crops a better start and a better chance.

**All kinds of belt work.** Individual threshers, ensilage cutters, feed grinders, hay presses, and many other useful, labor-saving belt machines soon follow an International tractor because it does good belt work at low cost.

An International will haul your crops to market, clear your land, grade and level roads. In any size or style it is a true "general purpose" tractor, useful for all kinds of farm power work, built by a Company that has built farm machines and tractors in large numbers for many years.

That is what you may reasonably expect from an International kerosene tractor. The local dealer can give you any further information you want. See him or write direct to us.

GRANVILLE LOWTHER,
Editorial Contributor.

I would rather be an apple king in the Inland Empire than to be the king of Austria, or the emperor of Germany.

The best government for a child is one that prepares it to govern itself. So with the child-like nations; but the governors of those nations should have the interests of the child-like races at heart and not use them for purposes of self-aggrandizement and exploitation.

The evolutionists have told us where we came from, but the kaiser would like to know where he is going to.

Remember that a tree is rooted to the ground, and can not run about in search of food. The bird can fly, the fish can swim, the beast can walk, the insect can crawl; but the tree must have the food where its roots can reach it.

What is an "irrigation project?" It is a scheme to take water that is running to waste, and put it on land that is no good, and make it support a dense population of well-to-do, happy and contented people. The people of the Inland Empire will cooperate with the people of the West Side in reclaiming their logged-off lands, if they will cooperate with us in reclaiming our arid lands. G. L.

## Big Question

### At Grade and Pack Conference

I have recently attended two meetings of local "grade and pack conferences," held by the fruit growers of the Yakima valley. The first was a meeting of the growers residing in the vicinity of Yakima, and was held for the purpose of discussion and the election of delegates to the state meeting to be held at Spokane. The other meeting was a meeting of delegates elected from the various sections of the county—Grandview, Granger, Zilla, Parker, Toppenish, Mabton, Wapato, Selah, Naches, Ahtanum, Moxee and other points. These delegates met at Yakima to discuss the questions involved and see if they could reach some general agreement.

All the questions discussed were of benefit to the growers, because they brought out the many viewpoints and angles, giving us larger ideas of the marketing situation and our relations as growers to the consuming public.

However, I felt that there was danger that we overlook the really large question involved, because of our confusion over a number of smaller things. The big question, as I see it, is whether the states producing the boxed apples will get together and adopt a uniform standard pack. The question of "two or three grades," "two or three healed-over stings," "visible and invisible water core," and others of like character, are important, but only in a very limited degree in their relations to the "uniform standard."

I do not wish to make these questions appear ludicrous, but I could scarcely help thinking, during the discussion, of the two colored men who furnished the basis for a story that runs about as follows:

"Say, Sam, did yo' hea about dat little cullud boy as got killed de odder day?"

"Naw, I nebber heard ob no cullud boy as got killed."

"Well, he did, an it was de saddest case I ebber heard about. Yo' see, he went down to Marse Jones' watter millyun patch, to git a water millyun. And when he was cummin' home, crossin' de railroad, he set down on a rail to plug de water millyun to see if it 'wuz ripe, an a train cum 'long and killed him."

"Well, dat was awful," said the other. "I s'pose yo' dident hear if de water millyun was ripe did ye?" G. L.

## Few Rules for Pruning

Some orchardists are already beginning to prune. It is a good plan to begin early and get that part of the work out of the way before the time for spraying in the early spring. I realize that no one can tell any other one just how to prune, for there are as many ideals of how any particular tree should be pruned as there are persons engaged in the business. However, there are a few simple rules that every one will agree it is better to observe, provided his attention is called to them and he gives the subject any thought.

**Pruning Grapes.**

Grapes should be pruned in the late autumn. They may be pruned in the early spring, but spring pruning is much more likely to result in a waste of sap than late fall pruning.

There are certain terms generally used in speaking of the different parts of the vine, and they are as follows:

A shoot is a green, immature growth, less than one year old.

A cane is a matured shoot.

An arm is a cane two or more years of age, is a permanent part of the vine, usually fastened to the trellis in a horizontal position and on which the spurs and branches are produced.

A branch is a division of an arm or shoot.

A spur is a cane that has been shortened from one to three joints; if left longer it is called a cane.

The stem is the permanent portion of the vine, below arms and canes.

Grape vines yield more fruit and larger fruit, if heavily pruned, than if they are permitted to run everywhere and produce a heavy wood growth.

Remember, the fruit of next year will be produced on wood that grew this year, on wood that grew last year. Last year's wood produced this year's wood that will produce next year's fruit. It is therefore desirable to remove as much as possible of the old wood, without sacrificing too much of the wood that will produce next year's fruit.

**Pruning Apple Trees.**

Cut out all dead branches, and if the death is caused by blight, or some other bacterial disease, cut below the diseased portion.

Cut close to the parent stem or trunk, so that the wound will heal.

If two branches interfere with one another, sacrifice the less desirable of the two.

Some varieties tend to send up perpendicular branches; these should be pruned so as to give the top as much as possible a spreading tendency and thus let in the sunlight.

Some varieties have spreading tops; these should be pruned so as to sacrifice the overhanging branches that interfere with cultivation, and that produce the poorer quality and less colored fruit.

Branches on old trees that reach a height where it is difficult to spray them well, or to pick the fruit, should be cut back. G. L.

### WEIGH VARIETIES IN THE BALANCE.

On the 10-acre orchard owned by E. F. Mash of Yakima, Wash., drastic methods have been resorted to to bring financial returns from trees which were proving unproductive. Several rows of Stamens and Wagners have been "dehorned" and grafted to Rome Beauties. Most of the work seems to have been very successful, and the majority of the trees have developed an abundance of healthy, new wood, from which leaders may easily be selected.

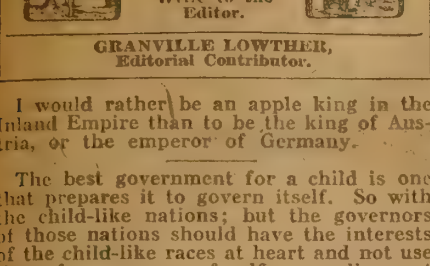
The tendency to weigh varieties in the balance, and to throw out those which do not average up with the better commercial sorts, is constantly going on. Many of the old orchards were planted either to varieties which have proved poor sellers, or were so broken up by the craze for an "assortment" that it has been difficult to sell the fruit to advantage. These mistakes are now being corrected either by taking out the trees or by cutting back to the scaffold limbs and grafting. P. E. T.

## Food Production

### Greater in France Despite War

France actually increased her percentage of food production last year more than the United States, notwithstanding the dreadful losses from war. This is the report made by C. W. Barron, a noted financial authority and writer who went to Europe last summer to study international conditions and who was in France in September.

With nearly all of her able-bodied men fighting the Germans, or dead in heroic graves, France's women, children and old men worked as never before to save their country from starvation. Strive as we may, our imaginations can never grasp the full import of that heroic record. We can never quite understand what it meant to these patient women, these weary children, these stooped and aged men in long hours of exhaustive toil. Laboring beyond their feeble strength, through scorching sun and drenching rains, through the frosts of autumn and the bitter snows of winter, they held themselves unfaltering in the line of duty. All the war correspondents, and hosts of workers in the Red Cross, the Y. M. C. A. and other overseas agencies have testified in amazement to the heroism of these heroes of the soil.



Many correspondents have written in astonishment at the strange scenes they witnessed themselves, of women and children working in fields that were actually under fire. It is a story of tremendous suffering, noble endurance and sublime courage, never surpassed in all the long history of the world.

### HOLSTEIN BREEDER GROWS CORN.

Herman Steffins, Holstein breeder of Monroe, Wash., grows Smoky Dent corn and, in spite of its dark color, considers it the best corn for the Coast country. It matures early and has a large number of ears. The ears are not large, but are of very uniform size, and Mr. Steffens likes the flavor and texture of the corn.

### SUGAR RESTRICTIONS OFF.

Announcement has been made by the food administration that the restrictions on the use of sugar in homes and public eating places are removed. This act is taken because of the increase in the supply of the Louisiana cane sugar and western beet sugar. The new Cuban crop is also expected to arrive soon.

**Plow an Acre an Hour—on Kerosene**

HUNDREDS are doing it and more with the "Allwork"—the light tractor that's different. Burns kerosene perfectly—has the largest 4 cylinder motor on any 3 plow tractor—mounted crosswise on the frame. Direct spur gear drive, no intermediate; belt pulley on direct drive from crank shaft extension. Four wheels; turns in a 12 foot radius. The

**Allwork KEROSENE TRACTOR**

is proving one of the biggest successes in light tractors. Its low upkeep cost, all around usefulness, ease of handling, great store of power make it the popular tractor everywhere. Built with the construction that insures years of good service—backed by an organization that can give you quick, dependable service. Satisfied owners everywhere. Write today for special folder.

# In Union There Is Strength

## If Farmers Are to Take Advantage of the New Opportunities They Must Get Together and Cooperate in Their Efforts

DARRINGTON, Snohomish County, Wash., December 2.—The question is how can the farmers in general be benefited by the opportunity offered by world markets? As near as I can see, it would be for all the farmers to come together, form a union and cooperate, not letting only a few men take an active interest in it, but one and all. Select a few men with experience to represent the union and deal directly with the agents of their respective counties and I believe that the farmers would get what they are entitled to and the sharks would not get all the profit. I would like some older, wiser and more experienced men to give their opinion on this subject, but I do know that in union there is strength. No doubt that domestic animals will be in demand to restock the European countries and most likely will prove a good article for export, as also will grains of all kinds. As I am in the dairy business and know the conditions of the present time regarding wages and prices for cream and milk, considering the prices we have to pay for feed, I am a little doubtful as to what it may be in six months or a year from now, for prices are almost sure to drop. If we have an eight-hour day law applied to farm labor I am afraid some of the dairymen will have to go out of business. Only the ones that have their own help could run a dairy farm and make any profit. The only way out of it is for all farmers to unite so they will be able to set a price on their products and sell directly to the consumer. That is the way I see things. A few of the farmers in this section took advantage of the few nice days we had and broke up old meadows, but very little has been done so far. The continued mild weather will help out some towards the feed as there is still some pasture. Stock in general is in good condition. C. B. NEIDERPRUM.

### CROP CONDITIONS FAVORABLE.

LA CROSSE, Whitman County, Wash., Dec. 6.—Crop conditions are, as a rule, favorable. Most of the fall wheat is up and most of it has a good stand. There is at least five times more acreage seeded this fall compared with last year, also considerable more than the usual acreage for fall seeding. The weather conditions are ideal—good growing weather. The precipitation, however, stayed far behind, the total precipitation since January 1 to date being 8.97 inches. More rain is needed as the soil is wet only from four to six inches. Live stock is doing well. M. E. SCHRECK.

### RANGE CATTLE DOING FINE.

METHOW, Okanogan County, Wash., Dec. 4.—I have no opinion that would carry any weight as to what kind of farm products could be profitably exported. The exporting business is one that the average farmer knows nothing about. In eastern Canada we used to export cattle and sheep mostly. I can not see any bigger problems than usual on the coming of peace. Grain and meats will stay up in price until Europe gets in shape to feed herself again. Then they are bound to come down. Farm conditions are better than for three years. The fall wheat is all up and the present mild weather is good for it. Live stock conditions are also good. The range cattle are still out on the range and doing fine, thereby saving lots of $25 hay. Quite a bit of fall plowing has been done. CHARLES GRANT.

### SEED CROP PROSPECTS GOOD.

LA CONNER, Skagit County, Wash., Dec. 10.—This fall has been an ideal one for getting the winter-over crops in shape, that is, the seed crops, such as cabbage and root crops. While the early summer was very dry the crops have kept on growing to date, and are still growing as there have been no frosts that have been heavy enough to kill even the leaves. No heavy rains until a week ago. If the present crops winter over there will be an enormous crop of seed from this section next year. Seed growing has come to stay. The conditions are equally as good for other crops. Many are getting their plowing well under way. I. W. ALEXANDER.

## Message

### To Disabled Soldiers and Sailors

"Do you know that most of the men who have taken vocational training in France got better jobs than before they went into the service?" Above is a sentence from a pamphlet issued by the federal board for vocational education, and addressed to the disabled soldiers and sailors in the hospital. An extract is also made from a communication by the director of vocational training in Canada, who speaks of a man who was a teamster before entering the war. He was afterwards trained as a machinist at McGill university, and after graduation went to a bridge company, where he became foreman in six months. In England there is a one-armed telephone engineer who was a butcher before the war; a hand bootmaker with no legs who used to be a laborer; an armless carpenter, who is now a building inspector; a laborer with both legs paralyzed, who has learned to run 20 looms unaided.

The federal board says that the worst mistake a disabled man can make is to drift into a low grade, unskilled occupation. Let Uncle Sam tell you how you can be fitted for a better job, and how you will be provided with means for the support of yourself and dependents during your training. Just write to the federal board for vocational education, Washington, D. C.

### NOT A PATH OF ROSES.

R. Henderson, whose five-acre apple orchard adjoins the city of Yakima, does not believe the orchardist's path is exactly one of roses. If it isn't one thing it's another. This year, for instance, aphis made a concerted attack on the Henderson orchard, and Mr. Henderson had to spray five times, not only for aphis but, as usual, against coddling moth and scale. He secured a fair crop, which probably would have been much larger but for the full crop of last year.

### A HEAVY CORN CROP.

When Horace Steele, who lives in the Boyd district, near Chelan, Wash., threshed his wheat September 26, he went right on and cut his corn and filled his silo. County Agriculturist Meigle says it was one of the heaviest crops of corn he ever say. The 12-inch corn cutter used is owned cooperatively, in a district where the cooperative spirit is very strong. The corn crop covered 35 acres, of which 25 acres were put in the silo. Nearly half the ears were pulled off as the corn was taken to the cutter, so heavy was it eared, and then, Mr. Meikle says, the silage is still very strong. The balance of the ears were saved for hog feeding. After the corn was cut Mr. Steele waited until the rain came, and then disked the ground and seeded it to small grain. Farmers in that district often seed right in the corn rows, without disking. H. A.

### ALFALFA CROP KNEE HIGH.

Fred R. Reed of Yakima is skeptical as to the pot of gold buried at the foot of the apple tree.

"General farming is good enough for me," he comments, glancing with considerable pride at the silo which adjoins his barn. "My herd of cows is small, and at present it's made up of grades, but I believe in the dependability of live stock farming."

On November 20th the fourth crop of alfalfa on the Reed farm was standing nearly knee high, ready to furnish an excellent late fall pasture when needed.

### FARMERS BUILD PACKING HOUSES.

Within the last year 50 or 60 farmers in Chelan county, Washington, have built fruit packing houses fitted with graders and with the lower part ventilated, air-cooled storage. Government experts spent the entire summer at and around Wenatchee, Wash., giving advice on the manner of building and equipment. County Agriculturist Meikle called my attention to the permanency of the fruit industry, as well as to the recognized necessity of being able to store fruit in case of car shortage. H. A.

### SHIP MUCH PRODUCE.

A report from Yakima states that the Yakima valley has this season shipped nearly 15,000 carloads of agricultural products. Of these shipments about half are fruit. Hay is the other principal item. Other produce includes 200 cars of potatoes, 400 cars of grain, 140 cars of live stock.

GOOD FARMING PAYS

Protect your crops against drought by using the Western Pulverizer, Packer and Mulcher for preparing your seed bed and keeping a moisture-retaining mulch on your growing grain.

The Western pulverizes, packs, mulches and makes a perfect seed bed in one operation, saves time, horse power and ½ seed, still producing a better stand. Seed will start at once when seeded. Especially adapted for breaking crust on growing grain, will break the hardest crust, forming it into a moisture-retaining mulch without injuring growing grain and will raise a crop with half the moisture during growing season.

MADE IN 12 SIZES, 1 AND 3 SECTIONS FOR HORSES AND TRACTORS

This year's crop will bring high prices; make it a record breaker by using the Western. Free illustrated catalog describing machine and its principle, shows its work by pictures taken in the field, gives nearest shipping point to you, contains valuable information on up-to-date farming. ## Banker and Farm Loans

Editor Washington Farmer: I see an editorial in your paper of November 21, in which you reply to E. Huxford of Cherokee, Iowa, in his remarks attacking the federal farm loan system, as being favoritism to the farmer.

I am glad you said just what you did, through the columns of your paper, and we are destined to have more of it in the future, for that is one of the coming issues.

If I may be permitted, I would like to add further the following suggestions: The bankers, not the farmers, have been specially favored by the government. I am not attacking the banking system, nor any particular banker. I grant that the banking system is an evolution of economic conditions, and that in its present form it is better than any system that has preceded us. But has it reached the highest possible point of perfection, beyond which there is nothing better? If so it is different from any other human institution. Now I want to suggest some possible improvements.

I would suggest that instead of maintaining a system of private or corporate banks, charging 10 per cent interest payable in advance, for short time loans, that the government take over the whole banking system, and charge 4 or 5 per cent for loans. Can the government do this? Yes, for they have already demonstrated it in the present "farm loan system." This would do away with the expense of maintaining so large an army of detectives and bank inspectors. It would make our deposits absolutely safe. It would turn loose at least half the bankers now in the business for productive industries. The intelligent banker today knows that his business exists, because the government maintains a system expensive to the people, which is already outgrown. G. L.

## Money for Good Roads

L. W. Page, director of the bureau of roads of the federal government, is authority for the statement that state and federal money for road construction in the United States during 1919 will approximate $100,000,000. In a recent letter on the subject Mr. Page says:

"In view of the fact that restrictions on highway work have been removed by the action of the war industries board, the fuel administration, the railroad administration, and the United States highways council, a great revival in road building should result.

"In my judgment, no more effective means of insuring employment, particularly to unskilled labor, in the transition period from war to peace can be devised than the vigorous prosecution of all public improvement work. I believe it would be better to go ahead with road work wherever it is needed rather than to wait for a period of lower prices. The benefits of improved highways are immediate to say nothing of the great desirability of having all labor employed and money active.

"Federal aid funds already available, and those which will be made available July 1, 1919, will aggregate $50,000,000, of which amount not over $5,000,000 has been expended. It is quite probable, therefore, that state and federal funds for construction purposes will, during 1919, run well over $100,000,000. This should constitute a material factor in carrying on the vigorous year's work.

"Every assistance which the bureau of public roads can render will be available to the states in dealing with the various problems which may arise."

### HANDLE FURS PROPERLY.

Houses buying the pelts of fur animals declare that large numbers of valuable furs are made valueless because of improper preparation for shipment. One point they emphasize is that they must be well dried before being packed and that the trapper must not therefore be in too big a hurry to cash in on them. It is said that many pelts are received which have never been dried at all but were merely rolled into a tight bundle and shipped to market, where they inevitably arrived in a condition that made them of little if any value. It is also urged that trappers do not wrap their furs for shipment in anything that excludes the air, such as paper. Even well dried furs will be damaged in shipment if the air can not circulate about them. Another point is that fat or flesh that clings to the pelts should be removed before preparing to ship. Never allow a pelt to be dried so that it wrinkles.

### DON'T GO AWAY TO TRAP.

Most folks have the idea that one must get far out into the wilds before being able to make a success of trapping fur bearing animals. Contrary to this idea, a prominent fur man recently said that trapping is most profitable in the well settled districts where there is sure to be something for the animals to live on. One of the Kansas City fur dealers reports that his greatest business comes from Kansas City itself in the form of pelts taken from animals in the immediate vicinity of that large city. During the trapping season it is said that several thousand pelts of various kinds are received by the fur houses of Kansas City and St. Louis alone.

### OAT HEAD MEASURES 25 INCHES.

To the Editor of The Washington Farmer: I have in my possession a few heads of oats. I claim the record of the state or states. One oat-head measures 25 inches, containing 440 grains, and a number of others measure from 18 inches to 23 inches. There are two stalks with two distinct heads. I sowed one-half gallon of oats that measured on the average of 18 inches. If there is any one who can beat them, and can show the goods, kindly let me hear. HENRY PRIRZNER.
Matlock, Wash.

### SELLS SKUNK HIDES.

A report from Hood River, Ore., says that M. Fuhrman of Klickitat county, Wash., not only rid his farm of a considerable number of pests in the form of skunks and muskrats, but that he sold the pelts of 45 of them to a Hood River dealer for $133. Mr. Fuhrman tumbled onto this little sideline by attempting to destroy the animals that were killing his poultry, later discovering that their fur had a real market value.

# Agrarian Group Is Inevitable

## *Largest Single Group of People, Yet With Least Political Power*

To the Editor: About a year ago in March I wrote a contributed editorial on "An Agrarian Party." I did not keep a copy nor did I keep a clipping of it. I should like to have a copy of it and say some more things on that matter. We have been, for a long time, so accustomed to two great parties with an occasional offshoot of some wild-eyed demagogue that we can hardly conceive of "groups" which act with solidarity on certain matters while usually acting in harmony with one or the other of the great political divisions. Yet in England and every European country such subgroups are the common thing. It is now evident that we shall have a labor group which will throw its weight with one or the other party. I think an agrarian group is inevitable and the sooner it comes the better, if it may not be led by demagogues and socialists. The hope of the agrarian states (west and south chiefly) lies in the United States senate and the dual system. That is to say, for a century at least, if the agrarian group were class conscious it could control the senate and the electoral college. A man might either be a republican or a democrat and yet be an agrarian and on industrial lines vote accordingly. The agrarians form the largest single group of people and yet have the least political power. Under this democratic administration we pander wholly to the consumer and the labor element. The best section of the agricultural press, including such papers as your own and Wallace's Farmer, ought to organize and outline a policy of public education along these lines.

Boise, Idaho. E. A. BRYAN.

The article to which Dr. Bryan refers appeared in The Farmer of March 29, 1917, and is reproduced below.

### A NATIONAL AGRARIAN PARTY.

The time is fast approaching when the formation of a national agrarian political party will be worthy of careful consideration. It does not require a close observer to perceive that economic questions are becoming the determining factor in political alignments. The wage-earning, labor union faction of society has become pretty thoroughly organized, and already places the aspirations of the group above any past political connections or predilections. Though the farmers and the laborers in the various industries have some things in common, particularly the fact of physical labor, they have many interests which are not in common and which are diametrically opposed.

For example, the cost of food products: the farmer wishes it to be high that he may receive a legitimate reward for his labor; the laborer wishes it to be low that the outlay for living may be less. For example again, taxes. The wage earner wishes large public expenditure that work may be plenty and wages high. He will always vote for a bond issue for the construction of public works. On the other hand, the farmer is a payer of taxes and opposes this increase, as a rule.

The truth is that the farmer is a capitalist who is his own employer, and in almost every instance when there appears to be diverse interests between capital and labor he finds his personal interests on the side of capital, even though he is one of the most diligent workers in the world.

While 80 to 85 per cent of our people were yet engaged in agriculture there was no need of an agricultural political party. But now that there are scarcely 40 per cent of the population engaged in farming, now that commercial interest, banking interests, manufacturing interests, transportation interests and labor interests are so concentrated, so thoroughly organized and have such ready access to the public ear, the time approaches when this largest and most fundamental class must consider the means of its own protection and the advancement of its own interests.

The Patrons of Husbandry (the grange) and the Farmers' Cooperative and Educational union, by the terms of their organization are nonpolitical, and, as a matter of fact, their membership belong to all political parties. They are chiefly educational and social, and confine their political activity chiefly to propaganda for certain specific economic ends, such as rural delivery or parcels post. Such organizations must continue their usefulness, but do not quite meet the requirement of a national agrarian party, always with a large congressional representation, the party always aligning itself for offensive or defensive legislation in the interests of its class.

In many countries with constitutional governments there are and there have been in the past agrarian parties. In few countries is the government so distinctly in the hands of one or the other of two great political parties. Rather, is it in the hands of one or the other allied groups of parties, as the government of Great Britain prior to the war was in the hands of the liberals, composed of the liberal party proper, the Irish group, the labor group, etc.

The "issues" between the republican and democratic party are no longer sufficiently radical or comprehensive to meet the demands of their adherents. The recent campaign (written in March, 1917) and election show that the high tariff and free trade no longer represents a true dividing line even though it as yet remained the most distinctive feature. Two party names, these or others, may continue, but they are likely to be made up of groups, such as the labor group or agrarian group, free to align themselves, as interest may dictate.

Our labor friends have been loudly proclaiming "nonpartizanism," yet they form the most partizan of parties, acting with a solidarity and an organization unequaled by any other party of the day. "Nonpartizan" has been made a shibboleth to jar loose the membership of a dominant party. A distinctively "agrarian" party is easily within the possibilities of the next decade. When it comes it will likely be a state as well as a national party, for its issues will be as strongly affected by state as by national legislation. This fact may modify the attitude of the country toward the election of a president by popular vote, for while the majority of the population is urban the majority of the states is rural.

# Sugar as a Body Building Food

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

Not every man can say as he eats that he "judiciously drank and greatly daring dined." As a rule things sweet to taste prove sour to digestion. Sugar and candies when eaten to excess often make a sour stomach and a bad temper.

Dr. Hirshberg.

If you think of your anatomy as one of the beautiful homes seen in the movies, you can easily conceive of the dozen or two food substances as the pillars, cornices, capitals, arches and other architectural elements of the human building called man. Such materials are employed to construct your life cosmos and thereafter to keep it in fuel, heat, energy and complete repair.

The stuff that meats, eggs, wheat, peas, beans, cereals and legumes are largely made of is called protein, albuminous or nitrogenous materials. These are the brain, brawn and blood builders. They make flesh and bone.

### What Sugar Does.

Minerals, salts, ash and water, each aid in fertilizing and distributing the various materials to the tissues.

Sugars and sweets furnish force and fuel for body-building, the heat produced by sugar being changed into muscular effort.

The nourishment or nutritive quality of a particular kind of food depends upon its easy digestion, ease of absorption and desirability by the body in the way of its need of energy-making or heat-producing foods. Many persons crave sweets because of the satisfaction this kind of food gives to the taste, digestion and the repair requirements of human heat and energy reservoirs.

Most persons in time of peace and plenty commonly eat as much candy and cakes as they can afford to buy. The desire for "something sweet" is gratified by sugary products, and the needs of man are met by its wonderful yield of 98 8-10 per cent of energy.

Exhaustion, poor endurance, "that tired feeling," fatigue, weakness, debility, the want of vitality in the aged, even sleeplessness, are all relieved at times by eating candy and sugar. Chocolate candy and cocoa are frequently given credit for restorative effects which belong to the sugar mixed with them. The same is true of coffee.

### Some "Sweet" Hints.

Chocolate is higher in real food value than almost anything in cakes and candies, other than sugar, because it supplies with each pound eaten 2860 calories.

Walnuts, pecans, almonds, filberts and peanuts provide some 1500 valories per pound.

Gum drops, taffy, licorice balls, hard sweets, tough caramels and candy are made of corn syrup, glucose or all sugar, whether it is cane sugar or another kind, become converted into glucose in the mouth and stomach. These candies are just as good as the more expensive grades, and also are as nutritious and stimulating. Glucose is the normal sugar of the blood and tissues, producing 1559 calories to the pound.

# Grinding Out Farmers

## *The Good Lord Is Yet Doing Most of the Work*

When I was in Washington last spring at the conference of farm editors with Secretary Houston one of the bureau heads of the agricultural department was called in and asked regarding the conditions of stockmen who were feeding cattle and hogs for the market. He replied that it was not as easy as it might seem to gather information that would answer this question. Farmers who were busy feeding stock were too busy to write or fill out questionnaires. Replies generally came from those who had time to write.

Again I was reminded of this incident when I was in Washington last month to attend another conference of farm editors with Secretary Houston. The magnitude of the department of agriculture grows upon me. Buildings upon buildings filled with scientists and specialists and experts of all kinds where mountains of information are piled up with regard to every branch of farming. Regiments of people doing farm extension work are traveling over the country ready to scatter the knowledge of better farming and more attractive farm living. Dr. True, at the head of this work, told us that during the present year $15,000,000 was being spent in extension work by the department of agriculture. This includes county agents, home demonstration agents, traveling specialists, as well as the sending out of quantities of leaflets and bulletins telling how to produce more crops and more live stock.

Listening with all attention to the summary from these vast accumulations of agricultural knowledge I just wondered how much of it was being vitalized in the minds and hearts of the farm folks.

I was told in Chicago by a man who I presume was receiving a high salary to promote a certain business enterprise which had to do with farmers that farmers must be made to see the value of better ways of farming, that, like children, they must be made to take medicine even if it is not palatable. I do not know but that will work in the corn belt, but I certainly have my doubts regarding the success of any man who goes out among the farmers of the Pacific northwest and tells them how they must farm, whether they are disposed to listen to him or not.

It all comes back to the proposition that mountains of agricultural information and regiments of agricultural missionaries are as sounding brass and tinkling cymbal if the farmers are not responsive.

Is it reasonable to expect a farmer or, for that matter, any man in any occupation to learn to adapt better methods if he is not already doing pretty tolerably well in that business or occupation?

The farmer must take the initiative. He must vision the prize of better farming; of better home for his family; of better opportunities for his children. Such a farmer is already striving for these better things. If he is shown how he can make more money by decreasing the cost of production, by using more farm machinery, by selling cooperatively with his neighbor, by taking advantage of the thousand and one things which he can obtain for the asking from the agricultural department, from the county agent, then he is ready to ask of this knowledge, judge of its application to himself and try it out in a moderate way until he is sure it is what he wants.

A few years ago I was talking with a man who was born and raised in the Willamette valley of Oregon. His father took up a donation claim and was a well-known pioneer. With his brother he fell heir to more or less of the estate. One of them followed a profession, the other went to farming. The professional man, from his income, helped his brother on the farm. He said to me: "Everything in the way of a new farm machine my brother has got. He is posting himself with farm bulletins and listening to all the agricultural college knowledge he can get. He is a student of the latest improvement in the farming business. Yet he doesn't make good and I am spending my money for that which doesn't satisfy."

In other words, we forget that there is such a thing as very tolerable farming fashioned after the slow development of the ages and the gradual introduction of modern ways.

You can not jump real farmers into new ways over night. The department of agriculture can not make a farmer, nor can the agricultural college, nor can the county agent nor the banker nor can any other agency. This is not a peculiarity with farmers. The law school can not make a successful lawyer, nor can a theological school make a successful minister, nor can a technical school make a successful engineer. Nine points must be in the individual, then the tenth point of outside help may spell success.

# SIDELIGHTS

### Take the Right Half.

He—I hope you didn't believe all they said about me.

She—I never believe more than half I hear.

He—Yes; but the trouble with you women is that you always believe the wrong half.

### A Mistake Somewhere.

Wix—I see by this paper that more than one-half of the world's population is feminine.

Nix—I don't believe it. If it were so how do you account for the fact that one-half of the world doesn't know how the other half lives?—Idle Hour.

### A Barrier of Ill Will.

"A good neighbor, you say?"

"Ideal," replied Mr. Crusterleigh warmly. "The best neighbor I ever had."

"Ah! I presume you have similar tastes and all that sort of thing."

"Similar tastes, nothing. That fellow has such a profound contempt for me and I have so much contempt for him that he would see me in hades before he would let a member of his family borrow anything from a member of my family."—Birmingham Age-Herald.

### Hadn't Read of a Flood.

A traveling man, the story goes, one night found himself obliged to remain in a small town on account of a washout on the railroad.

The rain was still coming down in torrents. The traveling man turned to the waitress.

"This certainly looks like the flood."

"The what?"

"The flood. You've read about the flood, and the ark landing on Mount Ararat, surely."

"My! mister, I ain't seen a paper for three days."

### Oh, These Congressmen.

A member of congress and his wife had been to Baltimore one afternoon. When they left the train at Washington, D. C., on their return, the wife discovered that her umbrella, which had been entrusted to the care of her husband, was missing.

"Where's my umbrella?" she demanded.

"I fear I have forgotten it, my dear," meekly answered the statesman. "It must still be in the train."

"And to think that the affairs of the nation are entrusted to a man who doesn't know enough to take care of a woman's umbrella!"—The Lamb.

### I Wonder Why.

"There was a good deal of baseball played in London last summer, and the doughboys often took English girls to see the game," said Earl Dunmore at a Washington reception.

"I heard of a doughboy who said to a girl as they entered the ball grounds together:

"'If there is anything you want explained, tell me. I guess a lot of things seem meaningless to you.'

"'Everything seems meaningless,' said the girl, 'and some things seem idiotic.'

"'What seems idiotic?' asked the doughboy.

"'Well,' said the girl, 'why do you call seats the stands?'"—Detroit Free Press.

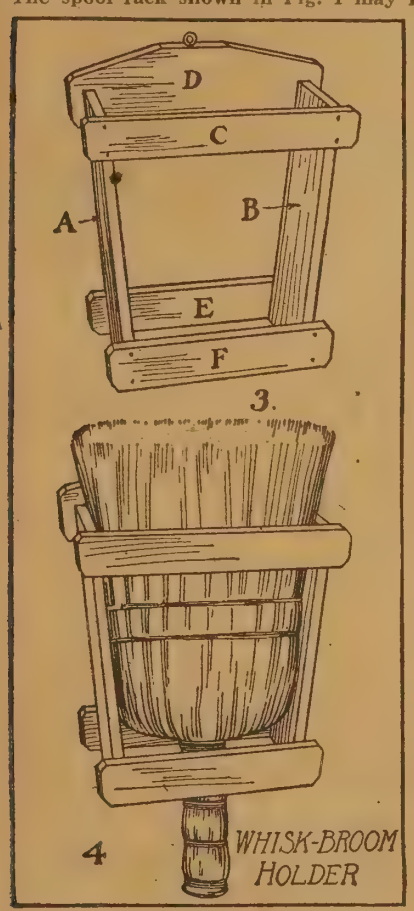
### Not So Very Much.

"Have you taken anything for your complaint?" asked an Arkansas doctor of a long, lank, hungry-looking man who came to him for advice.

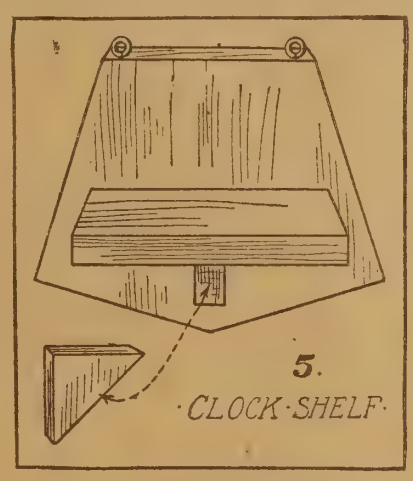
"Well, I ain't been taking much of anything, doc—that is, nothing to speak of. I tuk a couple o' bottles o' Pinkweed bitters a while back, an a bottle of Quackham's Invigorator, with a couple o' boxes of Curem's Pills and a lot o' quinine and some dandelion tea my old woman made. I've got a mustard plaster on my back an' a liver pad on, an' I'm wearing an 'lectric belt, an' takin' cod liver oil four times a day, with a dose or two of ginger ev'ry other day. 'Septing for that I ain't takin' nothin'."

# Handicraft for Boys

By A. NEELY HALL.
(Copyright by A. Neely Hall.)



## HOME-MADE CHRISTMAS GIFTS.



The gifts illustrated below have been designed along very simple lines with

the idea of providing articles that can be constructed easily with the tools almost every boy owns.

The spool rack shown in Fig. 1 may be made out of a boxboard three-eighths inch thick. The base piece should be cut about 4 1-2 inches wide and 6 inches long, with the top edge beveled off all around as shown. Lacking a plane, the beveling can be done by rubbing the edge with sandpaper. The two upright pieces should measure about 3 inches wide and 3 inches high. Cut the sides and top of these on a slant as shown, being careful to get opposite edges equal. If you find it too hard to cut the edges slanted in this way you may leave them straight and possibly round off the corners instead. After preparing the upright pieces bore a hole through each three-fourths inch below the top and large enough for a nail 4 1-2 inches long to slip through. If you haven't a gimlet with which to bore, make the holes by driving a nail through the pieces. The nail forms a spindle for the thread spool to turn upon. Fasten the uprights at the edges of the base block with nails driven through the base into their ends.

The size to make the little calendar board shown in fig. 2 depends upon the size of the calendar pad you can get. Various sizes of calendar pads are sold in the stationery stores, and cost two or three cents apiece. When you get the calender place it upon a piece of wood and mark out around it a design similar to that shown in Fig. 2. A piece of cigar box wood makes a very pretty board, and this wood is easily cut with a sharp knife. Fasten the calendar to the board with small tacks and screw a screw eye into the top edge of the board to hang up the calendar by.

The whisk-broom holder shown in Fig. 4 is made of six easily cut strips (Fig. 3.) Cigar-box wood will do nicely. Make strips A and B 1 1-2 inches wide by 4 inches long, C three-fourths inch wide by 4 1-2 inches long, 1 1-4 inches wide by the length of C, and E and F of the same size as C. Nail strips C, D, E and F to the edges of strips A and B, with C, E and F even with the ends of A and B, and the lower edge of D even with the lower edge of C. Allow the ends of the strips to project as shown. Screw a small screw eye into the center of the top edge of strip D, by which to hang up the rack.

Figure 5 shows an attractive shelf for a bedroom or kitchen clock. It is made of three pieces of wood, a back board, a shelf and a bracket. These may be cut from a box board. Use your own judgment as to the sizes to make them. After cutting them out, nail the back board to the edge of the shelf, then fasten the triangular bracket between the shelf and back board, in the exact center of their widths. Screw two screw eyes into top of back board for hangers.

Stain each gift with one of the modern stain finishes sold in paint stores, or where you have used cigarbox wood, simply rub up the surfaces with boiled linseed oil.

# From Producer to Consumer via American Red Cross

In one of the remote districts of Washington, where she is far removed from the busy marts of trade, lives "Grandmother" Hegg, a loyal American. Anxious to do her bit, through the American Red Cross, toward keeping the Yankee fighting men warm and comfortable, and, in order to expedite matters, sho brought forth her spinning wheel, long since consigned to the attic, to produce her own yarn.

'Grandmother" Hegg well remembers the time when all wool was spun by hand in private homes for family consumption, and, although she had been out of practice for many years, it did not take her long to acquire her old-time dexterity at the picturesque task.

And, here in the illustration, she is shown at her work—a work that has provided yarn for more than 1800 knitted garments since April 7, 1917. At her left is Mrs. Ella Wolf, who has carded the wool preparatory for spinning, and at the right, Miss Cora Hegg is demonstrating the final step in the process of producing a sweater made from the wool spun by "Grandmother" Hegg. It is believed these garments are the nearest thing to wearing apparel direct from producer to consumer that have been distributed to the men in the service.

## Not Like It Used to Be.

Stranger—Farm products cost more than they used to.

The Farmer—Yes. When a farmer is supposed to know the botanical name of what he's raisin' an' the entomological name of the insect that eats it, an' the pharmaceutical name of the chemical that will kill it, somebody's got to pay.

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**RAYMOND L. GARVER, Deer Park, Wash.**—Enlisted in the service of his country in May, 1918, and arrived in France in July, where he has been serving with motor truck company 437.

**LIEUTENANT C. GROSHONG, Deer Park, Wash.**—Enlisted in the United States army, and is now stationed at Camp Joseph E. Johnston, Jacksonville, Fla., with the sixth company.

**ENSIGN F. GROSHONG, Deer Park, Wash.**—Enlisted in the United States navy in July, 1917, and trained at Annapolis, Md. A brother, Chester, is a lieutenant in the army. The parents of the boys live in Deer Park.

# Answer to the Christmas Roll Call

Every American is called upon to join the American Red Cross during Christmas roll call week, December 16-23.

# A CROOKED TRAIL—By Lewis B. Miller

Copyright by The Page Company, 1911.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

SYNOPSIS.

Little did Travis Holloway realize, as he trudged off through the woods to bring in the calves and the oxen, that he was leaving his Texas frontier home to be gone many weeks. And little did he realize the adventure that those weeks held for him. Lep, his father's big spotted ox, was gone, and Travis, catching his pony, started to hunt him, riding bareback and without bridle. He breakfasted at a neighbor's where he borrowed bridle and saddle. Following a clue as to the whereabouts of the stray ox, he traveled too far to return home that night, and camped on the prairie with unseasoned rabbit meat and wild turkey eggs for his supper and breakfast. Next day and the next he went on and on. He had all but caught up with the lost animal when he arrived at the home of another frontier family, where he became acquainted with Frank and Stella Booth. Had he not tarried to spend the night and the next day with them, sure that the ox was with their cattle nearby, he would have found him and cut his travels short. But instead, the ox, accompanied by some of Frank's cattle, was gone. Together the boys started out in pursuit, and together they were destined to meet adventure after adventure for weeks. A haunted house, a hidden well, a swollen river, cattle thieves and sheriffs figured in their travels. Unwittingly they help the thieves, who later refuse to release their cattle. Even the sheriff fails to assist them, and they undertake, by a clever method, to secure them themselves.

## CHAPTER XV.

### Driving Away Our Own Cattle.

AT last, just as night was settling down, we halted at a neat-looking farm-house set in the midst of a grove of hackberries; and there, in reply to our questions, we learned what we were so anxious to learn.

"Do I recollect any long-horned, spotted steer in that bunch of cattle? Well, I ruther guess I do," the farmer at the woodpile assured us. "Couldn't well help noticin' that animal. He was mostly white, with reddish-brown spots, and wore a bell. He was in the herd when it stopped here, late yesterday evenin', but not when it moved on."

And then, in answer to our eager questions, the man threw down his ax and came out to explain.

"I'll tell you how it was. While the first drove was standin' here, another drove not quite as big happened along, and the owner of it wanted to buy some cattle. I told 'im I'd just parted with the last hoof I had to spare. I'd sold five head to the first man. But the first buyer he spoke up and said ruther than have the other fellow disappointed, he'd sell 'im a few cattle. So they dickered around awhile, and finally traded. I saw the money change hands. One of the cattle that changed owners was that big, spotted steer. There was six or eight others went with 'im; but I didn't notice any of the rest of 'em very close."

"What way did he drive from here—the man that bought the spotted steer?" I inquired.

"That outfit come along that cross-road there, and kept on west from here."

"And that's the way our cattle went," remarked Frank.

"No doubt about it," I answered.

"Did any of the hands desert the first drove and take up with the other?" questioned Frank.

The man shook his head. "No changin' hands that I saw."

"How many men were with the first drove?" I wanted to know.

"Three, not countin' the wagon-driver; and they all went on with it."

"So the man we'd seen at the water-mill must have left the outfit before they got this far," remarked Frank.

THE farmer was evidently getting very curious to know what all these inquiries meant. And we now explained exactly how matters stood, dwelling particularly on our experiences with the cattle-thieves and the sheriff.

"That fellow Dugan is a slow-poke and a crosspatch and a fool to boot," the man declared, indignantly. "I said so before he was elected, and I still stand by it. I worked ag'inst 'im the last time, and I expect to fight 'im harder if he ever tries for office ag'in. He's a disgrace to the county."

We were now about to start out on the other road, on the trail of our cattle, but the farmer would not hear to our riding any further tonight. So we said with him. Next morning he announced:

"If you boys just say the word, I'll saddle my horse and ride to town with you, and we'll make that fellow Dugan do something, whether he wants to or not; or we'll know the reason why."

"We're many times obliged to you, sir," replied Frank. "But we both got all we wanted of that bunch of slowness. Even if he tried to do anything, our cattle could be run all the way to Mexico before he could get well in motion."

"That's all so—every word of it," agreed the farmer.

"Our cattle have got into honest hands now, I hope, and we oughtn't to have much trouble getting possession of them when we once overtake them," I remarked.

The farmer scratched his head, doubtfully. "I wouldn't be too dead certain about the honest part," he replied. "The man that bought your cattle may be as honest as the day is long—or he may not. I didn't notice anything suspicious about 'im. But I didn't notice anything suspicious about the other fellows, either. They may all be buyin' some cattle and pickin' up some the easiest way they can. And the whole business looks suspicious to me now. That's an old trick for cattle-thieves to meet openly somewhere and swap stolen stock; so that if any of 'em get caught, they can prove by good witnesses that they bought every hoof in their herds."

WHEN we had saddled and mounted and were about to ride away, the farmer said:

"Well, I hope you'll find your cattle, and get 'em without much trouble. But I doubt it you will. Whatever you do, keep your eyes open. Cattle-thieves are desperate fellows, most of 'em; and they're dangerous for unarmed boys to deal with, especially out in that thin-settled country where you'll be likely to overhaul 'em. Between murder and the penitentiary, they'll choose murder every pop. If I can be of any help to you, don't fail to let me know. I'll go with you any time, day or night, rain or shine. And so will some of my neighbors. We don't love a horsethief or a cattle-thief around here."

We thanked him warmly and were quickly riding away, on the new-found trail of our cattle.

"What shall we do when we run onto that outfit?" I inquired of my traveling-companion.

"That's a riddle for us to solve. But they've got thirty-six hours the start, and maybe thirty or forty miles, and there'll be plenty of time to think up something. Unless they lie by somewhere, it may take up two or there days to overhaul them. We don't want to ride too hard."

"No. We must't break our horses down. But there's one thing I've already decided, Frank. From here on we depend on ourselves. No more leaning on broken sticks or sheriffs for me."

"Nor for me," he agreed, heartily enough.

ALL day long, save only for a short rest and grazing spell at noon, we followed the trail of the moving cattle. But they were marching briskly, and were still a good many miles in the lead when night called a halt on us. We camped near a farm-house, going to the house for our supper and for feed for our horses.

Another day, from sunup till sundown, we rode the trail, still without overtaking the drove. During the last few days we had seen little besides open, comparatively level country. But late this last afternoon we entered a rougher region. Here the settlements were scattering, and the country was largely given up to stock-raising.

Night found us a few miles from any house, and we camped in a little circular patch of prairie, hedged in for the most part with thickets of dogwood and greenbriers.

At the last cross-roads store we had bought some cheese and crackers and a chunk of dried beef. But I was hungry for fresh meat. Snatching Frank's six-shooter out of the saddle-bags, I whistled to Vic and started off in quest of game. Fifteen minutes later I had returned with two squirrels, one of which we broiled and ate for supper and the other for breakfast.

THE drove we were trailing was now only a few miles ahead, as we learned by inquiring at the first house we came to next morning. The owner of the drove had stopped there to buy some steers, and we learned by chance that his name was Hart. We might have overtaken the party by noon; but for some reason we slackened our speed. Our nooning-place was a dry camp, but about 3 o'clock we came to a clear, running creek.

"Look here, Frank," said I, "we're right on the heels of that outfit, and still we don't know what we're going to do when we come up with it. Why not lie by here till morning? The rest will be good for our horses. And by morning we ought to know—must know just what to do and say when we find our cattle."

My friend was willing enough, and we went into camp a few hundred yards from the road. First we found a deep place and had a good swim, amusing ourselves in the clear, cool stream for an hour or two. Then, having no change of clothes with us, we washed our underclothes, shirts and socks as thoughly as we could in the cold water. We had done this once before, while flood-bound on the Cowhouse. Afterwards, clad in nothing but our pantaloons, we hung our clothes on some bushes in the sunshine to dry, and then retreated to the shade to keep from blistering.

Now we threw ourselves down on the grass, by our saddles, and fell to debating the hard question we had stopped here to decide. The horses were grazing, and Vic, weary after much traveling, was sound asleep. At last we ourselves fell asleep and slept till late.

WHEN morning came, we had still not decided upon any definite plan of action. However, we would push on till we overtook the drove, and then let circumstances determine our course. Much would depend upon the estimate we formed of Hart, the owner of the drove. If we believed him to be an honest man, the matter would be simple enough. But if he seemed of doubtful character—

Frank Cautiously loaded his six-shooter.

That problem was still too hard for us, but we rode on, nevertheless. We must have been only two or three miles behind the cattle when, between 9 and 10 o'clock, we came to a log schoolhouse in the woods by the roadside. Wagons were standing around and horses were hitched to trees; and a little crowd of people had assembled, not in the schoolhouse, but under a brush-shed, or arbor, in front of the door. They were singing earnestly as we rode by.

"Did you know it was Sunday?" asked Frank.

"No; I'd forgot all about the days of the week. Wish we had time to stop. I always go to Sunday-school and preaching when I'm home."

"So do I. Let's stop anyhow. It don't seem just the thing to be hunting cattle on Sunday. We can overhaul that drove by noon tomorrow."

"I don't know so well about that, Frank. Sunday or not, it seems necessary for us to do some traveling today. But we might stop for Sunday school, and for preaching, if there is preaching, and then ride on. We can keep close behind the cattle that way."

We had soon unsaddled and lariated out our horses, and hung up our saddles, and were back at the arbor. We had no coats, and our clothes were not all that could be desired for the occasion. But clothes cut a very small figure in frontier meetings. Few of the men and boys present were dressed any better than we were.

SUNDAY school had just begun, and we went under the arbor and seated ourselves on a log, flattened a little on top with an axe for the purpose. We sat down in the rear of everybody else, but were soon invited into a class, and went. After Sunday school there was a sermon. And after the sermon we started for our horses, but a settler followed us and brought us back.

"This is a basket-meetin'," he informed us. "There'll be plenty for everybody, and to spare. And nobody ain't allowed to leave without their dinner."

So we ate with the crowd under the arbor. And very nicely they treated us. We were the only strangers present, it seems, and they vied with one another in looking after our wants. We had intended to take the road very soon after dinner, but were prevailed upon to wait till after the afternoon sermon, at 3 o'clock. When the services had ended, we saddled up and rode on our way.

Now we traveled faster than usual, to make up for lost time; and we intended to keep riding for at least two hours of the night. But half an hour after dark we saw a light glimmering ahead, and presently found ourselves opposite a considerable camp.

The camp was perhaps 200 yards from the road, in a little cove set back among the hills. A good-sized campfire was burning, and several men, ghostly figures in the reddish light, were moving back and forth around it. One of them, a negro, was cooking supper. Saddles lay scattered about, and a covered wagon, dimly visible, stood not many yards back. Some horses could be made out, and the occasional lowing of unseen cattle came from somewhere beyond the camp.

'Here they are, Frank," said I, reining up. "We've overhauled them at last."

"That's what we have. They don't seem to have made many miles today. But they must have traveled late, or they'd have had supper over before now."

"Shall we turn out and camp with them?"

'Let's see. No, I'm for riding ahead. I'd rather come onto the outfit in daylight. We don't know what kind of fellows they are. If they're thieves, they might smell a mouse if we stopped there tonight."

"That's so. But how do we know our cattle are there? Stolen animals change hands often, they say. They're too hot to hold long. If we could just find out—"

Here the deep tones of a big bell broke out on the night, ringing as if the wearer, while lying down, had turned his head to lick himself.

"Yes, they're there!" I exclaimed, but cautiously. "That's Lep's bell. I'd know that bell at midnight in Africa."

"Well, if Lep's there, the others are close around, I guess. So we needn't worry about that."

SOON we were riding on. The bell rang again, more than once, and as I listened to it I could not help saying:

"If we only—if we only had those three cattle out!"

"Yes, if we just had!" echoed Frank. "Let's hope that by this time tomorrow night we may have them out and a good long stretch on the road toward home."

Three-quarters of a mile further on we turned aside, up into another cove, and camped for the night. After eating a cold supper, we stretched ourselves on our blankets and talked over the situation. And a very puzzling, worrying situation we found it. Now that the critical time was almost upon us, we found ourselves growing anxious and nervous, and more or less excited.

Bright and early next morning we were awake and astir. But instead of taking the road, we remained quietly in camp. It was an hour or two later when the drove marched by. A strip of woods hid us from anybody passing along the road, but we could distinctly hear the shouts of the drivers, the ding-donging of Lep's bell, the lowing of the cattle, and even the tramping of many hoofed feet.

WHILE the procession was moving by, Frank was busy reloading some empty chambers of his six-shooter.

"What's that for?" I wanted to know.

"Oh, nothing in particular. But this is a wild country, and we don't know what we may run against out here. It's just as well to be prepared. No use being left at the mercy of a gang of cattle-thieves, if that's what they are."

Now we mounted and returned to the road. The cattle were not far ahead. The shouts of the cowboys could still be heard, rebounding from hill to hill.

First we overtook the wagon. After a few words with its black driver, we rode on, and a little later came up with the cattle.

There were four men in charge of the drove, and the first thing we noticed about them was that every one had a six-shooter belted around him. There was nothing unlawful in this. In enacting the law against weapon-carrying, the legislature had exempted the western portion of the state. And we had recently crossed the dividing line. While I understood the habits of cowboys, from having been among them, the fact that they had taken the first lawful opportunity to buckle on their weapons did not, as it seemed to me, speak very favorably of their peaceful intentions.

One of the men—we soon learned that it was Hart, the proprietor—was riding behind the cattle; and we rode up and engaged him in conversation.

"Where are you driving your cattle from?" I inquired.

"From wherever we can pick them up. This is a buyin' round-up we're on now."

"And where are you taking them to?" asked Frank.

"To my ranch, out beyond Fort Concho. It's a good distance out—entirely beyond the settlements. We're movin' in that direction now, but we expect to wind about a good deal before we get there. I want to take in as many cattle as I can, at reasonable prices?"

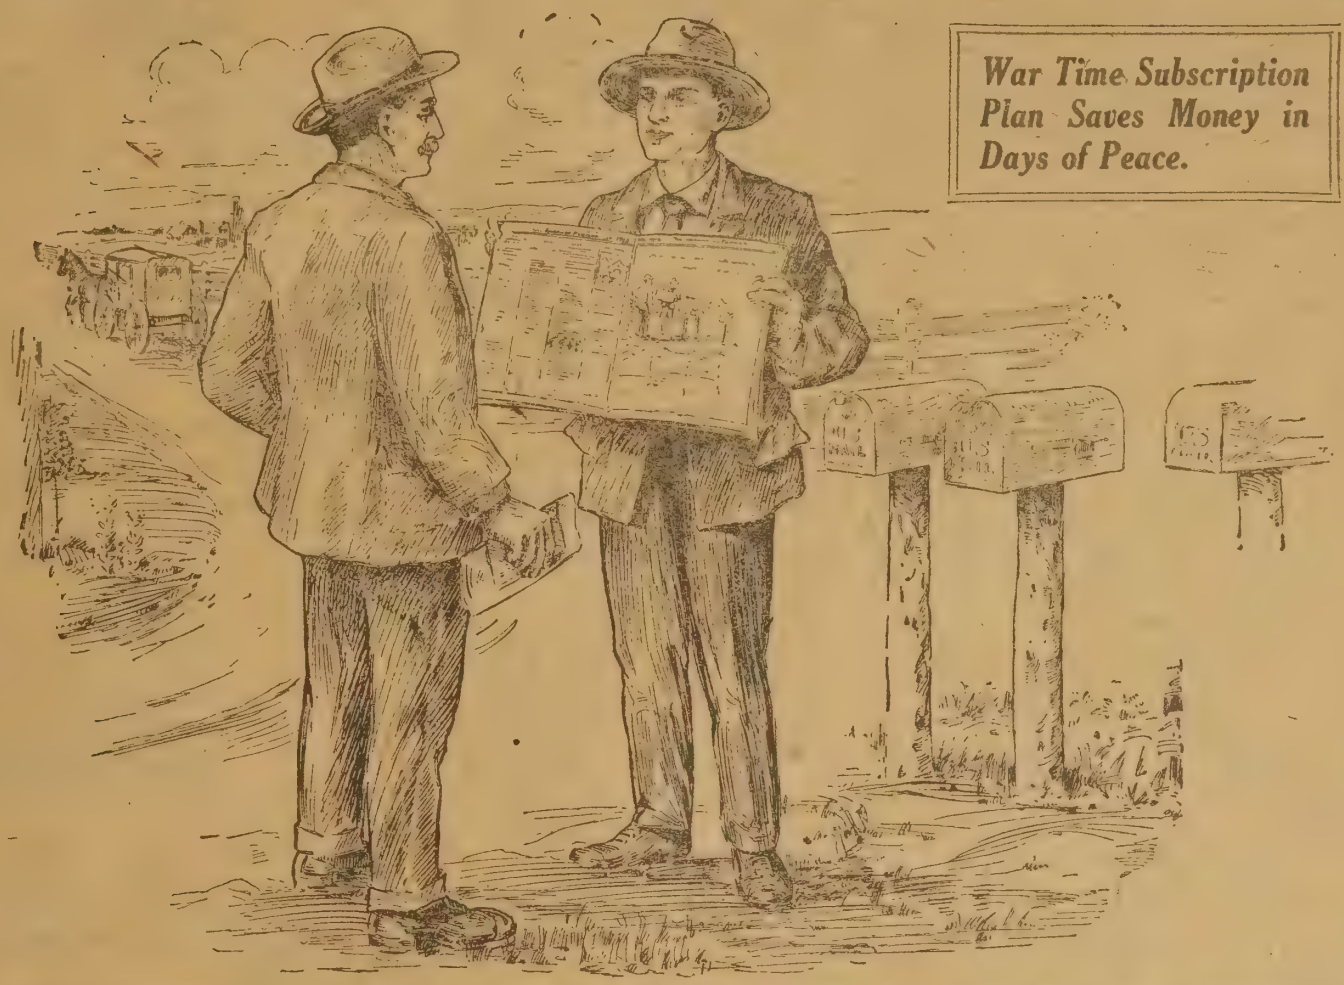
"About what are you paying for cattle these days?" inquired Frank. It was a question that any farmer or stock-raiser would be apt to ask.

"Well, that, of course, depends on what they are, their ages and so forth."

"That spotted steer over yonder with the bell on—what do you count him worth?" I ventured to inquire, with affected carelessness.

"Well, I forked over twenty dollars for him, only three or four days ago. But that was dirt-cheap. He's worth twice that if he's worth a cent. He's broke to work. His neck will tell you that. I got 'im from a buyer that didn't have any use for 'im. Wouldn't have bought 'im if I hadn't got 'im at a bargain. Ruther guess I'll sell 'im or swap 'im off to some farmer before we get out of the settlements. I'm not buyin' anything but young steers and heifers and cows to take out to the ranch."

Hart now dashed out to whip back an animal that had broken away from the drove, and Frank and I were left alone together.



"Well, how do you size him up?" I inquired, in a low tone.

His brow wrinkled into a frown—a frown of doubt and indecision. "I can't make much out of him. What do you think?"

"He don't look to me like a very good man or a very bad

(Continued on page twenty three.)

# PLEASE TELL YOUR NEIGHBORS ABOUT THIS BARGAIN

*War Time Subscription Plan Saves Money in Days of Peace.*

**His Neighbor: "Here's One Place Where You Get More for Your Money."**

The subscription plan which we adopted as a war measure and are continuing because of its tested economy gives the subscriber the benefit of every penny which would ordinarily go toward paying the salary and expenses of the subscription agent. It brings our friends their state farm paper at a fraction of what it used to cost and at a price far below that which other high-grade farm and family papers generally are obliged to ask.

In order that our readers may continue to save money on their subscriptions, we ask every subscriber to send in his or her renewal well in advance of the date of expiration stamped on the address label on the wrapper, and that you will also make an effort to send in the orders for your friends and neighbors with your own. Assistance of this kind, so cheerfully given by hundreds during the past year, will assure the success of our second year of cooperation.

**Remember — you receive The Washington Farmer every week—fifty-two great big issues in a year, chuck full of the best of all-around family reading at the remarkably low cost, under our cooperative plan, of only 50 cents for 3 years. Send your orders in today and get your share of the money saved.**

**Rates:-25c** For 1 Year **50c** For 3 Years **$1** For 5 Years

**The Washington Farmer.** Dec. 19.

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

**Enclosed is $..... for ..... years subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# Christmas Gifts

## Search the Attic and Old Trunks

By MRS. EDYTH TOZIER WEATHERED.

Has there been any practical reciprocity from this horrible war? Yes, it is bringing to the front each day wholesome lessons in economy. Many pioneers and older sons and daughters of pioneers have received drastic instructions along lines of conservation and substitutes in days long gone by, and often it is both interesting and amusing to listen to arguments given on this subject of economy by those who never were compelled to really exercise their views along economical lines. However, there is not a pioneer son or daughter who would care to blot from memory the days of substitutes and shortages. Never again did we think "history would repeat itself" and we would be turning backward to the long ago conditions. God has given to the soil many natural endowments of edibles which have grown to "blush unseen and waste its sweetness on desert air." Today they are called substitutes—in pioneer days they were substantials.

While we are looking for table supplies and diving deep into domestic science research for foods, let us not forget the attic and the old trunks, for in them you will bring to light the possibilities for pretty and useful articles for raiment and household accessories. Old silk skirts and waists can be ripped apart and washed and pressed. Often a little girl can have a silk petticoat which had been denied. Pin cushions, soft pillow tops, bags, etc., can be made. A piece of old broom handle can be padded and covered for a veil or necktie roll. Coat hangers can be covered. Handkerchief cases may be made from old silk or a chamois covering to be rolled and carried in the hand bag. Old white silk waists can be used for children's handkerchiefs. "Handy Sally" is a little roll made from an old piece of silk or ribbon in which is a pocket containing different colored silks, a yard or two wound on a small card—this is to be carried in a purse. This is handy for women who travel to and from their work and often find a glove needing immediate attention.

An old soft rain coat can be used in a great many ways—bathing caps with pretty linings, and we once knew of a little girl making for her mother a cap to be used on rainy days when hanging out clothes. This cap had a small circular cape effect which kept the rain from the neck. An old rain coat can be made into a music roll with pretty lining—or a book protector for school children. An old rain coat can be made into working gloves, and another useful article is a pocket on which is tacked a piece of sheep skin or heavy woolen cloth, to be used for a stove polisher. A like pocket also makes a splendid shoe polisher. The same plan can be made more dainty and rolled so as to slip into a man's traveling bag and thus save many a hotel towel from being blackened. This can also be added to a lady's traveling bag. Many men use talcum after shaving and a large chamois on a piece of silk can be rolled and added to toilet articles.

A little boy once was hard pressed for something to give his Uncle John—something that wouldn't require expenditure of money, and, after racking his young brain, set to work whittling some paddles of small dimensions. The family could not make out their use until the boy explained how he had heard Uncle John tell how he had used his jack knife, nail file and other articles to keep some of the country hotel windows from rattling. The young nephew had solved the problem. Then, too, Uncle John received from the same source a bunch of quill toothpicks all from home resources. It is wonderful what can be made from by-products when one takes the time and has the inclination to manufacture.

We know of a woman who made her two little girls each a muff, cap and neck-piece out of an old brown plush over-skirt that had been thrown away. She steamed and brushed it. The lining was of brown satin taken from a man's discarded coat.

Pretty corset covers can be made from worn-out underwear. There can always be found some unworn parts and plenty of laces. Worn white lace waists make dainty and pretty doilies, tops for pincushions and handkerchiefs.

We once knew several country children who formed themselves into a Christmas club. They lived a long distance from a city and they had no money with which to purchase material so they used their inventive powers. The useful articles that developed from that club of little folks could well be a lesson for older heads and give splendid arguments for the conservation orators of today. Oh! pioneer days have taught many pupils.

There have been many "Hooverized" Christmases in the northwest—the days when children were satisfied with a stick of striped candy, an orange and cooky dough made into shapes of animals, stars and moons. Then there was last year's doll in a new dress. Brother received a cap, mittens, a bat and a ball. Oh! these extravagant Christmases and "swappin' bees," that take the good old sentiment out of the real Christmas of Ye Olden Times. Who is to blame? Why, parents and others who themselves have taught and indulged children's and others' desire for extravagance.

Why not begin now to Hooverize Christmas as well as to Hooverize on edibles? Children and adults will be better for the return of Yuletide sentiments of long ago. They can learn to use cast-offs and by-products in the manufacture of useful articles and those to whom made-at-home presents are given, enjoy the gift much more and do not feel the next year's reciprocity obligation. Yes, this war was a great adjustor of unreasonable extravagances.

# Crochet Baby Sack

By WINIFRED WORTH.

During the cool days baby must have plenty of warm sacks to ward off the chilly breezes. This one is easy to crochet.

Use No. 5 Perle cotton. Make a chain the desired length of sack in the front.

1st row—Dc. in each ch.

2nd row—Ch. 2, dc. in each st.

3rd, 4th and 5th rows—Same as 2nd row.

6th row (Make points ch. down 3 st. at end of row)—1 t. sk., 1 dc., 1 t., back in skipped dc.

7th, 8th and 9th rows—Same as 6th row.

Continue until sack is required size. The sleeves are made the same. Finish off with 5 ch., 1 dc., 5 ch.

2nd row—7 dc. in 5 ch. of 1st row, 4 dc. in next 5 ch. ch. 5, catch in 4th st. of 7th dc. just made. Fill in with 4 dc. p., 4 dc., then 3 dc. in unfinished ch. of 1st row.

### CHRISTMAS PLUM PUDDING.

Now is the time to make the Christmas plum pudding, and the following inexpensive recipe, sent out by Miss Mary Sutherland of the Washington State college, is quite suited to the requirements for conservation:

3-4 lb. dry stale bread crumbs.
1 cup scalded milk.
3-4 cup Karo, honey or syrup.
3 eggs.
1-2 lb. raisins seeded, cut and floured.
1-4 lb. currants.
1-4 lb. finely chopped figs.
2 oz. finely cut citron.
1-2 lb. suet or 3-4 cup Wesson oil.
1-4 cup cider.
1-2 grated nutmeg.
1 teaspoon cinnamon.
1-3 teaspoon mace.
1 1-2 teaspoon salt.
3-4 cup chopped nut meats.

Soak bread crumbs in milk, let stand until cool. Add syrup, beaten egg yolks, raisins, currants, figs, and citron; add fat, then cider, and remaining spices—fold in stiffly beaten whites of eggs. Turn into buttered moulds and steam 5 to 6 hours.

**Sauce.**

Thicken cup of boiling water with 3-4 tablespoon cornstarch mixed with 3 tablespoons cold water. Add 1-2 cup Karo, syrup, or honey. Add a few grains salt and 2 tablespoons lemon juice.

# Stuffing for the Fowl

What's a Christmas turkey without stuffing? The back may be the best part of a goose, but surely the stuffing is a very important part of any Christmas fowl. Bread dressing is only one of the many kinds given here by the United States food administration.

**Puritan Stuffing.**

2 cups bread (use stale bread; if you have none, make some other dressing).
Hot water to moisten.
2 tablespoons turkey fat.
1 egg.
1 teaspoon sage.
1-2 cup milk or more if necessary.
2 teaspoons salt.
1-4 teaspoon pepper.
1 teaspoon sage.
1-4 cup chopped black walnuts.

Remove crusts of bread and wring out of hot water. Add the moist bread to the hot turkey fat. Beat egg and mix with milk. Add this mixture gradually to the bread and fat. Add to seasonings and cook for 2 minutes, then use for stuffing fowl.

**Rice and Giblet Stuffing.**

Boil until tender 1-2 cup rice in boiling salted water. Drain, pour cold water through the rice and dry thoroughly in a warm oven. Brown in one tablespoon fat, one onion and the giblets which have been put through the meat grinder. Add this to the rice together with 1 teaspoon salt, 1-2 teaspoon thyme, 1-2 teaspoon sage, 1-2 teaspoon marjoram, 1-2 teaspoon pepper and a few grains of cayenne pepper. Mix all thoroughly together and use for stuffing fowl. This quantity is enough for stuffing a 3 to 4 pound chicken.

**Chestnut Stuffing.**

Peel one pound of chestnuts, put them in boiling water and let them soak until the brown skin can be rubbed off, then wash them in cold water and drain. Brown four tablespoons of fat with two of syrup, add soup or hot water, then add chestnuts and stew until partly soft, being careful to keep them whole. Then take them out and cool them. Fill chicken or turkey with this stuffing, sew up the opening and proceed with the roasting.

**Potato Stuffing.**

To 2 cups riced potato add 3 small onions which have been chopped and cooked with 2 tablespoons chopped salt pork, 1-2 teaspoon marjoram, 1 teaspoon salt, 1-4 teaspoon white pepper, 1-4 teaspoon paprika, few grains cayenne, 1 tablespoon chopped parsley or 1 teaspoon dried parsley and 1 tablespoon melted margarine. Mix all together and use for stuffing.

### NO RELAXATION IN FOOD SAVING.

For the first time since its inception, the food administration will not frown upon the use of wheat bread. It has announced that all regulations requiring the use of wheat substitutes in baking are suspended and that the white loaf may return to its own. Restricted consumption of wheat bread is still advocated, however. Carrying on of conservation is requested by the food administration. There is to be no relaxation in the general food saving program.

### APPLES FOR WINTER USE.

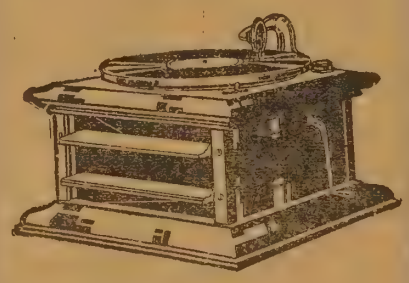
Every surplus fall apple has in it possibilities for winter desserts or relishes. With the drain on transportation during the coming winter likely to make the importation of fruits more difficult, the pantry shelf should be well stocked with local home products preserved in some form, as jelly, conserve, juices or dried.

Apples offer infinite possibilities for winter sweets.

FRESH RUNNING WATER

Everywhere You Want It—
Whenever You Want It—
At FIVE CENTS a 1000 Gallons

How much time do you spend every day pumping and carrying water?
What is your time worth?
What does it cost you now to handle a thousand gallons of water?
Figure that out and you'll realize that the



Milwaukee Air Power Water System

will pay for itself every season.
You get unlimited water for the house, the stock, the garden, and for fire protection.
And remember, it's not the stagnant, unsanitary water of the storage tank; it's the crystal, sparkling, ice-cold water from your well. Send us your name and address and let us send you our booklet explaining how it's done. It's mighty well worth while to get posted on the best farm water system, even though you may not be in shape to install one just right now.

# PATTERNS

**To secure the latest of these high-class patterns for its patrons, it is necessary for the Farmer to send east for them, so please order the patterns you desire about two weeks before you want to use them.**

2376—Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. Size 8 requires 3 1-2 yards of 44-inch material. Price 10 cents.

2516—Ladies' cape coat. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. Size medium will require 5 1-2 yards of 54-inch material. Price 10 cents.

2677—Misses' dress. Cut in three sizes: 16, 18 and 20 years. Width of skirt at lower edge is 1 3-4 yards. Size 16 will require 3 5-8 yards of 54-inch material. Price 10 cents.

2678—Child's rompers. Cut in four sizes: 2, 4, 6 and 8 years. Size 4 will require 2 3-4 yards of 36-inch material. Price 10 cents.

2327—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 6 yards of 36-inch material. The skirt portion measures a little over 2 yards at the foot. Price 10 cents.

2379—Girls' dress. Cut in five sizes: 6, 8, 10, 12 and 14 years. Size 10 requires 4 3-8 yards of 36-inch material. Price 10 cents.

2675—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 1-8 yards of 36-inch material. Width at lower edge is about 2 1-3 yards. Price 10 cents.

2706—Girls' dress. Cut in three sizes: 12, 14 and 16 years. Size 14 will require 4 1-2 yards of 36-inch material. Price 10 cents.

2681—Girls' dress. Cut in four sizes: 6, 8, 10 and 12 years. Size 12 will require 3 3-4 yards of 44-inch material. Price 10 cents.

2435—Ladies' apron. Cut in four sizes: small, 32-34; medium, 36-38; large, 40-42; and extra large, 44-46 inches bust measure. A medium size requires 4 5-8 yards of 36-inch material. Price 10 cents.

2693-2701—A good business costume. Waist 2693, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2701, cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. For a medium size the waist will require 2 3-8 yards of 36-inch material. The skirt will require 3 3-8 yards of 44-inch material. Width at lower edge is 2 1-4 yards with plaits drawn out. Two separate patterns 10 cents for each.

2684—Ladies' combination. Cut in sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 2 5-8 yards of 36-inch material. Price 10 cents.

## CRANBERRY RECIPES.

**Different Ways of Preparing the Fruit With Syrup.**

The following recipes for using cranberries are taken from the Washington federal food administration bulletin:

**Cranberry Cake.**

1 cup corn syrup, 1-2 cup Wesson oil, 1 egg, 1 1-2 cups stewed cranberries, 2 cups flour (1 white flour, 1 barley flour), 1 teaspoon soda, cinnamon, nutmeg, 1-2 teaspoon cloves, a little salt.

Place yoke of egg in bowl, add syrup and oil alternately, beating together, then add one and one-half cups cranberries and sift flour with dry ingredients into former. Beat and divide into layers, frost with following icing: 1 cup corn syrup, 1-4 cup water; boil until form hard ball in cold water; then add slowly to beaten white of one egg.

**Cranberry Relish.**

Wash cranberries and grind through coarse chopper. Add equal parts of corn syrup to cranberries. Place on fire and heat. When at boiling point bottle or serve.

**Cranberry Pie.**

1 1-2 cups split cranberries (raw), 1-2 cup seeded raisins, 1 cup water. Place on stove and bring to boil. Add 1 cup corn syrup and 1 1-2 tablespoons corn starch moistened in cold water with 1 teaspoon vanilla added. When thickened remove from fire and place in pie crust. Place strips on top.

**Cranberry Marmalade.**

Two quarts cranberries, 1 1-2 pounds seedless raisins, 6 cups corn syrup. Water juice and pulp of three oranges. Wash berries and cover with water. Cook and force through a sieve and add other ingredients. Cook until thick. Put in glass jars.

## RICE CROP SHOWS INCREASE.

The first official estimate of the rice crop in Japan this year places it at about 302,000,000 bushels, an increase of about 26,000,000 bushels over the average for the last 10 years. The new rice is now being placed on the market.

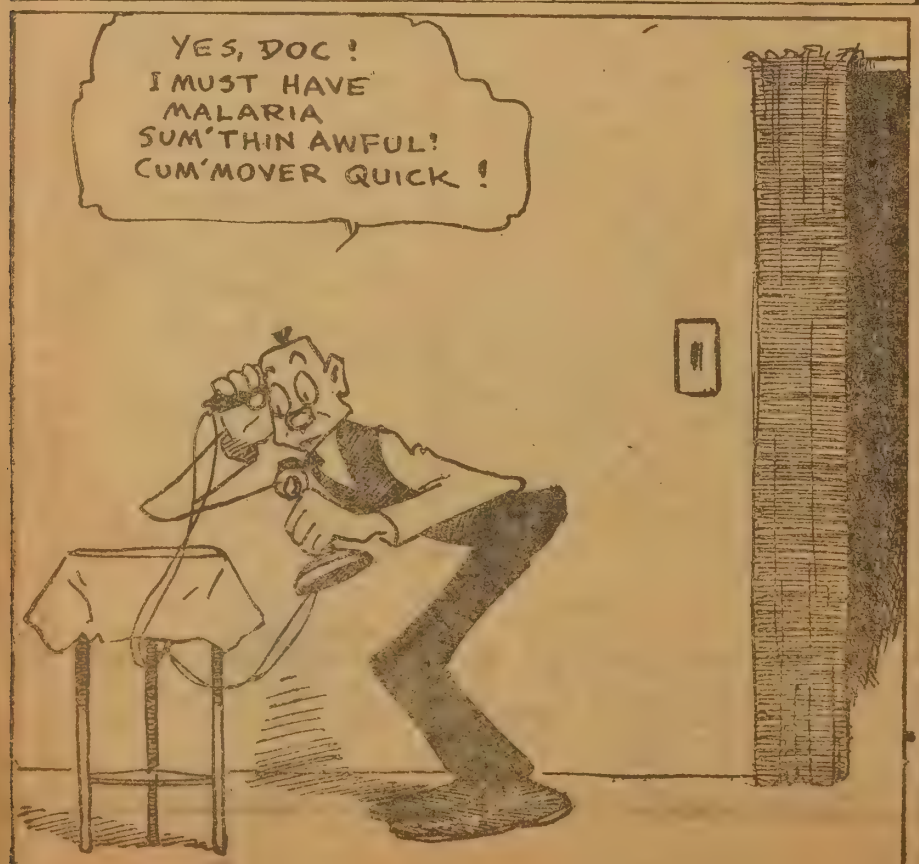
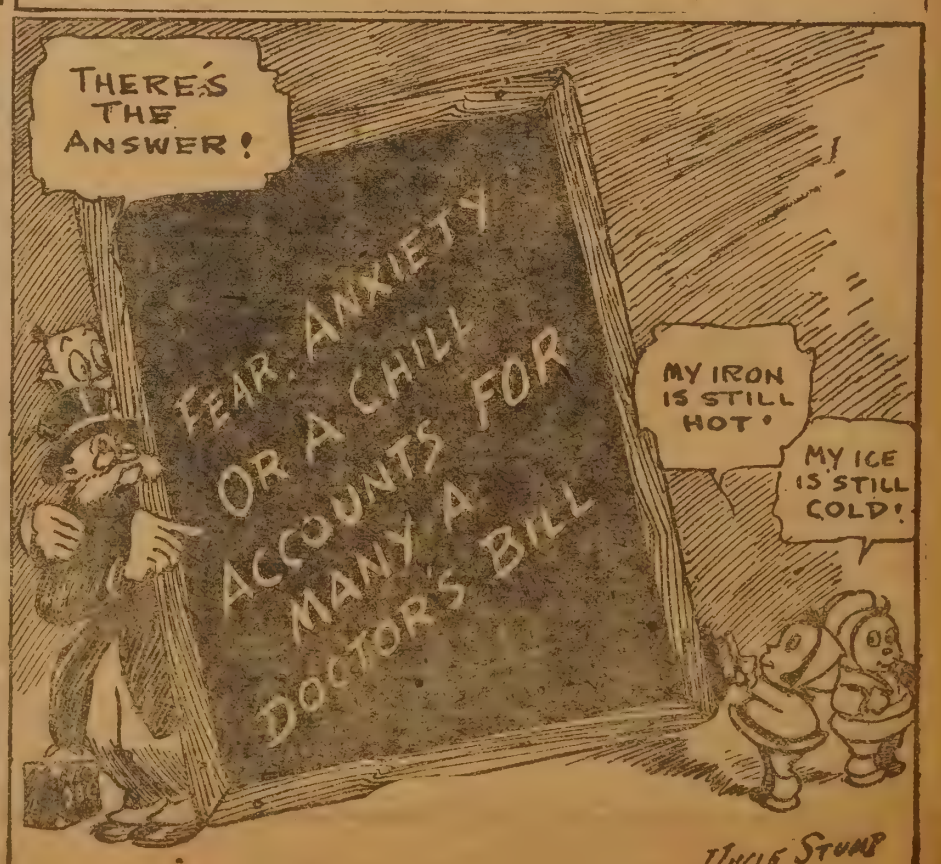
# RUFF AND REDDY CAUSE A BAD CASE OF COLD FEET





UNCLE STUMP

Dear Corner Cousins: Last week, I promised you some good holiday recipes, and here they are:

**Carrot Pudding.**

Grate one cup of potatoes, to which add one teaspoon baking soda, add one cup grated carrots, one cup of sugar, one cup of raisins, one-half a cup of shortening, either suet or butter and lard mixed; one cup of flour, one-half a teaspoon nutmeg, one-half teaspoon cinnamon, one-half teaspoon cloves. Grease pail, cover tight and steam three to four hours. A double boiler may be used, but do not lift the lid while steaming. Serve hot. This makes a delicious pudding and I prefer it to plum pudding. The potatoes and carrots may be put through the food-chopper with the smallest knife on.

**Economy Eggless Cake.**

One-half pound of raisins stewed 15 minutes in cold water and one-fourth cup of lard or Crisco. Then add one-half a cup of cold water. While this is boiling slowly, sift one cup of sugar and two cups of flour, one-half a teaspoon each of cinnamon, cloves, nutmeg and salt, and one-half tablespoon baking soda. Add raisins and make in loaf in slow oven from 40 to 60 minutes. This cake keeps very well if you are not fond of cake, and if you are and mother hides some of it, it will be still better after a week. AUNT NELLIE.

---

April 25 Bonnie Beck of Grandview was 12 years old, and she hopes she has a twin. Bonnie and her little sister walk about a mile and a half to school. They have 11 pet rabbits that are very tame.

---

Christina Grant of Methow doesn't think Elizabeth Brown is so unlucky after all because she knows a girl who was 13 August 29. Katinka Tollesfen, who lives at Langley, is Christina's twin. Christina has two cousins in the army.

---

This winter, Alta Howsden of Pateros is going to town to school. Alta lives on a farm in the Big Bend. She was 11 years old April 1.

---

A busy little farm boy, Aubrey La Plant, of Marcus, disks, harrows, plows and husks corn. Besides he finds time to knit for the soldiers. Aubrey lives on a 160-acre farm on the Marcus flat. He has two pets, a dog, Dick, and a horse, Dolly. Aubrey will be 12 years old August 22, 1919.

---

All the many nice letters of the Corner are read by Mildred Riley, a Pomeroy cousin, and she enjoys them every one. Mildred walks two and one half miles to school. During intermission, the pupils have lots of fun playing with the football. Della Crumpacker is her cousin. Mildred lives on an 870-acre farm and would rather live in the country than in the city.

---

Here are some real twins, Alice and Alma Root, of Kettle Falls, whose birthdays are July 6, and they are 12 years old. Have they some Corner twins? If so will they write a letter? Alice and Alma live on a fruit ranch and for pets have nine rabbits and a shepherd dog. They go to school in a van.

---

"Our little kittens have their eyes open now," writes Letha Peterson, R. F. D. 2, St. John, "and every time I go in the house they come to meet me." There are four white ones and one is a maltese. The big dog, Shep, chases the piggies. Letha has a doll named Rose.

---

Annie Croghan of Valley has a brother, Philip, in the army overseas. She has a pet cat, a pet pig, a pet chicken and a pet kitten. If Annie has a twin, she wishes they would write to her. She was 9 years old October 27.

---

"Bonnydale is the name of our farm," writes June Campbell, who lives two miles from Waverly. June rides her pony to school. When their Scotch collie, Shep, is hungry, he scratches at the window and barks until he is fed. June was 11 years old June 26, and if she has any twins she wishes they would write to her.

---

Beatrice Clay has lots of fun at school, and playing house and climbing trees. Beatrice lives near St. John, and they have some apples as big as a saucer.

---

One day Augusta Lewis of Sunset picked up 15 sacks of potatoes. She has knitted a sweater, a washrag, four quilt blocks, and a pair of wristlets. She sold her lamb and bought a war saving stamp with the proceeds.

---

A boy cousin, George Farmer, of Greenacres, was 11 years old December 17. Has he a twin? George lives on a 160-acre farm. He can ride two of the horses and runs the car. He has six pigs of his own.

---

"I hope Helen and Edith Callaway will see my letter in the Corner," writes Dorothy Callaway, Box 258, Valley, "because they have the same name as I." Dorothy lives on a farm. She will be 13 years old January 31.

---

The members of the Junior Red Cross society to which Lucile McKinney belongs are supposed to gather bottles, jar lids, old jar rubbers and old spoons. Lucile lives on an 80-acre farm near Rockford. She will be 9 years old February 10.

---

While mama and papa are east, Vivian Kidwell of Pomeroy is staying with her grandma and her aunt. Vivian has two horses, Brownie and Tag; two cows, Rose and Pansy; a calf, Bud, and four lambs, Buster, Tiny, Billy and Nannie. If Vivian has a twin she wishes them to write to her. She will be 10 years old July 15.

---

"One of our big pigs has five of the funniest liftle pigs," writes Lura Herrick, Box 154, Springdale. Laura is feeling fine and hopes the cousins are, too. She thought the old soldier's letter was very nice and is glad that he likes our Corner, too. Harold, Walter and Earl are Laura's three brothers.

---

Emma Pohle is knitting an old rose afghan square for the Red Cross. Her brothers are Ernest, Otto, Albert and Willie, who is in limited service. One of her uncles is somewhere in France. Emma's address is R. R. 5, Box 23, Spokane, Wash. She was 10 years old September 21.

---

**Two Funny Records.**

Dear Aunt Nellie: I am 11 years old and in the fifth grade. I have light hair and blue eyes. I am about four feet two inches and a half tall. I would like to have any of the cousins write to me. I will write to them. I like to go to school. I like all the studies. I would like to have Aunt Nellie write some more stories. We have three little colts, Maude, Cricket and Blaze. We have a cow named Nellie. Her calf is red. His name is Sullivan. We have a graphophone. We have two funny records. The names are "Nigger Loves a Watermelon, Ha! Ha! Ha!" and "Old Dan Tucker." Did any of the cousins ever hear the song of "Nigger Loves a Watermelon?" My birthday is March 24. I live in the country. I have never been out of Washington and Oregon. May I be a cousin, Aunt Nellie?—Dorotha Hicks, age 11, Coulee City, Wash.

**Sunflower Is 10 Feet High.**

Dear Aunt Nellie: My father has taken The Farmer for three or four years. I have enjoyed reading the letters in the Corner. May I become a member? I live on a 160-acre farm. We have over 100 head of cattle. I like to ride horseback. We live four and one-half miles from town. I was 12 May 8, and am in the seventh and eighth grades at school. We had a war garden. One of our sunflowers is 10 feet five inches tall. I wish some of the boy cousins would write to me. I have one sister and one brother. My sister is 15 years old. She got an eighth grade diploma this spring. My brother is eight years old. He is in the fourth grade. I have three thrift stamps and expect to buy more soon. I can knit. I knitted three squares for an afghan.—Ralph Springston, Quincy, Wash.

**Earns Stamp Money.**

Dear Aunt Nellie: I enjoy reading the Children's Corner very much. I am 10 years old and I am in the eighth grade. My birthday is February 17. I have light blue eyes and light brown hair. Have I a twin? If so I hope he or she will write. May I be a cousin? I live in Walla Walla, but I am working in Touchet. I am staying with Mrs. Jacobs and baby while Mr. Jacobs has gone harvesting. Mrs. Jacobs has two cows and their names are Jersey and Reggy. Their dogs' name is Brownie. The cat's name is Tom. He caught two rabbits. Brownie kept the hawks and other big birds away. They have 60 acres of alfalfa. I have one sister and her name is Helen and three brothers, Alva, Owen and Glen. I am earning money to buy thrift stamps. I can knit and crochet. joined the Red Cross. I hope all the cousins are well.—Nina Fisk, Touchet, Wash.

**Knits for the Red Cross.**

Dear Aunt Nellie. May I become a cousin? I was 14 years old April 21, 1918. Have I a twin? If so I wish they would write to me. I have a fair complexion, blue eyes, auburn hair and am five feet five inches tall. I have a father, mother and two brothers. Edwin is 10 and Earnest is 5. We have each a Belgian hare. Their names are Major Bobtail, Madame Betty and Lady Belle. I am visiting my friend, Bertha Walker. We took some pictures. She lives near Snake river. She is writing, too. I know how to knit and crochet. I have knitted two pairs of socks for the Red Cross. My father and mother knit for the Red Cross, also. I hope to be your niece.—Alberta M. Raymond, Box 17, Kahlotus, Wash.

**Can the Cousins Guess These Riddles?**

Dear Aunt Nellie: I live on a 10-acre farm and I have one dog and three cats. The dog is a Spitz. His name is Jeff. The cats' names are Cutie, Nigger and Molly. They are good cats. We have one pig, one horse, four big rabbits and three little ones. We have 12 hens and 42 little chickens. What is it you hear but can not see? What is it that has ears but can not hear? What is it that has a tongue and can not talk? What is it that does not stop running? I will give answers to the riddles next time I write. I am 11 years old. My birthday is March 30. If I have a twin I wish she or he would write.—Lillian Edwall, R. F. D. 1, Medical Lake, Wash.

**Little Pet Nanny Goat.**

Dear Aunt Nellie: I am 13 years old. My birthday is May 9. Have I a twin? If so I wish he or she would write to me. I live on a farm six miles from Addy. Mama is working out and keeping us children. The man she is working for now has 200 sheep, 20 goats, three horses, four head of cattle, two large pigs and five little ones, 25 chickens, one pigeon and 50 rabbits. I own a little pet nanny goat. I am in the seventh grade. I have two brothers. I have an uncle in the army. I belong to the Junior Red Cross and have knitted several nine-inch squares. This is my first letter to the Children's Corner.—Eva Dunlap, R. F. D. 1, Box 2, Addy, Wash.

**Military Training at School.**

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I am 12 years old and in the sixth grade at school. My birthday is September 18. My teacher's name is Miss Campbell. I have one brother in the navy and one is going to enlist in the navy or the marines. My brother who is in the navy is at Mare Island (California) Electrical Training school. I have one married sister, one single sister and eight brothers. Our school has military training. The principal is Mr. Jaques. We have nine horses and one colt. The colt's name is Fannie.—Albert M. Needham, Wilcox, Wash.

**Lives on 400-Acre Farm.**

Dear Aunt Nellie: I am 11 years old. My birthday is December 14. Have I a twin? If so I would like to hear from her. I live on a 400-acre farm. We have 19 head of horses, 15 cows and two little calves. We also have five pigs and four dozen chickens. We have 300 little chickens. I have two dogs, three big cats and four little kittens. We take the Farmer and I enjoy reading the other letters very much. I stay with my grandma in town and go to school. I am in the sixth grade. I have a brother and a sister younger than I am. I will write again.—Ethel Milles, Box 15, Bluestem, Wash.

**Four Sisters and Two Brothers.**

Dear Aunt Nellie: I like to read the letters. My sisters' names are Sylvia Mae, age 15, Bessie Marie, age eight, Helen Rowena, age six, and Nina Fay, age seven months. My brothers' names are Willard Lee, age 10, and Eugene Adelbert, age four. We all go to school but two. I will give my description. I am real light, have dark hair, blue eyes and am about five feet and one-fourth of an inch tall. I am 12 years old. My birthday is December 17. Have I a twin? If I have I wish they would write to me. I will answer their letters.—Hattie Bell Hogan, Tyler, Wash.

**Likes to Go to School.**

Dear Aunt Nellie: I am 10 years old and my birthday is April 12. Have I a twin? I have one sister and one brother, my brother's name is Clayton, aged 3 months. We have one cow and calf. I have four sheep. We live 11 miles southwest of Ellensburg. We have a car and we have made two trips to grandma's and are going to make another. I like to go to school. I am in the fourth grade. We have four scholars in our school. I have to go a mile and a half.—Zeldo May Northrup, Smyrna, Wash.

**Helping Win the War.**

Dear Aunt Nellie: I am 14 years old and my birthday is June 24. I am in the eighth grade and I go to the Bear Creek school. I am buying war saving stamps to help whip the Huns. I have bought $5 worth and I think I will buy $5 worth more. I have three pets, a dog, and his name is Chig; a cat, Tom, and a red rooster, Yankee. I will tell you more about my pets next time. I have four sisters and one brother. We have nine cows, five calves and two horses. I hope I have a twin.—Ula Easterling, Winthrow, Wash.

**In the Ninth Grade.**

Dear Aunt Nellie: I haven't written to you for a long time, so I thought I'd write again. I saw my name in the roll of honor. I am in the ninth grade this year. I saw what Esther Chalenor wrote. I know her. I live just about one mile from her. I trust that Aunt Nellie and the cousins are well and happy.—Stella B. Ervin, Mead, Wash.

---

(Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.)

# A Crooked Trail

(Continued from page eighteen.)

man. Guess he's astraddle of the fence between straight and crooked."

"That must be about the way he looks to me. I don't believe he's dishonest enough to steal. But is he honest enough to give up stolen cattle that he has paid cash for?"

"He may be, but I doubt it. The only way to find out for certain is to try him."

"And if we do, we stand a fine chance to look into some more six-shooters."

"No more of that kind of thing for me, if you please. But if we don't laiy claim to our cattle, what can we do?"

Frank looked worried. "Wish I knew," he said.

Hart now returned to the road. And soon he began to question us:

"Which way you travelin', boys?"

"We're out for a little trip," Frank answered him. "Don't know yet just how far we'll go. Fine weather; crops all laid by; nothing much to do at home. We might as well see some of the country as not."

We rode on together for a short time, talking on various topics. Presently a steer left the drove, and Hart dashed away in furious pursuit. A cow made off on the other side, and I galloped round her and brought her back. Hart now returned to us and said:

"Reckon you boys wouldn't like a job at cattle-drivin', would you?"

"Well now, we might," I answered, turning questioning eyes toward Frank. This was something we had not foreseen.

"Don't know why we shouldn't," Frank replied, speaking to Hart; but his answer was also addressed to me—to the question I had looked.

"If you didn't want too much money, don't know but what I might use you for a while," remarked the drover. "There wouldn't be a great sight for you to do. We've got hands enough to look after this little bunch as it is now. Only about 250 head in it, all told. But I expect to buy a few hundred head more. And if I had other hands, I could run off through the country and find more cattle than I can pick up along the main-traveled road. We couldn't move as fast as we're movin' now, but we'd get more cattle in the same length of time. What do you want a month?"

"How much can you pay?" answered Frank.

"Would fifteen dollars be enough?"

"Could you make it twenty?"

"Don't believe I could stretch it to that, considerin' the easy work. We're not rushin' things much this trip. But as you've got your own horses and saddles, I might add a dollar or two—say seventeen a month. Well, call it eighteen."

"How long will you want us?" I questioned.

"Until we get through buyin', and strike the trail for the ranch. I might even take you on up there if you wanted to go. But, of course, you can drop out whenever you feel like it."

Frank and I considered the offer. I had already made up my mind to accept it, less for the sake of the wages than because of the opportunity afforded us to stay with our cattle till we could get possession of them.

"Well, what do you say, Travis?" asked Frank, turning to me.

"We're going in the same direction anyway. "Let's call it a bargain."

"All right. A bargain it is," Frank remarked to the drover. "When do you want us to start in?"

"Right away, if you feel like it. After dinner I want to take two of the boys and run off into the country a few miles, to see what we can round up. The rest of you can keep the cattle joggin' along till we overhaul you. Better drop back and leave your saddle-bags and things in the wagon."

We rode back, and after ridding ourselves of all unnecessary encumbrances, were soon up with the drove again, busy, shouting cowboys now.

Thus it came about that, instead of claiming our cattle and starting home with them, we had actually hired ourselves to the drover to help drive them further away.

(To be continued.)

Western Branch: Washington Shoe Mfg. Co., Seattle, Wash.

# Stockmen Organize

## Will Manage Pacific International

For the purpose of guaranteeing the future of the Pacific International Live Stock show a large number of the representative stockmen met during the show last week and formed a permanent organization, with Frank Brown of Carleton, Ore., prominent Shorthorn breeder, president and E. L. Potter of O. A. C. secretary. The stockmen present expressed strong approval of the plan to choose a manager who would devote his time to the interests of the annual show and receive a fair salary for his services.

The board of directors, who, with the officers and manager, will conduct the show, were chosen as follows, indications being given of the live stock interests that each represents:

Vice president, William Pollman, range cattle, Baker, Ore.; Henry Thiessen, Herefords, Sweetwater, Idaho; C. L. Hawley, Guernseys and Lincoln sheep, McCoy, Ore.; F. M. Rothrock, Shorthorns, Spokane, Wash.; A. D. Dunn, Shorthorns, Wapato, Wash.; F. A. Koser, Cotswold sheep, Rickreall, Ore.; Otto Battles, Aberdeen Angus cattle, Yakima, Wash.; A. C. Ruby, Percheron, Belgian and Shirt horses, Portland; Thomas Carmichael, Holsteins, Gaston, Ore.; Ray J. Fox, Poland China swine, Lyons, Ore.; Edward Cary, Jerseys, Carlton, Ore.; F. H. Porter, Red Polled cattle, Halsey, Ore.; Nat McDougal, Portland Hunt club; George Gue, Holsteins, Yakima, Wash.; C. C. Berkley, range sheep, Hay Creek, Ore.

### WAUKON COW HEADS LIST.

To the Editor: I have just received from Supervisor R. C. Johnson, the November report of the Whitman-Spokane Cow Testing association. I am pleased to note that a cow owned by A. H. Reilly of Waukon, Wash., heads the 50-pound list for the month. The cow is a grade Holstein, 8 years old. She freshened in October, and in the month of November she produced 2[illegible] pounds of milk, 71.4 pounds of butterfat.

Mr. Reilly has been a member of the association for just three months. I first met Mr. Reilly some 10 or 12 years ago, when he came into my class room at the state college at Pullman as a student to take some elementary work in dairy farming. He was a good student, and it is evident from the results that he is securing that he is now far above the average as a practical dairyman.

I have not had the pleasure of visiting Mr. Reilly's place, but from the talks I have had with him I feel that his success is due in a large measure to his ability to feed his cows intelligently.

IRA P. WHITNEY,
President Whitman-Spokane Cow Testing Association.

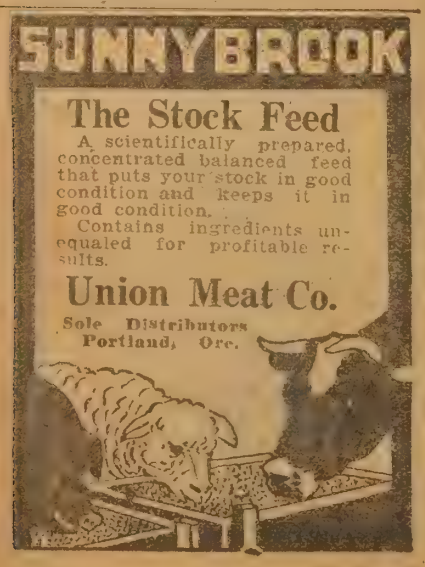
### DAUGHTREY RESIGNS.

William H. Daughtrey has resigned as president of the Portland Union stock yards. At this writing his successor has not been announced.

## Get Guernseys

If you want to increase your dairy profits, you need to know about the cows whose average production, under test supervised by state agricultural colleges, is three times as great as the average of all dairy cows in the United States. Ask for "The Story of the Guernsey."

THE AMERICAN GUERNSEY CATTLE CLUB.
Box W., Peterboro, N. H.



## Shorthorn Beef Records

An Illinois load of yearling Shorthorn steers made the world's market record at Chicago October 8, selling for $19.60 per cwt.

An Iowa load of Shorthorns sold for $19.50 September 16, averaging $308 per head, the previous record.

A Wisconsin Shorthorn load made the Wisconsin record at $18.35 and a Shorthorn load bred in Montana made the record for range steers at $18.

American Shorthorn Breeders' Association
13 Dexter Park Ave., Chicago, Ill.

# Lady Stewart of Meinie

In 1910 E. W. Van Tassell of Wenatchee, Wash., purchased from J. W. Clise of Seattle the Ayrshire cow, Lady Stewart of Meinie. Today Mr. Van Tassell has a herd of 26 registered Ayrshires, of which 14 are descended from Lady; and he has sold quite a few. In June last, Mr. Van Tassell bought the J. P. Graves herd of 14 Ayrshires, but resold 10 to H. I. Shotwell of Wenatchee and a bull calf to the state college at Pullman, Wash., and another to Smith & Neiman of Tonasket.

Mr. Van Tassell did his first official testing in March, 1917. He now has seven with completed records and four on test, though two of them are on for the second time. It is his intention to test the entire herd, generally with first calf, and usually at least once again.

Mr. Van Tassell put Lady Stewart of Meinie on test when she was 11 years and 10 months old. She produced 10,759 pounds of milk with an average test of 3.82 per cent fat. She is still a good breeder and good producer. She has had for Mr. Van Tassell seven heifers and one bull calf. One daughter, Lady Robinetta, as a junior 2-year-old, produced 10,885 pounds of milk, with a test of 3.65. A senior 2-year-old has produced 8973 pounds of milk, testing 4.31. One granddaughter has qualified with considerably above the requirements and another, a junior 2-year-old, will finish with over 11,000 pounds of milk.

Among the cows purchased from J. P. Graves is Emperor's Lady Scott. She had a record when purchased of a little over 9000 pounds of milk, but holds the world's record for high average test for an Ayrshire, of 5.69 per cent. Mr. Van Tassell has her daughter and son also.

The first bull Mr. Van Tassell purchased was Willowmoor Robinhood 16th. He was bought from J. W. Clise and was a son of Willowmoor Robinhood, sire of 19 A. R. daughters, with the highest average test of the daughter of any bull of the breed and the largest average production of the daughters of any bull except two. His dam, Barleigh Snowdrop, imp., has two completed records and another nearly done, all over 10,000 pounds of milk.

The present herd sire, Willowmoor Robinhood 39th, is by Willowmoor Robinhood 31st, another son of Willowmoor Robinhood. A half-sister holds the world's record in the junior 2-year-old class, and a full-sister in the senior 2-year-old class, while the granddam on the dam's side was high cow in the 4-year-old class in 1911.

It will thus be seen that Mr. Van Tassell has selected what appears to be the greatest producing lines of Ayrshires. When it is remembered that he is in the heart of probably the greatest apple region in the world, the trend toward dairying, even in this great fruit region, is seen at once, and Mr. Van Tassell's enterprise and foresight in building up a very high class Ayrshire herd will be commended.

When I was in Wenatchee Mr. Van Tassell was building a new brick dairy barn 50x32, with no loft, with latest modern conveniences and hay shed at one end. He is an apple grower, like most of the Wenatchee farmers, but he knows Ayrshire breeding, loves the Ayrshires and says dairying is a necessary adjunct of any kind of farming. H. A.

# Baby Beef Contest

The management of the Stevens County Live Stock show, which is held at Colville each year, is anxious to add another feature in the way of a baby beef contest to the program for next year. Any boy or girl 18 years of age or under, who lives in Stevens county, may enter the contest, but it will be necessary that we have the assurance that at least 10 individuals will finish the contest before the final plans can be arranged, says E. C. Dendle, Stevens county agriculturist. Three prizes will be given—$25 to the contestant producing the best baby beef, $15 for the second best, and $10 as a third prize.

By baby beef is meant fat cattle between 1 and 2 years of age and weighing from 800 to 1100 pounds. They should not have been allowed to lose their calf fat. Young stock of this age, if given the proper care will make from 25 to 40 per cent more gain than mature cattle on the same feed.

Calves selected for this contest should be those which are being weaned or those which have just finished the weaning period, or those which will remain with the cow all winter and be weaned when they go onto the grass in the spring. March, April or May calves will make the size and weight wanted next October. They should be of the beef type, although it is not necessary that they be thoroughbred stock. They should be of good quality as evidenced by fineness of hair, texture of skin and smoothness of flesh, and general refinement about the head and other parts of the body. A calf of this type should make a good profit for the individual who would give to it the proper attention and feed. I would not want to advise individuals to enter the contest without an available supply of feed on the home farm. The necessity of buying all feeds would make the proposition rather uncertain for the feeder, as the costs would be high.

If you are eligible to enter this contest and are desirous of doing so or would like any further information County Agent Dendle will be glad to take the matter up with you in the near future.

### GOLD MEDAL ANIMAL.

The A. J. C. C. awards a gold medal to each and every bull of the breed that sires three cows that make 700 pounds or over of fat in a year and carries a living calf at least 155 days during the period covered by their tests. A letter from the A. J. C. C. dated November 18, 1918, says that there are five gold medal bulls in the breed. One Oregon bull, Golden Glow's Chief 61460, bred by W. S. Ladd estate, is the only one of the five west of Michigan.

### Read the Veterinary Column.

The veterinary column of this paper has saved many valuable animals for those who have been its regular readers.

### BUY MORE WAR STAMPS.

The necessity of the American people investing their savings in war stamps and thrift stamps is again emphasized by Secretary McAdoo, who, in a letter to the governor of the federal reserve bank of San Francisco, says: "It is of the most importance that our people shall continue to save in order that they may help the government complete the victories we have gained in Europe, meet the expenses of the war and provide the means of supporting our army in Europe until it is released from duty and of bringing it back to American soil. We must, therefore, keep up the war savings campaign and induce every one to invest to the extent of his means in savings stamps and thrift stamps, which are obligations of the United States government, and which are the best investments for the savings of the people."

### KICKED BY SHOW ANIMAL.

E. B. Marks, Holstein breeder of Yakima, Wash., was kicked in the face by a black-and-white during the live stock show at Portland last week. While his injuries were painful, they did not prove serious.

### REPORT OF SALES NEXT WEEK.

The full report of the purebred cattle sales held at the Pacific International Live Stock show will be given in next week's issue of this paper. They are omitted this week for lack of space.

THE BEST LINIMENT
OR PAIN KILLER FOR THE HUMAN BODY
Gombault's
Caustic Balsam
IT HAS NO EQUAL

For the Human Body—It is penetrating, soothing and healing, and for all Old Sores, Bruises or Wounds, Felons, Boils, Corns and Bunions. CAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

A Perfectly Safe and Reliable Remedy for Sore Throat, Chest Cold, Backache, Neuralgia, Sprains, Strains, Lumbago and all Stiff Joints

REMOVES THE SORENESS—STRENGTHENS MUSCLES

## HOLSTEIN CATTLE

### The Hollywood Farm Offers Four Registered Holstein Bulls

Ready for Service. Well Marked.
Bred for Production. Straight on Top.
Their dams' official records are up to 29.71 lbs. butter, with lots of milk.
The average of the official records of their 5 nearest dams is:
Bull No. 809, 7 days' milk, 515.3 lbs.; butter, 27.18 lbs.; average test, 4.2% butter fat.
Bull No. 803, 7 days' milk, 504.6 lbs.; butter, 27.2 lbs; average test, 4.3% butter fat.
Bull No. 787, 7 days' milk, 557.7 lbs.; butter, 29.71 lbs.; average test, 4.3% butter fat.
Bull No. 786, 7 days' milk, 531.8 lbs.; butter, 25.25 lbs.; average test, 3.9% butter fat.
To make room for our increase, these bulls are priced to sell. Consider the high feed prices and raise only high producing stock.
HOLLYWOOD, WASH Near Seattle. HOLLYWOOD FARM.

Boise, Idaho.

## MILK GOATS

MILK GOAT DOES.
A few young ones soon to freshen. Immune from tuberculosis. Best milk for invalids and children. $50 up.
D. J. GILBERT, Newburg, Ore.

# Grain and Produce Markets

## Grain Market.

CHICAGO, Dec. 14.—Pronounced weakness developed in the corn market today owing largely to the outlook for an increase of receipts. The close was heavy, 2¼c to 3¼c net lower and with January and May both $1.35⅞ to $1.36. Oats finished 1⅜c to 2c off, and provisions down 50c to $1.

Forecasts of cold, dry weather tended to stimulate selling inasmuch as continued mild temperatures and excessive dampness have been seriously retarding the crop movement. Reports that congestion abroad would compel a readjustment of the food administration shipping program were also influential toward making sentiment more bearish.

Oats shared the depression of corn. Furthermore, there were reports of reselling of cash oats by the government.

Provisions fell with hogs and grain. Big receipts of hogs next week were expected, notwithstanding that killing facilities here were already overtaxed. Immense shipments of meats and lard to the seaboard from Chicago seemed for the time being overtaxed.

### Cash Quotations.

CHICAGO, Dec. 14.—Corn—No. 2 yellow, nominal; No. 3 yellow, $1.49; No. 4 yellow, $1.48@1.48½. Oats—No. 3 white, 73@74½c; standard, 73¾@75c. Rye—No. 2, $1.61½. Barley, $99c@$1.04. Timothy, $8@11. Clover, nominal. Pork, nominal. Lard, $25.50. Ribs, nominal.

### Spokane Union Stock Yards.

| | Cattle | Calves | Hogs | Sheep |
|---|---|---|---|---|
| Monday, Dec. 16 | 283 | 8 | 215 | .. |
| Saturday, Dec. 14 | 125 | 2 | 16 | .. |
| Friday, Dec. 13 | 187 | 10 | 205 | 56 |
| Thursday, Dec. 12 | 67 | .. | 70 | .. |
| Wednesday, Dec. 11 | 208 | 19 | 99 | 103 |
| Tuesday, Dec. 10 | 32 | .. | 163 | 138 |
| Week ago | 443 | 31 | 393 | .. |
| Year ago | 130 | .. | 102 | .. |
| Two years ago | 189 | .. | 372 | .. |

Monday's market opened with a little lighter run of cattle than ordinary, but all classes are holding their own in price; the good ones being in demand. Market closed strong at the following:

| | |
|---|---|
| Prime steers | $12.00@12.50 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Medium to good cows and heifers | 6.00@ 7.00 |
| Common to medium cows and heifers | 4.75@ 5.75 |
| Canners | 3.50@ 4.50 |
| Bulls | 5.00@ 7.50 |
| Calves | 9.00@10.00 |
| Stockers and feeders | 6.00@ 9.50 |

The number of hogs for Monday was not up to the general run, neither did they run in numbers to quality, being more or less mixed. Market closed strong at the following quotations:

| | |
|---|---|
| Prime mixed | $16.75@17.00 |
| Medium mixed | 16.50@16.75 |
| Rough heavies | 14.60@14.75 |
| Pigs | 14.50@16.00 |
| Stockers and feeders | 12.00@14.50 |

While there were no receipts of sheep, the market shows a tendency to be stronger at the following:

| | |
|---|---|
| Prime lambs | $12.00@12.50 |
| Fair to medium lambs | 9.25@11.50 |
| Prime yearlings | 10.25@11.50 |
| Prime wethers | 9.25@10.25 |
| Best mutton ewes | 7.50@ 8.50 |
| Breeding ewes, 1 to 4 years | 13.00@15.50 |

### Monday's Shippers.

### At Seattle.

SEATTLE, Dec. 14.—Hogs—Receipts, 100; strong. Prime lights, $17.25@17.30; medium to choice, $16.75@17; medium to heavy, $15.75@16.25; rough heavies, $14.75@15.25; pigs, $14.75@16.25.

Cattle—Receipts, none; strong. Best steers, $11@13; medium to choice $10.50@11; medium to good, $8@8.50; medium, $7@7.50; bulls, $5@7.50; calves, $5@10.

### MORE MILLS.

The manufacture of potato flour in the United States is a war created industry. The largest mill is at Idaho Falls, Idaho. A number of companies recently have been organized to build.

Congress a few months ago appropriated $250,000 for experiments in the dehydration of vegetables and the manufacture of potato flour.

## Portland Market.

PORTLAND, Ore., Dec. 16.—Three cars of Oregon butter have been shipped east and there are further inquiries from New York. Cube extras are quoted at 61@61½ cents. Prints are steady at the 65-cent basis.

Oregon eggs are very scarce, and readily command 72@73 cents for ordinary candled. A car of eastern storage eggs is due, which will slightly relieve the situation.

The demand for poultry is better, particularly heavy hens. Dressed meats are slow, and pork is especially weak.

The local apple market was slow in the last week, but prices were firm in sympathy with the strength at shipping points.

Potatoes incline to weakness. On the street jobbers ask $1.75@1.85 for the best Burbanks and $2@2.25 for Netted Gems.

Onions are also quiet, with Washington and Oregon Yellow Danvers bringing $1.75@2.

There is only a small call for beans, and with the government order practically filled prices have fallen back to 7@7¼ cents for whites and navys.

Butter—Cubes, extras, 59c; prints, 62c; butterfat, No. 1, 67c, delivered.

Eggs—Oregon ranch, candled, 72@73c; selects, 75c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 36c; young Americas, 37c per pound. Coos and Curry, f. o. b. Myrtle Point, triplets, 35¾c.

Poultry—Hens, 23@28c; ducks, 28@30c; geese, 18@20c; turkeys, dressed, 34c.

Pork—Fancy, 20@20½c.

Veal—Fancy, 19@20c.

Potatoes—Oregon Burbanks, $1.75@1.80.

Hay—Buying prices, f. o. b. Portland: Eastern Oregon timothy, $30@33 per ton; valley timothy, $27; alfalfa, $28; valley grain hay, $26; clover, $27; straw, $9@10.

## Portland Grain.

PORTLAND, Ore., Dec. 16.—There has been more movement in the coarse grain market recently, as stocks have been increased by several large shipments from the east. Prices are holding about steady. Closing bids at the exchange were: Sacked oats, $54.50@55; bulk oats, $51.50@53.75; bulk corn, $58.50@60; feed barley, $49@49.50; brewing barley, $49.50@51.

There is a 30-cent hop market again in the northwest. Buyers have paid 29@29½ cents, and would go the other half cent for desirable lots if growers would sell. Several hundred bales changed hands in the last week, and less than 1000 bales now remain unsold in the northwest.

### FARM RECONSTRUCTION CONFERENCE.

A conference to consider the various programs of reconstruction adopted by different farmer organizations and to work out a joint farmers' program for economic reconstruction in America, and for international reconstruction, will be held under the auspices of the farmers' national headquarters, in the National hotel, Washington, D. C., Tuesday and Wednesday, January 7 and 8, 1919. A number of farmer organizations, including state granges, state farmers' unions, the American Society of Equity, and the Gleaners, have pledged their cooperation in this conference. Any farmer organization, national, state or local, is entitled to representation.

### HOG PRICE FOR JANUARY.

The price of hogs for the month of January has been fixed by the food administration at $17.50. This price will be the daily average cost of the packers' droves on the Chicago market. No hogs will sell under $16.50, except stags, sows, skips, throwouts and pigs under 150 pounds. The limit on pigs was raised from 130 to 150 pounds a few weeks ago.

# Increase of Freight Rates

## *Is Unfair to the Producers of the Pacific Northwest*

Our readers will recall that THE FARMER entered an emphatic protest when Director-General McAdoo ordered an arbitrary 25 per cent blanket increase in freight rates.

We then drew attention to the very apparent fact that the order was unintelligent and unfair.

Some of the railroads, notably the transcontinental lines, were earning fine profits, others were doing moderately well, yet others were bankrupt and another class of lines on the verge of bankruptcy.

Secretary McAdoo's broadcast distribution of rate increase benefits was exactly on a par with an effort to alleviate poverty in a country by distributing county aid to all the people in the county. We now have before us a statement issued a few days ago by the secretary which throws a flood of revealing light on the practical operation of his method of broadcast increase of freight rates.

When congress took over the railroads for public operation it appropriated $500,000,000 fund to be drawn upon by the director-general for the relief of such roads as were being conducted at a loss and the purchase of new equipment. Mr. McAdoo's statement shows where that money has gone. Four far eastern lines have received $212,065,000 of it—the Pennsylvania lines, $77,670,000; the New York Central lines, $59,870,000; the New York, New Haven and Hartford, $50,450,000, and the Baltimore and Ohio, $24,075,000. The list of railroads that have drawn upon the revolving fund is a long one. They are almost altogether roads serving other regions than the Pacific coast.

On the other hand the list of roads that have paid surplus profits into the fund is a short one. For example, while the Pennsylvania lines were drawing out more than $77,000,000, the Northern Pacific was paying in $6,778,000; the Union Pacific system, $7,300,000; the Atcheson, Topeka and Santa Fe, $11,200,000; the Chicago-Burlington-Quincy, $3,950,000; the Chicago and Northwestern, $3,270,000, and the Los Angeles and Salt Lake, $1,500,000. Only 16 railroads have turned over, in individual cases, surplus earnings up to December 1, 1918, in excess amounts advanced to them by the railroad administration.

**This means, as THE FARMER pointed out when the rate increase was ordered, that the people of the Pacific west are made to support not only their own railroads, but to help support distant lines in regions where the people have long enjoyed low freight rates.**

We warn our readers that there is grave danger that these high and unjust freight rates will be continued after the government returns the lines to their original owners. The Wall Street Journal declares that good authorities hold that if the present form of federal possession were to cease at any time within the time limit of 21 months after the end of the war present freight and passenger rates would remain the only lawful rates until they were altered in due course at public hearings by the interstate commerce commission. Our people were led to believe that the increase was only a war-time necessity. Now it begins to dawn upon them that the increased rates are cinched upon them and will only be shaken off with a mighty effort.

### Drain the Barnyard.

In the first place, the barn should be built on ground that drains naturally, but if it isn't, special effort should be made to keep it from getting muddy or filthy.

# Wheat Convention

Tentative plans for the program of the thirteenth annual convention of the Washington Grain Growers', Shippers' and Millers' association are now in the hands of Secretary E. G. Schafer at Pullman, and call for the holding of this meeting, the wheat convention, as it is generally known, at the state college on January 7, 8 and 9.

According to the present plans the program of the convention will be marked by the unusual diversity of its subject matter, and especial emphasis to reconstruction problems which are destined to affect wheat growers, millers and shippers in the immediate future. Grain grading demonstrations, according to the federal grain standards, will occupy a prominent place in the discussions and deliberations of the convention, at which it is also planned to organize a Washington Pure Seed Growers' association.

For the accommodation of those who attend, it is planned to serve meals on the campus, obviating the necessity of their leaving the college grounds between sessions of the convention.

The program, to which a few speakers and subjects are yet to be added is as follows:

Address of welcome, President E. O. Holland; president's annual address, H. J. McCroskey, Garfield; "Grain Wasted in Threshing," R. J. Stephens, Spokane; "Tillage Methods for Wheat," F. J. Sievers, soils technologist, W. S. C.; "Cost of Growing Wheat," Byron Hunter, U. S. department of agriculture; "The Smut of Oats in Washington," F. D. Heald, plant pathologist, W. S. C.; "The Most Profitable Wheat Varieties," Secretary E. G. Schafer; "Sheep and Wheat-Growing," H. E. Goldsworthy, Rosalia; "Hogs and Wheat-Growing," Roy Perringer, Belmont; "Peas and Hogs," J. R. Shinn, county agriculturist, Spokane county; "Pure Seed Growing and Seed Certification," F. L. Kennard, Colfax, and E. F. Gaines, Pullman; "Smaller Wheat Farms," J. M. Klemgard, Pullman; "Wheat-Growers and the Federal Land Bank," J. C. Jewett, Spokane; "Better Homes on the Farms," Dean W. G. Beach, W. S. C.

## Spokane Market.

SPOKANE, Dec. 16.—The following are today's market quotations:

**Beef**—Beef steers, 13@21c lb.; T. C. steers, 19c lb.; cow beef, 10@15c lb.; heifers, 14 1-2@15c lb.; beef loin, 18@28c lb.; steer chucks, 10@12c lb.; square chucks, 11@13c lb.; prime ribs, 15@20c lb.; rump and round, 16@19c lb.

**Mutton**—Breakers, 19@21c lb.; wethers, 18@19c lb.; ewes, 15@18c.

**Lambs**—Diamond T. C. lambs, 22c lb.; lambs, 22@23c.

**Pork**—Packer dressed hogs, 25@27c lb.; pork loins, 30@35c lb.; legs, 32@34c lb.; shoulders, 25@28c lb.; leaf lard, 27c lb.; tenderloins, frozen, 45c lb.; spareribs, 17@19c lb.; country dressed hogs, with head on, 19@21c lb. to producer; country dressed veal, 13@15c lb. to producer.

**Smoked Meats**—Washington hams, 39c lb.; T. C. hams, 42c lb.; T. C. bacon, 53 1-2c lb.; Washington bacon, 45@49c lb.; picnics, 28c lb.; lean backs, 38c lb.; Boston butts, 35c lb.

**Star Brand**—Star hams, 40@40 1-2c lb.; Shield hams, 38@38 1-2c lb.; picnics, 28c lb.; bacon backs, 36@37c lb.; Star bacon, 53@54c lb.; Shield bacon, 44@48c lb.; Boston butts, 34c lb.; Simon Pure lard, 31 1-2@34c lb.; Shield lard, tierces, 28 1-2c lb.; White Cloud compound, tierces, 24 1-2c lb.

**Dry Salt Meats**—Clear bellies, 31@35c lb.; loin back, clear, 31c lb.; rib chunks, 25c lb.

**Lard**—Tierces, 29c lb.; $21.30 buckets, per case; Diamond T. C. pure leaf lard, $16.55 case; Snowcap compound, tierces, 23 1-2c lb.

### POULTRY.

**Live Poultry**—Live hens, 20@22c lb.; spring chickens, 22c lb; roosters, 10c lb.; ducks, 20c lb.; geese, 18c lb to producers, f. o. b. Spokane.

### BUTTER.

**Creamery Butter**—1-lb. prints, 57@60c lb.

### CHEESE.

**Wisconsin**—38@38 1-2c lb.; first-grade western, 37@38c lb.; cottage, 10@12 1-2c lb.

### EGGS.

Fresh local, 73@82c doz.; Minnesota fresh eggs, $23 case; storage eggs, $16 case.

### GASOLINE, LINSEED OIL, ETC.

**Gasoline**—Red Crown, bulk, 25c gal.; Shell, 25c gal.; refined oil (Pearl), bulk, 13 1-2c gal.; Eocene, 15 1-2c gal. in bulk.

**Linseed Oil**—Raw, bbl., $1.94 gal., cases $2.12 gal.; boiled, bbl., $1.96 gal., cases, $2.14 gal.

**Turpentine**—Bulk, 86c gal.; cases, $1.06 gal.

**White Lead**—Strictly pure white lead in oil, ton lots, 13 1-2c lb.; 50-lb. lots, 14c.

### GRAIN AND FEED.

**Rice**—Fancy head, $7.50@9.50 cwt.

**Flour**—Bluestem, $11; blend, $11; graham, $9.75 bbl.; whole wheat, $10.35; eastern rye, $10; eastern rye meal, $10.20; oat flour, $12.80, two 100-lb. sacks.

**Oats**—$62 ton whole, $63@65 rolled, delivered in city; steam rolled No. 2, $65 ton.

**Corn**—$77 ton; cracked corn, $79 ton.

**Barley**—Rolled, $61 per ton.

**Oil Meal**—$75 per ton.

**Bran and Shorts**—$30 ton; if soft wheat feed, $32 ton.

**Hay**—Timothy, $39 per ton delivered; $36, by carload; alfalfa, $32 per ton delivered, $28 by carload.

**EDGEWATER SAM.**

Great grandson of Beuchan Peter Pan, undefeated grand champion Great Britain and America, for sale. The first herd in Washington of any breed on government accredited list.
**ELBERT M. CHANDLER, Burbank, Wash.**

## FRENCH FARM LANDS.

### To Be Reclaimed on a Big Scale by War Tractors.

Those who have visited French farm lands report that the fields that once yielded abundant crops seem blasted beyond all hope of recovery. The pockmarks of the small shells are everywhere, and at frequent intervals are huge craters, yards across and many feet deep, where the larger shells have exploded. At some points entire farms have disappeared, for here the troops sank their mines which when fired engulfed whole companies and entirely changed the contour of the land. The fertile top soil is gone, buried beneath the upturned sterile clay and sand. Back and forth across all this devastation run endless masses of trenches, man-deep, with earthen ramparts before them, cutting up the fields until plowing or cultivating seems an utter impossibility.

Such is the condition in which returning French and Belgian farmers will find their once fertile acres. It will be a disheartening sight, for with the old horse and scraper method of leveling, it would mean years of work before the land would again be fit for cultivation.

Here is where the farm tractor will drop its war charge, the heavy gun and go to work for those simple peasant folk. Hitched to a big land leveler, it will cut off the earthen ramparts, fill the trenches, craters and shell holes, and otherwise redeem the land.

### Talk Business Matters Over.

Take your wife into your confidence on the matters that mean dollars and cents in your business.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

### SITUATIONS WANTED—Male 21

THOROUGHLY EXPERIENCED AND CAPable creamery man and butter maker seeks job calling for a broad knowledge of the creamery business, where he can make his services very valuable. Address P. O. Box 499, Ritzville, Wash.

### EDUCATIONAL 45

GOODING COLLEGE, GOODING, IDAHO, offers practical winter courses, review subjects, college and academic work and a special summer session for you. Write today.

TELEGRAPHY—YOUNG WOMAN'S POPULAR vocation; good paying positions available. Write for booklet. Pacific Telegraph Institute, Spokane.

SEND NEWS NOTES TELLING OF THE work of your school today. Address the Educator, Gooding, Idaho.

### HONEY, BEESWAX—Wanted 58

SEND SAMPLES OF YOUR HONEY AND beeswax. State quantity, price. Oregon Farm Products Co., 380 Halsey st., Portland.

### MISCELLANEOUS—FOR SALE 60

FOR SALE OR RENT—MONEY-MAKING blacksmith shop, Melrose, Idaho; full set tools, engine and power machinery; chop mill side line. W. N. Garner, Peck, Idaho.

TRAP COYOTES—FULL INSTRUCTIONS ON a sure catch method and reliable scent recipes sent on receipt of $5. C. L. Willis, Dillard, Ore.

FOR SALE—175 TONS HAY, 50 HEAD OF grade Holstein cattle, 5 horses and machinery, with good lease. Walter Allison, Belfair, Wash.

### MISCELLANEOUS WANTED 63

CASH PAID FOR OLD FALSE TEETH. We pay up to $35 per set (broken or not). Send now. Cash sent by return mail. Package held 5 to 15 days for sender's approval of our offer. Highest prices paid for old gold jewelry, gold crowns, bridges, dental gold, platinum, diamonds and silver. Send for fall catalog of new jewelry.
UNITED STATES SMELTING WORKS, INC.
331 Goldsmith bldg., Milwaukee, Wis.

POULTRY WANTED.
We are cash buyers of poultry and dressed meats, also cream. Write us for prices, shipping tags and premium catalogue for cream shippers.
COMMERCIAL CREAMERY CO.
SPOKANE, WASH.

### LIGHTING EQUIPMENT 74

THE SAFETY LAMP CO., N208 HOWARD ST., Spokane, Wash. Gasoline lighting and supplies.

### MACHINERY—For Sale 93

IMPORTANT NOTICE.
We not only stock "WITTE" gasoline engines, 2 to 30 h. p., but carry a full line of repair parts for them. Prompt service our hobby.
HIGGINS MACHINERY COMPANY.
312 1ST AVE., SO., SEATTLE.

FOR SALE—CLEVELAND TRACTOR; USED 25 days, in perfect running order and good as new; also tractor plow, bargain. Byrd J. Clark, Lyle, Wash.

BARGAIN—ONE 9X18 CASE TRACTOR; slightly used; one 2-bottom John Deere engine gang, almost new. Murphy & Harold, Albany, Ore.

SAVE $300—ONE NEW 12X24 SAMPSON Sieve grip tractor, with 14-inch extension rims. Price $1650. J. R. Wallis, Albany, Ore.

### AUTOMOBILES 114

HEADQUARTERS FOR USED CARS.
Trucks and tractors; printed list. Spokane Auto Market. W315 Sprague ave., Spokane, Wn.

AUTO RADIATORS, FENDERS AND LAMPS repaired. Lester Allen, 607 Second avenue, Spokane.

### STOVE AND FURNACE REPAIRS. 120

WRITE M. S. RUBENS, SPOKANE, FOR ANY parts needed to repair stove, furnace.

### POULTRY 174

BUY YOUR INCUBATOR NOW.
Incubators will be scarce and high next spring. Send for our list of new and used incubators and save money. Agents: Famous Queen incubators and brooder stoves. Queen Hatchery, 99 Pike st., Seattle.

# POULTRYMEN Now Is the Time

to begin advertising your breeding stock and hatching eggs.

## NOW IS THE TIME

to begin booking orders for baby chicks.

Farm folks know that the best birds for egg production are those that are hatched early. They know that pullets that are old enough to begin laying in late summer and early fall are the best money makers, because they are producing when eggs bring highest prices.

## BEGIN NOW

to call the attention of our big family of more than 80,000 subscribers to the good birds and eggs you have to offer. Your ad with us will reach more farm homes throughout the Pacific Northwest than you can reach through any other farm paper. Those poultrymen who have been advertising with us since early last fall have been getting excellent results. And buying will be much more brisk from this time on.

WRITE TODAY FOR SPECIAL POULTRY ADVERTISING RATES AND LET US SEND YOU FREE OF CHARGE A SUPPLY OF BLANKS THAT WILL BE OF HELP TO YOU IN GETTING ORDERS.

## The Pacific Northwest Farm Trio

HERE'S YOUR CHANCE OF A LIFETIME—BECOME A SKILLED MECHANIC.

# The Book that Guarantees you Satisfaction!

*This book contains a coupon for every lesson you get, and you don't give up a single coupon until you are satisfied with the particular lesson it covers. You can't beat that*

**A world at peace offers you the greatest future ever known. The war has demonstrated the value of trucks, tractors and aeroplanes, and all of them will come into general use. Pleasure cars will come back and the demand for skilled mechanics will be greater than ever. And many of the millionaires of the automobile industry started in as skilled mechanics.**

## *"Making $5000-a-Year Mechanics"*

We have printed a little book about an ordinary farmer boy and his success that you will find mighty interesting reading. The coupon will bring it to you free.

## MEN—YOUNG MEN—GIRLS—CAN YOU QUALIFY?

If you can, the biggest trade schools in the world offer you a practical course that has been O. K.'d by Uncle Sam and that gives you actual experience and contact with all branches of the trade.

You have to be born with a natural ability, though, in order to become a first-class mechanic, and it is a waste of both time and money for those who have not the natural ability to take this course.

Consequently, before enrolling, you are furnished a vocational analysis form which, when filled in and returned to us, enables us to judge of the advisability of your taking it. We give you this service absolutely free of charge, and even if you prove to have the necessary ability, you are not in any way obligated to take the course. Just fill in and send the coupon at the bottom of this page and we will send you your analysis form by return mail.

## Uncle Sam's New Year's Greeting

BEING Americans and being young, they will not ask or expect pensions. They will want work. They will want, if possible, a chance for a home of their own. * * * Why not say to this inquiring soldier man: America offers you a farm if you will help in its making and pay for it out of what you make out of it?

# If The War Had Continued!

If the war had continued, the pair of U. S. "Protected" rubber boots that you will now be able to buy at your dealer's this winter would have gone to France for one of the boys "over there."

But, as the trenches are empty, there is no need for trench boots; so our Government is now allowing us to provide heavy-service, double-duty U. S. "Protected" rubber footwear for the outdoor worker at home

Uncle Sam has furnished "our boys" with the best rubber boots that money can buy, and, in both the Army and Navy, there probably are as many U. S. "Protected" rubber boots as all other brands combined.

U. S. "Protected" rubber boots will outwear any ordinary rubber boots. The "boys" will tell you so when they come back. Every pair is sturdily constructed, reinforced where the wear is hardest, staunch and serviceable, and yet full of comfort. Every pair of "U. S." means warm, dry, comfortable feet for the wearer, whatever the work or weather.

The "U. S. Seal"—trade mark of the largest rubber manufacturer in the world—is on every pair of U. S. rubber boots. Look for it. It is your protection.

## To Put Settlers on 3,500,000 Acres

### *"The New Spirit of America" Daring the Development of Vast Domain of Farm Homes on Central Plateau of Eastern Washington*

By N. W. DURHAM

**As this issue of THE FARMER goes to press, word comes from Washington, D. C., that Secretary Lane of the department of the interior has appeared in person before the irrigation committee of the house of representatives in congress and formally recommended that this session of congress appropriate $100,000,000 "to reclaim logged-off, arid and swamp land in every part of the country." This apparently is a formal beginning of this great movement.—Editor.**

Senator Jones of Washington has introduced a bill directing Secretary Lane and the reclamation service to make preliminary surveys for the Big Bend irrigation project. For this work, his bill would appropriate $50,000.

The Big Bend irrigation project was given extended consideration by the United States reclamation service 15 years ago. The government maintained a corps of engineers in that field for two or three seasons and finally dropped the undertaking, chiefly because of its magnitude.

Lying in the encircling arm of the Columbia river, as that majestic stream flows in a great bend through the state of Washington, the government engineers found an area of about 3,500,000 acres of arid and semi-arid lands whose production could be tremendously increased under irrigation. The daring engineering feat was considered of tapping the Spokane or the Pend Oreille near the Idaho line and conveying water through a great canal in the southwesterly direction to these fertile, but thirsty, lands.

At that time, however, the reclamation fund was insufficient to justify the government in taking up so costly a project, but now that Secretary Lane of the interior department is urging upon congress the advisability of taking up the reclamation of arid swamp and logged-off lands in a big way, interest in the Big Bend project is revived. Governor Ernest Lister is making a vigorous investigation of its possibilities and has become convinced of its probable feasibility. He is now at the national capitol, presenting the matter to Secretary Lane. The governor also has directed State Hydraulic Engineer Chase and State Geologist Landes to go over the proposed route of the canal immediately and advise him if the project has any insurmountable obstacles.

This enterprise should enlist the active interest of the people of the Pacific northwest. Secretary Lane is known to be favorably disposed towards a proposed gigantic irrigation project in the Colorado river region. In his letter to President Wilson last May he said that a survey and study has been in the course of consummation by the reclamation service of the great Colorado basin, "that this great project, I believe will appeal to the new spirit of America. It would mean the conquest of an empire in the southwest. It is believed that more than 3,000,000 acres of arid land could be reclaimed by the completion of the upper and lower Colorado basin project."

As the great southwest will work for the Colorado project, the great northwest should rally to the support of the Big Bend project. In magnitude the latter matches the Colorado enterprise. Its soil fertility is unsurpassed and its climatic advantages are superior to the southwest. It is pierced by four transcontinental railroads and fronts upon an open region to the sea. Its products would have a short haul to the home markets of nearby cities with a population of more than one million. Its surplus flowing out through the gateways of the Columbia river and the Puget sound would have cheap open transportation to the markets of the world.

If the Big Bend project shall be found feasible from an engineering test, the great northwest, from Minnesota to the sea, should be an enthusiastic unit for it, for it is apparent that if the southwest project should be adopted and the northwest enterprise rejected, the current of immigration and investment will flow along the southern zone and away from the northern routes, the loss would not be confined to the state of Washington. Minnesota, Dakota, Montana, Idaho and Oregon would feel it. The fact is, the nation needs both developments and both should appeal to "the new spirit of America," to adopt the eloquent phrase of Secretary Lane.

## Should Make Legislators Understand

By request of The Washington Farmer, State Senator E. Ben Johnson of Spokane county, contributes the following illuminating article on "Autocracy at Olympia." Senator Johnson shows how "Cannonism" has a powerful grip on the Washington legislature; how the all-powerful rules committee, sitting and acting in secret, like the German bundesrath, decides what bills may be considered by the legislature and what bills shall not see the light of day.

To the Readers of The Washington Farmer: It is a fundamental requirement of representative government that the voters shall be fully apprised of the acts of their representatives through public sessions and records. Surely, the voters have the same right to know by whom and why a bill is defeated in committee, as when defeated on the floor of house or senate. No honest legislator can object to having the public observe his every legislative act. Why, then, should a system of secret and irresponsible control through rules committees be maintained in the Washington legislature?

When a bill is introduced in either house, it is read and referred to a committee for consideration; thus, a bill relating to farming interests is referred to the committee on agriculture. This committee studies the bill, perhaps calls in experts and holds public hearings, then returns it with written recommendations attached, signed by the members of the committee. There may be two reports, majority and minority, but public record is obtained of how each member of the committee acts.

So far, all is well and if the report is favorable, the bill ought now to be considered by the legislative body and disposed of in public, and that is the procedure in other well governed states, Ohio, Michigan, Minnesota, Wisconsin, Kansas, California and Oregon, for instance. But in Washington legislative procedure the bill, at this point, passes into the control of a rules committee, and will never be considered in public or voted on by the legislative body, unless the rules committee, in secret session, decides to place it on the calendar.

The rules committee of each house meets daily to make up the calender for the next day, and no star chamber of old or modern German bundesrath could proceed with greater secrecy or less responsibility. No report is given out or record kept of how the committee members vote; there are no signed reports as to the different bills; all the committee hands in is a list of bills to be considered next day. Bills not placed on the calender are defeated by failing to come to the consideration of the legislative body, but until the last day's calender is handed out, no one can say which bills the rules committee has defeated in secret. It is then too late for effective protest.

The possession of this power to defeat bills in secret gives a majority of the rules committee autocratic control over legislative action, since any member who dares to vote against their wishes can be punished by leaving his bills off the calendar. Nearly all the bills are actually passed in the last 10 days of the session, which must end on the 60th day, and there is then a tremendous congestion of bills. While the rules appear to permit bills to be taken away from the rules committee and placed on the calendar, under actual conditions it is all but impossible and is never done. The fate of most of the important bills is thus actually determined in secret.

This is substantially the system which was used in congress some years ago, known as "Cannonism," which the whole country denounced, and which Senator Poindexter helped to overthrow. In this state it appears to be a relic of the old days of legislative scandal and railroad control, when the principal legislative object was to thwart public opinion and escape individual responsibility.

A vigorous effort will be made at this session to abolish the system of secret control by rules committees, and substitute the public and responsible procedure in use in other states. It requires a change of rules which have been continued from session to session in the past, and will be vigorously resisted by all those who desire to avoid publicity and responsibility. The voters should make their legislators understand in no uncertain terms that secrecy and autocracy must be abolished.

E. BEN JOHNSON.

## Figuring Cost of Farm Products

### *Secretary Houston and W. J. Spillman at Odds Over Question*

The strained relations between Secretary of Agriculture Houston and Dr. J. W. Spillman are made public in an Associated Press dispatch from Washington. As the dispatch indicates this controversy hinges on the vital problem of the cost of producing farm crops and farm animals, and the trustworthiness of the methods employed in getting at that cost.

Professor Spillman, as he is remembered and highly regarded in the Pacific northwest, having been for a number of years at the head of the agricultural department of the state college of Washington at Pullman, is one of the recognized students of farm management the country over.

Here is the dispatch from Washington:

> In a letter today to Chairman Gore of the senate agricultural committee W. J. Spillman, former chief of the department of agriculture office of farm management, took exception to the recent statement of Secretary Houston that the department was without trustworthy estimates of the cost of farm production. Mr. Spillman reviewed at length investigations made by his office, and added:
>
> "There is no possibility, no matter how extensive the investigation, of getting more than a reasonably accurate approximation to a final result. This was done in the investigations under discussion."
>
> Mr. Spillman contended that the farmers are entitled to know the results obtained and to say whether the reports prepared on wheat growing represent the facts in the case. He also suggested that the committee is entitled to know why the work of his office in this connection was suspended three months last fall and winter.

The trouble began some years ago when very early in his administration Secretary Houston took out from under the supervision of Dr. Spillman the extension work of the department of agriculture in certain states and placed in these states a large number of workers who were identified with the Rockefeller foundations.

Dr. Spillman called the attention of congress and others to the striking tendencies in this direction. It developed at the discussions arising over this subject that in all probability the appointment of Secretary Houston was due to the suggestions of Colonel House, they having been warm friends in Texas. It also became known that Colonel House was one of the prominent oil men, having acquired his wealth in that way. It also became known that at an earlier period Secretary Houston had been appointed on the hookworm commission, which was a Rockefeller foundation; on the federal education board, a Rockefeller foundation; and on the general education board, a Rockefeller foundation, and that upon his appointment as secretary of agriculture he had appointed a son of the head of the general education board as his private secretary. During this period the number of extension workers in Rockefeller pay increased very greatly. The results was a congressional inquiry into this matter and the secretary was called upon to give the list of persons receiving money from this source. It developed that there were about 600. As a result when the Smith-Lever act was passed providing large sums of money for extension work, provision in it was made that gifts should not be received from anybody outside the state where the money was to be expended.

Doubtless Secretary Houston's suspicion of Dr. Spillman's attitude with regard to this legislation further increased the tension between the two men. It is only as these personal relations affect seriously the farming interests of the country that they become of public importance.

It is important that the farmers themselves, and the consuming public as well, should know what it costs to produce wheat and corn, pork and beef, eggs and butter and so on.

Was Dr. Spillman following the best methods in finding out these costs?

Was the farm management office hampered in this important work?

It is time for this matter to be cleared up by official inquiry.

Evidence is accumulating that THE FARMER has taken the right stand in its contention for the appointment of the ablest available man as national food production administrator.

## Dismiss Bouck Case

Federal Judge Neterer of the district court of Seattle has dismissed the case against William Bouck, master of the Washington State grange, who was charged with seditious utterances. The dismissal is made at the request of Clarence L. Reames, special assistant United States attorney general. Reames was instrumental in bringing the indictment against Bouck, but in asking the dismissal against the case, says that the evidence he received is so contradictory as to render it inadvisable to proceed with the prosecution

OUR GUARANTEE TO SUBSCRIBERS.
Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.
We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

FREE INFORMATION BUREAU.
The Washington Farmer has established an INFORMATION BUREAU at the NATIONAL CAPITAL, which is at the service of its readers, and which they are asked to use freely. It is intended to be a clearing house of government information. Address inquires (including 3c stamp) to The Washington Farmer INFORMATION BUREAU, Washington, D. C.

## *Chicago Greatest Agricultural Center*

Chicago is the greatest agricultural center of the United States, of North America and, for that matter, of the entire world. The Temple of Agriculture at Chicago, advocated by the Chicago Tribune, is the outward symbol of a great inward need for United States government agricultural headquarters in that central city, under the charge of a national food production administrator.

The greatest agricultural development of the next 50 years will take place in the states northwest from Chicago reaching to the Pacific coast.

A large part of the enormous coming trade of the United States with Siberia, Russia, Japan and China will be transported by rail on lines southwest from Puget sound and the mouth of the Columbia river to Chicago and farther east.

While San Francisco and the Panama canal will divide the coming trade of the Pacific, the commercial belt around the world remains in a northwesterly direction from Chicago. Already great transcontinental lines are in operation leading from Chicago to the Pacific northwest: the Great Northern railway, the Northern Pacific, the Chicago, Milwaukee & St. Paul, the Union Pacific lines from Granger northwest, the Burlington lines from Kansas City and Denver to the northwest, as well as the Chicago Northwestern through connections.

Wisconsin, Minnesota, North Dakota, Montana, Idaho, Washington, as well as Oregon, Wyoming, South Dakota, Nebraska and Iowa, are distinctively Chicago territory so far as the Pacific trade centering on Puget sound and the mouth of the Columbia is concerned. These states include a vast territory more than 500 miles in width and more than 1500 miles in length.

As the great agricultural center of the United States, Chicago's interests are vitally bound up with the agricultural interests of these 11 states, and, so far as basic agricultural development will have to do with the coming trade of the Pacific, Chicago's interests are as much concerned with regard to the agricultural development of Oregon, Washington, Idaho and Montana, as with that of Wisconsin, Minnesota and Iowa.

When a great business house like that of the International Harvester company, or that of Armour and Company, send out their regional executives, these executives are urged to make good in their own way and by their own methods, provided that they do not contravene the general policies of the central organization. When the department of agriculture attempts to control detailed work of subordinates throughout the country from the varying conditions of Florida and Idaho, of Texas and North Dakota, that department largely loses sight of the work to be done in its eagerness to take care of the machinery designed to do it.

As the great center of the agricultural interests of the country, Chicago should contain the central executive office of the national department of agriculture, while the laws for the conduct of the department of agriculture are made and interpreted and the books are kept at the national capital.

The Temple of Agriculture in Chicago should house a national food production administrator, having charge of the regional food production administrators throughout the country, coordinating and making efficient all the food production agencies of public as well as of private character.

## *A Wonderful Year Is Ahead*

A year terrible in its wonders is behind us. A year glorious in its possibilities is ahead. To have lived during the past year and taken part in its stupendous demonstration of power and its overwhelming victory of right over unrighteousness was the privilege of the ages. To live during the period of reconstruction that is just dawning is a prospect too alluring to becloud with language.

But as we face that prospect let us not magnify the idea of reconstruction. Let us rather emphasize the idea of new construction, not rebuilding of the old, but a building of the new where the old once stood. Let us, as we enter upon this first new year of the world's new life, lay deep the foundation of better things than those that have been sacrificed, great and good though much that is gone has been. And let us not cross oceans or continents to do it. Let us each begin at home. Banish that miserable allusion that distance lends enchantment! The brightest spot on earth is our own dooryard if we will but open our eyes to see, not yonder in another state or another nation. Let the two big words of this new year be Here and now. Right here, right now is our opportunity.

And let us not look for big things to do. The biggest thing in the world is the little thing well done, and in every home, on every farm, in every village the little thing is lying in wait for the willing hand to undertake. Undertake it. Accomplish it in a big way, and power will be given to accomplish the larger thing beyond it.

The new year is at hand. It can not be a year of accomplishment for the world unless it is a year of accomplishment at home. It can not be a year of accomplishment at home unless it is a year of accomplishment by each individual of the tasks that nature wisely places before him.

Each thing I do throughout this year
To make my home a better one
Will make the world a better world
To live in when that thing is done.

## *Should Not Go Too Strong*

Great effort is being made throughout the entire country to stimulate the production of live stock during the coming season. The depletion of the herds and flocks of Europe, together with large home demands, is the basis for the belief that there is a great future immediately ahead of the live stock industry.

This is true, and every one who can assist in supplying the world's need of live stock and live stock products will be doing not only himself but the people of other nations a benefit. But the industry must not be overstimulated. Every farmer who goes into it for the first time or who increases his interests in it should do so after careful calculation of the possibilities that his conditions present. The industry will be injured and not benefited by the man who undertakes to produce more live stock than he is prepared to handle properly. Such farmer himself will be the keenest sufferer from his mistake. Every man who undertakes to increase production the coming year must coldly calculate the possibilties of feed production, labor supply, marketing facilities and similar problems.

## *Waiting for Workers*

The United States, according to estimates, possesses more than a billion acres of land that can be used for agricultural production. Less than 400 million acres of this vast tillable domain now are used. To reach with the plow our unused 600 million acres, as President E. O. Holland, of the State College of Washington, well says, mighty feats in engineering, drainage, irrigation and clearing must be accomplished.

Moreover right at hand is the task of provisioning, comforting and rehabilitating areas of the old world that have been swept away by the fury of war. Russia, in particular, will want our help. Even before the war the state college received calls for scientifically trained young men in Siberia. Russian and Siberian students have attended instruction at Pullman, and every one of them agreed that in her reconstruction Russia would look to America for help more than any other nation in the world.

It must be rembered also that before 1914 there came to the United States each year over 1,000,000 immigrants. During the past four years the flow has ceased, consequently the farms have been depleted of help and every industry has had to run short-handed.

No one should be disturbed over the fear that the return to civil life of millions of soldiers and munition workers may be followed by extensive unemployment and social unrest. There has never been a time in all human history when the world was so rich in opportunity as today.

## *Should Prevent Double Freight*

The stock yards have done a great thing for the live stock industry of the northwest by turning poorly finished stock or stuff that was well fitted to be breeding stock back to farmers who were in a position to finish them or use them for breeding purposes. They have done much to create a sentiment against marketing stock that should not be marketed. Thousands of head have been shipped to the yards in unfit condition and have been reshipped to farmers who could handle them. Many of them have gone back to the same communities from which they came.

There is a point to consider. It is good business to send them back, but it would be better business if the communities would see to it that they were not sent in in the first place. Instead of shipping them 200 miles and back, it would be better to drive them or haul them, as the case might be, 10 miles across country to the farm or ranch that could keep them till the proper time to market. Here is one of the great things that community organizations can do, and that, in many instances, they are doing.

## *Schools Demand First Interest*

The schools of a community are the most vital asset that it has. There is no other one thing that more definitely expresses the prosperity and development of a neighborhood than the character of school that its children attend. And there is nothing that more definitely expresses the character of the school, all things considered, than the building in which it is held and the grounds surrounding the building.

The schoolhouse may be attractive in appearance or unattractive. It may be comfortable and sanitary or not. It may possess facilities for a liberal education, or just a reading, writing and arithmetic education. The boys and girls, in fact, the grown-ups of the community, are inspired to better effort by attractive buildings and grounds than by the unattractive. The health and contentment of the boys and girls depend in no little degree on the construction of the school building with reference to ventilation, warmth and convenience. The whole life of the community is vitally affected by the broadening of the course of study and experiment to include domestic science, agriculture, or even carpentry and blacksmithing. Let there be no reflection made on the "three r's," for they are the foundation stones of education. They are fundamental. But the day is at hand when education must be made more and more practical, when it must more and more aid directly in the industrial life of the community.

# International Situation Hopeful

## *World Peace Problems Are Big but Not Insurmountable*

While the problems that the peace conference soon to meet in Versailles, France, must solve remain grave and puzzling, there is a more hopeful tone in the reports that come from the various European centers of government now than heretofore. Statesmen of all the allied nations appear agreed upon the principal objects to be obtained by the peace treaties. There is a general agreement on the fundamental principles of a league of nations to enforce peace. The details of reaching the main objects are troublesome, however, but the underlying fear that the allies might disagree seriously among themselves seems to be passing.

President Wilson has been in conference with the leading statesmen of France and Italy. He is now taking up the big problems with British statesmen, being the guest of England for a period as he has been the guest of France. On the surface, there is no evidence of anything in the form of antagonism between any of the nations involved in the great, world settlement.

**FRANCE SUGGESTS LEAGUE PLAN.**

That a society of nations is not only possible, but absolutely necessary for the preservation of world peace, is the belief of the leaders in France, who, in setting forth a plan for such a society, say:

"We are convinced that a durable peace can be assured only in substituting for a reign of force that of organized right. It is the object of our association to aid in the constitution of a society, first of part, and then of all the nations. This society should, according to the recent declaration of President Wilson, be a most essential party in securing the maintenance of peace."

Their statement then continues in part:

"The essentials of the plan are:

"First, compulsory arbitration without limitation of exception. This leaves out the old exception of questions involving national honor and dignity.

"Second, limitation of armaments.

"Third, the establishment of a council of administration of the nations for the formulation of new international law procedure.

"Fourth, the application of 'sanctions' for making effective the decisions of the society of nations. 'Sanctions' is a diplomatic expression meaning the various steps for enforcing compliance. They are four-fold."

The four steps in "sanction" outlined by the French statesmen are:

Diplomatic sanction, by which any recalcitrant nation would be cut off from diplomatic relations with all the other nations of the society; judicial sanction, by which such nation would be cut off from the courts of the nations of the society; economic sanction, by which such nation could be cut off from international commerce or received foods and materials, and military sanction, by which the nations of the society might conduct military operations to compel obedience from the recalcitrant nation.

**FREEDOM OF THE SEAS IS PROBLEM.**

The matter of freedom of the seas, as outlined by President Wilson in his 14 original conditions of peace, remains a troublesome and indefinite problem, though it is reported that discussions of the matter by allied statesmen indicate the possibility of harmonizing views on it. One British attitude is expressed in the London Times, which says:

"Far from there being any necessary antagonism between the British and American views of the so-called freedom of the seas, there is revealed the possibility of an Anglo-American agreement respecting the main lines of the declaration of maritime rights and duties to be worked out, not at the peace conference, but at future conferences."

**MAY SINK GERMAN WAR VESSELS.**

Instead of attempting to apportion the captured German naval vessels among the allied nations to make up in part for the losses that these nations have incurred through German depredations of one kind or another, it is possible if not in fact probable that the allies will agree to take this fleet out on the high seas and sink it. There is wide differences of opinion as to the advisability of this step but there are indications that both England and America may decide that it is the wiser method of solving the problem.

**GERMAN INTERNAL SITUATION IS SHAKY.**

There is little evidence coming to light to indicate that the political situation in Germany is being cleared up. On the other hand, there are evidences that some believe indicate that the allies must either hedge the German people in and let them fight out their own problems through a considerable period of revolution or actually invade the country and take military possession of it. A statement last week indicated that General Von Hindenburg was doing his best to keep the army in shape to conduct a counter revolutionary movement to offset the socialist revolution that is now attempting to control German affairs. The statement indicated that he planned the establishment of a military line of defense a few miles back of the present neutral zone along the Rhine river. Some have expressed the belief that it was part of a big plan having as its object the return of the Hohenzollerns to the throne when Hindenburg dramatically refused to withdraw from the army as did Ludendorf and others of the military leaders. Some believe now that he is still acting in the capacity of military leader for the kaiser and that both are watching for the psychological moment when a trick might be turned leading to the return of the Hohenzollern family.

**THE ALLIES MUST CONTROL.**

That the allied nations can not permit Germany to exist in a state of reckless revolution during the next few decades is evident when it is remembered that indemnities totaling many billions of dollars are due the allies from Germany. It would seem, in view of this fact, that unless some element in Germany is capable of bringing about an early restoration of order it will be necessary for the allied armies to move in and take charge and put the German people to work earning the wherewithal to pay the allied losses. It will require a highly efficient German nation, working through a period of many years to support itself and pay just indemnities to France, Belgium, England, and the other allies.

**WORLD-WIDE HOUSECLEANING DUE.**

The war has been but one step in the world's housecleaning. The peace conference will be a second step and already in this country and in the European countries investigations are forcing themselves into the limelight. Instead of ceasing with the coming of peace the efforts to disclose the real story of pro-Germanism in allied nations, especially in America, is being stimulated. It reaches into diplomatic, military, civil and industrial life. Investigations reveal stupendous expenditures in war construction with practically nothing to show for it, such as the aeroplane revelation and the Hog Island ship yards revelation, showing the expenditure of many millions with little effective results. Just who played the leading roles in the German propaganda movement in this country is apparently destined to come to light also.

# Farm Crops of $12,272,412,000

The department of agriculture's final estimates on the farm crops of 1918 present eloquent proof that the American farmer made an extraordinary effort this year to respond to the government's call for increased food production.

With a total value of $12,272,412,000, the nation's principal farm crops this year were worth more, based on prices paid to farmers December 4, than in any year in the history of American agriculture. This year's total exceeds that of the former record year, 1917, by more than $614,000,000. There also was a marked increase in acreage, the 355,895,722 total exceeding that of last year by 10,700,000 acres.

**WHEAT CROP VALUE, $1,874,263,000.**

The 1918 wheat acreage was 59,110,000 acres, an increase over 1917 of more than 14,000,000 acres. This year's yield is given at 917,100,000 bushels, with a farm value on December 1 of $1,874,263,000. This was an increased yield over 1917 of more than 280,000,000 bushels, with an increased value over 1917 of nearly $600,000,000. The average yield per acre this year was 15.5 bushels, as against 14.1 bushels last year.

There was a slight decrease this year in the oat harvest, but a considerable increase in barley, rye, flax seed and sugar beets.

Our readers will be interested in the acre yield of the various crops of this country. The average all over the United States this year was: Wheat, 15.5 bushels; oats, 34.6; barley, 26.5; rye, 14.4; potatoes, 94.7 bushels.

**TOBACCO CROP, $374,318,000.**

It is interesting to compare the value of some of the great staple crops of the south with those of the north. The 1918 tobacco crop had a farm value this year of $374,318,000, but a little more than one-tenth of the total value of this year's corn crop, and less than one-fifth of the value of the nation's wheat crop. This year's cotton production is valued at $1,616,207,000.

Values of some of the small crops are as follows: Sugar beets, $58,341,000; maple sugar and syrup, $12,074,000; sorghum syrup, $28,017,000; beans, $93,639,000; peanuts, $91,522,000; broom corn, $13,598,000; onions, $16,268,000.

**APPLE CROP, $98,824,000.**

Turning to fruits, the government reports the apple crop at 25,404,000 barrels, valued at $98,824,000; the peach crop is given at 40,185,000 bushels, valued at $66,587,000; the pear crop is 10,342,00 bushels, valued at $14,200,000. Florida and California grew 19,587,000 bushels of oranges, valued at $92,723,000.

These cheering crop figures are looked upon with satisfaction by government officials, showing that the nation will be in even better position to fulfil its pledge of 20,000,000 tons of foodstuffs to Europe next year than had been expected.

# All at Sea Over Railroads

The nation seems all at sea over the railroad problems. The law under which the government took over the railroads for operation provides for their return to their owners within a period not exceeding 21 months after the termination of the war. President Wilson frankly confessed in his recent message to congress that he had "no confident judgment" of his own on the question of the policy to be adopted toward the railroads. "I do not see how any thoughtful man can have, who knows anything of the complexity of the problem," the president added. He emphasizes his declaration of openmindedness by further adding, "Let me say at once that I have no answer ready," but the president was scarcely well on his way across the Atlantic when Director-General McAdoo startled the country with an urgent recommendation that the government's operation of the railroads be extended until January 21, 1924. Mr. McAdoo added the surprising explanation that "the president has given me permission to say that this conclusion accords with his own views of the matter."

**GOVERNMENT OWNERSHIP IN PEACE.**

Apparently Director-General McAdoo feels that the principle of government ownership has not been sufficiently tested under war conditions and wants a longer trial in time of peace.

It must be acknowledged that the results of government operations have not been a very strong argument for government ownership of the railroads. When congress turned the lines over to Director-General McAdoo, it appropriated $500,000,000 as a revolving fund, intended to meet any possible deficits of operation. It did not take Mr. McAdoo very long to realize that this $500,000,000 fund would be very soon exhausted and he would have to go to congress for another appropriation very soon. To meet that problem he advanced freight rates 25 per cent, a stupendous increase.

**CAN NOT MAKE BOTH ENDS MEET.**

Even with that increase and the carrying capacity of the railroads strained to the limit by the rush of war business, Mr. McAdoo was not able to make both ends meet. In the single month of November, he had to draw upon his revolving fund for $46,493,391. At that rate, a $500,000,000 fund would last a little more than a year. In fact, less than two-fifths of the fund remains, and winter operations, always more expensive than other periods of the year, is very likely to wipe out what remains.

Possibly that is why Secretary McAdoo resigned. It is not impossible that he made up his mind to get out from under while the dodging was good.

## *Washington Gleanings*

W. D. Beck of Warden, Wash., has traded 320 acres of wheat land to T. F. Sense of Elk City, Idaho, for 3320 acres of hay land near Elk City.

A red fox was caught alive five miles east of Garfield recently by Charles Cromwell, a rancher. It is a valuable animal, as there are few in the community.

Surfacing of five miles of Sunset highway in the vicinity of Govan was completed last week. Eight thousand cubic yards of gravel were placed, costing about $14,000.

The British steamer Yankalilla arrived in Port Townsend December 14 with 6309 tons of wheat, the largest cargo of Australian grain to arrive on the coast since the war began.

Yakima Valley beet growers received $300,000 for beets taken to the Idaho-Utah Sugar Factory during November. Products worth over $500,000 already have been made at the factory this season.

Frank West has been elected president of the Yakima Valley Fruit Growers' union, which claims a membership of 900, succeeding H. M. Cassidy. W. B. Turner was elected secretary and Thomas Whalen guide.

The resignation of W. F. Kirkman and J. F. Pingrey, supervisors of drainage district No. 2 of Burbank, were accepted by the Walla Walla county commissioners, and H. J. Staufacher and Charles Hess, both residents of Burbank, were appointed.

J. D. Neville, Lewis county engineer, whose term expires the first of the year, has been chosen by the Portland Cement association as district engineer for their association for all of southwest Washington. He will make his headquarters in Chehalis.

The annual report of the boys' and girls' club in Walla Walla county shows that six poultry club members made a net profit of $203. The total value of all products produced by all the club members reporting is $2383, the cost of production was $1154, leaving $1229 as the net profit.

The officers of the Island county fair association have just made an itemized report of receipts and disbursements for this year. It shows total receipts of $1003.62, of which $386.75 was from gate receipts and $551.67 was from concessions. The disbursements were $960.60, leaving a balance of $43.02.

Walla Walla county's first sugar beet harvest will soon be completed. Among the yields are: H. F. Schmelzer, 300 tons from 30 acres; Grant Allsbury, College Place, 26 tons from one and three-quarters acres; Gray Sheets, 15 tons from five acres; D. G. Thomas, two and a half tons from one-quarter acre.

A rabbit drive was made a few days ago at Warden by 12 men and they brought in over 100 jack rabbits. The drive was made to ascertain whether there were many jack rabbits to injure the wheat fields and orchards. They are more numerous than was expected and other drives are already scheduled.

C. L. McLous has sold his alfalfa ranch, two miles south of Ephrata, to Mr. Ninemuth of Bellingham, Wash., for $25,000. The McLous ranch consists of 40 acres in alfalfa, which yields four cuttings of hay a season, a modern dwelling, a large barn and pumping plants for irrigation. The water is distributed over the land with pipes and ditches.

A grain survey covering the different varieties of wheat taken from the farms on the breaks of the Columbia and the flats north of Wilbur and Almira has been completed by Lincoln county agriculturist Charles D. Gaines. It was found by the agriculturist that on the hill section winter wheat last year averaged 27.74 bushels, while spring grain yielded but 14.7 bushels.

Forest Supervisor P. T. Harris of Okanogan, will meet with the stockmen's associations to take applications for 1919 grazing permits on the following dates: Chiliwist, December 27; Loop Loop, December 28; Conconully, January 2; Loomis, January 3; Pine Creek, January 4; Brewster, January 6; Lower Methow, January 7; Twisp, January 8, and Methow Valley, January 9.

E. F. Benson, state commissioner of agriculture, and Frank Meredith, secretary of the state fair, are considering plans for the state fair for the coming year. Mr. Benson says he will ask the legislature for an appropriation of $60,000, which is an increase over the amount asked of the last session of but $2000. Mr. Benson says he would spend the money in the erection of new poultry buildings, new dairy products hall and a show ring for cattle.

The annual report of Assessor Grover B. Fore to the state bureau of inspection shows that the levy for Okanogan county will produce $506,693.89 in 1918 taxes. The average levy for the county this year is 54 mills. Of the total about 43 per cent will be spent in the schools; about 11 per cent goes to the state, other than for schools; about 20 per cent for roads and bridges; 4 per cent for the redemption of old warrants, and 14 per cent for current expense.

Adams county commissioners have accepted the bid of the Lumbermen's Trust company, Portland, Ore., for $5000 worth of bonds at par, sold under the Donehue road law. The funds will be used in construction of eight miles of permanent highway on Michigan prairie, east of Hatton. Thomas Goodenough, a farmer near Hatton, was awarded the contract to build the road for $54,000.

The crop report for 1918 of the Wapato Indian project was filed recently, showing returns this season from 74,481 acres to be $7,205,500, an increase of over $1,000,000 above the crop returns of 1917. The reservation farmers responded to the government's call for an increase in the essential food production by adding 4500 acres more of wheat land and 1200 acres of sugar beets, and in addition raised 4983 hogs, as compared with 3305 the previous year, and kept 2554 milch cows, as compared with 2386 in 1917. Silos, a sure sign of permanent development in the live stock industry, increased 50 per cent.

# Propose Giant Land Settlement Plan

## *Every Returned Washington Soldier May Find Himself the Possessor of a Fine Tract*

By SOESTER I. ANTHON.

IF the plans made by the Washington irrigation institute, at its sixth annual meeting in Yakima, and by the Washington Land Settlement association, which held its first public conference in Yakima on December 19, are finally carried out, every returned Washington soldier may find himself the possessor of a fine tract of land, fully equipped with the necessities for its development, supplied with expert assistance and advice during the period he is learning the business of farming and given 40 years in which to pay for the land and the initial improvements. The type of land to be farmed is to be selected by the soldier himself; he may have his choice between an irrigated ranch in the Yakima valley, a farm created from the logged-off lands of western Washington, or a home on a reclaimed swamp area.

**REPRESENTATIVE GATHERING.** Never in the history of the irrigation institute has there been as representative a gathering as assembled this year. From the opening address of President Elbert M. Chandler, who pleaded for a definite provision for the returned soldiers instead of merely a spectacular reception upon their return, through the address of R. K. Tiffany, project manager of the U. S. reclamation service at Yakima, who outlined the possibilities in developing the 3,000,000 acres of now unreclaimed land, to the final adoption of the land settlement bill, the meeting centered about the reclamation of the state's waste lands. E. F. Benson, state commissioner of agriculture, and one of the property owners of the land to come under the proposed high line canal, Mayor Ole Hanson of Seattle, N. B. Coffman of Chehalis, and other citizens of the same high type spoke of the importance of making it possible for the soldier to acquire the land and of the tremendous development which would follow after the "back to the land" movement got under way.

Both sessions of the irrigation institute, held in the Commercial club, and attended by 200 interested irrigationists, were used for the consideration of the proposed giant land settlement plan. Mr. Tiffany, in his address, warned the men that, if the state of Washington were to receive any share of the federal aid proposed in Secretary Franklin K. Lane's suggested bill, the land must be farmed and not the farmers. He said that any possibilities of mere speculation must be removed and that the farmers must require the land at its real value and not its speculative value. He added that the settlement of each soldier on a farm of splendid possibilities was little enough to do for men who had risked their lives, a sentiment which proved highly popular.

All the Washington irrigation projects were discussed by men eloquent about the merits of each proposed development. Alex McPherson of Pasco, formerly commissioner of agriculture of Idaho, explained the merits of the Lower Snake river project; F. A. Wiggins of Toppenish spoke of the great productivity to be expected from the Wapato project which, now incomplete, produced crops worth three times the amount expended on development work; E. D. Mineah, a prophet of the wonder of the Horse Heaven section for 14 years, asked its immediate development; George T. Crane favored immediate construction of the Methow project; A. O. Johnson was spokesman for the wonders of the Quincy-Palouse-Spokane 300,000-acre project, and Judge Ralph Kauffman of Ellensburg favored the Kittitas high line system. Yakima boosters in number, backed by the organized effort of the Yakima Commercial club under the leadership of Mr. Tiffany, favor the Yakima high line, which will add 120,000 acres of as fine land as there is in the Yakima valley to the irrigation section. In his address Mr. Tiffany spoke of a time when there will be not less than 600,000 acres of land under cultivation in the Yakima valley.

**E. M. CHANDLER AGAIN PRESIDENT** At the business session of the institute on the closing day Mr. Chandler, who is himself one of the successful farmers under the Burbank project, was reelected president. Robert Insinger, Spokane, and Ralph Kauffman, Ellensburg, were named vice presidents; R. H. Hayden, Yakima, is secretary, and G. V. Finley, Yakima, treasurer.

Resolutions presented by the special committee, of which Mr. Benson is chairman, indorsed the land settlement plan of Secretary Lane and proposed changes in the irrigation and water codes.

Following the session of the irrigation institute the Land Settlement association met at what proved to be practically a continuation of the institute sessions. It was attended largely by the same men, and considered the land settlement plan in detail.

As a result of the sessions a bill will be introduced in the legislature as the first step in the reconstruction policy of the state. It will carry two appropriations, one of $2,500,000 to be used in the development of land projects, and one of $50,000 for administrative expenses. A land settlement board, to consist of three persons to receive an annual salary of $5000 each, will be created. The board will be bi-partisan, not more than two of its members belonging to the dominant political party. In other respects the proposed bill follows closely the California land settlement statute. It provides for cooperation between the federal and state governments in acquiring and developing the land, and also for state aid during the preliminary development. This aid is to consist of furnishing equipment, buildings and stock necessary for successful farming, as well as expert advice and assistance. The act recognizes that many of the returned soldiers, out of whom it is hoped to make prosperous farmers, have no knowledge of farming as a practical business. The land will be thrown open to soldiers first, then to any patriotic citizens, women to have equal rights with men.

**FOR ONE STATE ASSOCIATION** Indications are that all the land settlement and reconstruction work will be considered under one state association to devote its energies exclusively to land settlement and the promotion of agriculture in the state. It is likely that this body will come into being at the reconstruction meeting to be held in Tacoma on December 27-28. Mayor Hanson, one of the influential persons at the association and the father of the King County Reconstruction congress, stated that he was not in favor of having any section wrapped up in its local interests, and that he believed all districts should work together for the greater development of the state. Mr. Coffman, one of the most influential persons of the meeting, spoke of the importance of coordinating the state road program and the state land settlement program, another feature to be worked out at the Tacoma gathering.

The final land settlement bill approved by the association was drafted by Howard A. Hanson of Seattle. All worthy Americans who desire to farm and live in the open can acquire land by availing themselves of the opportunities offered through it. After investigating and determining upon a project for development the board will proceed to acquire title to the land for settlers and for farm laborers. The lands will be improved by clearing, drainage, irrigation, seeding, planting, erecting suitable buildings, and also making provisions for live stock upon the several farm allotments.

**MANAGER FOR EACH PROJECT.** A project manager is to be placed in charge of each project, whose business will be to render all possible assistance to the accepted settlers. This assistance is to be gradually withdrawn after the farmers have learned their business. The appropriation of $2,500,000 by the state, would, under the act, entitle the state to an additional investment by the government of $25,000,000. The state appropriation is to be placed in a revolving fund to be returned to the state without interest at the end of 50 years. The land settlement board, if the plans carry, is to be given the right of eminent domain in acquiring lands within any approved project where owners can not be located or may refuse to sell to the board. The plan of the convention was to procure, as soon as possible, a suitable project of arid lands, another of swamp lands and another of logged-off lands as demonstration projects.

In order to carry out the proposed legislation, Mr. Hanson moved that a committee be appointed to go to Washington, D. C., to confer with Secretary Lane to see that provision is made at the earliest possible date for utilizing federal money in reclamation work in the state. The committee has not yet been appointed, though Mayor Hanson has been suggested as its logical head, and will undoubtedly be named for that position.

**NEW MEMBERS ARE LISTED.** Growth of the irrigation institute, which as usual closed with the annual banquet, may be seen from the following list of new members:

Yakima—D. V. Morthland, L. D. Humphrey, R. S. Calland, T. A. Noble, L. M. Holt, L. D. Geaney, J. G. Terry, W. L. Wright, R. F. Brindley, H. P. James, T. S. Johnson, F. J. Wilcox, George Weikel, F. L. Miller, J. L. Forman, J. E. Hearron, B. G. Vincent, Burr Flagg, M. W. Richards, E. C. Scott, C. E. Crownover, E. W. Wigley, W. L. Flagg, W. A. Stuart, L. H. Nichols, Robert J. Burrill, M. E. Luthans, A. H. Gullickson, F. H. McCoy, C. L. Twohy, D. H. Williams, H. R. Linse, H. W. Chase, B. F. Barge, L. D. Luce, J. D. Storrs, S. W. Grubb, H. Paddock, W. L. Dimmick, G. C. Finley, H. R. Humphrey, W. N. Perrin, F. D. Fitts, A. P. Eschbach, J. L. Hughes, J. Tyson, A. H. Bair, C. S. Channing, G. A. French, L. E. Burge, E. Woodcock, H. M. Gilbert, W. B. Clark, D. R. Redmon, O. A. Steward, Thomas Hope, Paul Heintz, H. H. Wende, E. A. Shannafelt, E. A. Fisk, R. P. Bean, N. P. Hull.

Prosser—E. C. Houston, W. R. Ammon, J. M. Wamba, M. B. Shelby, B. E. McGregor, C. L. Ammon, E. W. R. Taylor, P. P. Maddox, C. D. Little, Lon Boyle, A. G. McNeil,

Sunnyside—G. A. Rodman, J. G. Heinz, William Hitchcock, H. L. Miller, D. W. Harrington, C. A. Moore, H. E. Nicolai, W. B. Bridgman, W. Satterlee, S. J. Harrison.

Zillah—W. H. Alsbury, W. R. Newland, J. A. Cheyne, Lars Rasmussen, C. M. Keyes, M. F. Lewis, E. Yetter, A. B. Hickenbottom, J. W. Fitts, C. H. Furman.

Yelm—F. H. Royce, L. M. Goldsmith, L. N. Rice.

Naches—J. C. La Fortune, W. McKinney, M. M. Burge, J. B. Taylor, F. J. Kandle, J. M. Everett, J. S. Moore, D. C. Smith, E. Y. Robinson, C. Kail, E. H. Powell.

Grandview—C. A. Christenson, W. F. Elser, W. H. Murray, H. W. Moore, Farwell Morris, E. J. Brand, Adam Foisy.

Selah—L. C. Farr, George Longmire, D. Longmire, A. J. Lotz, F. C. Eastwold, L. Longmire, A. J. Dollenbacher.

Ephrata—W. E. Southard.

Chehalis—V. B. Cox, Alexander McPherson, J. B. Conruy, A. D. McPherson, A. F. Marsh, N. B. Coffman.

Outlook—P. J. Quesenberry, W. M. Clark.

Seattle—F. P. Goss, H. A. Harrison, W. C. Buell, T. E. Halland, W. J. Rankin, Ole Hanson, F. W. Graham, H. L. Hillman.

Harwood—G. R. Byrd.

Quincy—A. E. Johnson, G. E. Sanderson.

Kennewick—Gordon C. Moores.

Tacoma—John Vint.

Olympia—M. L. Dean, C. J. Bartholet.

Granger—F. B. Dye, L. M. Hilton, O. Nelson, W. J. Oord.

Montesano—E. Torpen.

Bremerton—H. H. Hopper.

Okanogan—Harry J. Kerr.

Pullman—H. Kimbrough, F. J. Sievers, O. L. Waller.

Moxee—D. Walters.

Fruitvale—W. J. Jewell.

Tieton—Harry Antles.

Walla Walla—C. P. Hartvedt.

Neppel—H. W. Reaugh.

Wapato—H. A. Aken, W. P. Sawyer, W. G. Martin, C. W. Marks, C. M. Mudd.

Mabton—O. H. Schlein, C. B. Cox.

Wenatchee—E. M. Gillette.

Brewster—G. T. Crane.

Waterville—M. B. Howe.

Dayton—J. L. Dumas.

Oroville—F. S. Beal.

Tacoma—J. M. Gaynor.

Coulee City—Clifton Ham.

Spokane—M. E. Hay, T. S. Lane.

Denver—C. F. Gleason.

Toppenish—W. A. Wiggins, C. J. Atwood.

Ellensburg—Mitchell Stevens.

Berkeley—Dr. Samuel Fortier.

### GOOD THINGS COMING.

**Wherein Wage Earners and Farmers Differ Politically**—Soon THE FARMER will publish several timely articles by Dr. E. A. Bryan. They will be worth reading. Farmers should organize. Read what Dr. Bryan has to say about that. Farmers as a class have to look out for their political interests. Read what Dr. Bryan has to say about that.

**Our Dual System of Government**—In another article Dr. Bryan points out how the farmers must primarily look to the United States senate for the protection and furtherance of their own interests.

These will follow up Dr. Bryan's article on the "Agrarian Party," which has aroused much interest. As is well known, Dr. Bryan was for 20 years president of the state college of Washington at Pullman, has been a practical farmer and is now at the head of the state educational system in Idaho. You may not always agree with Dr. Bryan, but that is all the more reason for reading his articles. If we only read that with which we always agree we never will get ahead. The clash of opinions is what makes men, what makes farmers and wage earners and doctors and lawyers. It is the purpose of THE FARMER to give you something to thing about as well as something to agree with.

## Ten-Foot Corn Stalks

The above picture shows J. T. Sanderson with his Yellow Dent corn, which grew 10 feet high, and had ears one foot long and three inches wide. This corn was grown by Mr. Sanderson on the T. Budwin ranch, in the Glenrose district, near Spokane.

### PRESENT AMERICAN SOCIALISM.

**It Is Not What It Was a Brief Two Years Ago.**

Referring to the recent articles of Dr. Bryan on "Paternalism in Government," and on "German Socialism," as well as to E. E. Elliott, on "Collectiveism and Individualism," H. W. Mangold of Adrian, Wash., writes to the Farmer:

The present American socialism is not what it was a brief two years ago, the war having caused a split that has resulted in at least three factions of socialists, the majority of whom supported the war to the utmost, with a small minority who ssubmitted and another that openly opposed, and in the inevitable reorganization which will come some principles will be differently stated than formerly.

Dr. Bryan knows that socialism is one of the manifestations of the evolutionary forces of society, that it is the effect of a cause somewhere, and that it itself is evolutionary. As the conditions of labor and labor exploitation change so may the declared paramount demands of the socialists change. While it is true that the history of socialism began with attempts at communism no writer who wishes to be taken seriously attempts to link them together or confuse them today.

There is no German socialism, nor American socialism; it is international. There are different doctrines laid down in different countries about some special aspect of the thing, but fundamentally it is the same in all countries. The taking by legal procedure of the product of the many by the few. Capitalism is the cause; socialism the effect.

### LOCAL GRANGE IS FORMED.

At a recent meeting of farmers in Spokane county, the Moran prairie grange was formed with the following officers, installation being conducted by J. A. Graves:

Master—J. W. Wilson.
Overseer—Amon Graves.
Lecturer—J. W. Perigo.
Steward—J. W. White.
Assistant steward—P. Bloom.
Chaplain—Mrs. J. W. Wilson.
Treasurer—M. Krois.
Secretary—R. Johnson.
Gatekeeper—Olaf Peterson.
Ladies' assistant steward—Ruth Johnson.
Secress—Lydia Graves.
Pomona—Elsie Johnson.
Flora—Oril Wilson.

### ORCHARD RETURNS PROFIT.

F. G. Carlisle of Kettle Falls reports that this year he received from his 14-acre orchard 5978 boxes of apples and 78 boxes of pears in addition to the small fruits necessary to supply his home. In addition to this fruit yield he sold alfalfa hay from the orchard for $772 and kept enough alfalfa to winter his four horses, two cows and 15 brood sows. In addition he pastured during a portion of the season 80 head of hogs in his orchard. The apples that he harvested were of excellent grade.

# Shorthorns Sell Below Their Value

That their loss was the gain of the men who are building up better herds throughout the northwest, and that they were willing from that point of view to accept the loss, was the sentiment expressed by the Shorthorn breeders who sold 45 head of purebreds at Lewiston last week for much less than the quality of stock sold justified. Influenza resulted in a small attendance, which in turn caused the low prices. The 45 head brought a total of $9440, an average of about $209.80. The top price was paid by Duke Dudley of Nez Perce, Idaho, for the handsome white bull, Rainier 592116, two years old, consigned by William H. Leonard of Pomeroy, Wash. The average for the 24 bulls sold, all of which were under two years except the champion, was $191.50. The top price for heifers was $400, paid by Day & Rothrock of Sprague, Wash., for Marsh Violet 3d, consigned by W. J. Townley of Union, Ore. The average for the 21 cows and heifers sold was $230.80, approximately $39 a head higher than the average for the bulls.

Richard Hanna, herdsman for the State college of Washington, judged the animals in the show that preceded the sale. First and second in the two classes into which the entries were divided were as follows:

Bulls calved prior to September 1, 1917—First, Rainier 592116, shown by William H. Leonard, Pomeroy, Wash.; second, Jewel's Welcome 588585, shown by H. D. Wester, Nez Perce, Idaho.

Bulls calved since September 1, 1917—Choice Knight, shown by Day & Rothrock of Sprague, Wash.; second, True Victor 699990, shown by A. D. Dunn, Wapato, Wash.

Grand champion bull—Rainier 592116.

Females calved prior to September 1, 1917—Marsh Violet 3d, shown by W. J. Townley, Union, Ore., second.

Duchess 356th 612683, shown by Townley.

Females calved since September 1, 1917—First, Venus of Dunbro 700011, shown by A. D. Dunn, Wapato, Wash.; no second.

Grand champion female—Venus of Dunbro 700011.

The following is a complete list of the Shorthorn sales at Lewiston, including the consignors, the animal, its age, the purchaser and the price paid:

**Bulls.**

Consigned by H. D. Wester, Nez Perce, Idaho.
Jewel's Welcome 588585, yearling—H. W. Haywood, Weippe, Idaho ..... $ 205
Golden Gem 3d, 647319, yearling—John Dan, Lewiston, Idaho ..... 145
Consigned by Walter Hoover, Nez Perce, Idaho.
Water Wagon 632204, yearling—Joe Turner, Myers Falls, Wash. ..... 140
Consigned by A. D. Dunn, Wapato, Wash.
True Victor 699990, 11 months—Day & Rothrock, Sprague, Wash. ..... 205
King of Dunbro 683770, yearling—D. L. Rosengrants, Lewiston, Idaho ..... 135
Consigned by W. J. Townley, Union, Ore.
Iris King 669085, yearling—Harry Cranke, Nez Perce, Idaho ..... 160
Prince D. 669090, yearling—Harry Cranke, Nez Perce, Idaho ..... 145
Mounds King 345th 575161, yearling—Harry Cranke, Nez Perce, Idaho ..... 150
Consigned by G. W. De Lay, Hot Lake, Ore.
Violet Prospect 621860, yearling—Joe Turner, Myers Falls, Wash. ..... 175
King Linwood 621856, yearling—Joe Turner, Myers Falls, Wash. ..... 155
Baron Campbell 621854, yearling—Day & Rothrock, Sprague, Wash. ..... 200
Violet Star 621861, yearling—Joe Turner, Myers Falls, Wash. ..... 195
Rushes Goods 621859, yearling—Harry Cranke, Nez Perce, Idaho ..... 125
Consigned by Wm. H. Leonard, Pomeroy, Wash.
Right U. R. 696185, yearling—Joe Turner, Myers Falls, Wash. ..... 130
Michief 696184, yearling—William Mulhall, Lewiston, Idaho ..... 195
Lordly Lad 696182, yearling—J. P. McCann, Lewiston, Idaho ..... 210
Rainier 592116, two-year-old—Duke Dudley, Nez Perce, Idaho ..... 455
Joe Tucker 696181, yearling—Joe Turner, Myers Falls, Wash. ..... 135
Consigned by Erl F. Harper, Johnson, Wash.
Mayview Crown 631747, yearling—R. B. McKissick, Lewiston, Idaho ..... 205
Mayview Caesar 631748, yearling—Joe Turner, Myers Falls, Wash. ..... 200
Consigned by Joe Turner, Myers Falls, Wash.
Maid's Masterpiece 692847, yearling—Day & Rothrock, Sprague, Wash. ..... 205
Perseverance 692848, yearling—Day & Rothrock, Sprague, Wash. ..... 200
Consigned by Day & Rothrock, Sprague, Wash.
Choice Knight, yearling—G. W. DeLay, Hot Lake, Ore. ..... 225
Consigned by University of Idaho.
Welcome Prince (Reg. applied for), yearling—Huston McCroskey, Garfield, Wash. ..... 300
Consigned by J. R. Wyatt & Son, Bozeman, Mont.
Golden Clipper 657156, yearling—F. E. Leeper, Stites, Idaho ..... 135

**Cows and Heifers.**

Consigned by Day & Rothrock, Sprague, Wash.
Leona 2d 650626, yearling—G. W. DeLay, Hot Lake, Ore. ..... 200
Lily Onward 4th 650627, yearling—F. S. Vaughan, Lenore, Idaho ..... 180
Consigned by A. D. Dunn, Wapato, Wash.
Roan Princess 2d 700007, yearling—Earl F. Harper, Johnson, Wash. ..... 280
Venus of Dunbro 700011, yearling—William Mulhall, Lewiston, Idaho ..... 345
Ida Dunbro 591044, two-year-old—Huston McCroskey, Garfield, Wash. ..... 240
Dunbro Blossom 592250, yearling—Huston McCroskey, Garfield, Wash. ..... 200
Consigned by W. J. Townley, Union, Ore.
Marsh Violet 3d, yearling—Day & Rothrock, Sprague, Wash. ..... 400
Duchess 356th 612683, yearling—Carl Grief, Uniontown, Wash. ..... 250
Gay Frantic 669096, yearling—William Mulhall, Lewiston, Idaho ..... 200
Violet Frantic 612687, yearling—William Mulhall, Lewiston, Idaho ..... 275
Consigned by G. W. DeLay, Hot Lake, Ore.
Golden Darling 621864, yearling—Carl Grief, Uniontown, Wash. ..... 200
Good Duchess 621865, yearling—William Mulhall, Lewiston, Idaho ..... 200
Consigned by William H. Leonard, Pomeroy, Wash.
Rosie 696195, yearling—G. W. DeLay, Hot Lake, Ore. ..... 155
Sarah Bernhardt 696197, yearling—William Mulhall, Lewiston, Idaho ..... 165
Hettie Green 696187, yearling—Jesse Bardwell, Agatha, Idaho ..... 150
Lady Ordeans 240670, (calf at foot), five-year-old—Day & Rothrock, Sprague, Wash. ..... 200
Primrose 240676, (calf at foot), four-year-old—Neal Vaughan and Claire Wellman, Lenore, Idaho ..... 215
Consigned by J. H. McCroskey & Sons, Fishtrap, Wash.
Victor's Amanda 155104, (calf at foot), five-year-old—H. L. Stafford, Lenore, Idaho ..... 340
Consigned by University of Idaho.
Miss Mysie 3d 86347, nine-year-old—Harry Cranke, Nez Perce, Idaho ..... 220
Consigned by Joe Turner, Myers Falls, Wash.
Graceful Mary 579328, six-year-old, (calf at foot)—Harry Cranke, Nez Perce, Idaho ..... 295

# Holstein Men Optimistic

Optimism as to the future of the dairy business and the progress of Holstein achievement was expressed at the banquet of the Northwest Holstein breeders Friday evening, December 13, at the Imperial hotel. George Gue introduced O. M. Plummer as toastmaster, and following his leading, good natured badinage was interspersed with more serious remarks. William Bishop, in reviewing the progress in the Holstein breed, in numbers and performance, said we are not leading the Holstein cow; she is leading us. We are behind the greatest breed on earth and some of us have not yet caught up. He considered the sale fairly successful, and was glad to greet the new breeders who bought. Mr. Stewart of the Carnation stock farm told how much better Holsteins sell back east. He did not think the cattle brought all they were worth, but expected to see prices improve. Alma D. Katz, president of the Oregon Dairy league, spoke briefly on the value of organization. He congratulated the Holstein breeders on their prosperity. Thomas Carmichael expressed admiration for the spirit of the breeders. Professor Brandt of the O. A. C. expressed pleasure at the prospect of the Pacific International Stock show continuing and hoped to bring students for a judging contest. Mr. Plummer declared the show would put on one contest for animal husbandry students. Other speakers were Professor Fitts, W. K. Newell of the food administration, E. B. Marks, J. Luscher, Mr. Stimson, Mr. Burnham and George Gue. Mrs. Gue scored on her husband in a story she told.

Following the banquet, the Oregon Holstein breeders held a business meeting, at which S. B. Hall of Gresham was elected president. J. W. Pomeroy, Scappoose, vice president; George Frakes, Scappoos, secretary; and J. Luscher, Fairview; A. H. Burns, Troutdale, and Thomas Carmichael, Gaston, directors.

## ARMENIAN AND SYRIAN RELIEF.

To save from starvation fully 4,000,000 Armenians, Syrians and Grekes, a campaign to raise $30,000,000, or about 30 cents per capita, throughout the United States will be made the week of January 12 to 19, 1919. So interested was President Woodrow Wilson in the cause of these suffering peoples that preparatory to sailing for Europe, on his peace mission, he issued a proclamation, calling on the people of this country for funds, which he signed and left for release at this time, in which he says:

"It is estimated that about 4,000,000 Armenians, Syrian, Greek and other war sufferers in the near east will require outside help to sustain them through the winter. Many of them are now hundreds of miles from their homeland. The vast majority of them are helpless women and children.

"I, therefore, again call upon the people of the United States to make even more generous contributions than they have made heretofore to sustain through the winter months those, who, through no fault of their own, have been left in a starving, shelterless condition, and to help reestablish these ancient and sorely oppressed people in their former homes on a self-supporting basis."

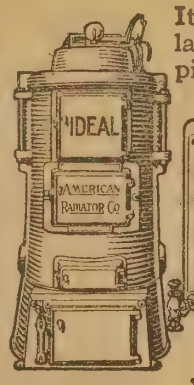
## EXPRESS RATES ON MILK UP.

It is feared by milk producers that the increase in express rates on milk, butterfat and cream, effective January 1, will result in the producer having another item added to his cost of production and marketing. There is, however, an unanimous sentiment that the producer should not be required to bear this additional cost.

## SHIP CARLOAD OF BUTTER.

The Commercial Creamery company's branch establishment at Spokane recently shipped to New York a carload of butter valued at about $20,000. R. A. Goodhue of the company, said he believed it was the first carload of Washington butter ever sent to the Atlantic coast.

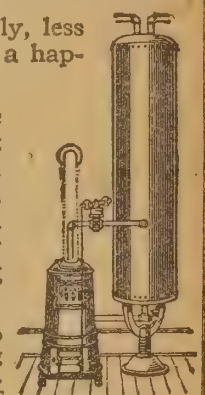
# Warm and Safe for Farm Family



When the work takes you away for the day in barns or fields, or to town, the family will be safe and comfortable with IDEAL-AMERICAN heating, making the whole house as warm as June

IDEAL-AMERICAN heating is the best paying, most economical equipment you can put on your farm. It is a permanent improvement and a wise investment—never wears out, always on the job, burns any fuel you have, and gives the most heat at the least cost. Thousands of farm homes which are Ideally heated do not know the terrors of the hard winters.

AMERICAN RADIATORS & IDEAL BOILERS



**You can buy an IDEAL-AMERICAN Radiator Heating Outfit for fewer bushels of grain than you could in 1916! Think it over!**

It means better health for the family, less labor for you, absolute comfort, and a happier, easier life on the farm.

Not necessary to have water pressure. You get back the first cost even if you sell or lease, and you get big yearly fuel savings; so why delay on a sure, high-paying investment like this?

Call up your dealer today and ask him to give you an estimate for installing IDEAL-AMERICAN heating this week. It can be done in a few days in any kind of buildings without disturbing the family.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season. Temperature kept just right by *Sylphon* Regulator. Write for booklet.

IDEAL Boilers will supply ample heat on *one charging of coal* for 8 to 24 hours, depending on severity of weather. Every ounce of fuel is made to yield utmost results.

## Send for our Free Heating Book

We want you to have a copy of "Ideal Heating." It goes into the subject very completely and tells you things you ought to know about heating your home. Puts you under no obligation to buy.

Sold by all dealers. No exclusive agents

Pounds of Milk Cow is Producing Per Day

Pounds of Grain to Feed per Day.

The accompanying table is one prepared by Professor E. G. Woodward of the dairy department of the state college of Washington, and K. B. Musser, dairy extension specialist. It is designed to help the dairyman or the farmer with one or two dairy animals to know how much grain and of what kind to feed the cow that is receiving a given amount of hay.

### GOOD GRAIN MIXTURES.

The following are the grain mixtures referred to in the table below under the heading, "grain mixture." They can be made in smaller amounts than indicated by simply using the same proportion of the grain or meal indicated:

**For Cows of Class 1.**

| Group A mixtures: | Group B mixtures: |
|---|---|
| Corn .....100 lbs. | Corn .....100 lbs. |
| Bran .....300 lbs. | Oats .....100 lbs. |
| Linseed oil meal ..... 50 lbs. | Linseed oil-meal .....100 lbs. |
| Total .....450 lbs. | Total .....300 lbs. |
| | Corn .....100 lbs. |
| Corn .....100 lbs. | Oats .....100 lbs. |
| Bran .....400 lbs. | Pea meal ..400 lbs. |
| Pea meal ..100 lbs. | |
| Total .....600 lbs. | Total .....600 lbs. |
| | Dried beet pulp .....200 lbs. |
| Bran .....200 lbs. | Bran .....100 lbs. |
| Oats .....200 lbs. | Linseed oil-meal .....200 lbs. |
| Linseed oil-meal ..... 50 lbs. | |
| Total .....450 lbs. | Total .....500 lbs. |
| | Dried beet pulp .....200 lbs. |
| Bran .....200 lbs. | Oats .....100 lbs. |
| Sports .....200 lbs. | Linseed oil-meal .....250 lbs. |
| Oats .....100 lbs. | |
| Total .....500 lbs. | Total .....550 lbs. |

**For Cows of Class 2.**

| Group C mixtures: | Group D mixtures: |
|---|---|
| Corn .....100 lbs. | Corn .....100 lbs. |
| Bran .....300 lbs. | Oats .....200 lbs. |
| Linseed oil meal ..... 25 lbs. | Linseed oil meal .....175 lbs. |
| Total .....425 lbs. | Total .....475 lbs. |
| | Corn .....100 lbs. |
| Corn .....100 lbs. | Oats .....100 lbs. |
| Bran .....400 lbs. | Pea meal ..300 lbs. |
| Pea meal ..550 lbs. | |
| Total .....1050 lbs. | Total .....500 lbs. |
| | Dried beet pulp .....200 lbs. |
| Bran .....100 lbs. | Bran .....100 lbs. |
| Oats .....200 lbs. | Linseed oil-meal .....175 lbs. |
| Linseed oil-meal ..... 30 lbs. | |
| Total .....330 lbs. | Total .....475 lbs. |
| | Dried beet pulp .....200 lbs. |
| Bran .....100 lbs. | Oats .....100 lbs. |
| Sports .....100 lbs. | Linseed oil-meal .....210 lbs. |
| Oats .....100 lbs. | |
| Total .....300 lbs. | Total .....510 lbs. |

In the mixtures given above barley may be substituted for corn. Cottonseed meal or soybean meal may be substituted for linseed oilmeal. Chopped alfalfa may be substituted for bran at the rate of 125 pounds to each 100 pounds of bran wherever this does not make the ration too bulky for the animals fed. Mill run or wheat feed may be substituted for bran approximately pound for pound.

### Direction for Using Table.

Suppose we desire to know the proper grain ration for a Holstein cow receiving clover hay as roughage and producing 40 pounds of milk daily. Look in the first column of the table and you will see Holsteins listed under class 1. In the second column clover hay is given among the high protein roughages. In the third column is shown the kind and amount of different grains, which may be fed in order to properly balance the roughage. In the fourth column is shown the amount of milk which can be produced from the roughage, together with the grain used in balancing it; for example beet pulp. In the next column is shown the group of grain mixture used; for example, one of the mixtures of group A shown below. This cow is giving 40 pounds of milk daily, and in order to determine the grain necessary to feed, follow out the proper line to the number 40. Then follow that column up or down to the line, which indicates the pounds of the grain mixture to feed per day. Remember that these are daily rations, and should be divided equally among the feeds of the day.

It should be remembered that the amounts suggested to be fed daily are only approximate, and are meant to serve only as a guide. All cows should be fed according to the following rule:

Give the cow all the roughage that she will eat, and in addition, enough of one of the grain mixtures to keep her in good condition.

Select a clean, smooth floor, if possible in front of the bin where the mixture is to be stored. Spread the different kinds of feed out on a floor in thin layers, one on top of the other, covering the surface six to eight feet square. Mix thoroughly by turning two or three times with a scoop shovel in the same manner as material is turned in mixing concrete. When thoroughly mixed scoop into the bin.

If a feed cart or truck is available for bringing the grain from the bin, the roughage can be placed in one end, and the grain mixture in the other.

Where good roughages as alfalfa, clover and oat hay, silage and rape are fed, and the cows have been kept in fair condition while in milk, dry cows can be brought through on roughage with but little grain. Heifers should be fed sufficient grain to allow for proper development, which necessitates a fair state of flesh at freshening time, for example, one to three pounds of barley may be fed daily.

Economizing in the feeding of calves to the extent of retarding growth is false in its results. Supply the best ration on the farm to the calves. Their growth and vitality will be ample return for the investment.

# First Prize Under Year Heifer

The Jersey heifer shown herewith is owned by John Kemmling, near Prineville, Ore., and was first prize under year heifer at the Interstate fair at Prineville, the first week in October, 1918. Mr. Kemmling purchased her in dam from Ed Cary, Carlton, Ore. Her dam's full sister has a great record as a junior 2-year-old in Mr. Cary's herd.

### PLAN FOR SILAGE NOW.

To the Editor: In reading over your paper I see where you ask for experience in silo feeding. For the last four years I have fed silage to cattle, sheep and horses with very good results. I have made a practice of feeding a carload of steers every year, but this winter will feed a carload of lambs for February market. My experience in feeding silage has been that it is the only feed for fattening or wintering stock cattle. It is a cheap and substantial feed. Silage is easier and much quicker to handle than hay and there is absolutely no waste. I believe that the time is not far off when there will be a silo on every farm as it is one of the best investments a farmer can make. A silo is the means of keeping more and better live stock at less expense. It also acts as a means of preserving feed that would be wasted if it were not for the silo. At present I have two silos on my farm, one having a capacity of 140 tons and the other a 40-ton size. The small one I use for summer feeding of milch cows. This fall I sowed some winter rye, winter vetch and sweet clover that I will put into the silo next summer. Now is the time to plan for your silo and silage crop for next year as the need of feed was never greater than at the present. A. E. WARSINSKE.
Daisy, Wash.

### GETS ACCREDITED HERD CERTIFICATE.

E. M. Chandler has just received the following letter from Sam B. Foster of the United States department of agriculture:

"I am enclosing accredited herd certificate No. 1010, which is recognition of the standing of your herd at Burbank, Wash. This is the first certificate issued in favor of any herd in the state of Washington."

### Another Loan Is Coming.

A fifth Liberty loan is coming next spring. Figure on your part.

Pig-a-Boo DIGESTER TANKAGE

A mixed ration with Pig-a-Boo makes healthier hogs and will put more weight in meat and bone in less time and at less cost than any other feed. Send for FREE BOOKLET. Contains information of value.

# When to Dehorn

## Either Spring or Fall All Right

To the Editor: A short time ago I noticed some one writing on the subject of dehorning cattle and said that now (in the fall) was the best time to dehorn. My observation and experience give me a different opinion and I wish to correct what I believe to be a mistake.

The operation of dehorning cattle causes them to bleed more or less and many of them bleed profusely. In the fall all animals are getting themselves in shape to live through the winter with the most comfort possible and the loss of blood at this time is a serious setback. They will suffer with the cold and will require more feed and be in bad condition in the spring. Dehorning cattle is an operation of some concern and taking all points in consideration I find that the early spring or well before fly-time is the best time to dehorn. A. J. WILLIAMSON.

Cedar Springs Farm, Cocolalla, Idaho.

With reference to the above, Professor E. L. Potter of the Oregon Agricultural college says:

"The article in question, I believe, stated as follows: 'Right now is a good time to dehorn calves and yearlings, but is rather late for older cattle.' It happens that this article was written along in the spring, but was not published until September; hence 'right now' meant spring rather than September. The next statement, however, 'The fall is a good time. The work should be done just as soon as the flies are gone,' still holds good, and while we really prefer to dehorn cattle in the spring, we have nevertheless had the very best results by dehorning in the fall just as soon as the flies are gone. While we realize the force of our correspondent's argument, will say that we have never had any trouble with cattle dehorned in the fall, but once in a while in the spring an animal will heal very slowly and in such case may not get well until fly time, which will make a good deal of trouble. Either spring or fall is entirely all right if the work is done quite early so as to allow plenty of time for the animals to heal, in one case before fly time, and in the other case, before severe winter weather."

# VETERINARY

By DR. S. B. NELSON.

**Pigs Get Stiff.**—I have five shoats that have got stiff. They all seemed to get stiff about the same time. It seems to be in their legs and feet. I had six in the same pen and a few days before the five got stiff I took one of the six out and he is all right. Their pen got pretty muddy. Can it be rheumatism and what can I do to help them? T. R. L.

Ephrata, Wash.

Try letting your pigs go without feed one day, and give them a nice sloppy meal, and into this meal put one ounce of castor oil for each pig. The following day begin giving from 5 to 10 grains of potassium iodide in the feed once daily. The dose should depend upon the size of the pig.

**Hemorrhage Causes Blindness.**—Will you please give me some advice on a 3-year-old horse I have? He is over 3 years old and was not castrated until this year in May. Ever since that he has been almost totally blind. He had an abnormal skin growth that had to be cut away and consequently he bled a good deal and was weak for several weeks, but is now in good flesh and looking well, but is still as blind as ever. Is there any remedy for this now or is it too late to treat it? If so, I would appreciate a remedy very much as he is a good-sized horse.

Davenport, Wash. C. S.

There is no remedy that I know of for the blindness caused by great loss of blood. I have not in my experience seen an animal recover its sight after going blind from excessive hemorrhage. I can not offer you any treatment.

**Foot Is Misformed.**—I have a mare that has a bum foot. She has been lame since March, but we thought then it was ringbone, so we blistered that about seven times but with no results, so we tried to shoe her and pour oil on her hoof, but that does no good either. Her hoof is awful hard. We have cleaned out her foot and her frog is hard. She has had a barbed wire cut on her foot, too, but that was a long time ago, so her foot is some misformed. What would you advise me to use on it? L. M. A.

Govan, Wash.

I would be of the opinion that possibly the misforming of the foot due to the barbed wire cut which she received a long time ago may cause a constant irregular pressure on the bone of the foot. I could not give you any advice regarding the treatment, because I do not know what the foot is like. I would suggest to you that you call in your nearest veterinarian or take the mare to him and let him see it, and possibly he could give you advice that would benefit the mare.

**Castration of Sheep.**—I have a bunch of spring sheep which have never been castrated and have been informed that it can not be done without the loss of the sheep, after they are weaned. I would like to have some advice concerning the proper ways, means and time concerning this. C. D. B.

Riparia, Wash.

The mortality rate following castration of sheep increases with age, even under the most careful conditions. Any pleasant day, not too hot, is a seasonable time to operate. The two fore and the hind right leg should be fastened together with a cord. Then the person assisting in the work should grasp the hind left leg and press it against the body. This gives a good field for operation. The field of operation should be thoroughly disinfected—possibly painted with iodine is the best. About as favorable an operation is to remove the lower third of the scrotum with one sweep of the knife. Make a clean-cut incision. Then, perform the operation, the same as for another animal. After the operation, the lamb should be placed in a nice clean sanitary place. If the weather is favorable, the pasture is the best place of all. The wound should be examined every day to see whether or not it has become infected, and if so it should be thoroughly cleansed and disinfected daily. Remember that fly time is a serious time to operate.

## LIVESTOCK SHIPPERS' INFORMATION

## The Mighty WADE Outsaws 10 Men!

A money-maker and hard work saver for land clearers and wood-cutting contractors. One man can move it from cut to cut. Simple and reliable. Hundreds in use all over the United States—in the woods of the Pacific Northwest, California, Minnesota, Arkansas, New York. When not in use for wood cutting the 4-H.-P. motor will run feed mills, feed choppers, pumps, etc.

## Read What These Owners of Wade Drag Saws Say:

"One afternoon my brother-in-law and I took my WADE into the woods and sawed three hard maple trees into 16-inch blocks, the trees averaging about two and one-half feet at the stump. He expected it would take me from eight to ten hours to do the job, but it was all done in three hours.—F. W. Hiller, Vernon, N. Y.

I cut thirteen and one-half ricks of cottonwood in six hours.—J. W. Stratton, Atkins, Ark.

One gallon of gasoline will cut six to ten cords of wood; it depends on the kind of timber you cut. —W. D. Thomas, Bull Run, Ore.

Thirty-six inches in diameter, yellow birch, is the largest I have cut and I cut down to six inches.—P. L. Cole, West Duluth, Minn.

My WADE saw paid for itself six times over.—F W. Taylor, Swisshome, Ore.

I am making $250 a month with my WADE.—F A. Storts, Orville, Cal.

I cut down to eight inches in diameter.—F. T. Swank, Park Falls, Wis.

**America must burn more wood for fuel. One Wade will do 10 men's work at one-tenth the cost. Write for free book. "How Dan Ross Cuts 40 Cords a Day." Full details and special price.**

# Poultry Farming

## Is Successful on a Large Scale

By JAMES DRYDEN.

It looks as though the public will have to revise its estimate of the man who attempts to raise poultry on a large scale as one who is headed surely for bankruptcy. Outside of Petaluma, Cal., and one or two districts on the Atlantic coast, there were no large successful poultry farms 10 years ago. There were no pretentious special poultry farms. There were, however, in almost every county in the land evidences where the attempt had been made and abandoned. In fact the country was strewn with the wrecks of ambitious poultry ventures. There was money in the business; it had been put there and left there.

The evidence was against the theory that there was money in poultry-keeping for the man who wished to specialize in poultry production and give his entire attention to it. It appeared to be a business of small units altogether and must remain so, so far as practical demonstrations had shown.

Because the practical demonstration is lacking, however, is not always proof that the theory is wrong.

During the last few years there has been considerable development of the theory of special poultry farms, or poultry-keeping as a special business. There have sprung up in the northwest many poultry farms, more or less extensive and successful, which are disproving the old notion that it could not be done. Men have been studying and experimenting until some of them have been successfully putting the new ideas or discoveries into practice. It has been a persistent campaign of education and investigation, and it is now bearing fruit, and the fruit is the egg basket or the 30-dozen egg case. The experiment stations, though as a rule poorly equipped for experimentation on poultry lines, have been working out problems, and the thousands of poultrymen who have started and probably failed have been adding to the sum of knowledge for the benefit of later comers if not for their own, until the man who is able to take advantage of all those experiments and experiences is now able to make a showing. By gathering a new idea here and another there and welding them together, in other words, making the best of the available knowledge, he is making a success of special poultry farming.

There are many such farms in the northwest that are now at least doing well. Some of the owners are making good money.

It has been a question of better knowledge along three lines that has made the change from failure to success—better feeding, better housing and better breeding. It has taken all three.

The most important advance in feeding has been a better use of animal food and green food; in housing, more fresh air; and in breeding, selecting the breeders on basis of trapnest records. Those are the main factors that are responsible for the success of these farms. Twenty or even 10 years ago large poultry farms were started without a knowledge of these essentials. To make the fowls comfortable the poultryman closed up the cracks and the windows. He knows now that the hen's idea of comfort is an open-front or fresh-air house. He may have fed the green food if it happened to be handy, and the meat scrap he would try one week and do without it the next. As to breeding, all hens were good if they looked well. At any rate the importance of breeding from selected heavy producing stock was not then realized, and if it was the trapnest had not been sufficiently long or generally enough in use to make it possible for the poultryman to secure strains with the blood of several generations of heavy layers.

It is different now. We have the fresh-air house, the balanced ration and the heavy layer. That combination has done it.

The commercial poultryman's problems, however, are not all solved. He has many and serious problems ahead, but he is doing well.

It can not fairly be said that commercial farms, except possibly in the districts mentioned, have stood the test of time, for they have hardly been long enough in evidence. Time is an important factor in poultry-keeping, because many a poultry farm that has made money for a year or two years or three years, has later, under apparently similar methods, failed to show results. The indications are, however, that some of our large northwest farms will stand this best and severest test of all time.

### Study This Winter.

There are lots of good things to read this winter.

**CHICKENS SICK?** Roup, Colds, Canker, Bowel Complaint, Limberneck, Sorehead, etc., the best remedy is always GERMOZONE. At most dealers or 75c postpaid with 5 book poultry library free. GEO. H. LEE CO., Dept. 421 Omaha, Neb.

# Use Good Roosters

Nothing would increase egg production faster than—what? The farmer and farmer's wife to feed the hens better? To provide a better house for them? To work harder? No, but to use better roosters. A good rooster will not lay eggs, but he will sire pullets that will produce eggs and produce them in abundance.

A good rooster will transmit the good qualities of his dam to his offspring. If his dam and grandam were good layers he will give to his daughters the good qualities of his dam. The more good layers he has behind him; that is, the more ancestors he has that were good layers, the more certain will his offspring be good layers.

There is abundant evidence that the male exercises a wonderful influence in the egg laying family. And yet farmers will buy males just because they happen to have a certain number of points in the comb, or a certain shade of color in the feather. The northwest has excellent strains of layers, and as much trapnesting is done here as in any other section of the country, and poultry-keepers and farmers have opportunity to purchase pedigreed males, males that have been bred from a line of heavy producers, and they should take advantage of it. No one other thing can be done that will be a greater boon to the poultry industry and a greater profit-maker for the poultryman than the purchase of good utility trapnest-bred males. It is the cheapest method to increase production. J. D.

# Laid Eggs Every Day

A. P. Woodard of St. Cloud, Florida, writes: "We get from 40 to 50 eggs per day. Before using 'More Eggs' we were getting only 8 and 9 eggs a day."

Any poultry raiser can easily double his profits by doubling the egg production of his hens. "More Eggs" is a scientific tonic that revitalizes the flock and makes the hens work all the time. "More Eggs" will double the production of eggs. Poultry raisers everywhere are making big profits by giving their hens "More Eggs." The results of a few cents' worth will amaze you.

Send $1.00 to E. J. Reefer, the poultry expert, 1586 Feefer Bldg., Kansas City, Missouri, for a package of "More Eggs." A million-dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request. Send a dollar today, or send $2.25 and get 3 regular $1.00 packages on special discount for a full season's supply, or write to Mr. Reefer for his free poultry book that tells the experiences of a man who has made a fortune out of poultry.—Adv.

# There's a Salesman from Virginia

who was chewing and swapping yarns with the men on the Post Office corner. "Have a chew," says he to Jake. Jake doesn't think he's chewing unless his cheek bulges out like he had the mumps. "Call *that* a chew?" he snorts. "Sure!" says the salesman. "This is Real Gravely. That small chew satisfies, and the longer you chew it the better it tastes. That's why it doesn't cost anything extra to chew this class of tobacco."

• • • •

*It goes further—that's why you can get the good taste of this class of tobacco without extra cost.*

# Learn the Automobile and Tractor Business in a Real School Approved by the U. S. Government War Department. Start the New Year Right, Enroll in this School

You should go to a practical automobile and tractor school and learn this attractive and well-paying business, and, of course, you want to go to the best. The U. S. GOVERNMENT WAR DEPT. spent thousands of dollars employing expert inspectors to locate the best schools in the country where soldiers could be trained as auto and tractor mechanics, and this is the **only school** in the **entire west** which was equipped to train the men as required by the WAR DEPT. Don't spend your money with schools that are not fully prepared to teach this business in a thoroughly practical manner. Now that the war is over we are offering all of the government equipment in our private school for the exclusive use of our students. You have never had such an opportunity before to use such wonderful equipment and receive such a practical training. We are offering a special rate for a short time only to students who enroll at once. Write today for catalogue and rates. Don't delay.

# The Orchardist's Cow

By C. I. Lewis, O. A. C.

A few years ago there was a strong movement among the orchardists of the northwest to introduce dairy cattle quite extensively. In many sections there has been a strong reaction against this, due to the fact that the growers attempted to keep too many animals. The idea of a cow to an acre is beautiful in theory, but has not worked out very well in practice with most of our orchardists. The average fruit grower of the northwest has no pasture and no land for the production of grain and often can produce only a limited amount of forage. One of the cardinal principles of dairying is to be able to produce most of the food that the animals consume. Very few orchardists can do this. They rarely have any pasture or land other than the orchard that can be devoted to the growing of grain or forage. It is true, however, that many men who formerly kept no cow are keeping a family cow, and where they formerly kept but one are finding that they can arrange their affairs so as to perhaps keep two or three economically and with profit. There has been a general movement over the Pacific northwest, which is a very sane and healthy one; namely, an honest attempt to produce as much as possible of what the family consumes. We find the family cow, a pig or two, a few chickens and a good garden where a few years ago most of these were not possessed by the average orchardist. There has been a slight reaction in chicken raising, due to attempting it on too large a scale and finding the food problem a serious one. There are, however, more chickens being kept in small flocks than was formerly the case and this is a very desirable movement.

# What Causes Rosette?

By Granville Lowther.

In the hope of learning the cause and the cure of rosette, I took one of the trees in our orchard that was the worst affected and began to dig around the roots, thinking perhaps the disease was one of the roots and that the difficulty on the top was only a symptom. We had been giving the orchard clean cultivation and cutting the little rootlets off to a depth of three or four inches; and in irrigating the water puddled so that the water did not penetrate more than eight or ten inches, and with four inches cut off at the top by clean cultivation and the water puddled in the middle, the lower strata were without sufficient water. The trees were literally starved because they could not get plant food. I examined other trees and orchards, and I found a number of conditions on all of them and in every case they were on the roots. I came to the conclusion that whatever tends to destroy the little root hairs will tend to cause rosette. Too much water will do it, not enough water will do it, a stratum of hardpan, rock or alkali will do it. In other words I believe that whatever will prevent the upper limbs from getting a sufficiency of plant food will result in rosette, which is really a lack of development.

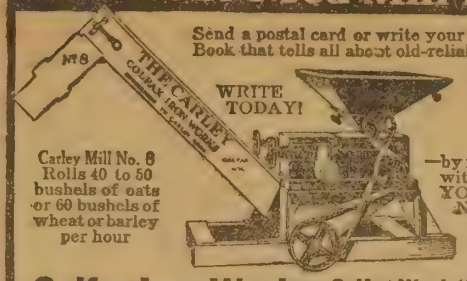
Now I travel quite a little and I have made investigations in the different sections, Washington, Oregon, Idaho, Colorado and the middle and eastern states, and rosette is in every section. It is not quite so pronounced in the humid sections as here, but it is everywhere. Alfalfa is the best remedy that I know for this rosette. It opens up the soil that puddles and lets the water down and it stops the cutting off of the tender roots near the surface.

# Stock for Orchard

By E. J. Iddings.

Granted that live stock keeping by an orchards, is quoted as saying that he only consider the kinds of live stock that are best adapted to the fruit farm. A few horses will always be kept, but many orchardists question the advisability of trying to breed horses in connection with an orchard plant. Beef cattle are produced most successfully and profitably where there is ample room and cheap grass. In a similar way sheep have, in past years, been regarded as better adapted to cheaper lands that are devoted largely to grazing purposes. In the last two or three years, however, hundreds of small flocks of sheep have been bought by the farmer and it will only be a short time, if the present tendency prevails, when sheep on the western farms will be as common as they have for years been on the farms of Ohio and Indiana. There is a possibility of using a small band of sheep in connection with the orchard. For the average man engaged in fruit growing, however, the dairy cow and the brood sow lend themselves better to his needs. These two classes of animals fit well together on the farm and make a splendid combination for use in connection with the orchard.

## APPLE RESTRICTIONS OFF.



All restrictions on the importation of American apples by England have been removed, according to a statement from the national capital. The only barrier existing to prevent the shipment of apples from this country to England is the shortage of shipping facilities, the statement says, and as soon as adequate cargo space can be obtained the trade may be resumed. The British government, however, continues to control apple prices, which probably will result in lighter shipments than would be the case if the market would be entirely open.

## INVESTIGATE STORAGE PLANTS.

A federal inquiry is under way in Chicago involving every cold storage plant of any importance in that city, the object being to determine if possible the reason for the present high price of butter, eggs and other storage foods.

CARLEY Feed Mill Book—FREE!

ATKINS SILVER STEEL SAWS

A Really Good Saw Saves You Money

Labor is scarce. Time is money. And timber is too valuable to trust to poor tools. An Atkins Saw will save you many times its cost in lumber, labor and money. It will pay you to throw away any saw that sticks and binds and get an Atkins Steel Saw.

*You can't get Atkins patented segment grinding in any other make of saw.* It prevents sticking and binding because from the tooth edge—the thickest part—the blade tapers to the back. Atkins saw blades also taper from the ends to the middle—designed to cut faster and easier—wherever the teeth go the rest of the blade follows.

*You can't get Silver Steel in any other saw.* It is the highest type of saw steel—developed in Atkins laboratories—gas tempered, tested and proved—the result of three hundred years of metal working experience in the Atkins family. Read the letter at the right, proving how Silver Steel holds an edge longer. It makes an Atkins outlast any other Saw.

There is an Atkins Saw for every purpose and the Atkins name on it is a guarantee that the saw will run easier, cut faster and hold its edge longer. *Look for the name—Atkins.*

Thousands of dealers in good tools, in every state, are ready to sell and guarantee you the time-and-money saving Atkins satisfaction. If your dealer is not one of them, write us before you buy any other saw.

"The Saw on the Farm"

—a book of carpenter helps tells how to build, how to make neat joints, how to care for saws. We will send it to you FREE, together with information on any type of saw made. Send us your name and address.

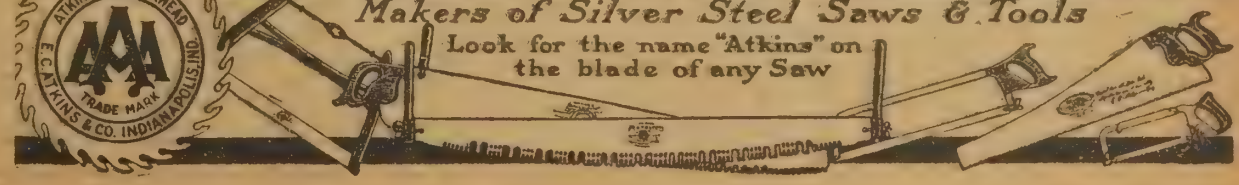
The Frozen Timber Test

Up in the lumber camps, in zero weather, experienced lumbermen know the greatest test of any saw is its ability to hold an edge in cutting frozen timber.

Here is what A. T. Marceau of 1210 Fifth Street, Wausau, Wis., says in a letter:

"I have places where they have run these Atkins cross-cut saws for three days in frozen timber without filing. The filer told me he asked the men when they came in at night why they did not bring the saws in for filing and their reply was that they were not dull. This one instance was at Menominee Indian Reservation, Neopit, Wis., Camp No. 15, Dan Hunley, foreman. Please note the supreme test of any cross-cut saw is frozen timber."

Under any and all conditions Atkins Silver Steel Saws hold their edge longer and cut faster and easier.



HAND SAWS—*For your carpenter work, use the kind of saws most carpenters use—the Atkins. You'll do better work, easier and quicker, when you are repairing or building things.*

CIRCULAR AND OTHER SAWS—*There is an Atkins Saw for every purpose. When you need a circular saw, hack saw, meat saw, ice saw, or any other kind, try an Atkins. It will cost little if any more at the start, and you will find it the truly economical kind to buy.*

CROSS-CUT SAWS—*The Atkins is the choice of expert woodsmen everywhere. Every stroke brings out a clean, thin ribbon of wood, instead of ordinary saw dust, and goes through the log with surprising speed.*

WOOD SAWS—*The hardest money you ever earned was the fifty cents you "saved" on a poor buck saw. An Atkins Saw will give you a new idea of sawing up stove-wood.*

E. C. Atkins & Co. Inc., Indianapolis, Ind.
*Makers of Silver Steel Saws & Tools*

# Fat Stock Compete at Portland

In spite of the postponement of the show and the cancelling of other show dates in the Coast country, and unsettled conditions generally, there was a showing of fat stock at the Pacific International of which exhibitors, as well as the management, could be justly proud.

The following are the fat stock awards:

**Car Lots of Beef Cattle.**

First prize and grand champion two-year-old steers. Grade Aberdeen Angus, fed and shown by Cofoid & McGaw, Troutdale, Ore. Sold to Union Meat Co., Portland, for $16.50 per cwt.

Second prize, grade Herefords, bred and shown by Dobbins & Huffman, Joseph, Ore.—Willard Commission Co., North Portland, $15.75.

Third prize, grade Angus, bred and shown by Dixon & McDowell, Prineville, Ore.—Union Meat Co., $15.25.

Fourth prize, grade Angus, Dixon & McDowell—Union Meat Co., $15.

Fifth prize, grade Angus, Dixon & McDowell.—Hunt Commission Co., North Portland, $13.75.

First prize yearling, bred and shown by Congdon & Battles, Yakima, Wash.—J. M. Gill, Portland, $14.25.

First prize and champion feeder steer, shown by Dixon & McDowell.—J. L. Sterrett Packing Co., Portland, $12.90.

**Pure Bred Shorthorn Steers.**

First prize and champion yearling—University of Idaho, not sold.

Second prize yearling, A. D. Dunn, Wapato, Wash.—Portland Hotel, $15.25.

Third prize yearling, Geo. Bertrand, Castle Rock, Wash.—T. R. Howatt, Portland, $15.25.

First prize under year, U. of I.—Not sold.

Second prize, under year, U. of I.—Not sold.

Three best steers, U. of I.

**Pure Bred Hereford Steers.**

First prize, two-year-old, Chas. Bull, Mabton Wash.—T. R. Howitt, $13.25.

First prize and champion yearling, Washington State College—Barton & Co., Seattle, $15.50.

Second prize yearling, U. of I.—Barton & Co., $15.25.

**Pure Bred Angus Steers.**

First prize and champion two-year-old, U. of I.—Barton & Co., $15.25.

First prize yearling, U. of I.—Union Meat Co., $15.

**Grade and Cross-Bred Steers, Spayed or Martin Heifers.**

First prize and grand champion of the show, Washington State College—Barton & Co., $20.

Second prize, two-year-old, U. of I.—Tom Howatt, $16.

Third prize, two-year-old, W. S. C.—Jas. Henry, Seattle, $15.75.

Fourth and fifth prizes, Cofoid & McGaw.—Imperial hotel, Portland, $16 and $15.50.

First prize, yearling, U. of I.—Union Meat Co., $15.

Second prize, yearling, W. S. C.—M. J. Gill, $15.25.

Third prize, yearling, Chas. Bull.—Sevier Com. Co., $10.

First prize, under 1 year, W. S. C.—Union Meat Co., $15.

Three best steers, W. S. C.

**Medium Wool Fat Sheep.**

First prize and reserve champion yearling wether, W. S. C.—Portland hotel, $25.

Second and third prizes, W. S. C.

First prize and grand champion wether lamb, W. S. C.—Benson Commission Co., Portland, $35.50.

Second and third prizes, W. S. C.

First prize pen of three wethers, W. S. C.—Union Meat Co., $16.50.

Second prize pen of three wethers, W. S. C.—Union Meat Co., $13.

Third prize pen of three wethers, Chas. Adams, Portland.

First prize pen of three wether lambs, W. S. C.—Union Meat Co., $17.

Second prize pen of three wether lambs, T. B. Johnson, LaGrande.—Union Meat Co., $15.

Third prize pen of three wether lambs, Chas. Adams.

**Long Wool Fat Sheep.**

First, second and third prize yearlings, W. S. C.—Sold as first prize pen of three wethers.—Union Meat Co., $14.75.

**Car Lots Fat Sheep.**

First prize and champion car lot lambs, grade Shropshires, T. B. Johnson.—Union Meat Co., $16.

Second prize car lot lambs, grade Rambouillets, Dobbins & Hoffman, Joseph, Ore.—Tom Howatt, $14.25.

Third prize car lot lambs, Dobbins & Hoffman.—Tom Howatt, $14.

Fourth prize car lot lambs, Dobbins & Hoffman.—Tom Howatt, $13.75.

First prize yearling, grade Shropshire ewes, McKennon & Ledbetter, Alicel, Ore.—Benson Commission Co., $14.25.

Second prize yearling, grade Rambouillet ewes, Dobbins & Hoffman.—Union Meat Co., $9.

**Car Lots Heavy Hogs.**

First prize and grand champion load Berkshires, T. B. Johnson, LaGrande, Ore.—Union Meat Co., $20.

Second prize grade Durocs and Berkshires, J. M. McFadden, Corvallis, Ore.—Union Meat Co., $18.25.

Third prize, Poland Chinas, J. W. Chandler, LaGrande, Ore.—Jas. Henry, Seattle, $18.10.

First prize light hogs, Poland Chinas, T. B. Johnson.—Union Meat Co., $18.75.

Second prize light hogs, Poland Chinas, A. L. Swaggart, Athena, Ore.—Union Meat Co., $18.25.

First prize pen of three, 225 lbs., and over, pure bred Poland Chinas, Ray J. Fox, Lyons, Ore.—Bodine & Clark Commission Co., $23.

Second prize pen of three heavy hogs, Berkshires, J. N. McFadden.—Union Meat Co., $19.25.

Third prize pen heavy hogs, Poland Chinas, A. L. Swaggart.—Sterrett Packing Co., $19.30.

First prize pen, 175 to 225 lbs., Poland Chinas, T. B. Johnson.—Sterrett Packing Co., $24.25.

# Hereford Men Elect

On Wednesday evening, December 12, the Northwest Hereford association, at a meeting in Portland, elected the following officers: President, Henry Thiessen, Sweetwater, Idaho; vice president, A. H. Barnum, Moro, Ore., Secretary-treasurer, L. R. McGee, North Portland, Ore.; directors, Charles Bull, Mabton, Wash., and W. P. Emery Macleay, Ore. A constitution and by-laws was adopted and, in other words, the organization was perfected. Plans for a spring sale were also discussed.

The 29 catalogued Herefords that were sold at Lewiston December 19 averaged a little higher than did the Shorthorns sold the previous day, owing to the fact, perhaps, that the territory immediately surrounding Lewiston is more of a Hereford country than it is a Shorthorn country. The 29 animals averaged $246.20, the 15 bulls averaging $241.65, and the 14 cows and heifers averaging $251.

The top animal of the sale was Fairfax Farmer 640406, a yearling heifer sold by A. O. Huntley of Cuprum, Idaho, to George Reinhardt & Sons of Nez Perce, Idaho, for $420. The second high animal was Bill Bryan 2d 611649, that was sold by Henry Thiessen of Sweetwater to J. P. Zenner of Uniontown, Wash., for $370. This 2-year-old was winner of the grand championship among the bulls.

Harry Cranke, himself a breeder of Herefords on his farm at Nez Perce, Idaho, conducted the sale, which was managed by L. R. McGee of Portland, Ore., secretary of the Hereford Breeders' association.

The following are sales of the catalogued animals, indicating the consignor, the animal, the age, the buyer and the price paid:

**Bulls.**

Consigned by O. P. Hendershot, Lewiston, Idaho.
Edgar 672731, two-year-old—D. S. Wallace, Lewiston, Idaho ..... $ 145
Consigned by A. O. Huntley, Cuprum, Idaho.
Carey Donald 700038, yearling—Charles Bull, Mabton, Wash. ..... 125
Gancan 631607, yearling—J. M. Perkins, Fraser, Idaho ..... 210
Woodrow M. 700050, yearling—M. L. Hastings, Phillipsburg, Mont. ..... 210
Gabriel Fairfax 700041, eight-year-old—John Mayer, Uniontown, Wash. ..... 340
Gabriel D. 741835, eight months—J. L. Chapman, Asotin, Wash. ..... 135
Romeo 631611, yearling—G. W. DeLay, Hot Lake, Ore. ..... 150
Consigned by Platt Bros., Genesee, Idaho.
Cody, yearling—C. J. Knight, Cloverland, Wash. ..... 245
Glover 651715, yearling—M. L. Hastings, Phillipsburg, Mont. ..... 345
Victor Lee 6th 674575, yearling—M. L. Hastings, Phillipsburg, Mont. ..... 300
Consigned by August Schroeder, Cottonwood, Idaho.
Generous 3d 636408, yearling—James Barkley, Lewiston, Idaho ..... 300
Consigned by Henry Thiessen, Sweetwater, Idaho.
Beau Ideal 701795, yearling—E. L. Martin, Sweetwater, Idaho ..... 350
Perfector 2d 706686, yearling—M. L. Hastings, Phillipsburg, Mont. ..... 200
Bill Bryan 2d 611649, two-year-old—J. P. Zenner, Uniontown, Wash. ..... 370
Perfect Beau Jr. 706685, yearling—Mrs. Belle Knotgrass, Clarkston, Wash. ..... 200

**Cows and Heifers.**

Consigned by O. P. Hendershot, Lewiston, Idaho.
Eva 556616, three-year-old—C. J. Miller, Nez Perce, Idaho ..... 170
Snowbird 598061, two-year-old—C. J. Miller, Nez Perce, Idaho ..... 155
Snowflake 2d 598062, (calf at foot), two-year-old—J. M. Perkins, Fraser, Idaho.. 225
Della 552314, (calf at foot), three-year-old—C. J. Miller, Nez Perce, Idaho ..... 215
Adelia 611995, (calf at foot), two-year-old—John Mayer, Uniontown, Wash. ..... 305
Asa B 2d 611994 (calf at foot), two-year-old—J. H. Holt, Kendrick, Idaho..... 215
Lady Sunbeam 598058, two-year-old—J. M. Perkins, Fraser, Idaho ..... 200
Consigned by A. O. Huntley, Cuprum, Idaho.
Sarah Donald 700049, yearling—J. M. Perkins, Fraser, Idaho ..... 165
Lady Elbert 6th 622322, (calf at foot), two-year-old—J. M. Perkins, Fraser, Idaho ..... 235
Modie Lad 700047, yearling—Henry Thiessen, Sweetwater, Idaho ..... 255
May York 412574, (calf at foot), six-year-old—Platt Bros., Genesee, Idaho ..... 365
Fairfax Farmer 640406, yearling—George Reinhardt & Sons, Nez Perce, Idaho ... 420
Nodie 412639, five-year-old—George Reinhardt & Sons, Nez Perce, Idaho ..... 325
Donated by Henry Thiessen, Sweetwater, Idaho, to be sold for benefit of the Red Cross.
Pretty Lass 3d 701820, eleven months—John Mayer, Uniontown, Wash. ..... 225

## HIGHWAY BEING WORKED.

OTHELLO, Adams County, Wash., Dec. 14.—The month of December has been fine for all fall-sown grain, and all grain looks well. There has not been a bit of frost in the ground yet. The stock is coming through so far in fine shape, and if present weather holds much longer the winter will be short. Some seeding was done up to the very last of November. The road masters are doing good work on our highways, putting them in fine shape for winter. As to cooperative organizations, there are none to speak of in Adams county. We have noticed that when crops are good and prices are high the farmer is generally contented, does not pay much attention to the profits the other fellow makes, but keeps righ on "sawing wood." It is poor crops or low prices that breed discontent; then we resort to organizing to shift the burden.

A. O. LEE.

## FEED SITUATION BETTER.

COLFAX, Whitman County, Wash., Dec. 14.—Weather in the Palouse continues excellent for outdoor farm work. A considerable amount of plowing is still being done. Live stock management has been greatly helped and the feed situation is not nearly so acute as it otherwise would have been. Stock is still out of doors, and straw is being utilized to good advantage. Some hay is being shipped in from Idaho and Washington points.

F. L. KENNARD,
County Agent.

## WILL GROW SEED CROPS.

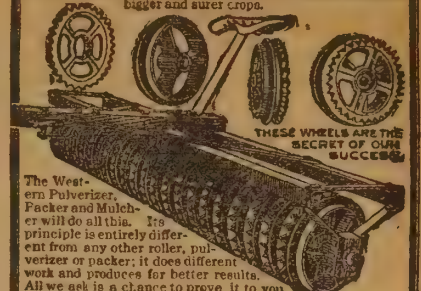
An experiment was carried on during the last season by S. D. Woodruff & Son, seed growers, tending to prove the practicability of seed growing on a large scale in the Yakima valley. This concern operated a 200-acre farm this season producing large quantities of squash, pumpkin and bean seed. Their experiment, it is reported, resulted in a net profit of something like $100 per acre in addition to the by-products obtained.

## TRACTOR SCHOOL ANNOUNCED.

The Holt Manufacturing company has announced its sixth annual tractor school, to be held in Spokane beginning February 3 and continuing two weeks. An owner of a "caterpillar" tractor is entitled to the course free, or he may designate a member of his family to attend. Persons not owning tractors will be charged a tuition fee of $25. Among the subjects that will be studied are the following:

Gas engine principles and types, fuels and carbureters; carbureter adjustment, ignition—high and low tension systems, magnetos, governing and cooling mechanism, lubrication, tractor operation, valve timing, engine troubles, tillage methods, tractor overhauling, tractor management—contracting, tractor implements—plows and hitches.

Actual practice work will be done in the following:



Carbureter adjustment, ignition timing, valve timing, ignition troubles, clutch adjustment, gas engine testing, belt lacing, babbitting of bearings, soldering, field practice—driving, forge practice—welding, combined harvester practice.

The increasing interest in the Holt school is indicated by the fact that the first year, 1914, there were 96 tractor men attended; in 1915, there were 116; in 1916 there were 210; in 1917 there were 342, and in 1918 there were 447.

**The Threshing Problem Solved** Threshes cowpeas and soy beans from the mown vines, wheat, oats, rye and barley. A perfect combination machine. Nothing like it. "The machine I have been looking for for 20 years." W. F. Massey. "It will meet every demand." H. A. Morgan, Director Tenn. Exp. Station. Booklet free.
KOGER PEA & BEAN THRESHER CO.;
Booklet 15 Morristown, Tenn.

**GOOD FARMING PAYS**

Every farmer and land owner should be interested in something that will save labor, time, horse-power, seed and make bigger and surer crops.

The Western Pulverizer, Packer and Mulcher will do all this. Its principle is entirely different from any other roller, pulverizer or packer; it does different work and produces far better results. All we ask is a chance to prove it to you at our own expense.

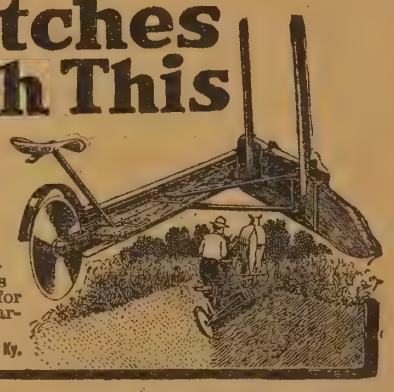
Our FREE ILLUSTRATED CATALOGUE proves our statement and contains lots of valuable information on up-to-date and better farming and is worth its weight in gold to any farmer or land owner who doesn't think he knows it all. Send for it today

WESTERN LAND ROLLER CO., Box 420 Hastings, Neb.

**NITRATE OF SODA WHAT IT WILL DO FOR YOU**

SPOKANE SEED CO.
FERTILIZER Dept.
SPOKANE, WASH.

Write now about your needs of superphosphate, land plaster, etc. Fertilizer booklet free.



**The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.**

**Cut Your Ditches With This**

Cuts ditches, cleans out old ditches, scrapes and levels land, grades roads quicker, cheaper and better than any other machine ever built. It's the

**Simplex** DITCHER-TERRACER

Sent on 10 days' Trial

Cuts V-shaped ditch up to 4 feet. Fine for terracing. Light draft. All steel; reversible. Does work of 100 men, and does it better. Write for catalog and prices. Sold on money back guarantee. You will want a Simplex.

SIMPLEX FARM DITCHER CO., Inc., Box 78 Owensboro, Ky.

**R·M·WADE & CO.** SINCE 1865

PORTLAND, ORE.
General Sales Agents for the Pacific Northwest

**Does Not Winterkill**

LYMAN'S Grimm Alfalfa has proven itself the most profitable to sow in this locality because of its wonderful hardiness, immense yields and high feeding value. It requires less seed to get a stand, offsetting its higher first cost. Productive of seed which is in demand at good prices. Decide to plant genuine Grimm and place your order early to avoid disappointment. Booklet, testimonials and seed sample mailed free.

# Power, Mechanics and Devices

**The purpose of this department is to give helpful suggestions to its readers. The editor invites letters that give experiences or practical ideas along the lines of "power, mechanics and devices" on the farm. Inquiries from any one on any point in which he or she is interested, whether previously touched upon in the department or not, will receive personal reply by mail.**

What have you learned during the year 1918 which has been helpful to you on the farm or in the farm home?

Has it helped you to make a little more money? Have you been able to do the same amount of work a little easier and not take quite so long to do it? Has it brought some added help or comfort to the good wife of the home? Has it encouraged the young folks to become more interested in farm matters?

All these things are possible. Somebody is always finding out a better way. If you'll tell of your own better way it will induce others to tell of their better ways and you may learn of something which would be of even more help to you than that which you have already found out.

Here is the department for you to exchange views, tell each other of farm devices, of the use of power, of farm mechanics generally as you have applied them to your own farm work. Write to the Editor. Send us drawings and we will try and have them fixed up. Write just as you talk and we will fix that up, too, if it needs it. Tell us what you have found out. Ask us what you want to do, know and let this be a question box in reality.

### SIZE OF FARM AND TRACTOR.

**Increase in the Acreage Which Can Be Farmed by One Man.**

Tractors using gasoline or kerosene are increasing in numbers on eastern farms, says Bulletin 1004, of the United States department of agriculture. Though the use of a tractor may be expected to reduce the man labor required for farm operations, thus permitting one man to accomplish more work and so farm more land than with horses, it is obvious that a farm business must be of sufficient size to permit its economical use in order to justify the necessary investment. That is, many small farms must either use the old methods or hire a tractor, because the small amount of work to be done each year does not warrant owning it.

Among the more important facts disclosed by a study of the use of the tractor for farm work are those relating to the increase in the acreage which can be farmed by one man when a tractor is used in connection with horses over that farmed with horses alone. Eighty-four per cent of these New York tractor owners say that the tractor has proved a profitable investment to them. Of this number a little over one-third, after purchasing the machine, increased the acreage they were farming. On the other hand, of the men who found the tractor unprofitable, only one-tenth increased their acreage after purchase of the tractor.

This comparatively high percentage of the entire number of tractor owners who have enlarged their farms is significant, for whereas there has been a tendency for the size of general farms to increase in recent years owing to the influence of improved farm equipment, this increase in general is not nearly so pronounced as on farms where tractors are used.

With the tractor, as with any other farm machine, it is important that a suitable size should be selected for a given acreage. By far the larger part of the tractors sold at this time pull either two, three or four plows, with the three-plow size the most numerous, taking the country as a whole. In the state of New York, judging by the reports received from tractor owners, the number of three-plow machines sold in 1916 was slightly less than one-third of the total number of two-plow outfits sold in that state. In 1917, however, the three-plow machines amounted to about two-thirds of the number of the two-plow rigs.

An important point in this connection is the fact that it is exceedingly difficult to keep a gas tractor in such condition that it will develop a high percentage of its rated power at all times, since wear in different parts, imperfect adjustment, etc., may greatly reduce the amount of power it will develop. Hence, a machine which will develop adequate power to meet requirements when new and in perfect order, may prove very unsatisfactory for both field and belt work after having been used a short time.

Another point is that soil conditions in the eastern part of the United States are such as to require considerably more power to do the work of plowing than in most of the middle west and western sections. The difference is so great that many machines which pull three plows in sections where plowing is comparatively easy, can pull only two plows under eastern conditions.

### ABOUT MILKING MACHINES.

All milking machines are alike in one respect, and that is that they draw milk from the cow's teat by vacuum. The original milking machine was using continuous vacuum that would draw the milk all right, but it would also draw the blood from the bag into the teat, injuring the cow. For this reason the original milking machine was not a success. Improvement of an intermittent vacuum and others have followed.

All milking machines using vacuum to draw the milk usually employ a vacuum pump in the milk house operated by a gas engine or an electric motor. Here are two or three instances of the introduction of the milking machine on western Washington dairy farms.

Otto Tamm of Enumclaw used to keep a bunch of hired men to milk his cows. He finally installed a milking machine and his son was running it. The son was drafted and now his sister is operating the milking machine and they have that many less men to feed, while the income is the same as when they gave their money to the hired men.

The Meadowbrook farm at North Bend is milking about 300 cows and for years has had the usual experience with milkers coming and going all the time.

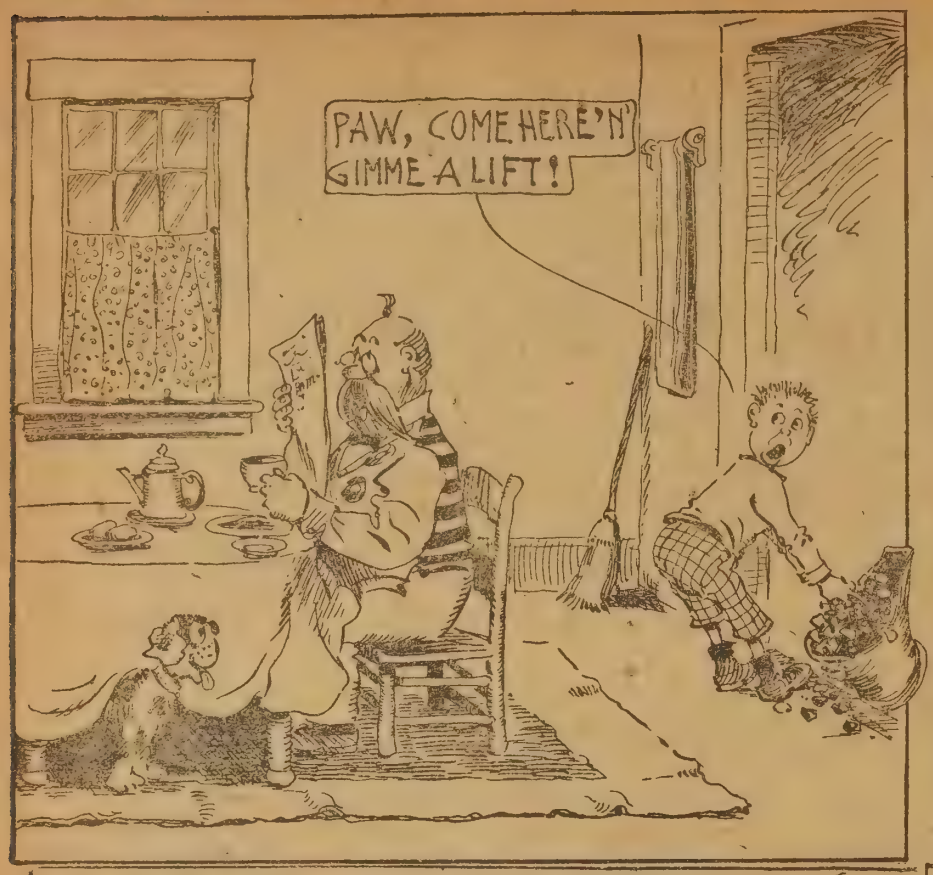
Last March they installed a milking machine in one barn and there one man milks and cares for 57 cows. They have now installed a milking machine in another barn where two men milk 90 cows. At $100 per month for milkers it does not take long to save enough in wages to pay for the milking machines.

### FARM BUTCHERING.

In our neighborhood there is a farmer who has things arranged handy for what little butchering he does. He has a permanent frame built about 18 feet high, like a swing. A pair of double blocks are hung from the top of this and used to hoist the carcass up and down. Directly beneath this he has a barrel for scalding hogs. Next to the barrel he has two saw horses with boards lying on top to lay the hog on to scrape it. This is just about the right height to scrape a hog conveniently. After the hog is scalded and scraped the barrel and frame can be moved out of the way for convenience in removing the entrails. Within a few feet of the device for butchering he has a large tank for heating water. This is made of steel sheeting and planks. The planks form two sides and the sheeting two ends and the bottom. This tank is also used to cook potatoes for fattening hogs. Before butchering, the knives are sharpened, all tools made ready in a convenient place, and the water heated. The hogs are not fed the day before. With the blocks the carcass can be hung up so that no marauding animals can get at it. C. J. M.

### JACK UP THE HIND WHEEL.

It is said that a successful way to start a car when the starter fails to work is to jack up one of the rear wheels, putting the gears in high and turning the wheel in the direction in which it revolves in driving the car forward. A few turns of the wheel take the place of the cranking, it is stated, and are usually more effective in a stubborn case. The advice says to be sure to place the gearshift lever in neutral before letting down the wheel to prevent the car plunging forward. It is also necessary that the car be sufficiently braced to prevent falling, which would have the same effect as though the gear were not in neutral.



### CONCRETE CORNER POST BASE.

Those who have had trouble, as practically all farmers have in making their corner posts stand the strain upon them, may be interested in the plan practiced by many of setting their corner posts in a base of concrete. One person explaining his method says that he digs his post hole something like two feet across, sets the post in the center and pours around it a mixture of rock and concrete with some old wire thrown in for reinforcement. A post set in this manner, he says, will stand almost any strain that is ever placed upon it.

# SURE, IT WOULD HURT POOR PAW'S BACK TOO MUCH

# Purebred Cattle Sell at Portland

The sale of the Northwest Shorthorn association at North Portland December 12 was a very successful event. Even the poor attendance at the show and other untoward conditions did not seem to affect the sale very much. The offering was good, and especially strong in good young females. Four figures were reached twice in the females and twice again in the bulls. Chris Olsen of Haines bought the top bull, Hercules Stamp, consigned by Day & Rothrock of Sprague, Wash. This bull was champion of the show and was a very low down, beefy bull with a lot of quality. He was sired by Gainford Perfection, and from the Ramsden family, a good Scotch family of Campbell breeding.

Another good prospect as a herd bull is Brigadier General, consigned by Frank Brown of Carlton, Ore., and bought by Mossie & Sons of Ukiah, Ore. This is a Canadian bull of good Scotch breeding, and a promising individual. He is of quite different type from Hercules Stamp and is of the growthy, rather upstanding type, but smooth and a good one. Robert Rutter of Ellensburg, Wash., was the runner up on both of these bulls.

The heifer stuff was very choice and while apparently bringing good money, would have brought more in the east. Four of them were particularly fine and brought from $740 to $1010. The first heifer sold was also one of the choice ones, but being the first only brought $550, which was hardly her value. The top heifer was a beautiful calf consigned by Frank Brown and sold to W. O. Cummings of Mount Vernon, Ore. This heifer was grand champion female of the sale, one of the blockiest, neatest things we have seen in a long time. The first prize yearling, Dale's Queen, was consigned by Day & Rothrock and sold to M. R. Biggs of Prineville, Ore. This was another very thick, blocky roan, and a really good one. The buyers were quite discriminating, as a whole, and bid right up on the best ones. The average of $422 was very satisfactory. The bulls averaged $425 and the heifers, $421.

## The Hereford Sale

The sale of Herefords was fairly successful. Prices, however, were not quite as strong as last year and bidding not as spirited. The quality of the stuff ranged second rate to very high class. The best was in keen demand and brought good prices while the demand for the poorer cattle was less active. However, December is not a good time for selling range bulls. It is a good time for high-class herd bulls and for good females, but the range cattle prefer to wait until about spring before buying, especially as many of them have not made any arrangements for carrying any new bulls through the winter. The top animal of the sale was the bull, Royal Perfection, consigned by Henry Theissen, and sold to Edwards Bros. of Fossil, Ore., for $1900. This was a show bull and a good one, very meaty and massive. He was sired by the good bull, Beau Perfection 26th, his dam by Caldo 2d, and the second dam by Beau Brummel. With good individuality and such choice breeding he was worth the money, and Edwards Bros. are to be congratulated on his purchase. A half-brother to this bull sold to J. D. Miles of Livingston, Mont., for $1325. This bull was very much like the bull the Edwards Bros. bought, and was a close second to him in every way. The top female was Lady Rex 29th, also consigned by Henry Theissen and sold to J. D. Miles of Livingston, Mont., for $1400. She was a daughter of Rex Donald and was a beautiful show heifer and heavy with calf. She was a good buy.

## The Holstein Sale

The sixth annual Holstein sale at North Portland, Ore., December 13, was a very fair sale, when the general situation is considered. There were no sensational prices, and it is true that many of the animals did not bring all they were worth, especially the bulls. Some with extremely good breeding were not appreciated, but most of the consignments brought close to a fair value. Many of them went to beginners who will make good and be better buyers later.

Top price was realized for the beautiful young cow, Cascade Ruth, consigned by William Todd & Sons, carrying a double infusion of the blood of their former great herd sire, Sir Johanna Ruth Fayne. She was taken by Mt. Angel college stock farm of St. Benedict, Ore., at $600. Hollywood Homestead Fayne, a beautiful white heifer of the Hollywood consignment, went to Dr. C. W. Cornelius of Portland for $110, and Dr. Cornelius also took Von Heim Cristeria Mechthilde, one of the Von Herberg cows, for $400.

Only one animal, a bull, went below $100, and a very classy Von Herberg consignment went to Albert Johnson of Scappoose, Ore., for $590. The following is a complete list of animals sold, buyers and prices paid:

# Get This Spreader Now —Pay Us Within One Year

Did you ever hear of an offer more liberal? We never did! No strings to it, either—we deliver a Litchfield Low-Down Spreader right away. You use it—and pay us any time within one year after delivery.

In spite of factory difficulties we were able to secure 200 Spreaders to distribute this Fall and Winter on our famous one-year payment plan.

A Litchfield Crop

No Litchfield —No Crop

## LITCHFIELD Low-Down Spreader

Latest improved low-down type—easy to load. Spreads evenly and quickly. Built to stand hard service.

## *Manure Is Gold to YOU When Properly Spread*

Increase your crop yields now while prices are high. Spread the manure, so it will do the most good. A Litchfield Spreader pays for itself in a year—before you have to invest any money.

**Sign and mail coupon today for full particulars. No cost or obligation.**

# American Red Cross Hospital Farm at Sarisbury, England

By CAPT. FRANK S. PEER, Ithaca, N. Y.

**Frank S. Peer, who has recently been commissioned a captain in the field service of the American Red Cross in England, is widely known in America as an expert in cattle breeding and intensive farming. His "international farm" on the Island of Guernsey in the English channel, is a famous showplace and a model of its kind. He is an authority on Guernsey and Jersey cattle, and some of the finest specimens of these cows have recently been donated, through him, to stock the dairy farm at the American hospital at Sarisbury, near Southampton, England, where accommodations are being prepared for 3000 American soldiers, sick and wounded.—Editor.**

The Jersey cow was my first love—at least among animals of the bovine family. I look back on the day when I secured my first Jersey cow as a red-letter day in my experience as a breeder. This was 'way back in the early seventies.

I still recall most vividly my first visit to the island of Jersey, in the English channel. It was in the spring of 1892. I had been spending five or six weeks en route via the Azores, Portugal, Spain and France, and I can assure you that I never was so pleased to reach a place as I was at that time when at last I set foot in a spot where I could hear my native tongue spoken.

Since that day my fondness for the island has "grown by what it fed upon." American farmers will forgive me for indulging in these personal reminiscences, particularly when I confess to them that I am writing this on my birthday. I am not going to say which one, as I do not care to see it expressed in numerals. I am feeling, in regard to my age, something like an old cattleman I knew near Rochester, N. Y., who, when asked his age, replied: "Well, really, I most forget, but as near as I can calculate, I am either 69 or 96. The truth is," he added reflectively, "I've been afraid to look in a glass for the last 10 years for fear I would be tempted to count the wrinkles on my horns, and then I might learn for a fact that I was 96 instead of 69."

After Jersey, I came to love Guernsey also. For several years I have had a little home there. For 26 years I have spent considerable time each year on these two beautiful islands. Of course they are chiefly notable in the farmer world as the home of the Jersey and Guernsey cattle. One of their most attractive features to me has always been the wonderful production of the soil. I have always been something of an enthusiast on the subject of intensive agriculture, and in this respect I believe these two little islands stand head and shoulders above any equal acreage of farming land in the world.

We are endeavoring to install this same type of intensive agriculture at the hospital farm at Sarisbury England. Here the American Red Cross has purchased an estate of 186 acres, where accommodations are being prepared for more than 3000 American sick and wounded soldiers. The hospital buildings will occupy about 10 acres of tillable land. Some 60 odd acres will be devote dto the needs of the hospital, cultivated on Channel island lines of agriculture.

The farm organization is on the departmental system, modeled after a farm organization which I installed several years ago near Wheeling, W. Va., for the Hon. E. W. Oglovay. There will be six departments at Sarisbury, each one under an experienced director, and each department will be answerable to a comptroller, who will debit it with every expenditure for its work and credit it with everything which it produces. The six departments will be as follows: The farm, producing soiling crops and food for the cattle; the garden, consisting of about 15 acres of vegetable and garden truck; the cattle, consisting of 60 head, equally divided between Jerseys and Guernseys; the swine, about 100 to 150 head; the poultry, about 1500 to 2000 head, and the dairy where the milk will be separated, bottled and sent to the hospital.

At present the Sarisbury farm is in a low state of cultivation, and a good deal of hay, straw and grain must be bought for several years before the farm becomes self-sustaining for the number of stock we have installed. But that does not worry me, for I have been through the same mill on my Guernsey farm and feel that what has been done can be done again.

Speaking from memory and in round numbers, I believe the island of Jersey contains about 20,000 acres of tillable land, including orchards and gardens. With a pre-war population of 55,000 and 40,000 to 50,000 visitors annually, the island also supports 12,000 cattle, 7000 horses, and 10,000 swine, to say nothing of goats, sheep, dogs and poultry. This figures out at about three persons and one and one-half animals for every acre of land farmed. The marvelous feature, however, is that this 20,000 acres not only largely supplies all this number of people and farm stock, but in addition provides for export five to 10 million dollars' worth of agricultural products yearly.

I doubt if there is a finer example of intensive agriculture anywhere in the world. The little island of Guernsey does even better per acre than Jersey, but she has something like 700 acres under glass, while Jersey is strictly confined to straight farming.

The channel islands, then, are an object lesson in agriculture and horticulture to all the world, and especially to Great Britain. Now that the British government has committed itself to a policy of encouraging small farms for the purpose of keeping its young men at home, there could be no better schooling for the embryo farmers than to send them to the channel islands for a time as farm pupils before putting them on a farm of their own.

I am sometimes almost afraid to tell the truth in England regarding the size of the crops the island farmers are able to win from their soil, for it sounds like a fairy tale. Here is what these farmers are getting per acre:

Potatoes, 300 to 500 bushels.
Wheat, 50 to 75 bushels.
Oats, 75 to 150 bushels.
Hay, 3 to 5 tons.
Roots, 50 to 100 tons.

If what has been done can not be done again—we mean at least to give it a try at the Red Cross farm at Sarisbury. If it fails we may have the satisfaction of knowing why.

Our cows, as has already been told, are a donation from the farmers of the two channel islands. Jersey has given us 30 of its finest blooded dairy cows, and Guernsey has given us the same number. About four of the cows from each of the islands were given outright by individual farmers, the pick of their herds. The rest were provided by individual subscriptions, running all the way from $1 to $125. The subscriptions in Jersey reached a total of about $8500 and in Guernsey about $6000.

**Convalescent American soldiers are learning farming and dairying at the American Red Cross military hospital at Sarisbury, near Southampton, England. The hospital farm includes about 186 acres, which is being developed along lines of an up-to-date American farm. It is the largest American hospital farm in Europe.**

**The cattle on the farm are divided equally between Jerseys and Guernseys, all these cows being the gift of farmers on the islands of Jersey and Guernsey, in the English channel.**

**Much of the farm work on the 186-acre farm is done by convalescent soldiers.**

## As to Sanity

Amidst all your gettings, get sanity. Sanity is the modern name for wisdom.

There is a lot of insanity in the world. Insanity varies infinitely as to kind and as to degree. Some one special thing looks dark to a man, he becomes pessimistic. He has a touch of insanity. While optimism is a more agreeable species of insanity it has its drawbacks just the same.

Over-indulgence in pleasure, or under-indulgence in work both give evidence of an unbalanced mind.

While moderation and temperance are commonly connected with breadth of view and sanity of thought, yet sanity is at the basis of extremes as well. When American boys went over the top in the war they had behind them a training of sanity. After going over the top they were able to meet the reactions of fate with magnificent heroism. They had a basis of sanity which saved them from the paralysis of panic. When Clemenceau, before assuming the premiership of the government in France, asked his physician if he might hope for a limited period of unremitting duties during the war, he was acting on the broadest sanity. I saw a home war worker the other day who has given his services to the country. He entered that service a strong, vigorous man, with health of body and health of mind. Two years have left him in a condition that his physician says he may die in an hour's notice or he may live for years. The functions of his heart are irreparably damaged, but he said:

"I am glad I did it. I would do it again. It is worth while."

There was sanity underneath all this extreme taxing of the physical system, with its consequent pains and penalties.

Sanity furnishes the basis of good judgment, that judgment which shall dictate moderate or excessive endeavor, which shall match the body and the mind against the nature of the task.

C.A.S.

## Why We Have Scandalmongers

By DR. LEONARD KEENE HIRSHBERG, A. B., M. A., M. D.

The weakness which you are prompt to see in others is often a reflection of your own. Furthermore, it has its foundation more than likely in your own unrecognized physical infirmities.

Whenever you hear a woman or a man speak ill of another you should recall the tests made by experimental psychologists. This test often proves that there is present in the tale-bearer and critic an unconscious perception that she herself has the same weakness that is alleged against the absent one.

Fear, cowardice and an inferior physical and mental make-up in the scandalmonger makes such a person speak evil of the man or woman who is unconsciously recognized as a superior intellectually and physically.

No matter how wise, how noble, how young another may be, there are always many who "would spell him backward."

While the casual, swift, superficial medical examination may not always show a dispenser of scandal and criticism to be sick physically or mentally careful tests physiological and pathological show such women and men to be unstable emotionally and physically not all they should be.

Dr. Hirshberg

**Symptoms Are Plain.**

The very fact that such persons take the pleasures, laughter and gayety of others in bad part, helps to prove that they are ill.

They fret, chafe, grumble, croak, lament, knit they brows and exhibit such vexation of the spirit at the joys and merriment of others that their own strength and health can not but be undermined—if it has not already been so.

You are often compelled to observe that women, who become old, housed-in, and deficient in the number of their friendships, exhibit a sour, embittered, crabbed criticism of others. This indicates that their sentiments and points of view have become mortified and disheartened by the developments of some structural or internal disturbance.

Their tissues have taken on a diseased, damaged or disarranged state and the various parts of their fabric have ceased to harmonize. Physiological concord and unity have given way to pathological discord and disruption.

The healthy man or woman takes a more liberal, just and charitable view of the words and actions of others. The frank behavior of friends and acquaintances are not taken to task by him. His health, vitality and success give him a broad outlook on life. He is tolerant and knows that there are more sides to an appearance or an act of behavior than a murmurer, a gossiper and a neighborhood censurer presents.

Emotional instability and a loss of that mental balance which makes for intolerance of others and a search for their foibles and weaknesses indicates sickness. Often some occult, hidden anatomical disease such as bacteria and infection in the gall bladder is responsible for the repinings, naggings and scandal tales. On the other hand, defective vision, undeveloped muscles or the foul air of darkened, unventilated rooms is at the bottom of the mischief.

One woman, estimable in many respects, was much given to gossip at the expense of her neighbors' reputations. Her husband was a big, successful, broad-minded man, who never spoke ill of others and could not abide his wife's snobbishness and talebearings. They had six young children and the husband did not wish them to grow up narrow, bitter, hypercritical and bigoted like his wife, whom he nevertheless loved.

The woman was brought to me as a patient, and, after elaborate tests were made, the diagnosis of her trouble was loss of emotional stability and defective muscle sense with anemia. She was given more help at home and induced to take up outdoor sports and athletics. In three months' time she became a different person—gay, smiling, liberal in her views, tolerant of what others did and a genial, cheery, emotionally well-balanced woman.

## SIDELIGHTS

**He Was So Slow!**

"Our shipping program was in a bad way, but Charlie Schwab has given it a helping hand."

The speaker was Stanley Hawkins, director of camp singing in Camp Dix. He went on:

"Yes, Schwab has helped shipbuilding as efficaciously as the pretty girl helped her bashful adorer.

"As girl and adorer sat on the beach in the moolight side by side, the young man said:

"'Is your little Pekinese affectionate?'

"'Affectionate? Indeed he is!' the girl replied. 'Here, Fido! Come here and show Tom Jones how to kiss me.'"—Detroit Free Press.

**Modern Definitions.**

Appendicitis: A modern pain costing about $200 more than the old-fashioned stomach-ache.

Bachelor: From the Latin baculus, a stick unattached; hence an unattached man, which any lady may stick, stick to, or get stuck on.

Backbiter: A mosquito.

Blue: The only color we can feel. Invisible blue: A policeman.

Cinder: One of the first things to catch your eye in traveling.

Dust: Mud with the juice squeezed out.

Fly: A familiar summer boarder, who mingles with the cream of society, gets stuck on the butter and leaves his spec behind.

Pole cat: A small animal to be killed with a pole—the longer the pole, the better.—Brush and Pail.

**Editor Has Trials.**

Most any man can be an editor, says the town knocker.

All the editor has to do is to sit at a desk six days a week and 'edit' such stuff as this:

Mrs. Jones of Cactus Creek let a can opener slip last week and cut herself in the pantry.

A mischievous lad of Piketown threw a stone and cut Mr. Pike in the alley last week.

Joe Doe climbed on the roof of his house last week looking for a leak and fell, striking himself on the back porch.

While Harold Green was escorting Miss Violet Wise from the church social last Saturday night a savage dog attacked them and bit Mr. Green on the public square.

Isaiah Trimmer of Running Creek was playing with a cat Friday when it scratched him on the veranda.

Mr. Frank, while harnessing a broncho last Saturday, was kicked just south of his corn crib.

# Washington's War Service Boys

From The Twice-a-Week Spokesman-Review.

**VERNON KILGORE,** Daisy, Wash., enlisted in the navy in September, 1916, and trained at San Francisco. He saw active service at the first of the war, but was later sent to school at Newport, R. I. He is now in the submarine service.

**CLARENCE KILGORE,** Daisy, Wash., enlisted in the army, and is now in the ninth balloon company serving in France. He is a graduate of the Lewis and Clark high school of Spokane, Wash., and is the son of S. J. Kilgore of Daisy, Wash.

**CARL FERRIS,** Deer Park, Wash., enlisted in the U. S. navy in November, 1917, and was soon assigned to the U. S. S. Bill, which makes trips out of New York city. Mrs. M. Ferris, his mother, is a resident of Neer Park, Wash.

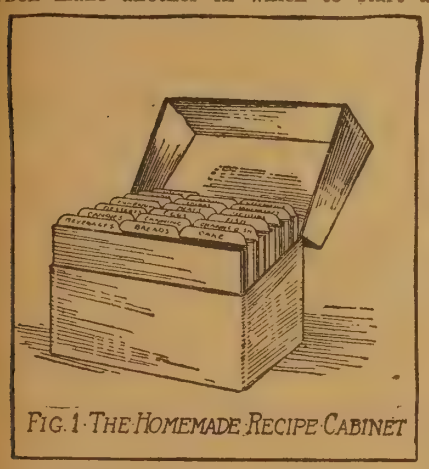
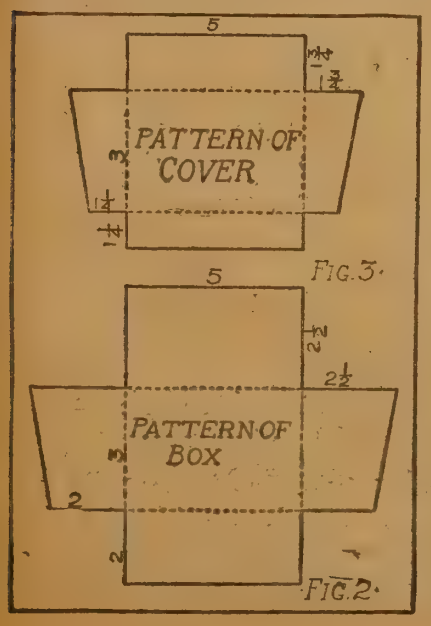
## A HOME-MADE RECIPE CABINET.

Every girl will be interested in this little cabinet made for keeping together favorite cooking recipes. There is a place in it for every kind of recipe, and, with a guide-card to show just where each recipe is placed, it is possible to find exactly what is wanted without a minute's delay.

Make a cabinet for your mother's recipes. Then make another in which to start a





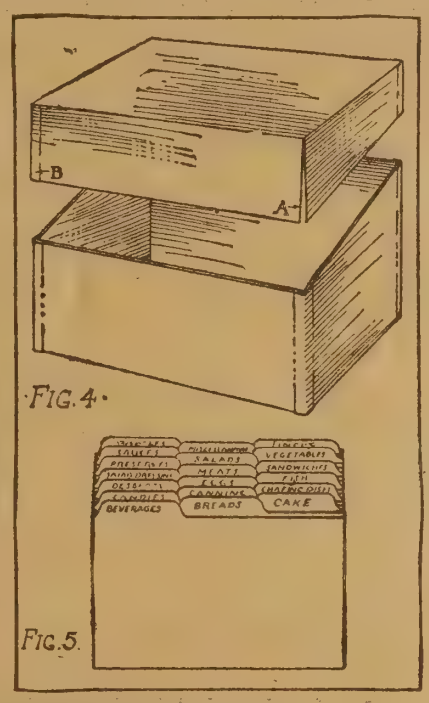


FIG. 1. THE HOMEMADE RECIPE CABINET

collection of your own. The work is easy and quickly done. Any cardboard box can be used for working material. Mark out the bottom, two sides, and two ends in the form shown in the pattern of Fig. 2. Draw the lines with ruler and pencil, using the dimensions given. Then, when you have marked out the piece, cut out along the outside lines. With a pocket knife score along the outer lines of the bottom piece, as indicated by dotted lines, and bend up the side and end pieces until their ends meet. Bind the corners together with strips of linen, coated with glue and lapped over the corners as shown in Fig. 4. The pattern for the cover is shown in Fig. 3. Mark it out in the same way that you marked out the box. Score it as indicated by the dotted lines, and bend up the sides and ends until their ends meet. Corner A (Fig. 4) shows how the corners are brought together, and corner B shows how they are bound with the linen strips.

Hinge the cover to the cabinet box with a cloth hinge strip similar to the strips bound over the corners. Make the hinge extend the full length of the cover. Then with the cover attached, get a piece of light-weight cambric of a dark gray or other durable color, and cover the outside of the cabinet, gluing the cloth to the cardboard, and stretching it tightly and neatly over the corners.

The indexed guide cards are of cardboard, and made as shown in Fig. 5. They should measure 3 3-8 inches high by a length equal to a trifle less than the inside length of the box. Divide the upper edge of each card into three parts, and prepare the projecting tabs as shown, making each a trifle longer than one-third of the length of the card, and three-eighth inch high. Cut away the card either side of the tab. The first card, you will notice, has the tab on the left end, the second has it in the center, and the third on the right end. The fourth is the same as the first, the fifth the same as the second, the sixth the same as the third, and so on.

You can make up your own recipe classifications, but the following cover about every heading necessary: Beverages, breads, cake, candies, canning, chafing dish, desserts, eggs, fish, frozen desserts, meats, pickling, preserves, salads, sandwiches, sauces, soups, vegetables, miscellaneous.

For the cards on which to write recipes, use a heavy grade of note paper. Cut each of the length and height of the index cards. Fifty cards will probably be enough to start with.

# Warrants Optimism

## Great Plans for Future Under Way

By A. E. GIPSON.

The colossal plan proposed by the government for land reclamation, primarily to meet the needs of our returning soldiers, and then to be extended to home-seekers generally, if carried out as it should be, will be far-reaching, almost beyond conception. It will not only include some 15,000,000 acres in the arid portions of the country, which are to be brought under adequate irrigation systems, but will embrace vastly more of swamp and other lands in different parts of the country. The total acreage is not yet definitely known, but is supposed to mount up above the hundred million mark. Engineers have been doing preliminary work for some time on the different projects, and the information is given out that they are now rounding it into form so that actual construction may be started on some of them, at least, within the next few months.

The soldiers are to be given the preference in construction work, and liberal wages, and after the lands have been redeemed, they are to be given the opportunity to secure a farm, fully equipped, if desired, and on terms of payment that will be very easy.

This appears to be Secretary Lane's plan, briefly outlined, and ought to mean a great deal, both to the soldier boys, and to the entire country.

These big jobs and a nation-wide campaign for good roads, to say nothing of innumerable other enterprises, both public and private, that will doubtless be launched ought to go far towards providing employment for years to come to all who may need it. Better still, it should put the masses of the people, who may desire farm homes, and improved conditions, in position to secure the same without encountering the obstacles that people with little or no financial resources so often encounter. Furthermore, the proposed development, it is announced, is to be along improved civic lines, with community centers, and entirely modern equipments, and facilities for making ideal farm homes.

Of course, this outline is simply preliminary and tentative, but even if carried out in a modified form, has possibilities so beneficent that one can hardly help being enthusiastic over them, and to regard with distinct optimism the demonstrations about to be made. Sane and wise leadership will be needed in carrying out the essentials of these gigantic undertakings, and so the master minds of agriculture should be called to service in the general campaign that is about to be launched.

## Then and Now

YELLOW.

The Evening Star, Washington.

## Watering Animals in Japan

The accompanying photograph, taken on a burning hot day in August, shows one of the many temporary drinking buckets which the Society for the Prevention of Cruelty to Animals kept connected with hydrants at prominent street crossings and corners in Osaka, Japan, during the hot summer months. Another year the society plans to erect permanent drinking fountains in all the principal squares of the city, according to a letter received by "Our Dumb Animals" from Ralph P. Bridgman, temporary honorable secretary of the Osaka Y. M. C. A.

Reading from right to left the characters on the bucket in the picture say (first line) "Temporary bucket," and (second line) "Osaka Society for the Prevention of Cruelty to Animals."." The signs above the bucket are for drivers and passers-by; "Please supply horses and cattle with water here. After supplying, stop the water running. Osaka Society for the Prevention of Cruelty to animals."

### ASOTIN FRUIT OUTPUT.

Asotin county fruit growers in southeastern Washington, according to Inspector Charles G. Andrus, have received the net sum of $143,909 for fresh fruit shipped during the 1918 season. Additional were hundreds of tons of fruit handled by local canneries, which paid fruit men $44,619, making a grand total of $187,529.

### WASH. WOOLGROWERS' ASSOCIATION.

In compliance with a request from the health authorities here the annual meeting of the Washington Wool Growers' association, originally scheduled for December 19, has been postponed to January 10 and 11.

# A CROOKED TRAIL---By Lewis B. Miller

Copyright by The Page Company, 1911.

**A story of a thousand-mile saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

**SYNOPSIS.**

Little did Travis Holloway realize, as he trudged off through the woods to bring in the calves and the oxen, that he was leaving his Texas frontier home to be gone many weeks. And little did he realize the adventure that those weeks held for him. Lep, his father's big spotted ox, was gone, and Travis, catching his pony, started to hunt him, riding bareback and without bridle. He breakfasted at a neighbor's where he borrowed bridle and saddle. Following a clue as to the whereabouts of the stray ox, he traveled too far to return home that night, and camped on the prairie with unseasoned rabbit meat and wild turkey eggs for his supper and breakfast. Next day and the next he went on and on. He had all but caught up with the lost animal when he arrived at the home of another frontier family, where he became acquainted with Frank and Stella Booth. Had he not tarried to spend the night and the next day with them, sure that the ox was with their cattle nearby, he would have found him and cut his travels short. But instead, the ox, accompanied by some of Frank's cattle was gone. Together the boys started out in pursuit and together they were destined to meet adventure after adventure for weeks. A haunted house, a hidden well, a swollen river, cattle thieves and sheriffs figured in their travels. Unwittingly they help the thieves, who later refuse to release their cattle. Even the sheriff fails to assist them, and they undertake, by a clever method, to secure them themselves. They fall in with cattlemen and hire out to them, actually helping to drive their own stock farther and father away from home.

## CHAPTER XVI.

### Where Heroes Had Fallen.

NOT till our party had halted for noon could Frank and I snatch a chance to talk over the strange situation in which we now found ourselves. Soon after dinner Hart, accompanied by two of his cowboys, Ame Watson and Ben Dankins, rode off on a hunt for cattle that could be bought. The other hand, Newt Lindsay, remained at the camp to help us keep watch over the drove.

But a short while after Hart had gone Newt, remarking that there was little to do, and that he was about to go to sleep, strolled away up the creek in quest of ripe grapes, Sam, the black cook, having washed and put away the few dinner-dishes and pots and pans, cut himself a dogwood fishing-pole, tied a line to the little end of it, and set off down the valley.

"Reckon little mess o' fish taste mighty good 'long 'bout supper-time," he remarked as he passed us. "Dey bites de bes' kin' in de cool, shady places, fish does," he added, suggestively.

Most of the cattle were standing or lying in the shade, lazily switching flies and chewing their cuds. Vic was exploring the near-by woods for squirrels. Frank and I had resaddled our horses, but had turned them loose to graze, while we ourselves took refuge in the friendly shadow of a gigantic sycamore.

"Well, here we are," I remarked, soon after we had been left alone.

"Yes, here we are," repeated Frank. "There lie our cattle, there stand our horses, already saddled, and there's the road toward home. What's to hinder us from jumping into our saddles, driving up our cattle and taking the back trail?"

"Sure enough, what is to hinder us?" I answered. "Not a thing in the world I can see—except one."

"That's right—except one," agreed Frank. "When a man hires us to take care of his cattle, and trusts us, we can't play him that kind of a mean trick."

"No, we couldn't sneak off like that. The gate's open, but there are bars behind it, and they're still up. It looks like a fine chance to get out of the pen, but it's not half as good as it looks. We've got to wait for something better."

"Still, it's a curious shape affairs have worked themselves into. I couldn't imagined such a thing as this yesterday."

"Though we can't do as we please with our cattle, they're in our hands. And that's something gained. It's more than we've been able to say before since we started from home."

"Yes, we've made a long step forward there, Travis. We can look after them ourselves now, and see that they don't slip out of our fingers again. They're in our possession. Now the question comes: How can we get them under our control, so that we can cut them out and drive for home with them?"

"That's a puzzle. The only way I can think of is to march straight up to Hart, put in our claim, and have it out with him then and there."

"But what will he say—and do?" asked Frank. "I have a suspicion that he's pretty hot-tempered, and that the fire flies when he gets mad."

"From several little things I saw, I'd guess him off about the same way. But what are we to do? We can't let him keep our cattle just to keep him in a good humor."

"No, of course not. Still, I'd rather get a little better acquainted with him, and on friendlier terms with him, before we stir him up. He seems like a pretty square sort of a man, but we may have our eyes opened by the time we've worked for him a few days."

"I'll tell you, Frank. We're earning fair wages now; and as long as that lasts I'm in no great rush to get home. Not much work to do there, for pay, this time of year. Suppose we stay with Hart a week or so, and see what will turn up. Maybe things will take some unexpected twist, like they did this morning."

"All right. That may prove the easiest way out of the woods," Frank agreed. And after a little more discussion, the subject was dropped for the time.

NEWT, the grape-hunter, came back a good while later; and so, finally, did Sam, the fisherman. Sam now began to harness his wagon-mules, and Newt and Frank and I punched up and rounded up the cattle and got them under way. This was according to our instructions.

About the middle of the afternoon we came upon Hart and his two hands, waiting by the roadside with a little bunch of cows and young cattle they had bought. The new cattle were thrust into the drove, and the three men made another short circuit, striking the road again three or four miles ahead. The second time they returned empty-handed. But a little later Hart bought several yearlings from a settler living on our line of march.

All the new cattle had to be watched closely at first, to keep them from breaking out of the drove.

We were now nearing the Colorado river. When night came down upon us, we had camped in sight of it; and next morning we marched across. From here on, if we had proceeded toward Hart's ranch, our course would have been due west, and parallel with the river. The Colorado, at our crossing-point, runs south; but a little further north it bends almost at right angles, and above that for many miles its general course is east. The road we were now following was well beaten and dusty. It was the Fort Concho trail. Hart's ranch, we were told, was situated on the Fort Concho river, a tributary of the Colorado, two days' travel beyond the fort.

But instead of moving on toward Fort Concho, we now headed almost due south, in the direction of San Antonio.

The country was more or less broken, and rather thinly settled. But all the settlers were cattle-raisers, and most of them had at least a few head to sell. And that was what we were out for.

HART now informed us that we would travel southward, he did not know how far, then bend west and double back, striking the Fort Concho trail 20 or 30 miles nearer the fort than where we were leaving it. The circuit he expected to make would occupy from a week to three weeks, according to the rapidity with which we accumulated cattle.

"Well, Frank, we're tied up for several days now, it seems," remarked I, the first time we were alone together after the turn southward. "We'd better not try to get our cattle away till this buying circuit winds up."

"No, I don't see that we can well," he answered, thoughtfully. "But we must be ready to cut loose and strike for home the first minute after we get back to that main-traveled trail."

I agreed with him; and again we dropped the subject for the present, though it was never out of our thoughts long at a time, I think.

Now we both wrote letters home and mailed them at the first postoffice we came to. We explained that we had found the cattle at last, and had them with us; but that the man in whose drove they now were had offered us fair wages to accompany him on a little cattle-buying trip, and we would not start for home for a few days yet. As heretofore, we were careful to say, we would write at least a postal-card from every postoffice on our route.

Not caring to worry our friends as we ourselves were worried, we did not inform them that our cattle were not actually in our possession, and that we did not know how we could get possession of them. On that point, however, we had fully made up our minds. Get possession of them we would, one way or another.

Sometimes, for a change, Frank and I rode out with Hart on his little side-trips, to help him drive back the cattle he bought. Usually, however, our work was with the main drove. At first Newt or one of the other cowboys always remained with us; but after two or three days Hart got sufficient confidence to leave the cattle in our care. We not only held them under herd during his absence, but we also did most of the driving, starting and stopping according to his instructions.

EVERY day we made two drives of 10 to 12 miles each. By this plan the cattle were always either marching or grazing or resting; and they had no time left to grow restless. With the exception of those just turned into the drove, which had to be watched to keep them from breaking out or slipping off into the brush, they gave us far less trouble than we had expected.

One morning, three or four days after we had turned southward, Frank and I underwent a very unpleasant experience.

Immediately after breakfast, Hart, accompanied by three cowboys, Ame and Ben and Newt, rode ahead to begin the day's buying. Having allowed the cattle to graze an hour or two longer, Frank and I rounded them up and drove on, followed by Sam with the wagon.

After traveling a few miles we overtook Hart, dismounted by the roadside, in front of a cabin. The three hands had ridden on, but Hart was talking to a settler, a big, bushy-bearded man dressed in pantaloons and shirt of soiled buckskin. Scarcely had the leaders marched by the cabin when Hart signaled a halt. We galloped around till we got ahead of the cattle, and quickly brought them to a standstill. Then Hart called out:

"Travis, I wish you'd ride in there and cut out that bell-steer for me."

Lep was the only belled animal in the drove. I pushed in among the cattle and brought him out, stopping in front of the two men. Already I had serious misgivings, which increased to positive alarm when Hart turned to the settler and said:

"There's that work-steer. He's a good one, too. I'll either swap him for other cattle, or sell 'im, just as you please. He's the only animal in the drove that ever wore a yoke, I guess. If you've got an odd steer that will match 'im, he's worth every cent I ask for 'im, and more."

Then they proceeded to try to trade. I withdrew a few yards, but not out of ear-shot, and waited anxiously, almost in terror, as I thought of the complicated situation that would follow the transfer of Lep to a stranger.

WE had recently told Hart that we expected to stay with him at least till we touched the Fort Concho trail again. If Lep was sold or swapped off, he would be left here, while Frank's two animals would go on with the drove. What we ourselves should do under those circumstances there was no knowing. Bitterly I regretter now that we had not explained matters to Hart the day we hired ourselves to him, instead of weakly procrastinating as we had done.

Presently Frank rode over to me and said, in low tones:

"You know what's on foot there, don't you?"

"Do you think they'll make a bargain of it?"

"Yes, I do," I answered, with some agitation.

"I believe they will, Frank."

"Then, if they do, we've got to blurt out the truth here and now, or forever hereafter keep our mouths shut. We won't dare hold it in a minute longer. If we keep silent and let that steer pass into the hands of an innocent purchaser, without making any claim or protest, you never can claim him, by law or any other way. Maybe your father could, but you can't."

Frank knew more of law than I did. But this view of the matter struck me at once as being at least the best kind of common-sense.

Every word that reached our ears seemed to indicate that Hart and the settler were on the point of coming to an agreement. After listening a short time I said:

"If they trade I'll speak out right away. And you'd better claim your cattle, too. Hart will be mad, mad, mad when we step in and knock his trade in the head. And we can't blame him much."

"Mad's no name for it, Travis. He'll be crazy—wild. I'd rather punch a hornets' nest 20 times any day. He'll swear till the air's blue, and then tell us to make tracks. No doubt about that. But it will only serve us right. We oughtn't to have let this matter drag so long."

"Well, if he chases us off and our cattle with us, we can stand it," I said. "But if he holds our cattle—"

"Listen!" whispered Frank.

The settler and Hart had almost come to an understanding, as it seemed. But now, before closing the trade the settler was walking around Lep, giving him a critical inspection.

And the inspection, it soon became evident, was not altogether satisfacory. Though he did not say so in so many words, I easily understood that he was afraid of Lep—afraid that the ox would prove vicious and give trouble under the yoke. Those horns did look threatening. On that point I could easily have relieved the man's fears; but, needless to say, I was as silent as a gate-post.

Seeing that the man in buckskin was trying to back out, Hart, who had only a limited stock of patience, promptly lost what little he had. He ignored the settler, and sprang upon the horse and shouted, with ill-concealed irritation:

"Drive on, boys! We've fooled away too much time here already!"

And drive on we did, with a hearty good will, glad to have Lep still in the drove; and even gladder, perhaps, to have escaped the fury of our quick-tempered employer.

"But the same trouble is liable to turn up again any day," Frank remarked to me, after Hart had left us. "And it'll be pretty sure to end differently next time. We'd better have a plain talk with Hart right soon."

"That's the thing. We'll have it just as soon as—as soon as we catch him in a good humor."

But a disagreeable duty is never made easier by being put off—rather harder. And from day to day we still kept postponing the dreadful interview. And the longer we delayed the harder it seemed to us to explain why we had not made our claim the first day instead of waiting all this time.

OUR party kept on marching southward, from 20 to 25 miles a day; and every day we added 20 or 30 cattle to the drove. Soon we found ourselves but little more than a day's march from San Antonio.

Hart had not intended to travel any further south. In fact, he had not at first expected to advance as far down as this. But, having a little business in San Antonio, he now decided to go on and look after it.

We went into camp a few miles north of the town one night. And next morning Hart, in company with Ben Dankins and Ame Watson, and followed by Sam with the wagons, set off in that direction. They would bring back some supplies.

It was about 2 o'clock when the party returned. Now Newt Lindsay, Frank and I got ready for a visit. Hart paid all of us some money, Frank and me $10 apiece; though we had not asked for it, and had no intention of spending much. We were going to see rather than to spend.

It was with feelings of keenest interest that I rode into the historic old town. From my childhood I had heard much of it; and much I had read of it, in the history of Texas and elsewhere. "San Antone," all old Texans called it. It contained nearly 20,000 people, and was, at the time of our visit, without a railroad. In fact, it was a city set out in the wilderness. Its population was largely, though by no means wholly, made up of Mexicans.

In appearance it was scarcely an attractive place, even to our inexperienced eyes. We rode up and down its principal streets, and finally dismounted in a plaza. Most of the visiting people present, except the Mexicans, seemed to be cowboys from the neighboring ranches.

One of the peculiar things we noticed in the streets was a wagon train, loaded with barrels of flour, drawn by oxen and driven by Mexican teamsters. It was just coming in from Austin, the nearest railroad point. Strictly speaking, it was only a cart train. But every cart had a big frame on it, so that a huge wagonload was deftly balanced on its two wheels. Each cart was pulled by several yoke of oxen; and the yokes, instead of having bows, were lashed to the oxen's horns.

"Did you ever hear of anything half as foolish?" laughed Frank.

"You needn't laugh. It's no laughing matter," I told him. "At least those oxen don't think so, I imagine."

"No, I'd say not," spoke up Newt. "It's about the same thing as if a man, instead of puttin' harness on his horses was to hitch his halter straps back to the wagon and make 'em pull by their noses."

"But why don't they learn better?" asked Frank. "I see other ox teams here, working with yokes and bows."

"Oh, a Greaser never learns anything," replied Newt, contemptuously. "If he did, he wouldn't be a Greaser."

One place in San Antonio we all wanted to see—were resolved not to go back without seeing. And after looking over the city and buying the few things we had need for, we directed our steps to the Alamo.

That thick-walled battle-scarred old mission house would have been interesting in itself; but it was rendered many times more interesting to us because of one great historical event. For here, on March 6, 1836, had fallen, after a bloody struggle, Colonel Travis and all the 189 heroes who laid down their lives to cripple the Power of Santa Ana and break the tyranny of Mexico.

The old building was at this time private property; but the man living there cheerfully showed us through. Strange feelings, which I shall not attempt to describe, thrilled me as I stood in the room where Davy Crockett, the famous backwoodsman and congressman, had made his last stand, fighting with his clubbed, broken rifle till he was shot down. In another room we saw where Bowie, the man with the terrible knife, had risen from his sick bed to sell his life as dearly as possible.

"And how many Mexicans fell while they were storming this building?" inquired Frank.

"The official report, made by one of the Mexican generals, put their loss at about 500, I think," answered the owner of the building. "And that's the number given in most of the histories of Texas. But the alcalde that had charge of burying the dead always insisted that he buried 1500. Hard to say who told the truth. But 500 or 1500, old Santy Anny needed every man of 'em about six weeks later, when Sam Houston turned on 'im at San Jacinto and literally wiped out his army, and took old Santy prisoner."

"The one big mistake Houston made was when he didn't introduce Santy Anny to the first good limb he came to, instead of turnin' 'im loose to live 40 years longer," declared Newt, resentfully. For the treacherous, cruel Mexican general had long been an object of bitter hatred in Texas.

"Well it's better to—to err on the side of mercy than against mercy," remarked Frank. And undoubtedly he was right.

We lingered about the Alamo till night was upon us, then mounted and rode back to camp.

# Learn to Handle Fur

By George La Rue, Twisp, Wash.

Furs, as well as other commodities, have advanced in value so much that trapping may keep pace with other occupations. At present we find unusual inducements along most any legal pursuit or business we may choose to take up. The great advance in the fur market and the fact that many boys and men like the sport of trapping, will start quite an army of men and boys in pursuit of the fur bearers. Most amateurs will think only of catching the animal that wears the valuable coat and will overlook the art of disrobing, stretching and drying the skin so it will be the most valuable. Handling the fur after it is caught is just as important as catching the animal. Very few trappers take as much interest as they should in learning to handle furs. Most furs bring the most when cased, but merely casing the pelt is not all there is to do. Having had some experience in buying furs I have found them handled in many ways. Some will take the fur off and keep it a month without stretching, others will pull a fur over an old rough board and hang it up on the south side of a building so as to dry it quickly. Most of those fellows want the top quotations for their furs and sometimes feel as if they have been robbed when they are paid more than the buyer can get for them. Sometimes I have soaked a valuable skin and restretched it, but I would much rather skin two animals and handle the furs at first than work one over after it is dry. When casing a fur, split down the back of each hind leg to the root of the tail and down the tail half way or far enough so you can pull the bone out of the tail without pulling the tail off. That is all the splitting that is necessary. Just skin down to the end of the nose and be careful not to cut the pelt and leave as little flesh on the pelt as possible. Turn the flesh side in until you can get a stretcher board prepared and when ready to stretch turn it flesh side out and stretch that way. Tack it fast to the stretcher at the root of the tail and the end of each hind leg, and it is best to have a narrow piece of board to stick down between the stretcher board and the fur. Have it long enough to reach about the full length of the fur and push it down between the front legs and tack it at the back end. Hang in a cool, dry, shady place to dry. A good trapper in a good locality should clear considerable money in a season while the present high prices continue. Sometimes I feel like quitting the farm and going after the high priced fur.

# Corn Looms Big

Corn is by far the most important crop in the United States. The acreage and also the value of the corn crop is greater than that of wheat, oats, barley, rye, buckwheat, rice, fruits and nuts combined. The relative importance of corn as compared with other cereals has remained fairly constant since the first agricultural census of 1840.

The climatic boundaries of the region of greatest production of corn in the United States is the mean summer temperature of 70 degrees to 80 degrees, a mean night temperature exceeding 58 degrees, a frostless season of over 140 days, and an annual precipitation of 25 to 50 inches, of which seven inches occur during July and August.

Corn is the great American crop, grown on three-fourths of all the farms in the United States, which produce nearly three-fourths of all the corn in the world.

Within the United States, three-fourths of all the corn produced is grown in the Mississippi valley.

Outside of the south, very little of the corn is directly consumed by man, most of the crop is fed to cattle and hogs and consumed as feed.

The production of corn in Europe is about one-fourth of that in the United States.

The broad, fertile plains of Hungary places that country in the lead among European regions in corn acreage and production.

In Rumania, corn is both the chief food of the people and an important article of export. Corn in Egypt is grown entirely under irrigation. The crop is planted in July and harvested in October and November, being irrigated about every 10 days.

The corn acreage in Mexico ranks next to that in the United States. Most of the corn in Mexico is grown in small patches of a few acres leased by the peons, from large landholders, and is produced by very primitive methods. The corn is used mostly for corn bread, which, together with beans, constitutes the staple diet of the Mexican people.

The corn crop of Argentina occupies 21 per cent of the land and crops and in per capita production Argentina ranks next to the United States.

Most of the corn raised in Argentina is of the flinty type, which stands transportation well.

**TRAP FURS MAKE BIG MONEY**

# Chapped Hands

## Learn to Use Simple Remedies

By MARGARET PALMER.

It won't be long until the children, as well as the grown-ups, will be complaining of chapped hands, lips and cheeks. This is one of the real trials that every mother has to battle with and now is the best time to get ready for this trouble by laying in a few simple remedies. Then learn and teach the children how to use them and protect themselves from getting chapped hands, lips and face. This will prevent much pain and suffering for them and save lots of work and time for every mother.

Cocoa butter, camphor ice and mutton tallow are very healing. The latter can be made at home without any expense. If put in a clean, small, round tin box to harden and if it is kept covered it will keep fresh and nice for a long time.

It is best if used at night rather than during the day. If it is used in the day time, the grease will gather dust. This will make the hands look bad as the dirt and grime will work into the chapped skin and as the tallow heals the skin quickly, it will make the hands look and feel worse than when they were just chapped.

Always wash the face and hands thoroughly with some good, pure white soap in warm water, but do not use the soap too liberally. Dry thoroughly, then dip the hands in a little vinegar—it will smart, but is very healing. Next dip the finger tips into melted tallow and rub well into the skin and wherever there is any roughness, as well as all chapped parts. Just a very little of the tallow will be needed. More than this will be too much.

This treatment is one of the surest and best ways of healing cracked lips, hands and fingers from exposure and rough work.

Another healing application is made of equal parts of glycerine and lemon juice. This is nice to use in mild cases or as a preventive or after the skin has started to heal by using the tallow. Medicated vaseline can also be used in the same way as the tallow is used and is very good, but not as effective as the tallow.

If the hands have become dirty while they are chapped or the cheeks or chin, as is often the case with children, and if the dirt seems to be in the skin, rub it with plain lard or camphor ice or cocoa butter, rubbing with the same motion as the soap was being used, leaving it on a few minutes. Then wash off with warm water and a little cornmeal instead of soap. If the cornmeal does not remove most of the dirt, use a little soap. Dry thoroughly and apply the tallow. The next morning wash the hands again in warm water, using a little soap. After they have been dried, dust with a little cornmeal which will help the healing along.

Every woman is always troubled in doing fine needlework if her hands are rough. In a measure this can be prevented if a little forethought is used and such must be done by every woman who does all or a part of her housework and outside work as well. Nothing will roughen the hands as much as general housework, a little gardening or outside work and with the first snap of cold weather the hands will be in perfect condition for chapping and discoloring.

It is impossible to wear gloves for all dry work, but they can be worn very often to save the hands. It is best to have three pairs of cotton flannel working gloves for this purpose. One to be used in doing the outside work and the other for the dirtiest work in the house and one for general purposes. One would not come amiss in the cellar to go over the vegetables as they are picked over or even getting those for a meal.

Try and do as much of the wet work as possible at the same time. After having the hands in the water for some time—after washing them thoroughly—dip them in cold water two or three times. Dry thoroughly. The cold water will harden the pores of the skin and make them less sensitive. It is an excellent plan after having the hands in water some time to rub a little honey and lemon juice on them. Use two tablespoons of honey to one of lemon juice. Keep this handy and it will save rough and chapped hands many times during the cold weather. Always wear gloves as far as possible in doing rough work of any kind. All this takes but a few moments, but it is worth the comfort as well as the improvement in the appearance of the hands for the time and trouble it takes.

### METHODS OF SAVING.

**How to Freshen Old Velvet; About Bleaching of Flour Sacks.**

The following hints for saving are sent out by the extension department of the Washington State college:

Place a hot iron flat side up on the kitchen work table. On either side of the iron place a brick to serve as a resting place for the cloth. Take a piece of damp cloth and stretch it out over the bricks. You now have a steaming arrangement for renovating velvet in need of freshening. Place the velvet over the steaming cloth, brushing up the nap with a fine soft brush. It must be done quickly to prevent the nap becoming too wet.

Use your flour sacks. They can be made into serviceable kitchen aprons, bags, tea towels, dish cloths, dust cloths, etc. (after they are ripped, washed and bleached). To bleach them, soak in a solution made by dissolving as nearly as possible 1-2 to 1 ounce chloride of lime for each gallon of water (strain sediment through a cloth). Rinse thoroughly and boil in good suds.

### MEANS MORE THAN STEW AND HASH.

This new war on waste means far more than "stews" and "hashes" and "bread puddings," more than the gospel of the "clean plate." It calls for balanced rations, scientific feeding and learning to look a calorie in the face with due respect and without fear.

The training and discipline of last year will help. Go forward on this foundation and acquire that economic cookery for which certain countries are famed, but which they learned through long centuries of short meat and dairy supplies.

There is no time to wait on this expensive teacher—experience. Take the short cut based on knowledge of food values. You are called now, in the name of humanity, to adjust your table at once, and to practice the most rigid economy in the face of apparent plenty.

Economy and good food can go together only when based on knowledge, whether learned from experience or books. So learn to face a calorie and respect the ration.

# Making Over

Because actual fighting is over, we must not assume that conditions are normal and feel that our carefully limited use of the woolen supply can cease at once, for just now the world's supply of woolen, linen and other raw materials is extremely low, and no one of these should be consumed in any but the most essential work, says a writer in the extension service bulletin of the Washington State college.

Through fashion and improper care more money is wasted on clothing than on food. It is said that American women wear out only 15 per cent of the garments they buy. They must now use the other 85 per cent.

| Garment. | After Alteration. |
|---|---|
| Woman's long coat.. | Short coat. Child's coat. Skirt. One-piece dress. |
| Woman's suit..... | Girl's suit. One-piece dress. Dress for girl. Suit for boy. |
| Man's trousers..... | Boy's trousers. |
| Woman's dress..... | Remodel by combining with other materials. Jumper dress with white sleeves. Girl's dress. |
| White or silk waist.. | Slip to wear under voile or crepe waist. |
| Wool skirt..... | Ripped, washed and recut. Coat for a child. Bloomers. |
| Wash skirt..... | Ripped and recut on better lines, contrasting material used to lengthen or widen, for pockets, belt, etc. Middy, waist, rompers, petticoat or aprons. |

Few women realize the necessity and value of pressing. Many a suit has been discarded because it looked shabby and had lost its freshness. Careful pressing will prevent bagging and a decidedly unattractive, wrinkled appearance. Constant care in mending, cleaning and pressing woolen and silk garments will lengthen their period of usefulness, and in this way conserve our supply of raw materials until the readjustments following war have taken place.

### Do Not Let It Rot.

The old sack or board or pile of rubbish should not be allowed to lie on the ground and rot. If it is not worth saving, burn it up.

# Christmas Leftovers

## What Good Dinners They Do Make!

The days following Christmas are rich ones for the housekeeper who likes to see what good meals she can prepare out of "a little bit of nothing." Desserts, salads, casseroles and creamed dishes are natural results of a big meal.

Do not let cold pieces of roast fowl be passed out to the children for lunches when they could be made into a meat course for the whole family. Desserts can be reheated, served with a new sauce or fruit and made to appear like new deserts.

Creamed turkey, goose, duck or chicken makes an excellent dish for either luncheon or dinner following Christmas. All the little pieces, not large enough to serve, and those bits that cling to bones can be readily diced, heated well and covered with a cream sauce.

The celery which was left makes a delicious salad when combined with shredded turkey and a little boiled dressing. A small pie made of turkey or whatever fowl you had makes a delicious way of serving left-overs. The "crust" may be made of mashed potatoes or hominy as is sometimes done in Shepherd's pie.

Vegetable hash is one way of using up small quantities of left-over vegetables. Squash, potatoes and turnips may be put into an oiled baking dish, covered with crumbs and grated cheese, and baked till brown.

Bread pudding will not only use up any odds and ends of bread and cake that may have been left, but if the left-over cranberries are baked with it, it makes a dessert that is delicious as well as food saving.

Do not waste a single piece of food left from the meal if you have to serve a different kind of food to every member of the family. But recall your knowledge of casseroles and salads and see if you can not make a delicious dish for the whole family out of the Christmas left-overs.

# Sanitary Methods

Upon thorough inspection, made at the request of President Higley, the health board has approved the sanitary arrangements and conduct of the Northwestern Business College.

Our school is open every day, without holiday vacation. Students may enter at any time. Ask for our Ninteenth Annual Catalog.

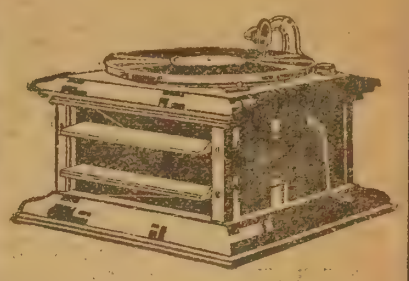
### PICTURE BOOKS FOR BABY.



"Buy only the best picture-books for my baby!" a mother exclaims. "Why, anything will do, if it is bright-colored and will not tear."

But will anything do? Baby's brain is eager and alert. He is taking in a stock of ideas to use when he begins to speak and read, says Frances Jenkins Olcott of the United States bureau of education. He is imitative, and is learning to do the things he sees done in his pictures. He is developing his sense of color.

Pictures may be made the beginning of baby's education as well as a delight to him. And what a joy he takes in entering into the life he seems in each bright-colored print! But he will not learn from them unless they please him. He likes best primary colors, and large figures of animals and of children at work or play. His first books should be untearable, so that he will not be able to destroy them whenever the impulse seizes him. The term untearable or indestructible, however, does not guarantee that a book will not be destroyed by rough handling.

# food

.is mightier than pen and sword

It is the foundation of health and human energy. It produces the stamina and the strength to do things. On the field of battle—as well as on the tables where peace and plenty reign—chocolate has proved itself a 100% food.

To insure supreme quality chocolate you must *insist* upon Ghirardelli's. It comes *only* in cans *—for your protection.*

At the store where you do your trading—in ½ lb., 1 lb. and 3 lb. cans.

*"Say Gear-ar-delly"*

D. GHIRARDELLI CO.

Since 1852 San Francisco

Ghirardelli's Ground Chocolate

Dear Corner Cousins: One of our dear little cousins has sent us a recipe for candy made with honey instead of sugar, and those of us who have plenty of honey will appreciate it and I am sure will add it to our lists: 2 cupfuls strained honey, 2 tablespoons butter, 1-4 teaspoonful salt, 1-2 cupful cream, 1 teaspoonful lemon extract.

Put honey, butter, cream and salt into a sauce pan. Boil until it forms a hard ball when tested in cold water. Remove from the fire and stir in the lemon extract and pour on buttered plates. Mark into squares before cold.

AUNT NELLIE.

### Likes Outdoor Sports.

Dear Aunt Nellie: We have quite a large number in our family. There are 10 of us. I have three brothers, Henry 16, Walter 5 and Oscar 3. My sisters are Louise 12, Ella, 11, Gertrude 2, and my baby sister is 1 month old. I am five feet eight inches tall and weigh 135 pounds. I am 14 years old and my birthday is January 2. I have blue eyes and light brown curly hair. I passed the eighth grade this last spring and I wear glasses. My favorite sports are tennis, horseback riding, bicycle riding, and I have read several books, for I love to read. Louise and Ella and Walter go to school now. We live on a farm by Lone Pine and have six horses. Their names are Dick, Jim, George, Duke, the saddle horse, and Maude and Nell. Our two cows are Peb and Patricia. We have four hogs and about 45 chickens. I have a pet dog and have taught him to shake hands, fetch sticks and play with a ball. His name is Carlo. We have four cats. My sister Louise and I took music lessons last summer from mama. We have an organ. I have just about found my twin. His name is Lester Large, but I forgot his address. He is the same age and height. We used to live in Idaho. My father took the Farmer awhile back, but only began to take it again some time ago. We have been here two years and are going to move again soon. I am sending a few riddles: Which candle burns the longest, wax or tallow? I think my sister Louise will write soon. Ella has written already and found her twin. I will close with love to Aunt Nellie and the cousins.—Agnes Helena Liere, R. F. D. 1, Tekoa, Wash.

### Brother Is Coming to Visit.

Dear Aunt Nellie: I love to read the letters from the cousins. My brother has just gotten over the typhoid fever. He was in the hospital for six weeks and just got home. He is 16 years old. I have been corresponding with some of the cousins, but at present I am only writing to Irene Clarke and Retta Gray. I was 14 years old July 23 and am in the eighth grade. There are two rooms in our school. There are 12 pupils in our room and about 30 pupils in both rooms. My cousin, who is in the U. S. navy on the battleship New Orleans, on the Atlantic coast, is coming out to see us next month and I can hardly wait to see him. He enlisted last summer in July. He is a gunner. I would be glad to hear from some of the cousins or any one who would like to write to me. I will send my picture the next time I write.—Virginia Clarke, Penawawa, Wash.

### Will Write to Two Cousins.

Dear Aunt Nellie: I was 13 years old September 16. My hair is dark brown. I weigh 99 pounds. I am four feet nine inches tall. I have brown eyes. Have I a twin? If I have I wish they would write to me. I am in the seventh grade. I have almost found two twins. They are 13 years old and their birthdays are July 8 and April 2. If you think that I can call them my twins I will write to them. They are Eva Priddy, Route 2, Touchet, Wash., and Clara Pohle, Spokane, Wash. I have five brothers and one sister. We have four horses and two colts. The horses' names are Maud, Gipsy, Betsy and Effy. The colts' names are Florence and Trixy. We have two cows. Their names are Flossy and Mary Jane.—Myrtle Garrett, R. F. D. 1, Box 15, Okanogan, Wash.

### Not Her Last Letter.

Dear Aunt Nellie: I like to write to the Corner and I enjoy the cousins' letters very much. I wrote to Linda Anderson and she answered it and I answered her letter again, but she didn't write any more, so I wrote to her last week again. I don't think this is going to be my last letter to the Corner. I am going to try and answer Ella Mae Payton's riddles. Something that goes up and down the hill and yet it stands still. Tongue. One hundred eyes and never a nose. Thimble. I would like to get a letter from Ella Mae Payton. I will give some riddles now. The more you take from it the bigger it gets. What has tongue and can't walk? I rode and yet I walk. I sit down and walk. As I was going over the bridge to London I met a man with a wheelbarrow full of fingers and thumbs. My brother who was in Camp Lewis is in France now. I have one uncle in France, too, but he isn't where my brother is. He is in a blacksmith shop. I spent a couple of weeks with my aunt and uncle. I had a dandy time over there. We went fishing and we went to a couple of shows in Waterville. We are going to move. Maybe next summer we are going to have a picnic on the lake and we are going to camp out, too. Arthur Halla is going to rent this place. He is our best friend. I am sending you part of a peacock feather with this letter. Love to Aunt Nellie and the cousins.—Luella Venneberg, Manson, Wash. (Thank you, dear, for the peacock feather. It is beautiful.—Aunt Nellie.)

### Visiting Grandmother.

Dear Aunt Nellie: I wonder if I have a twin? I was 10 years old June 10. I have three sisters, Marie 17, twin sisters Genevieve and Geneva, they are 14, two brothers, David and Alfred. Alfred is in France. David belongs to the home guards, as does my cousin, Wesley Turner. I stayed this summer with my Grandma Davison and Uncle Charlie. I like reading the Children's Corner very much. Wasn't I surprised and glad to read Lella Wilson's letter. Her teacher, Miss Mary Agnes Wright, was my teacher also. I was one of the little green leaves in the school play. My mama has a picture of Lella and her dog. It is fine. She has a picture of Richard also. They live on Lopey island. I like the island fine. Uncle Charlie has some pet cats. Their names are Suesetta, Fuzetta, Brindletta and Black Tom Tinker. They are white, yellow, spotted and black. He has three horses, Pet, Babe and Queen; also three cows, Red, Spot and Speck. Grandma's place has 160 acres. There are quite a lot of fruit trees and a fine spring. The valley looks very nice from here.—George Claud Turner, Lock Box 23, Thorp, Wash.

### A Good Time at School.

Dear Aunt Nellie: I read the letters and am interested in them. I was 11 last May 22, and I am in the fifth grade. I would like to hear from a cousin the same age and I would write to him or her if I know them or not. We live in the country, and I go to a country school. It is about one and one-half miles from our house, and I walk to school. My teacher's name is Miss Taylor. We like her fine. There are only five children in our school, but we have a good time any way. There are two girls and three boys. There are two years' difference between me and the other girl, but we are both about the same size. Last year I knitted 12 squares and I bought two war savings stamps. I have three brothers and no sisters. My brothers are Lloyd, Glen and Walter. Walter is 18 years old, Lloyd is 17, and Glen is 2 months old. He is very cute. My pets are a gold fish and two cats. —Lela Thorpe, Edwall, Wash.

### Pets Teach Children Kindness.

Dear Aunt Nellie: I am wondering if I may be a cousin. May I? I am a big girl 15 years old June 5, 1918. Have I a twin? I would like to correspond with some of the cousins, if they would care to write to me. I live on a 260-acre farm near Colville. I have many pets and I would not part with them for the world. I think they are the most wonderful things for children as it teaches them kindness. I have two Red Cross pins and some war savings stamps, and I intend to have more. My father has a Liberty bond. I have one brother. He is only 3 months old. He has light hair and blue eyes and weighs 17 pounds. We have 24 pupils in our school. I took the state examination for the eighth grade last May, but I failed in one subject. My teacher's name is Miss Ashburn. I think she is the best teacher we have had. With best wishes to all the cousins and much love to Aunt Nellie, I will say goodby.—Bertha Marion Brown, Route 1, Addy, Wash.

### Teacher Is Kind and Nice.

Dear Aunt Nellie: My papa takes the Farmer. I like to read the children's letters. I enjoy them ever so much. We live on a farm of 20 acres, mostly fruit. We have two horses, one cow, and for our pets, three kittens and one bird dog named Judy. I have two sisters, Helen and Josie, and one brother, Lester, who is 9 years old. My father fought in the Spanish-American war. I have two uncles in France now and one in Camp Lewis. Have I a twin? If so I wish they would write to me. My birthday is November 24. I am in the fourth grade. My teacher's name is Miss Hamilton. We like her, too, she is so kind and nice. There are 50 pupils in our room. I have light hair and brown eyes. I only weigh 55 pounds. I was 11 my last birthday.—May Sanders, Route 4, Box 136, Yakima, Wash.

### Wins Prizes at Sunday School.

Dear Aunt Nellie: This is the fourth time I have written to the Corner. I hope it will not be the last. I am 14 years old. My birthday is June 30. I have been corresponding with a girl who lives at Eureka, Wash. Her name is Beulah Gluck. She is 13 years old. Her birthday is October 6. I am in the eighth grade. There are 11 pupils in our school. My teacher's name is J. H. Hill. I like him fine. We have nine cows, seven calves, seven horses, four sheep, one dog and one cat. I call the cat Sir Laviene. He is a black cat. I helped one of my aunts drive about 11 head of cattle about 17 miles and a half. We went on horseback. I surely was tired when I got home. We started about 10 a. m. and got home about 3:30 p. m. We have a Sunday school at Cliffs and I go every Sunday I can. The superintendent of our Sunday school gives prizes. I got nearly every one. I learned every one of the names of the books in the old and new testaments, the Ten Commandments, five chapters of Mark. As prizes I got a blue crocheted dust cap, a pin of the Cross and Crown, and $1.50. I have bought one war savings samp and I intend to buy more.—I will write again.—Beulah Walker, Cliffs, Wash.

### Learn to Be Strong and Industrious.

Dear Aunt Nellie: I like to go to school very much, and hope that all the cousins do. My birthday is May 23. Have I a twin? I would like to correspond with any of them. My two cousins and a friend wrote. We do not take the Farmer, but our neighbor does and I get to read some of the letters, but not all as I wish I could. I am in the seventh grade and go to the Glenwood school. My friend, Lela Bailey, saw her friend's letter in the paper. Her name was Marie Kilgore of Deep Creek, Wash. I read it and thought it a nice letter. Lela said she might write. She is my nearest neighbor. We go to school to learn to be strong, healthy, industrious men and women. I hope we all want to be that. I, at least, want to be. I hope the kaiser finds his thinking cap and thinks a while, don't you?—Ruth Reynolds, aged 12, Elberton, Wash.

### Save Food for the Soldiers.

Dear Aunt Nellie: I hope every girl and boy will do all they can to help Uncle Sammie. I am going to buy a war savings stamp. Edith Crabb and I used to write to each other, but she never answered my last letter. My subject is about the war. I think the boys were pretty brave to go over there and fight. To make it easier for them we should not waste and we should eat less, so they can have food. I send my love to Aunt Nellie and all the cousins.—Beulah Shaw, Grandview, Wash., 10, April 11.

### A Visit in Spokane.

Dear Aunt Nellie: Mama takes the Farmer. I like to read the letters. I will be 15 years old December 23. I have dark brown hair and dark complexion. I am five feet three and one-half inches tall. Have I a twin? If so I would like to hear from her or him. I have two sisters, Minnie, who is 13 years old, and Gladys, who is three years old. We live on a farm containing 150 acres. We have two horses, Mollie and Daisy. They are black. My teacher's name is Miss Bowen. I like her fine. I can tat, crochet and knit a little. I can play on the piano a little, too. My pape has a car and we have lots of fun riding all over in it. My sister Minnie and I spent a week in Spokane, guests of our former teacher, Miss Sutliff, and, oh, the fun we had. She took us everywhere and we had such a nice visit. Then we returned home with Mr. and Mrs. Bowen in their car.—Olive Wilkinson, Ford, Wash.

### Vacation at Grandma's.

Dear Aunt Nellie: I thought I would like to join the Cousin's Corner. I was 10 years old January 7. Have I a twin? I am in the third grade. I go to school in Pomeroy, Wash. I live about 12 blocks from school. I like to take my vacation in the country at my grandma's house. My grandma lives 18 miles from Pomeroy. I had a fine time picking flowers and berries. I help grandpa get the cows and help him milk. I like to hear the birds sing. Grandma has 10 little birds. We have one dog, Tippy. I have two sisters, Thelma, who is nine years old and Anna May, who is five years old. I have one brother Albert. He is seven years old. I will write again.—Velma Martin, Pomeroy, Wash.

### Many Apples This Year.

Dear Aunt Nellie: This is my first letter, but I hope it is not the last. I am 13 years old and my birthday is October 28. Have I a twin? If I have he or she may write. I am in the fifth grade. We have lots of apples this year. I have two brothers and four sisters, Sven and Bertil, Bertha, Florence and Silvie. Bertha and Florence are twins and Silvie is the baby. We have one cow, two horses, three pigs, one sheep and lots of chickens. I have an uncle in the war. His name is Sven. I hope the kaiser will be killed.—Karin Molinder, Box 48, Benton City, Wash.

### Evelyn Finds Her Twin.

Dear Aunt Nellie: In reading the Children's Corner, I discovered I had a twin, so I thought I would write to the Corner. My twin is Agneta Bruhn of Wilbur, Wash. I wish she would write to me. This is the first time I have written to the Corner, but it will not be the last. I am in the fifth grade, and am 11 years old.—Evelyn Haworth, R. F. D. 1, Box 144, Colville, Wash.

(Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.)

# HOW CO-OPERATION SAVES YOU MONEY

The co-operative idea was put to a real test when The Washington Farmer adopted a new subscription plan as a war measure. This plan has been in operation for more than a year. It has proved the value of co-operation. It brings you your state farm paper for much less money than you must pay for other high grade family papers. Our plan in detail is described below.

## *SUBSCRIBER GETS BENEFIT OF EVERY PENNY SAVED*

The Washington Farmer has dispensed with its usual big force of subscription agents. In place of these we urge our readers to send in their own and their neighbors' subscription orders direct.

This plan gives the subscriber the benefit of every penny which would ordinarily go toward paying the salary and expenses of the subscription agent. It brings our friends their state farm paper at a fraction of what it used to cost and at a price far below that which other high-grade farm and family papers generally are obliged to ask.

In order that our readers may continue to save money on their subscriptions, we ask every subscriber to send in his or her renewal well in advance of the date of expiration stamped on the address label on the wrapper, and that you will also make an effort to send in the orders for your friends and neighbors with your own. Assistance of this kind, so cheerfully given by hundreds during the past year, will assure the success of our second year of cooperation.

**Remember—you receive The Washington Farmer every week—fifty-two great big issues in a year, chuck full of the best of all-around family reading, at the remarkably low cost, under our cooperative plan, of only 50 cents for 3 years. Send your orders in today and get your share of the money saved.**

**Rates:- 25c** For 1 Year **50c** For 3 Years **$1** For 5 Years

**The Washington Farmer.** Dec. 26.

Review Building, Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost.

**Enclosed is $..... for ..... years' subscription.** In Canada add 1 cent per copy for extra postage.

If you are already paid in advance your subscription will be set forward from the date to which you are paid.

# News for Breeders

George S. Ball of North Yakima, on December 10 purchased from Earl Wood of Silverton, Ore., the Berkshire gilt which won grand championship of the breed at all the shows at which she was shown this ington State fairs. She is a most promising animal, with best breed type, good feet and legs, strong back and length of body. She should be a formidable competitor if shown next season.

The Methow Valley Live Stock company, of which Mr. Parsons of San Francisco is president and W. S. Gaynor of Winthrow, Wash., vice president and manager, have a herd of about 40 purebred Herefords in the valley near Winthrop. For a herd header they have Panama 72d, a son of old Panama, bred by A. B. Cook. The foundation cows are mostly from L. L. Young of Nampa, Idaho, and are big, breedy cows that are producing high-class show calves from the high-class sire mentioned. It is probable the company will show Herefords at least at Spokane and Yakima next fall. They will come out strong, if at all, and in any case expect to build up a great show herd. The company runs about 500 head of range cattle, with Hereford tops.

RESCUES SOME GOOD ONES.

"I have some cattle in this sale myself, and I may be hurting my own sales, but I won't let good bulls like that go at such prices," declared Joe Turner of Myers Falls, Wash., as he put in a bid on a fine yearling Shorthorn at Lewiston, Idaho, Dec. 18. The bidding was slow and some of the stock were selling at far below their real value. Mr. Turner bought six head of young bulls. Ray & Rothrock of Sprague, Wash., also bought several head of bulls and heifers, paying the top price of the heifer sale, $400, for Marsh Violet, consigned by W. J. Townley of Union, Ore.

## JERSEYS

The PROFIT BREED

The pump has been blamed for much watered milk that really came from poor cows. Why waste feed on cows that skim their own milk when feed cost? Jerseys will produce the highest percentage of butter fat at the lowest Raise the standard of your herd to the highest degree with Jerseys. The man who begins with one Jersey is never satisfied until he has a herd. He can see the profit without close figuring. Start now. Write to breeders for pedigrees and prices. Let us send you the Jersey facts that will open your eyes to the possibilities of this money-making breed.
The American Jersey Cattle Club., 314 West 23rd Street, New York City.

### Raleigh's Jolly Nobleman

Our senior herd bull traces twenty-one times to Golden Lad 1242 and fifty-four times to Sultan P. 7, progenitors of more champion Jerseys than any other family of the breed. His dam is out of a daughter of Golden Lad 1242.
EDGEWATER FARM, Myrtle Creek, Ore.

### Meridian Dairy and Fruit Farm

Oldest Jersey herd in northwest Washington. Young stock for sale, both sexes, from good, producing dams. Herd headed by Kolander's Eminent 148256. A very fine bunch of young stock, both sexes, for sale.
B. C. CRABTREE, Lynden, Wash.

LUCKIAMUTE FARM JERSEYS WON.
At Oregon state fair, 1918, with only 15 head shown. Junior and grand champion bull, junior champion heifer, 1, breeder's young herd; 1, calf herd; 1 and 3, get of sire; 1, 2, 3 and 4, produce of cow; 1 and 2, senior bull calf; 1, junior bull calf; 1, 3-year-old cow; 1, 2-year-old cow; 1 and 2, senior heifer calf; 9 other prizes. Young bulls from R. of M. dams.
FRANK LAUGHARY & SON. Monmouth, Ore.

### ROSE LAWN JERSEYS OFFERS

First prize junior bull calf, Idaho State Fair, Minnidoka Co. and Twin Falls Co. fairs. Sire, Rosys Jolly Golden Fern 135028.
Grand champion bull, above fair circuit. Dam Gem Nehalim Lassie, a reg. of merit cow line bred in blood of Hood Farm Torona, Oonan 23 and Figgis.
S. H. KAYLER, Twin Falls, Idaho.

### ASHBURN FARM

REGISTER OF MERIT JERSEYS.
A bred herd, tried out for several generations by every breeding test. Only the best blood lines. Three proven matings. Nothing for sale except from tried sires. Increase of both sexes for sale.
J. M. DICKSON & SON. Shedd, Ore.

### Goldie's Nehalem Beauty

won grand champion of the Jersey breed for production, 1917. Her record, 80 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.08) and 433 lbs. butter. Both have been grand champions in show ring. Also a few females.
CLIFFORD F. REID, Wilcox bldg., Portland, Ore.

### Who Wants This Bull?

A double grandson of Kadia D., world's Jersey milk record for senior 4-year-old, 16,191 lbs. He is also a grandson of Holger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.
N. H. SMITH, Oregon City, Ore.

### Doerfler Farm Jerseys

Awarded first, second and third in milking contest, open to all breeds at Oregon State fair, 1918. Also first for 4 best cows, judged 50 per cent type and 50 per cent production. These were the 4 best prizes awarded. They also received many other prizes in the show ring, but type follows production: A few cows and a dandy bull for sale, with great records back of them.
F. A. DOERFLER, Prop., Silverton, Ore.

### WHERE CAN YOU BEAT IT?

Young bull, ready for service. Sire's dam, St. Mawes Poppy, 1129 lbs. 85 per cent butter, or 1190 lbs. 80 per cent, in a year. Is 75 per cent same blood as Poppy's Grace, that has recently finished year's test as junior 2-year-old, with 601 lbs. 85 per cent butter. His dam and dam's dam both register of merit cows. Priced at $250 for quick sale.
F. E. LYNN, Perrydale, Ore.

### Five Gold Medal Bulls

in the Jersey breed. Golden Glow's Chief (bred by us), only one west of Michigan. Only one other sire has more 500 lbs. fat record daughters. Two of his sons are our present herd sires. Bull calves by them to offer.
IRON MINE FARM, W. M. Ladd, Owner. Oswego, Oregon. D. Brooks Hogan, Mgr.

### Come to the Fountain Head

The original St. Mawes herd. Every cow is in register of merit or on test. We now offer a bull calf that is a grandson of St. Mawes Poppy and St. Mawes Susie, the two greatest daughters of the great St. Mawes, averaging over 900 pounds of fat.
ED CARY, Carlton, Ore.

### Anoka Farm Jerseys

We have some choice young bulls up to six months old for sale, whose sire has a 714-lb. dam and 1120-lb. granddam, St. Mawes breeding. The Best in the West. Prices very reasonable. Address.
R. B. SEELY, R. 5, Sherwood, Ore.
Shipping Sta. Wilsonville, on Ore. Elec. Ry.

### LYNDEN JERSEY FARM

Herd sire son of Fororio's Glindes Pogis of Hood Farm and St. Mawes of Lynden, whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to
P. MEENDERINCH, Lynden, Wash.

### Ready for Service

Young bulls of Golden Glow's Chief, and King Melia Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.
HENRY STEWART. Albany, Ore.

### Jersey Farm Dairy

Peter Mouw's Poland China hogs, Cotswold sheep, White Leghorn and Buff Orpington poultry, carefully bred, great foundation stock.
E. S. PELOT, R. F. D. 5, Idaho Falls, Ida.

### A Bit of Courtesy

When writing to any of the Jersey breeders advertising in these columns, you will confer a favor to the breeder and to the American Jersey Cattle club by mentioning this paper, as they want to be able to trace the exact source of their inquiries. Will you do this, please?

### Both Grandsires Great

Young bull, by a son of Foxhall's Fern Lad, sire of 6 register of merit daughters and out of a daughter of Golden Cicero, sire of 7 register of merit daughters. Young bull's dam has a private record of 476 lbs. fat as a 3-year-old, and will be officially tested. Granddam a daughter of Upright's Chief, half-brother to Golden Glow's Chief. Also a few granddaughters of Golden Cicero.
WILLAMETTEDALE FARM, TOM PETTIT, MRG., CORVALLIS, ORE.

### Register of Merit Cows

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire, FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.
FOX BROS. Silverton, Ore.

### AT LAST

we can again offer a bull ready for light service. His three nearest dams average 649 lbs. fat in one year. Solid color and a splendid individual. Write today, as we have but the one ready to use.
JOHN B. STUMP & SON, Monmouth, Ore.

### JERSEY HEIFERS FOR SALE

We are offering a few choice individuals of excellent breeding.
Write for sale list and photographs.
WAIKIKI FARM, Spokane, Wash.

### Jersey Home Jerseys

Young bull out of Olalla 2d, daughter of Olalla (806.25 lbs. butter as junior 3-year-old). Bull's sire, St. Mawes Prince, by Poppy's St. Mawes, and out of Gertie's Fern Princess (342.5 lbs. butter), both 80 per cent. Also other good young bulls.
THOMAS WILLIAMS, Forest Grove, Ore.

### St. Mawes—Rinda Lad

The two most popular strains of Jerseys in the northwest. Young bulls from register of merit cows for sale.
G. G. HEWITT. Monmouth, Ore.

### Ashnook Farm Jerseys

Young bulls by Silver Chimes of S. B., whose first 6 daughters average 710 lbs. 80 per cent butter. A few good cows and heifers for sale.
DEL PERKINS. Carlton, Ore.

## BERKSHIRE SWINE

PRIZE WINNING BERKSHIRES.
At Washington and Oregon state fairs, 1918, my Berkshires won both championships and every first prize for which shown. Open gilts, bred gilts of all ages, to farrow in March and April. The grand champion and other boars of all ages. All guaranteed to be breeders.
EARL WOOD, Silverton, Ore.

### BABY BERKSHIRE BOARS

Also boars ready for service. Best breeding. Will ship subject to approval.
DR. GREEN & SON. Wapato, Wash.

## SHEEP

SHEEP AND SWINE.
Registered Shropshire, Hampshire and Oxford sheep. Registered big type Poland China and Duroc swine. Your personal inspection is invited. More than twenty years' exprience as a breeder of pure blood stock.
GRANT B. DIMICK, Oregon City, Ore.

When answering advertisements don't fail to mention this paper.

## POULTRY

### Cockerals, $3.50 and $5.00

Rhode Island Reds, both combs. Rhode Island Whites, both combs. My stock is pedigreed and line bred. Mammoth Toulouse geese, $5. Mammoth Bronze turkeys, males, $8 and $10; females, $5 and $6. Have pedigreed Belgian hares and registered Flemish Giant rabbits.
HIGHLAND FRUIT AND POULTRY RANCH, J. NONNENMACHER, R. F. D. No. 3, Yakima, Wash.

### Rominger's S. C. W. Leghorns

and R. I. Reds. Pullets two to ten dollars. Cockerels, $2.50 to $15. Hatching eggs January, 1919.
MRS. ROMINGER, Underwood, Wash.

We have 12 bulls sired by the above sires running in age from 12 to 18 months for sale; also a few pure bred cows and heifers for sale if sold soon.

**W. W. GREEN & SONS,** **Union, Oregon.**

**REGISTERED SHORTHORN COWS.**
Young bulls and heifers, sired by Scotch bulls; liberal terms.
**CALDWELL CATTLE CO.,** **Caldwell, Idaho.**

When you write to advertisers be sure to state that you saw their advertisement in this paper.

## HOLSTEIN CATTLE

### The Hollywood Farm Offers Four Registered Holstein Bulls

**Ready for Service.** **Well Marked.**
**Bred for Production.** **Straight on Top.**

Their dams' official records are up to 29.71 lbs. butter, with lots of milk.
The average of the official records of their 5 nearest dams is:
Bull No. 809, 7 days' milk, 515.3 lbs.; butter, 27.18 lbs.; average test, 4.2% butter fat.
Bull No. 803, 7 days' milk, 504.6 lbs.; butter, 27.2 lbs; average test, 4.3% butter fat.
Bull No. 787, 7 days' milk, 557.7 lbs.; butter, 29.71 lbs.; average test, 4.3% butter fat.
Bull No. 786, 7 days' milk, 531.8 lbs.; butter, 25.25 lbs.; average test, 3.9% butter fat.
To make room for our increase, these bulls are priced to sell. Consider the high feed prices and raise only high producing stock.

**HOLLYWOOD, WASH** **Near Seattle.** **HOLLYWOOD FARM.**

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.
**H. R. BOOMER,** **New Plymouth, Idaho.**

### HOLSTEINS

When answering advertisements don't fail to mention this paper.

## DUROC-JERSEY SWINE

### Registered Duroc Jersey Boars

Choice boars sired by Richard Pathfinder and Cherry King Orion Jr., and out of sows representing the best blood in the west. Big growthy fellows, with quality. Satisfaction guaranteed or money refunded. Write me for prices.

**Erik W. Olson**
**VIRGINIA, IDAHO.**

### Bargains in Bred Gilts

On account of the influenza I have not been able to show at the Lewiston and Portland shows. In order to make room for my young pigs I am offering Duroc gilts at 10 per cent off for the next 30 days. My herd won the most prizes with strong competition making a clean sweep of all firsts and seconds under a year at the Washington State fair this fall. These gilts will be bred to my $500 Iowa boar, King Orion Gano. You will make no mistake in buying one of these gilts. Satisfaction guaranteed.

**S. D. CORNELL,** **Grandview, Wash.**

**FOUR DUROC GILTS BRED TO FARROW**
this fall, also spring pigs, on hand.
E. E. PRICE, CABINET, IDAHO, OR
**JAMES N. PRICE,** **Yakima, Wash.**

**Registered Duroc and Hampshire Hogs.**
Must sell to make room. Both breeds. Carry best blood lines.
**F. E. KINGSBURY,** **Malaga, Wash.**

**DUROC JERSEY BOARS**
ready for service. Also bred gilts, from prize winning stock.
**D. M. ADAMS, R. D. No. 1,** **Spokane.**

**OVER 150 SPRING PIGS.**
Sired by our grand champion Richards Defender, Richards Pathfinder and Cherry King Orion Jr., and out of our big type prize winning sows.
In the last three years at the Utah and Idaho state fairs our hogs won 76 champion and first prizes.
Can furnish unrelated pairs. Satisfaction guaranteed or money refunded. Priced very reasonable.
**Richards Live Stock Company, Virginia, Idaho.**

# Every Live Stock Breeder Should Weigh These Facts Carefully

Right now there's a brisk demand for good breeding animals, buyers waiting, we believe, for every head of first-class stock you wish to sell. You will see this condition reflected in what Mr. Wilson says in the following letter:

Greenleaf, Idaho, Dec. 11, 1918.

**Pacific Northwest Farm Trio, Spokane, Wash.**

Gentlemen: I am shipping out boars as fast as I can get them to the express office. Have four to ship tomorrow. Have shipped seven and got nine letters today and one telegram to ship at once. It makes a man feel good when he is shipping to men who have bought before, as he knows his stuff is making good. Got 17 inquiries in the last five days, and 15 mentioned either the Idaho Farmer, The Oregon Farmer or The Washington Farmer. Your papers surely are doing us good. Also got three inquiries for bull calves.

With best regards,

A. L. WILSON,
Manager Greenleaf Stock Farm.

More than 80,000 up-to-date, progressive farm families right here in your own section read The Washington Farmer, The Idaho Farmer and The Oregon Farmer every week. An ad with us enables you to offer anything you wish to sell to

# Grain and Produce Markets

## Grain Market.

CHICAGO, Dec. 21.—Notwithstanding that new high price levels for the season were touched today by December and January corn, the entire market later developed weakness owing to a sharp cut in quotations on undesirable holdings. The close was unsettled to 1 1-8 lower, with January 138 5-8 to 138 3-4, and May 135 3-4 to 135 7-8.

Oats gave way with corn.

In provisions as in grain the effort to free the yards from leftover hogs had an evident bearish effect.

**Chicago Futures.**

| | Open. | High. | Low. | Close. |
|---|---|---|---|---|
| Corn— | | | | |
| Jan. | 1.40 | 1.41 | 1.38½ | 1.38½ |

| Week ago | 125 | 2 | 16 | ... |
| Year ago | 64 | ... | 381 | ... |
| Two years ago | 139 | ... | 275 | 487 |

Saturday's receipts were the heaviest at the yards for several weeks past. All trains being late, most of the stock arrived too late to be placed on today's market. While the week's receipts have been light the market has been very active, with the demand exceeding the supply. Cattle of good quality meet a ready sale at the following quotations:

| | |
|---|---|
| Prime steers | $12.00@12.50 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 7.50@ 8.25 |
| Medium to good cows and heifers | 6.00@ 7.00 |
| Common to medium cows and heifers | 4.75@ 5.75 |
| Canners | 3.50@ 4.50 |
| Bulls | 5.00@ 7.50 |
| Calves | 9.00@10.00 |
| Stockers and feeders | 6.00@ 9.50 |

The receipts of hogs for the week have been very satisfactory. The quality has averaged very good and all shipments found a ready market in line with the following quotations:

| | |
|---|---|
| Prime mixed | $16.75@17.00 |
| Medium mixed | 16.50@16.75 |
| Rough heavies | 14.60@14.75 |
| Pigs | 14.50@16.00 |
| Stockers and feeders | 12.00@14.50 |

There were no sheep receipts today. The market remains steady at the following prices:

| | |
|---|---|
| Prime lambs | $12.00@13.50 |
| Fair to medium lambs | 9.25@11.50 |
| Prime yearlings | 10.25@11.50 |
| Best mutton ewes | 7.50@ 8.50 |
| Prime wethers | 9.25@10.25 |

**Hay**—Timothy, $39 per ton delivered, $36 by carload; alfalfa, $32 per ton delivered, $28 by carload.

## Portland Market.

PORTLAND, Ore., Dec. 21.—Poultry dealers think turkeys will be higher for Christmas than at Thanksgiving. The price at the close of the week on choice dressed was 42@42½c. The receipts were only fair and cleaned up on shipping orders. Other poultry was also scarce. Retailers announce a 50c market for the week. At Thanksgiving the retail market opened at 45c and slumped to 35c.

Eggs are coming in more freely but are selling well at 72@73c for ordinary candled and these prices are likely to hold until after the holiday.

Butter is slow and the market is weaker. Cube extras are held at 61c with 60c asked.

There is a firm local apple market, but the demand is mostly for cheap grades. Potatoes are weak and tending lower. Onions are holding their own.

Further sales of hops at 30 cents have reduced Oregon stock to 950 bales. There is little inquiry for contracts at 20 cents.

Butter—Cubes, 60@61c; prints, 62c; butterfat, No. 1, 67c, delivered.

Eggs—Oregon ranch, candled, 72@73c; selects, 76c per doz.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 36c; young Americas, 37c per pound, Coos and Curry, f. o. b. Myrtle Point, triplets, 35¾c.

Poultry—Hens, 25@28c; ducks, 28@30c; geese, 18@20c; turkeys, dressed, 42@42½c.

Pork—Fancy, 19@20c.

Veal—Fancy, 20@21c.

Potatoes—Oregon Burbanks, $1.50.

## Portland Grain.

PORTLAND, Ore., Dec. 21.—The mill feed has been completely upset by the removal of milling restrictions by the food administration. New prices have not been named, but are likely to be any day. It is the belief in the trade that mill feed will be advanced at least $10 a ton and flour reduced slightly. Millers point out that in order to compete for government flour orders with the middle west they must cut export grades of flour severely and they can only do this by raising feed prices. Unless they can get these flour orders they say they can make neither flour nor mill feed. Patents will be ground as before the war and will likely sell at the present price of government 100 per cent flour and the latter be reduced about 25 cents.

There was no trading in the coarse grain in the latter half of the week. Closing bids were: Sacked oats, $54@55; eastern oats, $50@53.50; bulk corn, $59@61; feed barley, $49@50; milling barley, $50@51.

# Want Model Apiary

The Washington State Beekeepers' association is planning to ask the state legislature for an appropriation of $4000 for the purpose of establishing a model apiary in connection with the state college experiment station at Prosser. This action was agreed upon at the recent convention of the association held in Yakima. Another plan of the association is to secure the appointment of an expert to assist in combating the disease known as foul brood, which is claimed to have reduced the production of honey in several sections as much as 25 per cent.

Dr. A. J. Pressey was elected president of the association for the ensuing year. The other officers chosen are J. P. Hostetter, Puyallup, vice president; C. B. Saxton, Harwood, secretary; H. L. Hart, Yakima, treasurer.

## Seattle Market.

SEATTLE, Dec. 21.—The following a present market quotations here:

**Prices to Producers.**

Eggs—Select ranch, 70c per doz.; pulle 64@65c per doz.; Oregon, eastern Was ington and Idaho, loss off, 60c per doz.

Butter—Fresh dairy, 30c per lb.; butte fat, 70c per lb.; bakers', 28@30c per l raw milk, $3.60 per cwt.

# FARMERS' WANT ADS

This is the farmers' "Want," "Sale" and "Exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rate, 7 cents a word per insertion, with a special rate to farmer subscribers to the Washington Farmer of 6 cents a word per insertion for from 4 to 12 times, and 5 cents a word per insertion for 13 times or more.

All commercial and land advertising, 7 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisement will be inserted for less than 75 cents. (2) Every word, number and initial, including name and address, must be paid for. (3) Cash must accompany order.

Above rates also include insertion in The Oregon Farmer and The Idaho Farmer.

Address James H. Frazier, owner, Coeur d'Alene, Idaho.

# Where Money Piles Up

"Personally, I am in favor of turning off beef as long twos or as three-year-old stuff," says Grant Copeland, a prominent live stock man of Whitman county, Wash. "The steer that will grow from 850 to 1150 pounds in his third year will only add 150 pounds in his fourth year, and the cost of feeding that into him is excessive. At the same time interest is accumulating on an increasing investment. The ideal operation for our farmers is to buy two-year-old stuff weighing about 850 pounds, carry it through the fall and winter and turn it off as prime beef. The ideal of an 1150-pound steer at 30 months is on a par with the ideal of a 200-pound hog at 8 months. Both represent the point where the money piles up rapidly. But the thing always to remember is to handle only well-bred stock that has been pushed with feed from weaning. Then the pasture and the feed should not be crowded. A crowded pasture means stunted beef and inability to turn off finished cattle by the time they are 3 years old wipes out the best profits in the business."

# Your Local HOME PAPER and Your State FARM PAPER at a Special Club Price

A clubbing arrangement has been made with a number of newspapers in your state whereby we can now offer you a one-year subscription to your local home paper and a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER**

brings you all the local news and happenings of the social and commercial life of your community. It gives you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER**

brings you, each week, all the news of the farm and farm home, with the agricultural developments of your state. Features for every member of the family, including women's and children's pages and colored comics. Also departments for every phase of farming.

Your Local Home Paper and Your State Farm Paper can now be sent to you for one year each at the special clubbing rate as quoted below:

or
Review Bldg., Spokane, Wash.

# My K Hand Stump Puller

## Gives Your Hand 96,000 Pounds of Power

Big stumps! stumps and trees with deep tap roots! any stump that can be pulled with the best inch steel cable!—you *alone* can pull with my "K" Hand Power Stump Puller—*without digging and without the expense of teams and powder.* I guarantee it. I refer you to U. S. Gov. officials. I give highest banking references. If you have stump land, the cheapest way of clearing it is with the

Frank Hance, a *one-armed* farmer of Bowie, Md., pulling a double silver maple 8 ft. 8 in. in diameter at the ground, with deep tap roots. This is an easy pull for the "K," as the cable can be hitched high and the leverage is consequently greater.

## K HAND POWER Stump Puller

### How the "K" Pulls Biggest Stumps

The "K" works on the leverage principle of the ordinary lifting jack, except that the power is applied on a cog-wheel instead of a standard. 100 lbs. push on the lever develops a 48-ton pull on the stump—all an inch steel cable will hold. One man operates it alone—no teams to pay for—no walking.

### A Mechanical Wonder

Made of finest steel—guaranteed against breakage. Weighs only 171 lbs.—easily carried or hauled about on its own truck wheels. Has two speeds—60 feet per minute for hauling in cable or for small stumps—slow speed for heavy pulls. *Works equally well on hillsides and marshes where horses can not* work

### Owners Praise It

H. Sinclair of the Dept. of the Interior, a U. S. Gov. official, writes: "The stump puller is a wonder."

Ernest Thompson Seton, author and naturalist, declares the "K" "a great success."

Hundreds of owners write in, telling of pulling six- and seven-foot stumps, of pulling faster and pulling bigger stumps than by any other machine.

**Special Offer** I am making a special offer to get a "K" Stump Puller introduced in every neighborhood. Write me today for full information and for free book on Land Clearing.

**Walter J. Fitzpatrick**

Box 32 182 Fifth St. San Francisco, Cal.

H. G. Hunzicker of Foster, Wash., pulling a 24-inch fir stump with deep tap roots out of hard ground, without using powder or cutting any roots.

**Tear Out and Mail Today**

Walter J. Fitzpatrick
Box 32 182 Fifth St., San Francisco, Cal.

Send me full particulars on your special offer and your free booklet on Land Clearing.
